

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

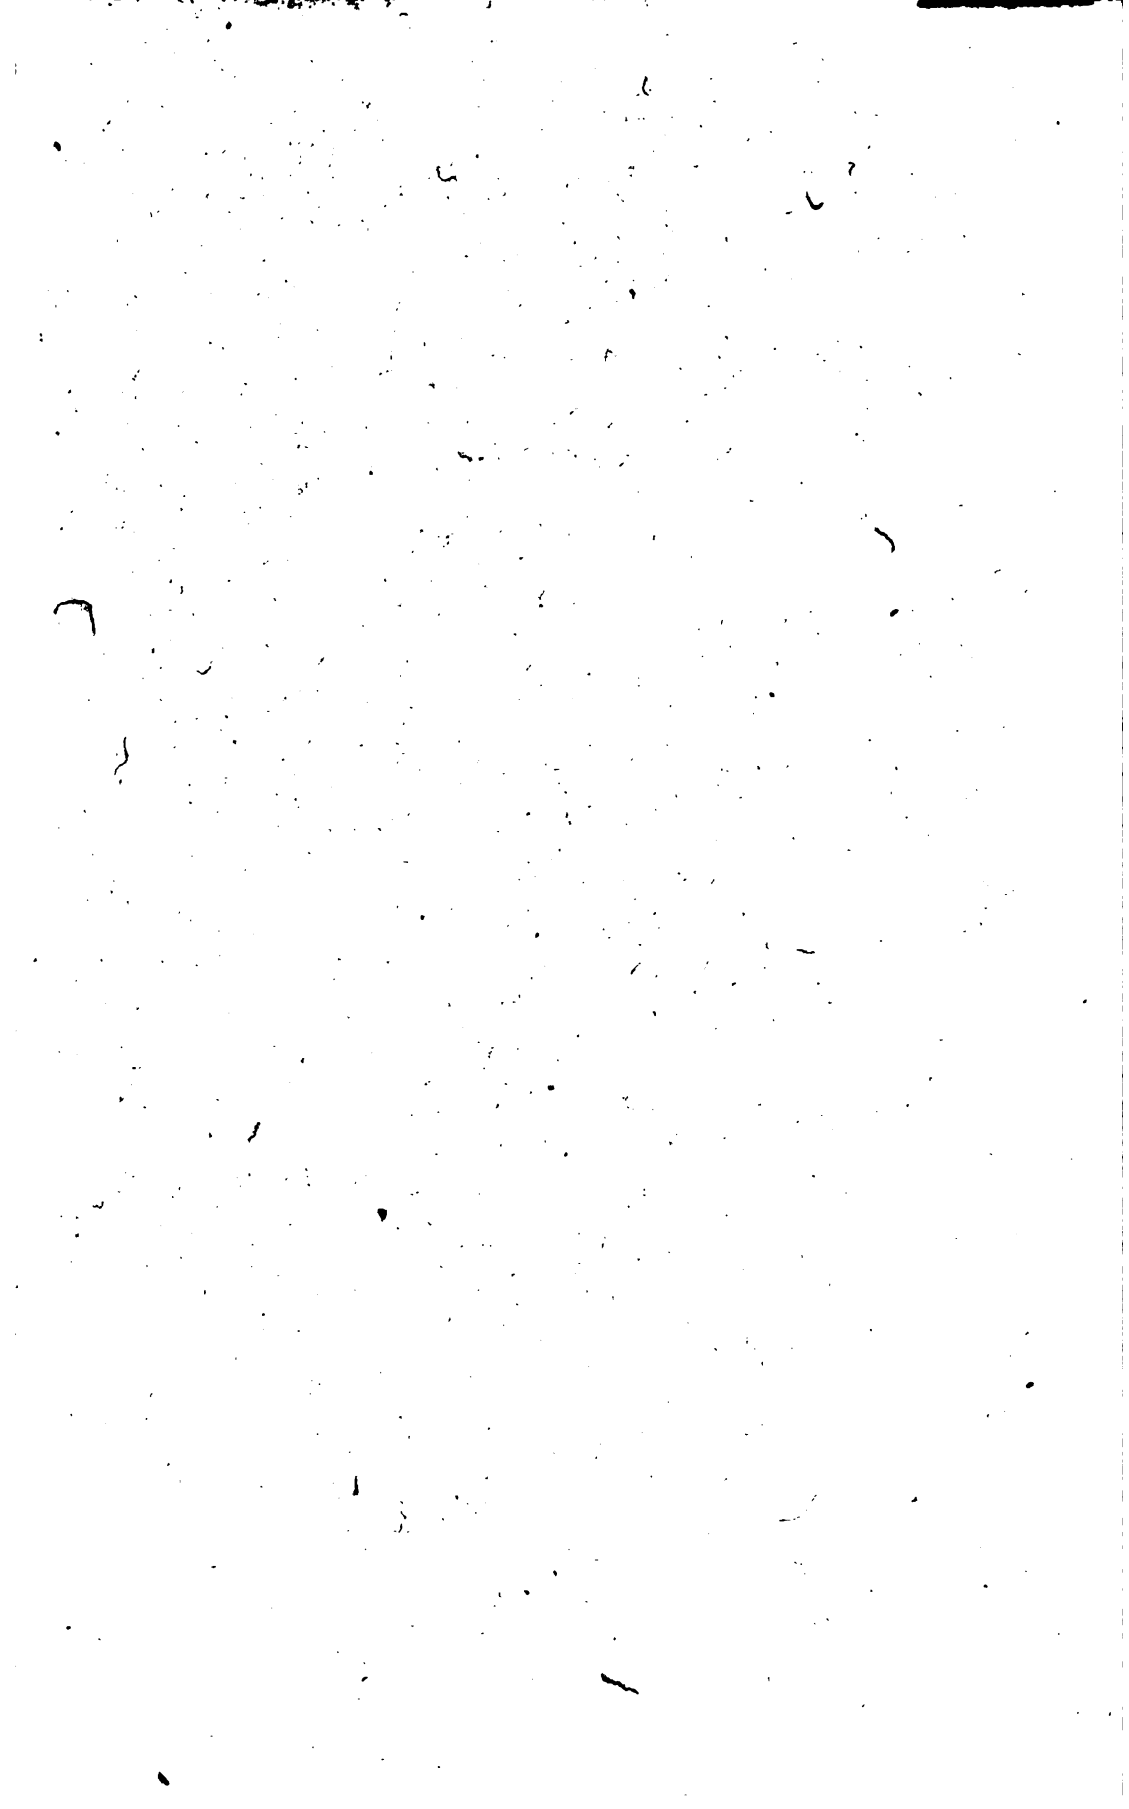

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

SOUTHERN LITERARY MESSENGER.

VOL. IV.

RICHMOND, JANUARY, 1838.

No. I.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

THE NEW YEAR.

IN commencing the fourth volume and fourth year of the *Messenger*, we have somewhat to say beyond a mere holiday salutation to subscribers, readers, and contributors.

While we cannot look back upon the past with unmingled satisfaction, we yet derive from it some pleasing thoughts; and much cheering hope for the future. Some useful and elegant talent has been called into exercise, nay, it may be said, has been created; since such is the power of exercise over the faculties, that to afford an attractive field for their exertion is in a great degree to create them. Some new and valuable truths have been promulgated through our columns; and a yet larger number of truths not new, has doubtless been presented in forms more engaging or impressive than before, and has thus been stamped beneficially upon many a mind. Some books, worthy to be read, have been pointed out to the reader's notice; and some unworthy ones have been marked, so that he might not misspend his money and time upon them. And if no other good had been done,—many an hour, of many a young person, which might otherwise have been given to hurtful follies, has by our pages been whiled away in *harmless* at least, if not salutary enjoyment. So little ascetic are we, as to hold, that whoever furnishes mankind with an innocent recreation, is a public benefactor.

But the past is nothing, except as a help to the future. We are earnestly desirous to render the *Messenger* a vehicle of LIGHT; of useful truth; of moral improvement; of enlightened taste. To some extent, it has been so already: but to an extent commensurate neither with our wishes, nor with the fund of talent slumbering in the community around us.

The mineral wealth of Virginia is a trite theme of expatiation. It is unquestionably immense. But the *mines of Southern intellect*, all unwrought, and many of them unknown even by their proprietors, far surpass those of matter, both in number, and in the richness of their buried treasures. Not to speak of persons to whom the ample page of knowledge, 'rich with the spoils of time,' has never been unrolled, there exists, southward of the Potomac, a mass of cultivated mind sufficient, with only a little industry and care in practising

the art of composition, to fill twenty such magazines as this, with instruction and delight. Few are aware, how improvable the faculty is, of expressing thoughts upon paper. The gigantic increase of the muscles in a blacksmith's arm, from his wielding the hammer so frequently; the proverbial strengthening of the memory by exercise; or the miraculous sleight which the juggler acquires by practice with his cups and balls; is not more certain than that he who daily habituates himself to writing down his ideas with what ease, accuracy, and elegance he can, will find his improvement advance with hardly any assignable limit. Nor will only his style improve. It is a truth so hackneyed, that only its importance rescues it from contempt and emboldens us to utter it, that "in learning to *write* with accuracy and precision, we learn to *think* with accuracy and precision." Besides this, the store of thought is in a two-fold way enlarged. By the action of the mind in turning over, analyzing, and comparing its ideas, they are incalculably multiplied. And the researches prompted by the desire to write understandingly upon each subject, are constantly widening and deepening the bounds of knowledge.

Thus, whether the conscious possessor of talents desire to enrich and invigorate his own mind, or to act with power upon the minds of others; we say to him "WRITE."

The *Messenger* is a medium, through which, the best talents need not disdain to commune with the public. Whatever it contains, worthy to be read, finds not less than ten thousand readers; besides those whom republications procure. And most of these (it is a pardonable vanity to say) are such readers as any author may well be proud to have. Where is the orator so gifted, that he might not glory in addressing so numerous an auditory of the enlightened, the fair, the exalted in station!

By all these powerful considerations then,—by the desire of self-improvement—by an honorable ambition—by disinterested patriotism—by the pure wish to diffuse light and to do good,—we invoke the dormant talents of the South (especially) to rouse up from their slumber, and employ the means now offered them, of assisting to mould and fashion the age, if not of leaving names, which a distant posterity will contemplate with grateful veneration.

SOUTHARD'S ADDRESS.*

A practice has long prevailed at Princeton college which cannot be too highly commended. The two societies which have so much contributed to the celebrity of that distinguished institution, annually unite in inviting some eminent individual, to deliver, at the Commencement, an oration on some literary topic. The persons selected are usually alumni of the college and members of one of the societies. The same strictness does not seem to be observed in other seminaries which have imitated the laudable example of the college of Nassau Hall; for we remember a most admirable address from Mr. Wirt, which was delivered at Rutgers college, New Jersey, of which, beyond doubt, he was not an alumnus. No inconvenience, however, has hitherto been experienced at Princeton from limiting the field of choice, so numerous are the distinguished men who have been nurtured in her lap, and reared under her auspices. At the late Commencement the address was delivered by the Hon. Samuel L. Southard, a gentleman of the first distinction, who has for some years filled with conspicuous ability a seat in the Senate of the United States. From such a source we have reason to look for sound sense and practical wisdom, instead of studied periods and gaudy ornament. These are pardonable in boys just emerging from the chrysalis state, but are unworthy of men whose locks are whitened by time, and who may be presumed to have chastened by reflection the crude notions of youth, and stored up lessons of sober experience for the benefit of the rising generation. In the production of Mr. Southard we find in this regard every thing to approve. Disdaining both the "power and the inclination to trifle with matters of fancy or deal in flowers of rhetoric," he selects as the subject of his discourse, "the importance of the study of the Bible, in forming the character of literary and scientific men, of scholars of every grade and every occupation." It is indeed a noble theme. We say nothing of the awful majesty of that sacred book which the faithful receive as an emanation from the Godhead. That we leave to those whose hallowed lips are touched with fire. But look upon the Bible as a curious history—the history of the infancy of mankind—of the first stages of human existence—when the mind of man was yet in embryo, untaught of the arts and sciences—unconscious of those great improvements which time has been busy in disclosing; read it as the memorial of cities and of empires that rose to splendor and to power, and have for ages been crumbled into ruins, while in the gorgeous palaces where once a monarch held his state,

"Hisses the gliding snake through hoary woods
That clasp the mouldering column."

Or look upon it with the critic's eye, and where shall we find a parallel to the beautiful simplicity and pathos of its narration, or the exalted sublimity with which it invests the King of Heaven, or conveys to trembling mortals the denunciation of his wrath, or the tender mercies of his unbounded love? Or read it with the

eye of the philosopher—of the philosopher who teaches that

"The proper study of mankind is man;"

and where shall we find such a transcript of the human heart; such a chart of all its passions; such a scrutiny into its motives, such a penetration into its recesses; such a ferreting out of its unholy promptings; such an exposure of its deceitful imaginings; such pictures of exalted virtue, of human frailty and of fiendlike depravity? It is altogether admirable: nothing equal to it in this regard does exist; nothing superior to it can exist. When David, the man after God's own heart, plunges into the very depths of sin, we humble ourselves under the mortifying sense of human infirmity; and when the yet spotless Hazael, unconscious of his future crimes, exclaims with honest indignation, "Is thy servant a dog, that he should do this thing?" we are self-abased at the reflection, that however strong we may feel in conscious virtue—however we may fortify our hearts against human weakness, the time may yet come when we too may be

"To bitter scorn a sacrifice,
And grinning infamy."

Mr. Southard has treated this noble subject with an earnest seriousness that is due to its importance. In his address, the reader will not fail to be struck with the extent of his researches, the cogency of his arguments, and the apparent strength of his convictions. His recommendation of the holy book is enforced with all the zeal of a friend, the anxiety of a parent, and the earnestness of a christian. Let the youth of our land peruse with care this able paper, and consider it as addressed, not to the societies of Nassau Hall alone, but to their own hearts also. Let the words of wisdom sink deep into their souls, and the author will enjoy in return for his labors, that best of all rewards, "the consciousness of doing good."

We could have wished to insert the whole of this interesting article in the present number of the Messenger, but our limits have forbidden. Devoted to the cause of literature, we mainly delight in that which is calculated to elevate the principles and to mend the heart; and hence we ever receive with thanks and circulate with pleasure, those original communications, which to the graces of style and purity of thought, unite the inculcation of virtue or the illustration of the beauties of our holy religion. The moral tale, or the moral essay, the poetical effusion redolent of piety, the glowing language of the gifted orator breathing into the souls of his hearers the nobler virtues, always find welcome with us. Taste and genius are not degraded, but illustrated and adorned, by an association with the productions of the moralist, and the beautiful outpourings of a heart warmed with religious fervor, and animated by love to God and benevolence towards man. We repeat, therefore, our regrets at our inability to insert the whole of the address, and must content ourselves with offering to our readers a few striking extracts.

In entering upon the subject, the author very forcibly presents some remarkable facts connected with the existence and preservation of the Bible.

"What," says he, "is the Bible? It purports to be a commu-

* Address delivered before the American Whig and Philosophic Societies of the College of New Jersey, Sept. 26, 1837, by Samuel L. Southard, LL. D.

nation from the all-knowing and eternal Mind of the universe. A record of our race—of our creation—powers—capacities and destiny. Its claims, in these respects, demand for it an earnest attention. Its origin, preservation and existence, at the present moment, is a standing, perpetual miracle. A great part of it was written more than three thousand two hundred years ago; and all of it, has been of nearly eighteen hundred years' duration. For centuries the art of printing gave no aid in multiplying copies and preserving it. Yet from the time when its first pages were written, it has been handed down, from age to age, protected in its integrity and purity—undefaced, un mutilated and almost unaltered. And where are the writings of the nations, contemporaneous with its origin? of Assyria, and Chaldaea, and Egypt? of all those which preceded Greece and Rome? They perished with their authors, or were lost in the wasting of their nations. Where are the writings of Greece? A part, and a part only remain. Of the four hundred works of Aristotle, one of the great masters of human reasoning, and the merits of which would create a desire to save them, but about forty have reached us, and even of these, some are broken, and of others the genuineness is questioned. Not one-hundredth—perhaps not one-thousandth part, of the precious literature of that land of poetry, eloquence and philosophy has escaped the wreck of her liberty and national existence. Rome was the successor—the imitator—the competitor—the survivor of Greece in literature; yet few of her works, which were her pride and her glory, survive. She was, for a long period, the keeper of the Book of the Cross, as she was of the literary productions of her citizens. Yet it remains, and they have perished. The dramas of Livius Andronicus were the first regular compositions in Latin, of which we have any record. Where are they? Where are the works of Ennius, Naevius, Pacuvius and others? We retain a line of one of them—*Lælius sum, laudari ab te, pater, laudato viro*: of others there is little of any substantial value. Where are the works of Cato, except his *de re Rustica*? Of Varro? Of all those, to whom Cicero in *de Claris Oratoribus*, refers? Of some even of his own more perfect productions? Where are the works on natural philosophy and the sister sciences, mathematics and geometry, which have been called the 'implements of natural philosophy'? They were in existence when the *Origines* of Cato were written, yet now *Quae reliquiae? quodve vestigium?*

Why the difference as to this book? For many hundred years, copies were not multiplied and scattered, so that the ordinary causes of decay and destruction could not reach them. Yet the flames which have consumed palaces and couages and libraries, have left it unharmed. The eruptions of the volcano have not buried, and the more terrible devastations of the barbarian, have not destroyed it. The siege, and sacking, and utter desolation of the capital, and the scattering to the utmost ends of the earth, of the nation to whom it was committed, defaced not one of its features. The temple was destroyed, but the laws written upon its tables were not abrogated nor erased. The Cross is the essence and the emblem of the record; and while all around the place where it was erected utterly perished, that record, in all its perfectness, was protected. Whether it be true or not, that ΤΟΥΤΟ ΝΙΚΑ was written over that ensign, in letters of fire upon the heavens, and conducted the first christian emperor to victory, it is true that the doctrines of this book were planted by the throne, and extended wide as the empire of the Caesars; and yet when that empire fell and expired beneath the scourge of the northern hordes and the scimitar of the Mohammedan, this book, with its text and its doctrines, continued to live; its energies were renewed, and it is still the same as when Constantine became its advocate. It has passed through times of literary and moral darkness as well as light—of barbarism as well as civilization—through periods of enmity, as well as friendship, to its contents—and crossed that oblivious gulf which divides the modern from the ancient literary world, and where lies covered up, forever, so much of the literature and science of the nations. Other books have perished when there was no hostility to their doctrines; this has survived when the arm of power was stretched out, and every human passion exerted for its destruction."

Speaking of the influence of the study of the Bible on the formation of a good style, we are told:

"The study of the Bible is an efficient means of acquiring correct language and style; not studying it, to borrow its phrases,

and profusely quote on all occasions, its inimitable passages—a practice which savors little of good taste or reverential feeling—but studying it, to become imbued with its simplicity, and force and elevation. Its unaffected narrative—unaltered pathos—pointed invective—picturesque and graphic description—plain yet magnificent energy, cannot be thoroughly comprehended without appropriate effects upon your taste and judgment. Observe, for example, the preachers of the gospel. The manner in which its allurements are depicted—its admonitions uttered, and its threatenings denounced by them, will indicate to you the source from which they have derived their reasonings and illustrations—whether directly from the fountain of living truth, or the stagnant pools of human commentaries. They who have aided their style and modes of thought by diligent study of this work, if they do not rise to the first grade of excellence, never sink to inferiority. Observe, again, two comparatively unlettered men; laborious in their employments, and altogether without the adornments of literature. If one diligently reads the Bible, and becomes familiar with its language and expressions, and the other never opens it, you may tell the fact, by the superiority of the former, in his ordinary manner of conversation, even upon topics unconnected with the doctrines of the book. The same fact is illustrated by two schools, in one of which it is sedulously taught, and in the other is never read. You cannot converse with the scholars without remarking the contrast.

"There is cause, I think, 'o rebuke those who have written and lectured on style and composition, that among the authors and books recommended, the Bible is so seldom pressed upon the consideration of the student. There is no one superior to it, in examples suited to correct and discipline the taste. There are no works of human genius containing finer passages. Search the volumes of fiction, of poetry and eloquence, and produce the passages most justly admired, and their equals and superiors may be readily found in this work. Herodotus and Xenophon do not surpass it, in the simplicity and beauty of their narrative, nor Homer in the splendor and sublimity of his descriptions. Compare, for yourselves, the unornamented yet intensely sublime account which is given of the creation of the world and of man, in the commencement of the volume, with any and all the efforts of pagan or christian writers. Compare the noblest pages in Homer, those in which he portrays the majesty and government of Jupiter, and his interference in the conflicts of contending armies, with the announcement of the attributes of the Christian's God, by Job, Isaiah and their fellow penmen, and with the manifestations of his power, at every step, as he led the Israelites from bondage to dominion. Compare the clouds and thunder and scales of Olympus, with the awful exhibition at Sinai, and the destruction of the enemies of his chosen people, not only in their journeyings, but at subsequent periods of their history. Make your comparison as extensive as you please, upon any and every subject embraced in it, and apply the most rigid rules of criticism, and you will come to the conclusion, that in correctness, energy, eloquence and dignity of composition, it is without a rival. Why, then, shall it be disregarded by the scholar who is ambitious of excellence in writing and speaking?"

In the conclusion of the address, Mr. Southard, speaking of the Decalogue, observes:

"This law is carried out in all its breadth and spirit, in the sacred Scriptures. It has descended from the wilderness of Arabia, through all the changes of times and nations; never for one moment deserting the land which it first governed, for portions of it are still read and taught by a wretched remnant, amidst the ruins of the cities of Palestine; but it has passed from thence over oceans and continents; inhabited the cottage of the peasant, ascended the seats of power, and become the foundation of the codes of all Christian nations. Since the hour of its promulgation, Israel has risen to the greatness of glory which Solomon possessed, and been dispersed in every land, a proverb and astonishment. Nations have flourished and fled away like the mists of the morning, and their names are lost. Imperial cities, and the monuments of the great have crumbled and been swept away with the hearth-stones of the humble; but Horeb still stands amidst the desolations of the wilderness, an evidence of the presence of the Author of this law; and this law has continued to roll on with undecaying power, in contempt of all the passions and philosophy and infidelity of men. Its principles

are still found in accordance with our interests and happiness, and have their home in the inmost depths of the pure in heart. And they will continue to spread, until the islands, the oceans and the continents obey; and until *non erit alia lex Romæ, alia Athenæ, alia nunc, alia post hæc, sed et omnes gentes, et omni tempore, una lex, sempiterna et immortalis continebit*. Of all men, American scholars, and you among them, ought not to be ignorant of any thing which this book contains. If Cicero could declare that the laws of the twelve tables were worth all the libraries of the philosophers—if they were the *carmen necessarium* of the Roman youth, how laboriously, *manu nocturna diurnaque* ought you to investigate its contents, and inscribe them upon your hearts. You owe to them the blessed civil institutions under which you live, and the glorious freedom which you enjoy; and if these are to be perpetuated, it can only be by a regard to those principles. Civil and religious liberty is more indebted to Luther and Calvin and their compeers of the Reformation, and to the Puritans and Protestants of England, and the Huguenots of France, than to any other men who ever lived in the annals of time. They led the way to that freedom and firmness, and independence of thought and investigation, and the adoption of these principles, as the guide in social government, as well as private actions, which created a personal self-respect and firmness in its defence, which conducted us to a sense of equal rights and privileges, and eventually to the adoption of free written constitutions as the limitation of power. Be you imitators of them. Make your scholarship subservient to the support of the same unchanging principles. They are as necessary now as they ever were, to the salvation of your country and all that is dear to your hopes. The world is yet to be proselyted to them. Religion and liberty must go hand in hand, or America cannot be established; the bondage of the European man broken; Africa enlightened, and Asia regenerated. And even here, we are not without peril. Look abroad; are not the pillars of our edifice shaken? Is not law disregarded? Are not moral and social principles weakened? Are not the wretched advocates of infidelity busy? The sun has indeed risen upon our mountain tops, but it has not yet scattered the damps and the darkness of the valleys. The passions are roused and misled. Ancient institutions are scorned. Our refuge is in the firm purpose of educated and moral men. Draw then your rules of action from the only safe authority. Hang your banner on their outer wall. Stand by them in trial and in triumph. Dare to maintain them in every position and in every vicissitude; and make your appeal to the source from which they are drawn. And then, come what may, contempt or fame, you cannot fall; and your progress, at every step, will be greeted by the benedictions of the wise and good—**SALVETE—SALVETE."**

We renew our invitation, (and to our youthful readers in particular,) to peruse with diligence this valuable production; feeling assured, as we do, that it will have a strong tendency to lead to an assiduous examination and study of that book, which at this day stands above all others, in the literature of every civilized nation on the globe.

THE EXPLORING EXPEDITION.

Every person, anxious for the honor of this country, must regret to perceive the new difficulties that gather around the naval expedition destined to explore the South Seas. The flattering prospects held forth in our last number, with regard to this enterprise, seem to be overcast with clouds. Ill health has obliged Commodore Jones to resign his command: and it is not yet certain, who will be his successor. But whoever he may be,—supposing him to possess equal qualifications with Commodore Jones for the trust—he will require weeks, if not months, to prepare for so long and eventful a cruise, in such a manner as to conduct it prosperously. The squadron, too, is to be reduced.

The frigate Macedonian is to be superseded by the Peacock sloop of war; and the number of inferior vessels will probably be lessened. Delay, and even disappointment, seem to impend over the undertaking.

MY JESSIE DEAR.

A RHYMING ROMAUNT.

PART I.

Shall I tell thee a tale, my Jessie dear,
It is a fearful tale!
I learned it in my dreams yestreen,—
Nay, do not grow so pale.

Come laugh now, and I'll tell it thee,
But if thou look'st so white,
I'll think the vision shades are real,
Which rose upon my sight.

Well! methought that we were wandering
Beneath that tall tree's shade,
In whose spread branches we have heard
The cuckoo's mourning made.

There we did breathe our earliest love,—
Now do not hang thy head,—
Dost not remember how I swore,—
And the stars looked bright,
And the heavens hung o'er,—
That I was thine forevermore,
'Till my poor heart was dead.

It was a lightsome night, I ween,
My heart did bless the fairy scene,
And there was no dark on earth or sky,
But the shade of the oak
We were standing by.

Black was the oak, and vast, and grim,
Tuneless its lofty bowers;
And it stood like a warrior
In his mail,
Or a fiend-giant frowning
O'er the landscape pale,—
"A curse on the bright-eyed Powers!"

We sat within its shady hall,—
Thou know'st the bank full well,—
And we whisper'd of our hopes and joys,
And the woes our love befell.

We talk'd, and we talk'd, and the night wore old,
And the moon run up the sky,
And the shades did deepen,
And the boughs did sleep 'n,—
But by the sight
Of a chink of moonlight,
I saw a deep, black eye!

The eye, the eye was very bright,
'Twas bright as bright could be;
It was so sweet and spiritfûl,
So full of all most beautiful,

It shone so clear from the black'ning tree,
So very light,
That the dark look'd bright,
By'r Lady, 'twas like thee!

'Twas strangely like my pretty Jess,
I saw it in the paly light;
The firmament hath not a star
That looks to me so bright.

The moon has burst from a fleecy cloud,
'Tis light, 'tis light as day,
And the glade, and the hill, and the tiny stream,
Gladden beneath its silver beam,
And the night-bird stills his wildest scream:
List! there is music as soft as a dream,
And tripping on the velvet green,
May'st see the dapper-fay!

I drew thee closer to my side,
I whisper'd thee more low,
I vowed,—and here I spoke aloud,—
And raised my face to the passing cloud:
"From thee, my love, my destined bride,
I ne'er, I ne'er will go!"

My arm did drop down from your waist,
My arm was stiff as lead,
And you did glide from my embrace,
Like a shadow of the dead.

Outfell the darkness from the tree,
And the eye was in its shade,—
Round and round it circled thee—
Thou look'st beseechingly to me;
The eye did fire, and then did fade,
And I was alone in the moonlit glade.

A cry, and a bound,
And a rushing sound
Swept by,—
I burst from the ground,
For the spell was wound,
And the fiend did fly!

Wildly I grasped upon the air,
I clutched the stony mound,
I curs'd, and groan'd, and yell'd, and moan'd,
Yet all was still, but the echoing hill,
And my voice came back
Full clear and shrill,
And woke me from the swoond.

And when I woke I started upright,
Look'd wildly around for the things of night,
But on mine eyes, the sun broke bright,
And the merry birds carolled to the morning's light.

PART II.

Fie! Jessy, fie! what weeping now,
And scared as any dove,—
'Twas but a dream, an idle dream—
I would not fright my love.

Come dry thine eyes, my winsome Jess,
Come smile upon me now,—

Ring out, ring out thy silvery laugh,
'Tis sweet as a music vow.

And it were true, and did we part,
Would'st not be glad at all?
There's many a heart in this bright world,
Would worship thee, for all!

Blisters be on my meddling tongue!
This makes thee weep so sore,—
Wilt heal it now, my blushing girl?
I will not grieve thee more.

Now, blessings on thee, Jess, my dear,
Blessings from Him above!
We'll sing His songs in the still, bright eve,
And pray for His good love.

His seal on thee, no harm may come,
No blast of wicked dream;
And if thy lover's arm hath power,
No ill shall hurt his quean.

Green summer is now upon the trees,
And the painted time comes slow;
But when the leaf is on the brook,
And the solemn pencil hath gilt our nook,
Then, Jessie, then we'll whisper low,—
Resting our eyes on the promise bow,—
*To love in calm or tempest loud,
To love in weal or woe!*

THE LYCEUM—NO. V.

ADVICES TO SUNDRY KINDS OF PEOPLE.

BY GULLIVER THE YOUNGER.

CHAPTER I.

ADVICE TO YOUNG PHYSICIANS.

In former times, Medicine was not at all what it is now. Any one, who knew the virtues of a few simple herbs, could practise it with fame and profit. Diseases were not many, or various. They were mostly rheumatism, which the gentlemen caught in hunting; or crudities and pains arising from surfeit, after the long fasts which followed the failure of their stock of dried venison and parched corn. The only use for surgery, was to heal scratches and bruises received in their combats with wild beasts, or each other. All these hurts and maladies were readily cured by the old ladies of the tribe; sometimes by healing applications, but oftener by certain cunning words and ceremonies, which hardly ever failed, if the patient had faith in them. As to lectures, schools of Medicine, diplomas, long, strange technical terms, and puffy treatises in a dozen different languages, they were altogether unknown.

But now, the case is quite altered. The kinds of sickness have multiplied a hundred fold; and each kind has a hundred various symptoms, and wears a hundred various shapes, according to the diversities of frame and habit in patients. By this increase of diseases,

the number of those who profess to cure them is also increased; and the increase of doctors, again, has multiplied diseases. Old ladies have been supplanted by young gentlemen, who swarm out every spring, by thousands, from hives placed on purpose, in the towns and cities. So many practisers not being able to earn a livelihood, if the medical art remained simple as before, have invented new remedies, which, with the help of new meats and drinks taken copiously, are every day giving birth to new diseases, or new appearances, which warrant the giving of new names. And from the number of competitors, as well as from the number and complexity of maladies, it has become so hard to succeed in practice, that I have taken compassion upon young candidates for medical advancement, and determined to offer them the lights of my experience touching the means of success.

IN YOUR TRAINING for the profession, do not trouble yourself with any private studies before you attend the lectures: it will only blunt the edge of your curiosity in listening to them, and take away their great charm, novelty. Besides, it will plant errors in your mind, which the professors will have to weed out, before they can make their own true notions take root. Let them have you as a blank sheet, upon which to write at once the soundest and purest doctrines. Do not even learn the meaning of any technical phrases before hand; but leave them as knots to untie for your amusement, as the lectures go on. It must add greatly to the interest you will feel; and it will require your attention to be intensely fixed upon the lecturer. Should these knots prove too hard to untie, that is, should the terms of art remain unintelligible to you; comfort yourself with the thought, that obscurity is a part of the sublime: and feast your fancy upon the depth and grandeur those words no doubt involve, if you could but understand them.—Lectures you must be sure to attend: as many courses as may suffice to get you a degree; because the name of a degree is a great thing. It will make you seem learned and wise, though you be neither; and enable you to look down with scorn upon those, who, by the mere vulgar dint of study, experience, kindness, and honesty, are winning the patronage and wealth that rightfully belong to none but the holders of diplomas.

Never dim your eyes and muddy your brain by reading many authors. A medical dictionary, and one or two books that quote a great many others, will furnish you with any quantity of technical phrases, and with the names of so many authors, that you may show off as a prodigy of learning at a very small expense of money, time, labor, or brains.

The ways of showing off are various. In conversation, deliver yourself in long sentences, strung together in speeches the very longest that your hearers will endure, and uttered with your utmost gravity, and weightiest emphasis. Make it a rule, never to use a word of one or two syllables, where a word of four, five, or six can be pressed into the service; and always to prefer a Greek, or at least a Latin term, to an English one. When you can express an idea by one, or a dozen words at your option, always choose the dozen: for this will make your discourse flowing; and that large class of men with whom words are coin, will

think it rich. Cite books and authors on all occasions: the more numerous and high-sounding, the better. Talk of them so familiarly, that the world may think them your most intimate acquaintance; as London dandies talk of lords and duchesses, of whom they know only the titles.* Discuss theories boldly. Compare Sydenham with Boerhaave: question Harvey's claim to the honor of having discovered the great circulation: balance the Buononian system with Darwin's; and blow Broussais sky high, as a fellow who would reduce the science to the mere art of starvation, no better than Sangrado's method of bleeding and hot water. However poor a truism you utter, nail it with authority, thus: 'Cullen and Brown inform us, that a cold, neglected, is apt either to affect the lungs, or to settle into rheumatism.' So have I heard a pretty gentleman say, "As Shakspeare observes, 'this is a very fine day.'"

Walk with a slow and solemn gait, as if pressed by a weight of anxiety for numerous patients. Mount your horse often; or if you have a sulky, it will be better; or a close carriage, best of all; and ride or drive as if life were at stake, by places where you will certainly be seen; and let it appear that you are going to see such and such persons, who are dangerously ill. Contrive now and then to have yourself called out from a dining party, or from your bed at midnight, to visit some imaginary patient; but in the latter case, be sure to let the messenger knock at your door loudly enough to wake several of your neighbors, who may hear him call for "Doctor" such a one!

When you happen at length to have a real patient, be mysterious; speak low; feel his pulse with your wisest look; smell the handle of your cane; and give a doubtful prognostic as to the event of his disease. Do not make light of his complaint, however trifling, or groundless; if it be only a finger ache, treat it seriously: examine—dress it—give physic—talk learnedly; and you will be certain in the end to make it a serious affair sure enough to him, and a profitable one to yourself, or else, if all your endeavors fail to aggravate it into a case of danger or difficulty, you may gain vast credit for so quick and easy a cure. Humor the appetites of your patients; despising the new-fangled plan, of starving out sickness. What is the surest attendant on disease? Weakness. And what is the opposite of weakness—the attendant and sign of health? why, strength. And what gives strength? Eating and drinking. Therefore, not only permit, but encourage your patients to eat and drink heartily; and if that produce any ill effects, do you counterwork them by physic. The great virtue of modern improvements in the healing art is, to let men feast on, and then save them from the ills which followed feasting in times of ignorance. One thing is certain: if this is not the best system for the patient, it is the best for the doctor.

You may get both name and money, by playing upon people's imaginations. About one half of every disease is either quite imaginary, or is the effect of imagination. Act upon this hint, and you may generally heighten a malady to what pitch you please, may create it entire, by feeding the patient's fancy. A hypochondriac, for instance, or a dyspeptic, will believe he has any disease you may name to him: and after you have physicked him to your satisfaction, you may by working his fancy

* Vide the Tale of a Tub.

the other way, often cure him again; unless you have carried the joke too far, and got him past operating upon. In that case, you have only to take care that the world shall know it was the obstinacy of his disorder, and not your treatment, that killed him. I would not recommend this method of making patients, however, unless they be scarce. If you have enough on hand without it, never resort to such an expedient: it is wanton; and conscience ought to be obeyed, when not at variance with interest.

In most cases, when a patient dies under your hands, you may say that you were sent for too late. Especially, if he was first in the care of another doctor, never fail to find something in his treatment, which gave a fatal turn to the malady. If you had been called in sooner (you should say or insinuate) you could have saved the patient.

As soon as you get somewhat ahead in your profession, lose no occasion of sneering at your competitors; above all, at the younger ones, just entering the lists. You will have a thousand opportunities of giving them sly cuts, and jostles, which may keep them down for a long time; perhaps till you be rich, and ready to leave the stage.

By following these precepts, and acting in their spirit whenever they do not literally apply, you cannot help rising high, and rolling in wealth.

CHAPTER II.

ADVICE TO NEWSPAPER EDITORS.

The first thing to be thought of is, what are the great ends of editing a newspaper? Of course, you will answer, first, to strengthen your party, and second, to raise and enrich yourself. Of course, too, you will not let the world know these to be your aims. That, as any simpleton may see, would baulk them at once. No, no. Make the world think, that your *country* is every thing with you; that your party is to be upheld only as a prop to your country; and that your humble self is nothing in your eyes, except as a worker for your party's, that is for your country's good. For you must constantly strive to impress every one with the idea, that your *party* and your *country* are the same thing.

A few hints, towards reaching the great ends which it is agreed you should aim at.

Print as many fine sentences as possible, about giving the people light, and about virtue, justice, and expansion of mind: but confine yourself to generalities on these topics. Do not devote any portion of your paper regularly to the elucidation of such truths as really enlarge or refine the public mind: because, in proportion as that is done, the public will become less and less apt to allow you the influence which it is my design to shew you how to obtain. For instance, while you strenuously aver your zeal for morality, do not scruple to support as a candidate for office, a man whose life has been glaringly immoral: and let no paragraph in behalf of the temperance reform (as it is called), or any other such stuff, enter your columns. Indeed, so many preachers, and weak people influenced by them, have enlisted in this temperance cause, that it deserves only a sneer, as a vulgar fanaticism. At all

events, a sufficient reason why you should discountenance it is, that a cool-headed, sober people are the very last to suit your purposes.

There is one sort of subjects, alone, that should fill any large space in your journal; and that is politics; I mean, party politics. What Demosthenes said of action in speaking, you should hold with regard to politics: make it the first, the second, and the third requisite—the beginning, the middle, and the end, of your newspaper. But do not attempt to take in the whole field. In politics, there are always two sides; one of which is your's and your party's, or the orthodox side; the other is your adversaries', or the wrong side. For '*orthodoxy*' signifies 'your opinions;' and '*heresy*' or '*heterodoxy*' signifies 'opinions opposite to yours,' that is, 'wrong opinions.' Now, let your journal shew forth the merits of none but the orthodox side. Hide the opposite from your readers, with the care of a duenna. Thus, if you are for a particular measure, or system of measures, never print a single argument against it: if you are against it, let no one dream, for you, that a word can be said in its favor. If you are a Clay-man, a Webster-man, or anybody's man (and somebody's man you must be), suppress whatever may raise the slightest suspicion that your favorite has a single fault, or his rival a single virtue. In a word, use all your power to make your own side seem bright, and spotless; and the other side, black as pitch.

When you wish to refute something which, as a whole, is too hard for you, never copy it all into your columns; but only the most vulnerable passages. These, thus 'torn from their context,' like stragglers from a hostile army, you may demolish with perfect ease. In this way, an adversary may be cut up in the finest style, who, if you let him come fully before your readers, may give you no small trouble. The way some editors have, of spreading out in their own papers whatever they mean to combat, (under the romantic notion of shewing their readers both sides) is mere knight-errantry; giving the adversary a foothold within their own camp: a weakness not at all enjoined by modern chivalry.

Able speeches and essays against your party, require especial caution; because there is danger lest your readers chance to see them, and imbibe a heresy that cannot be driven out. Never slight such, therefore, altogether; but publish what may seem their purport; only so abridged, as to be harmless. And always accompany your abridgment with long comments of your own or of some brother partisan, which, in its enfeebled state, may crush it entirely; or at least may forestall the reader's mind so as to prevent its effect upon him. For the editor's remarks are always first read.

Should any one have the hardihood to send you for publication an essay on the other side, do not flatly refuse; for that would give too palpable a ground for calling you unfair and illiberal: but contrive to be much pressed for space just then; or let documents, or essays which have prior claims, or some other imaginable thing, crowd out the intruder: till at length, either he will lose patience and withdraw his piece in disgust; or the nick of time he wrote for, will have passed away, and his readers (if any) will wonder what ails that fellow—to be opening upon a cold trail. If you can find no excuse for delay, or if delay have not

the desired effect, smother the piece by putting it in some obscure part of your sheet, where not one eye in ten, of your readers, ever fixes. Or hold it back at any rate until you can write and publish a refutation, or what you may swear is one: thus, like a wise doctor, making the antidote go with the poison. But whichever course you take, protest loudly your love for the liberty of the press, and for free discussion: and glorify your own liberality, in publishing a piece against yourself.

There are two other ways of crippling such an adversary. One is, to misprint him; so that the best passages may lose their point and force, by having their chief words turned into others of either no meaning, or a wrong one. The other is, to leave out any passage, even a whole paragraph or more, that galls you or your side very severely. By this method, many a home thrust has fallen to the ground: and by the former, pithy sentences have become such nonsense, that readers would turn from them with contempt, and the author sicken at the silly figure he made.

You may get a great name for candor, at a cheap rate, by sometimes owning yourself in the wrong, about some trifle; or even about a point of consequence, when you see your mistake or falsehood on the verge of exposure. One such confession will gain you a credit, upon which you may pass off a hundred distortions or concealments of truth.

By such means, all who read no paper but yours, will in time come to regard you as infallible. Among them, all heresy will be rooted out: and if all other presses would act with you, orthodoxy would completely triumph. But as this is not yet to be hoped for, you may rest content with two, great benefits, sure to result from the plan here recommended. First, your party, seeing no merits in any other creed, or editor, will keep true to its creed, and to you; nay, perhaps will vanquish its adversary: and secondly, both parties, unable to discern any reason for each other's opinions, will be animated to that patriotic readiness to tear one another in pieces, which is so advantageous to the community, and especially to party leaders and trumpeters.

It is thus, that in certain parts of the world, particular opinions have reigned supreme. It was thus, that in some states of this Union, the tariff at one time so signally triumphed. It is thus, that among certain sets of people at this day, notions, of which the truth is very questionable, are held as axioms. Their newspapers and other oracles, watchfully exclude everything that may excite a doubt as to those notions. It was thus that Europe was lulled for centuries in the arms of the Holy Catholic faith, whose doctors, by wisely locking up the Bible from their flocks, and by those persuasive arguments, the rack and the stake, effectually banished all heresy, till the rebel, Martin Luther, shewed mankind the other side of the question. And it is by kindred means, that now, in Turkey and Russia, eighty millions of people are made to repose in the quiet belief, that the Sultan and the Czar have a divine right to cut off as many heads as may suit their royal pleasure. It would be Utopian perhaps, to hope that in our time at least equal harmony can be produced in this country; but no doubt a great deal may be done by faithfully observing the foregoing counsel. Each

editor may secure a Turkish unanimity, a catholic belief in his own infallibility, amongst his readers; which, by proper co-operation, may be extended to those of all the kindred presses; that is, to half, or more, of the community. And, that progress being made, why may we not hope, in less than a century, to see orthodoxy universal?

THE RICHMOND LYCEUM, AND ITS JOURNAL.

An Association in this city, bearing the name of the "Richmond Lyceum," formed with a view to the improvement of its members and the encouragement of literary taste and scientific knowledge, will soon commence the publication of a monthly magazine, to be called "THE JOURNAL OF THE RICHMOND LYCEUM;" at the moderate price of one dollar and a half per annum.

The resemblance of character and objects, between this association and the Franklin Institute of Philadelphia, it may be hoped, will exist also between the proposed magazine, and the justly esteemed 'Journal of the Franklin Institute.' That Institute and its journal, we believe, by diffusing useful knowledge in popular forms, have done and are doing an amount of good scarcely surpassed by any other kindred enterprise in the world. May they be successfully emulated, by the young institution in Richmond! A fuller notice will be taken of the latter, hereafter.

NEGLECT OF TIME.

BY J. C. BRENT.

The clock is to the eye
What reason 's to the soul;
Yet moments hasten by,
And man heeds not their roll:

In dreams forgets the hour
Which silently goes on,
Until 'tis past his pow'r
To call back what is gone.

In vain the clock doth sound
Its warnings on the ear;
In folly's meshes bound,
He has not time to hear.

Though reason points the way,
And profit may await,
He learns not to obey,
Until it is too late.

He seems to pass through life,
As if it had no close,
As if it were not rife
With vanity and woe.

He marks with heedless eye
The hours receding fast,
Till time for him must die,
And hope depart at last.

LORD BACON.*

PART I.

HIS LIFE, AND CHARACTER.

Birth—education—father's death—his uncle, Lord Burleigh, and cousin, Robert Cecil—their jealousy—his law-studies—disappointments—figure in Parliament—his patriotism rebuked—abject submission—friendship and generosity of Essex—Bacon's *Essays*—fall of Essex, and Bacon's ingratitude—death of Queen Elizabeth—accession of James I.—his character—Bacon's knighthood and marriage—Bacon and Waller compared—successive promotions—his treatise on the "Advancement of Learning"—other works—his oppression of Peacham—Coke's manly resistance—Bacon's patron, Villiers, Duke of Buckingham—Bacon made Councillor,—Lord Keeper,—and Lord Chancellor—his corruptions as judge—impeachment—conviction and disgrace—sentence—pardon—literary pursuits—death.

FRANCIS BACON, the youngest son of Sir Nicholas Bacon, was born at York House, his father's residence in the Strand, on the 22d of January, 1561. His health was very delicate, and to this circumstance may be partly attributed that gravity of carriage, and that love of sedentary pursuits, which distinguished him from other boys. Every body knows how much his premature readiness of wit, and sobriety of deportment, amused the Queen; and how she used to call him her young Lord Keeper. We are told that while still a mere child, he stole away from his playfellows to a vault in St. James's fields, for the purpose of investigating the cause of a singular echo which he had observed there. It is certain that, at only twelve, he busied himself with very ingenious speculations on the art of legerdemain,—a subject which, as Professor Dugald Stewart has most justly observed, merits much more attention from philosophers than it has ever received. These are trifles. But the eminence which Bacon afterwards attained renders them interesting.

In the thirteenth year of his age, he was entered at

* The *Edinburg Review* for July contains an article of great length, but far greater ability, upon Basil Montagu's voluminous edition of Bacon's works, and history of his life. The article so teems with interesting facts, and contains what we take to be so just a view of Bacon's character, and so clear as well as just an exposition of his philosophy, that we cannot forbear enabling all our readers to share the pleasure and benefit derivable from the perusal. To this end, we call those paragraphs and pages which are necessary to present an unbroken thread of narrative or of disquisition, and print them continuously; omitting little, besides the reviewer's discussions with Mr. Montagu, of some points on which that gentleman, with the amiable though too common weakness of biographers, is a mere apologist for his hero. The portions thus culled, we arrange in three divisions, with a table of contents to each; the first containing the Reviewer's sketch of Lord Bacon's life and character, and the other two a view of his philosophy—and a triumphant contrast of its useful aims, with the sounding emptiness of that taught by the ancient philosophers. We give translations of the passages in foreign tongues; hoping that unlearned as well as learned readers, will be attracted by this masterly performance. And we have tried so to mould the several parts together, and give it so much the appearance of a consistent whole, that no one might suppose it to be other than an original and independent Life of Bacon, and account of his works, but for this declaration to the contrary.

No reader will finish this article, exhibiting the amazing intellect and weak (not bad) heart of the wonderful man & commemorates, without regarding as literally true, that line which calls him

"The greatest, wisest, meanest,—of mankind."

Trinity College, Cambridge. It has often been said that Bacon, while still at college, planned that great intellectual revolution with which his name is inseparably connected. The evidence on this subject, however, is hardly sufficient to prove what is in itself so improbable, as that any definite scheme of that kind should have been so early formed, even by so powerful and active a mind. But it is certain, that after a residence of three years at Cambridge, Bacon departed, carrying with him a profound contempt for the course of study pursued there; a fixed conviction that the system of academic education in England was radically vicious; a just scorn for the trifles on which the followers of Aristotle had wasted their powers, and no great reverence for Aristotle himself.

In his sixteenth year, he visited Paris, and resided there for some time, under the care of Sir Amias Paulet, Elizabeth's minister at the French court, and one of the ablest and most upright of the many valuable servants whom she employed. France was at that time in a deplorable state of agitation. The Huguenots and the Catholics were mustering all their forces for the fiercest and most protracted of their many struggles: while the Prince, whose duty it was to protect and to restrain both, had by his vices and follies degraded himself so deeply that he had no authority over either. Bacon, however, made a tour through several provinces, and appears to have passed some time at Poitiers. We have abundant proof that during his stay on the Continent he did not neglect literary and scientific pursuits. But his attention seems to have been chiefly directed to statistics and diplomacy. It was at this time that he wrote those *Notes on the State of Europe* which are printed in his works. He studied the principles of the art of deciphering with great interest; and invented one cipher so ingenious that, many years later, he thought it deserving of a place in the *De Augmentis*. In February, 1580, while engaged in these pursuits, he received intelligence of the almost sudden death of his father, and instantly returned to England.

His prospects were greatly overcast by this event. He was most desirous to obtain a provision which might enable him to devote himself to literature and politics. He applied to the Government, and it seems strange that he should have applied in vain. His wishes were moderate. His hereditary claims on the administration were great. He had himself been favorably noticed by the Queen. His uncle was Prime Minister. His own talents were such as any minister might have been eager to enlist in the public service. But his solicitations were unsuccessful. The truth is, that the Cecils disliked him, and did all that they could decently do to keep him down. It has never been alleged that Bacon had done anything to merit this dislike; nor is it at all probable that a man whose temper was naturally mild, whose manners were courteous, who, through life, nursed his fortunes with the utmost care, and who was fearful even to a fault of offending the powerful—would have given any just cause of displeasure to a kinsman who had the means of rendering him essential service, and of doing him irreparable injury. The real explanation, we have no doubt, is this: Robert Cecil, the Treasurer's second son, was younger by a few months than Bacon. He had been educated with the utmost care; had been initiated, while still a

boy, in the mysteries of diplomacy and court-intrigue; and was just at this time about to be produced on the stage of public life. The wish nearest to Burleigh's heart was that his own greatness might descend to this favorite child. But even Burleigh's fatherly partiality could hardly prevent him from perceiving that Robert, with all his abilities and acquirements, was no match for his cousin Francis. That Bacon himself attributed the conduct of his relatives to jealousy of his superior talents, we have not the smallest doubt. In a letter, written many years after to Villiers, he expresses himself thus:—"Countenance, encourage, and advance able men in all kinds, degrees, and professions. For in the time of the *Cecils*, the father and the son, able men were by design and of purpose suppressed."

Whatever Burleigh's motives might be, his purpose was unalterable. The supplications which Francis addressed to his uncle and aunt were earnest, humble, and almost servile. He was the most promising and accomplished young man of his time. His father had been the brother-in-law, the most useful colleague, the nearest friend of the minister. But all this availed poor Francis nothing. He was forced, much against his will, to betake himself to the study of the law. He was admitted at Gray's Inn, and, during some years, he labored there in obscurity.

What the extent of his legal attainments may have been, it is difficult to say. It was not hard for a man of his powers to acquire that very moderate portion of technical knowledge which, when joined to quickness, tact, wit, ingenuity, eloquence, and knowledge of the world, is sufficient to raise an advocate to the highest professional eminence. The general opinion appears to have been that which was on one occasion expressed by Elizabeth. "Bacon," said she, "hath a great wit and much learning; but in law sheweth to the uttermost of his knowledge, and is not deep." The *Cecils*, we suspect, did their best to spread this opinion by whispers and insinuations. Coke openly proclaimed it with that rancorous insolence which was habitual to him. No reports are more readily believed than those which disparage genius and soothe the envy of conscious mediocrity. It must have been inexpressibly consoling to a stupid sergeant,—the forerunner of him who, a hundred and fifty years later, "shook his head at Murray as a wit,"—to know that the most profound thinker, and the most accomplished orator of the age, was very imperfectly acquainted with the law touching *bastard signé* and *mulier puisné*, and confounded the right of free fishery with that of common piscary.

It is certain that no man in that age, or indeed during the century and a half which followed, was better acquainted with the philosophy of law. His technical knowledge was quite sufficient, with the help of his admirable talents, and his insinuating address, to procure clients. He rose very rapidly into business, and soon entertained hopes of being called within the bar. He applied to Lord Burleigh for that purpose, but received a testy refusal. Of the grounds of that refusal we can in some measure judge by Bacon's answer, which is still extant. It seems that the old Lord, whose temper, age and gout had by no means altered for the better, and who omitted no opportunity of marking his dislike of the showy, quick-witted young men of the rising generation, took this opportunity to read Francis a very

sharp lecture on his vanity, and want of respect for his betters. Francis returned a most submissive reply, thanked the Treasurer for the admonition, and promised to profit by it. Strangers meanwhile were less unjust to the young barrister than his nearest kinsmen had been. In his twenty-sixth year he became a bench-er of his Inn; and two years later he was appointed Lent reader. At length, in 1590, he obtained for the first time some show of favor from the Court. He was sworn in Queen's Counsel extraordinary. But this mark of honor was not accompanied by any pecuniary emolument. He continued, therefore, to solicit his powerful relatives for some provision which might enable him to live without drudging at his profession. He bore with a patience and serenity which, we fear, bordered on meanness, the morose humors of his uncle, and the sneering reflections which his cousin cast on speculative men, lost in philosophical dreams, and too wise to be capable of transacting public business. At length the *Cecils* were generous enough to procure for him the reversion of the Registrarship of the Star Chamber. This was a lucrative place, but as many years elapsed before it fell in, he was still under the necessity of laboring for his daily bread.

In the Parliament which was called in 1593 he sat as member for the county of Middlesex, and soon attained eminence as a debater. It is easy to perceive from the scanty remains of his oratory, that the same compactness of expression and richness of fancy which appear in his writings characterized his speeches; and that his extensive acquaintance with literature and history enabled him to entertain his audience with a vast variety of illustrations and allusions which were generally happy and apposite, but which were probably not least pleasing to the taste of that age when they were such as would now be thought childish or pedantic. It is evident also that he was, as indeed might have been expected, perfectly free from those faults which are generally found in an advocate who, after having risen to eminence at the bar, enters the House of Commons; that it was his habit to deal with every great question, not in small detached portions, but as a whole; that he refined little, and that his reasonings were those of a capacious rather than a subtle mind. Ben Jonson, a most unexceptionable judge, has described his eloquence in words, which, though often quoted, will bear to be quoted again. "There happened in my time one noble speaker who was full of gravity in his speaking. His language, where he could spare or pass by a jest, was nobly censorious. No man ever spoke more neatly, more pressy, more weightily, or suffered less emptiness, less idleness, in what he uttered. No member of his speech but consisted of his own graces. His hearers could not cough or look aside from him without loss. He commanded where he spoke, and had his judges angry and pleased at his devotion. No man had their affections more in his power. The fear of every man that heard him was lest he should make an end." From the mention which is made of *judges*, it would seem that Jonson had heard Bacon only at the bar. Indeed we imagine that the House of Commons was then almost inaccessible to strangers. It is not probable that a man of Bacon's nice observation would speak in Parliament exactly as he spoke in the Court of King's Bench. But the graces of manner and lan-

guage must to a great extent, have been common between the Queen's Counsel and the Knight of the Shire.

Bacon tried to play a very difficult game in politics. He wished to be at once a favorite at Court and popular with the multitude. If any man could have succeeded in this attempt, a man of talents so rare, of judgment so prematurely ripe, of temper so calm, and of manners so plausible, might have been expected to succeed. Nor indeed did he wholly fail. Once, however, he indulged in a burst of patriotism which cost him a long and bitter remorse, and which he never ventured to repeat. The Court asked for large subsidies, and for speedy payment. The remains of Bacon's speech breathe all the spirit of the Long Parliament. "The gentlemen," said he, "must sell their plate, and the farmers their brass pots, ere this will be paid; and for us, we are here to search the wounds of the realm, and not to skin them over. The dangers are these. First, we shall breed discontent and endanger her Majesty's safety, which must consist more in the love of the people than their wealth. Secondly, this being granted in this sort, other princes hereafter will look for the like; so that we shall put an evil precedent on ourselves and on our posterity; and in histories, it is to be observed, of all nations the English are not to be subject, base, or taxable." The Queen and her ministers resented this outbreak of public spirit in the highest manner. Indeed, many an honest member of the House of Commons had, for a much smaller matter, been sent to the Tower by the proud and hot-blooded Tudors. The young patriot condescended to make the most abject apologies. He adjured the Lord Treasurer to show some favor to his poor servant and ally. He bemoaned himself to the Lord Keeper, in a letter which may keep in countenance the most unmanly of the epistles which Cicero wrote during his banishment. The lesson was not thrown away. Bacon never offended in the same manner again.

He was now satisfied that he had little to hope from the patronage of those powerful kinsmen whom he had solicited during twelve years with such meek pertinacity; and he began to look towards a different quarter. Among the courtiers of Elizabeth, had lately appeared a new favorite,—young, noble, wealthy, accomplished, eloquent, brave, generous, aspiring,—a favorite who had obtained from the grey-headed queen such marks of regard as she had scarce vouchsafed to Leicester in the season of the passions; who was at once the ornament of the palace and the idol of the city; who was the common patron of men of letters and of men of the sword; who was the common refuge of the persecuted Catholic and of the persecuted Puritan. The calm prudence which had enabled Burleigh to shape his course through so many dangers, and the vast experience which he had acquired in dealing with two generations of colleagues and rivals, seemed scarcely sufficient to support him in this new competition; and Robert Cecil sickened with fear and envy as he contemplated the rising fame and influence of Essex.

Nothing in the political conduct of Essex entitles him to esteem; and the pity with which we regard his early and terrible end, is diminished by the consideration, that he put to hazard the lives and fortunes of his most attached friends, and endeavored to throw the

whole country into confusion for objects purely personal. Still, it is impossible not to be deeply interested for a man so brave, high spirited, and generous;—for a man who, while he conducted himself towards his sovereign with a boldness such as was then found in no other subject, conducted himself towards his dependants with a delicacy such as has rarely been found in any other patron. Unlike the vulgar herd of benefactors, he desired to inspire, not gratitude, but affection. He tried to make those whom he befriended feel towards him as towards an equal. His mind, ardent, susceptible, naturally disposed to admiration of all that is great and beautiful, was fascinated by the genius and the accomplishments of Bacon. A close friendship was soon formed between them,—a friendship destined to have a dark, a mournful, a shameful end.

In 1594 the office of Attorney-General became vacant, and Bacon hoped to obtain it. Essex made his friend's cause his own,—sued, expostulated, promised, threatened,—but all in vain. It is probable that the dislike felt by the Cecils for Bacon had been increased by the connexion which he had lately formed with the Earl. Robert was then on the point of being made Secretary of State. He happened one day to be in the same coach with Essex, and a remarkable conversation took place between them. "My Lord," said Sir Robert, "the Queen has determined to appoint an Attorney-General without more delay. I pray your Lordship to let me know whom you will favor." "I wonder at your question," replied the Earl. "You cannot but know that resolutely, against all the world, I stand for your cousin, Francis Bacon." "Good Lord!" cried Cecil, unable to bridle his temper, "I wonder your Lordship should spend your strength on so unlikely a matter. Can you name one precedent of so raw a youth promoted to so great a place?" This objection came with a singularly bad grace from a man who, though younger than Bacon, was in daily expectation of being made Secretary of State. The blot was too obvious to be missed by Essex, who seldom forebore to speak his mind. "I have made no search," said he, "for precedents of young men who have filled the office of Attorney-General; but I could name to you, Sir Robert, a man younger than Francis, less learned, and equally inexperienced, who is suing and striving with all his might for an office of far greater weight." Sir Robert had nothing to say but that he thought his own abilities equal to the place which he hoped to obtain; and that his father's long services deserved such a mark of gratitude from the Queen,—as if his abilities were comparable to his cousin's, or as if Sir Nicholas Bacon had done no service to the State. Cecil then hinted that if Bacon would be satisfied with the Solicitorship, that might be of easier digestion to the Queen. "Digest me no digestions," said the generous and ardent Earl. "The Attorneyship for Francis is that I must have; and in that I will spend all my power, might, authority, and amity; and with tooth and nail procure the same for him against whomsoever; and whosoever getteth this office out of my hands for any other, before he have it, it shall cost him the coming by. And this be you assured of, Sir Robert, for now I fully declare myself; and for my own part, Sir Robert, I think strange both of my Lord Treasurer and you, that can have the mind to seek the preference of a stranger before so near a kinsman; for

if you weigh in a balance the parts every way of his competitor and him, only excepting five poor years of admitting to a house of court before Francis, you shall find in all other respects whatsoever no comparison between them."

When the office of Attorney-General was filled up, the Earl pressed the Queen to make Bacon Solicitor-General, and, on this occasion, the old Lord Treasurer professed himself not unfavorable to his nephew's pretensions. But after a contest which lasted more than a year and a half, and in which Essex, to use his own words, "spent all his power, might, authority, and amity," the place was given to another. Essex felt this disappointment keenly, but found consolation in the most munificent and delicate liberality. He presented Bacon with an estate, worth near two thousand pounds, situated at Twickenham; and this, as Bacon owned many years after, "with so kind and noble circumstances, as the manner was worth more than the matter."

It was soon after these events that Bacon first appeared before the public as a writer. Early in 1597 he published a small volume of Essays, which was afterwards enlarged, by successive editions, to many times its original bulk. This little work was, as it well deserved to be, exceedingly popular. It was reprinted in a few months; it was translated into Latin, French and Italian, and it seems to have at once established the literary reputation of its author. But though Bacon's reputation rose, his fortunes were still depressed. He was in great pecuniary difficulties; and on one occasion was arrested in the street at the suit of a goldsmith, for a debt of 300*l.*, and was carried to a spunging-house in Coleman street.

The kindness of Essex was in the meantime indefatigable. In 1596 he sailed on his memorable expedition to the coast of Spain. At the very moment of his embarkation, he wrote to several of his friends, commending to them, during his own absence, the interests of Bacon. He returned, after performing the most brilliant military exploit that was achieved on the Continent by English arms, during the long interval which elapsed between the battle of Agincourt and that of Blenheim. His valor, his talents, his humane and generous disposition, had made him the idol of his countrymen, and had extorted praise from the enemies whom he had conquered. He had always been proud and headstrong; and his splendid success seems to have rendered his faults more offensive than ever. But to his friend Francis he was still the same. Bacon had some thoughts of making his fortune by marriage; and had begun to pay court to a widow of the name of Hatton. The eccentric manners and violent temper of this woman, made her a disgrace and a torment to her connections. But Bacon was not aware of her faults, or was disposed to overlook them for the sake of her ample fortune. Essex pleaded his friend's cause with his usual ardor. The letters which the Earl addressed to Lady Hatton and to her mother are still extant, and are highly honorable to him. "If," he wrote, "she were my sister or my daughter, I protest I would as confidently resolve to further it as I now persuade you." And again—"If my faith be anything, I protest, if I had one as near me as she is to you, I had rather match her with him, than with men of far greater titles." The suit, happily for Bacon, was unsuccessful. The lady

indeed was kind to him in more ways than one. She rejected him, and she accepted his enemy. She married that narrow-minded, bad-hearted pedant, Sir Edward Coke, and did her best to make him as miserable as he deserved to be.

The fortunes of Essex had now reached their height, and began to decline. The person on whom, during the decline of his influence, he chiefly depended,—to whom he confided his perplexities, whose advice he solicited, whose intercession he employed,—was his friend Bacon. The lamentable truth must be told. This friend, so loved, so trusted, bore a principal part in ruining the Earl's fortunes, in shedding his blood, and in blackening his memory.

But let us be just to Bacon. We believe that, to the last, he had no wish to injure Essex. Nay, we believe that he sincerely exerted himself to serve Essex, as long as he thought he could serve Essex without injuring himself. The advice which he gave to his noble benefactor was generally most judicious. He did all in his power to dissuade the Earl from accepting the Government of Ireland. "For," says he, "I did as plainly see his overthrow, chained as it were by destiny to that journey, as it is possible for a man to ground a judgment upon future contingents." The prediction was accomplished. Essex returned in disgrace. Bacon attempted to mediate between his friend and the Queen; and, we believe, honestly employed all his address for that purpose. But the task which he had undertaken was too difficult, delicate, and perilous, even for so wary and dexterous an agent. He had to manage two spirits equally proud, resentful, and ungovernable. At Essex House, he had to calm the rage of a young hero, incensed by multiplied wrongs and humiliations; and then to pass to Whitehall for the purpose of soothing the peevishness of a sovereign, whose temper, never very gentle, had been rendered morbidly irritable by age, by declining health, and by the long habit of listening to flattery and exacting implicit obedience. It is hard to serve two masters. Situated as Bacon was, it was scarcely possible for him to shape his course, so as not to give one or both of his employers reason to complain. For a time he acted as fairly as, in circumstances so embarrassing, could reasonably be expected. At length, he found that while he was trying to prop the fortunes of another, he was in danger of shaking his own. He had disobliger both the parties whom he wished to reconcile. Essex thought him wanting in zeal as a friend—Elizabeth thought him wanting in duty as a subject. The Earl looked on him as a spy of the Queen, the Queen as a creature of the Earl. The reconciliation which he had labored to effect appeared utterly hopeless. A thousand signs, legible to eyes far less keen than his, announced that the fall of his patron was at hand. He shaped his course accordingly. When Essex was brought before the council to answer for his conduct in Ireland, Bacon, after a faint attempt to excuse himself from taking part against his friend, submitted himself to the Queen's pleasure, and *appeared at the bar in support of the charges*. But a darker scene was behind. The unhappy young nobleman, made reckless by despair, ventured on a rash and criminal enterprise, which rendered him liable to the highest penalties of the law. What course was Bacon to take? This was one of those conjunctures which show what

men are. To a highminded man, wealth, power, court-favor, even personal safety, would have appeared of no account, when opposed to friendship, gratitude, and honor. Such a man would have stood by the side of Essex at the trial,—would have “spent all his power, might, authority, and amity,” in soliciting a mitigation of the sentence,—would have been a daily visitor at the cell,—would have received the last injunctions and the last embrace on the scaffold,—would have employed all the powers of his intellect to guard from insult the fame of his generous, though erring friend. An ordinary man would neither have incurred the danger of succoring Essex, nor the disgrace of assailing him. Bacon did not even preserve neutrality. He appeared as counsel for the prosecution. In that situation, he did not confine himself to what would have been amply sufficient to procure a verdict. He employed all his wit, his rhetoric, and his learning,—not to ensure a conviction, for the circumstances were such that a conviction was inevitable,—but to deprive the unhappy prisoner of all those excuses which, though legally of no value, yet tended to diminish the moral guilt of the crime; and which, therefore, though they could not justify the peers in pronouncing an acquittal, might incline the Queen to grant a pardon. The Earl urged as a palliation of his frantic acts, that he was surrounded by powerful and inveterate enemies, that they had ruined his fortunes, that they sought his life, and that their persecutions had driven him to despair. This was true, and Bacon well knew it to be true. But he affected to treat it as an idle pretence. He compared Essex to Pisistratus, who, by pretending to be in imminent danger of assassination, and by exhibiting self-inflicted wounds, succeeded in establishing tyranny at Athens. This was too much for the prisoner to bear. He interrupted his ungrateful friend, by calling on him to quit the part of an advocate,—to come forward as a witness, and tell the Lords whether, in old times, he, Francis Bacon, had not under his own hand, repeatedly asserted the truth of what he now represented as idle pretences. It is painful to go on with this lamentable story. Bacon returned a shuffling answer to the Earl's question: and, as if the allusion to Pisistratus were not sufficiently offensive, made another allusion still more unjustifiable. He compared Essex to Henry Duke of Guiso, and the rash attempt in the city, to the day of the barricades at Paris. Why Bacon had recourse to such a topic, it is difficult to say. It was quite unnecessary for the purpose of obtaining a verdict. It was certain to produce a strong impression on the mind of the haughty and jealous princess on whose pleasure the Earl's fate depended. The faintest allusion to the degrading tutelage in which the last Valois had been held by the house of Lorraine, was sufficient to harden her heart against a man who in rank, in military reputation, in popularity among the citizens of the capital, bore some resemblance to the Captain of the League. Essex was convicted. Bacon made no effort to save him, though the Queen's feelings were such, that he might have pleaded his benefactor's cause, possibly with success, certainly without any serious danger to himself. The unhappy nobleman was executed. His fate excited strong, perhaps unreasonable feelings of compassion and indignation. The Queen was received by the citizens of London with gloomy looks and faint accla-

mations. She thought it expedient to publish a vindication of her late proceedings. The faithless friend who had assisted in taking the Earl's life was now employed to murder the Earl's fame. The Queen had seen some of Bacon's writings, and had been pleased with them. He was accordingly selected to write “A Declaration of the practices and treasons attempted and committed by Robert, Earl of Essex,” which was printed by authority. In the succeeding reign, Bacon had not a word to say in defence of this performance—a performance, abounding in expressions which no generous enemy would have employed respecting a man who had so dearly expiated his offences. His only excuse was, that he wrote it by command,—that he considered himself as a mere secretary,—that he had particular instructions as to the way in which he was to treat every part of the subject,—and that, in fact, he had furnished only the arrangement and the style.

The real explanation of all this is perfectly obvious; and nothing but a partiality amounting to a ruling passion, could cause any body to miss it. The moral qualities of Bacon were not of a high order. We do not say that he was a bad man. He was not inhuman or tyrannical. He bore with meekness his high civil honors, and the far higher honors gained by his intellect. He was very seldom, if ever, provoked into treating any person with malignity and insolence. No man more readily held up the left cheek to those who had smitten the right. No man was more expert at the soft answer which turneth away wrath. He was never accused of intemperance in his pleasures. His even temper, his flowing courtesy, the general respectability of his demeanor, made a favorable impression on those who saw him in situations which do not severely try the principles. His faults were—we write it with pain—coldness of heart and meanness of spirit. He seems to have been incapable of feeling strong affection, of facing great dangers, of making great sacrifices. His desires were set on things below. Wealth, precedence, titles, patronage,—the mace, the seals, the coronet,—large houses, fair gardens, rich manors, massy services of plate, gay hangings, curious cabinets,—had as great attractions for him as for any of the courtiers who dropped on their knees in the dirt when Elizabeth passed by, and then hastened home to write to the King of Scots that her Grace seemed to be breaking fast. For these objects he had stooped to everything and endured everything. For these he had sued in the humblest manner, and when unjustly and ungraciously repulsed, had thanked those who had repulsed him, and had begun to sue again. For these objects, as soon as he found that the smallest show of independence in Parliament was offensive to the Queen, he had abased himself to the dust before her, and implored forgiveness, in terms better suited to a convicted thief than to a knight of the shire. For these he joined, and for these he forsook Lord Essex. He continued to plead his patron's cause with the Queen, as long as he thought that by pleading that cause he might serve himself. Nay, he went further—for his feelings, though not warm, were kind—he pleaded that cause as long as he thought he could plead it without injury to himself. But when it became evident that Essex was going headlong to his ruin, Bacon began to tremble for his own

fortunes. What he had to fear would not indeed have been very alarming to a man of lofty character. It was not death. It was not imprisonment. It was the loss of court favor. It was the being left behind by others in the career of ambition. It was the having leisure to finish the *Instauratio Magna*. The Queen looked coldly on him. The courtiers began to consider him as a marked man. He determined to change his line of conduct, and to proceed in a new course with so much vigor as to make up for lost time. When once he had determined to act against his friend, knowing himself to be suspected, he acted with more zeal than would have been necessary or justifiable if he had been employed against a stranger. He exerted his professional talents to shed the Earl's blood, and his literary talents to blacken the Earl's memory. It is certain that his conduct excited at the time great and general disapprobation. While Elizabeth lived, indeed, this disapprobation, though deeply felt, was not loudly expressed. But a great change was at hand.

The health of the Queen had long been decaying; and the operation of age and disease was now assisted by acute mental suffering. The pitiable melancholy of her last days has generally been ascribed to her fond regret for Essex. But we are disposed to attribute her dejection partly to physical causes, and partly to the conduct of her courtiers and ministers. They did all in their power to conceal from her the intrigues which they were carrying on at the Court of Scotland. But her keen sagacity was not to be so deceived. She did not know the whole. But she knew that she was surrounded by men who were impatient for that new world which was to begin at her death,—who had never been attached to her by affection,—and who were now but very slightly attached to her by interest. Prostration and flattery could not conceal from her the cruel truth, that those whom she had trusted and promoted had never loved her, and were fast ceasing to fear her. Unable to avenge herself, and too proud to complain, she suffered sorrow and resentment to prey on her heart, till, after a long career of power, prosperity and glory, she died, sick and weary of the world.

James mounted the throne; and Bacon employed all his address to obtain for himself a share of the favor of his new master. This was no difficult task. The faults of James, both as a man and as a prince, were numerous; but insensibility to the claims of genius and learning was not amongst them. He was indeed made up of two men,—a witty, well-read scholar, who wrote, disputed, and harangued,—and a nervous drivelling idiot, who acted. If he had been a Canon of Christ Church, or a Prebendary of Westminster, it is not improbable that he would have left a highly respectable name to posterity,—that he would have distinguished himself among the translators of the Bible, and among the Divines who attended the Synod of Dort,—that he would have been regarded by the literary world as no contemptible rival of Vossius and Casaubon. But fortune placed him in a situation in which his weakness covered him with disgrace; and in which his accomplishments brought him no honor. In a college, much eccentricity and childishness would have been readily pardoned in so learned a man. But all that learning could do for him on the throne, was to make people think him a pedant as well as a fool.

Bacon was favorably received at Court; and soon found that his chance of promotion was not diminished by the death of the Queen. He was solicitous to be knighted—for two reasons—which are somewhat amusing. The King had already dubbed half London, and Bacon found himself the only untitled person in his mess at Gray's Inn. This was not very agreeable to him. He had also, to quote his own words, "found an Alderman's daughter, a handsome maiden, to his liking." On both these grounds, he begged his cousin Robert Cecil, "if it might please his good Lordship" to use his interest in his behalf. The application was successful. Bacon was one of three hundred gentlemen who, on the coronation-day, received the honor, if it is to be so called, of knighthood. The handsome maiden, a daughter of Alderman Barnham, soon after consented to become Sir Francis's lady.

The unfavorable impression which Bacon's conduct had made, appears to have been gradually effaced. Indeed it must be some very peculiar cause that can make a man like him long unpopular. His talents secured him from contempt, his temper and his manners from hatred. There is scarcely any story so black that it may not be got over by a man of great abilities, whose abilities are united with caution, good-humor, patience, and affability,—who pays daily sacrifice to Nemesis, who is a delightful companion, a serviceable though not an ardent friend, and a dangerous yet a placable enemy. Waller in the next generation was an eminent instance of this. Indeed Waller had much more than may at first sight appear in common with Bacon. To the higher intellectual qualities of the great English philosopher,—to the genius which has made an immortal epoch in the history of science,—Waller had indeed no pretensions. But the mind of Waller, as far as it extended, coincided with that of Bacon, and might, so to speak, have been cut out of that of Bacon. In the qualities which make a man an object of interest and veneration to posterity, there was no comparison between them. But in the qualities by which chiefly a man is known to his contemporaries, there was a striking similarity. Considered as men of the world, as courtiers, as politicians, as associates, as allies, as enemies, they had nearly the same merits and the same defects. They were not malignant. They were not tyrannical. But they wanted warmth of affection and elevation of sentiment. There were many things which they loved better than virtue, and which they feared more than guilt. Yet after they had stooped to acts of which it is impossible to read the account in the most partial narratives without strong disapprobation and contempt, the public still continued to regard them with a feeling not easily to be distinguished from esteem. The hyperbole of Juliet seemed to be verified with respect to them. "Upon their brows shame was ashamed to sit." Every body seemed as desirous to throw a veil over their misconduct as if it had been his own. Clarendon, who felt, and who had reason to feel, strong personal dislike towards Waller, speaks of him thus:—"There needs no more to be said to extol the excellence and power of his wit and pleasantness of his conversation, than that it was of magnitude enough to cover a world of very great faults,—that is, so to cover them that they were not taken notice of to his reproach, viz., a narrowness in his nature to the lowest degree,—an abjectness and want of courage to support him in

any virtuous undertaking,—an insinuating and servile flattery to the height the vainest and most imperious nature could be contented with. . . . It had power to reconcile him to those whom he had most offended and provoked, and continued to his age with that rare felicity, that his company was acceptable where his spirit was odious, and he was at least pitied where he was most detested.' Much of this, with some softening, might, we fear, be applied to Bacon. The influence of Waller's talents, manners, and accomplishments, died with him; and the world has pronounced an unbiassed sentence on his character. A few flowing lines are not bribe sufficient to pervert the judgment of posterity. But the influence of Bacon is felt and will long be felt over the whole civilized world. Leniently as he was treated by his contemporaries, posterity has treated him more leniently still. Turn where we may, the trophies of that mighty intellect are full in view. We are judging Manlius in sight of the Capitol.

Under the reign of James, Bacon grew rapidly in fortune and favor. In 1604 he was appointed King's Counsel, with a fee of forty pounds a-year; and a pension of sixty pounds a-year was settled upon him. In 1607 he became Solicitor-General; in 1612 Attorney-General. He continued to distinguish himself in Parliament, particularly by his exertions in favor of one excellent measure on which the King's heart was set,—the union of England and Scotland. It was not difficult for such an intellect to discover many irresistible arguments in favor of such a scheme. He conducted the great case of the *Peet Nati* in the Exchequer Chamber; and the decision of the judges,—a decision the legality of which may be questioned, but the beneficial effect of which must be acknowledged,—was in a great measure attributed to his dexterous management. While actively engaged in the House of Commons and in the courts of law, he still found leisure for letters and philosophy. The noble treatise on the "Advancement of Learning," which at a later period was expanded into the *De Augmentis*, appeared in 1605. The "Wisdom of the Ancients,"—a work which, if it had proceeded from any other writer, would have been considered as a masterpiece of wit and learning, but which adds little to the fame of Bacon, was printed in 1609. In the mean time the *Novum Organum* was slowly proceeding. Several distinguished men of learning had been permitted to see sketches or detached portions of that extraordinary book; and though they were not generally disposed to admit the soundness of the author's views, they spoke with the greatest admiration of his genius. Sir Thomas Bodley, the founder of the most magnificent of English libraries, was among those stubborn Conservatives who considered the hopes with which Bacon looked forward to the future destinies of the human race as utterly chimerical; and who regarded with distrust and aversion the innovating spirit of the new schismatics in philosophy. Yet even Bodley after perusing the *Cogitata et Visa*—one of the most precious of those scattered leaves out of which the great oracular volume was afterwards made up—acknowledged that in "those very points, and in all proposals and plots in that book, Bacon showed himself a master-workman;" and that "it could not be gainsaid but all the treatise over did abound with choice conceits of the present state of learning, and with worthy contemplations of the means to procure it." In

1612 a new edition of the "Essays" appeared, with additions surpassing the original collection both in bulk and quality. Nor did these pursuits distract Bacon's attention from a work the most arduous, the most glorious, and the most useful that even his mighty powers could have achieved, "the reducing and re-compiling," to use his own phrase, "of the laws of England."

Unhappily he was at that very time employed in perverting those laws to the vilest purposes of tyranny. When Oliver St. John was brought before the Star Chamber for maintaining that the King had no right to levy benevolences, and was for his manly and constitutional conduct sentenced to imprisonment during the royal pleasure, and to a fine of five thousand pounds, Bacon appeared as counsel for the prosecution. About the same time he was deeply engaged in a still more disgraceful transaction. An aged clergyman, of the name of Peacham, was accused of treason, on account of some passages of a sermon which was found in his study. The sermon, whether written by him or not, had never been preached. It did not appear that he had any intention of preaching it. The most servile lawyers of those servile times were forced to admit that there were great difficulties both as to the facts and as to the law. Bacon was employed to remove those difficulties. He was employed to settle the question of law by tampering with the Judges, and the question of fact by torturing the prisoner. Three Judges of the Court of King's Bench were tractable. But Coke was made of different stuff. Pedant, bigot, and savage as he was, he had qualities which bore a strong, though a very disagreeable resemblance to some of the highest virtues which a public man can possess. He was an exception to a maxim which we believe to be generally true,—that those who trample on the helpless are disposed to cringe to the powerful. He behaved with gross rudeness to his juniors at the bar, and with execrable cruelty to prisoners on trial for their lives. But he stood up manfully against the King and the King's favorites. No man of that age appeared to so little advantage when he was opposed to an inferior, and was in the wrong. But, on the other hand, it is but fair to admit that no man of that age made so creditable a figure when he was opposed to a superior, and happened to be in the right. On such occasions, his half-suppressed insolence and his impracticable obstinacy, had a respectable and interesting appearance, when compared with the abject servility of the bar and of the bench. On the present occasion he was stubborn and surly. He declared that it was a new and a highly improper practice in the Judges, to confer with a law-officer of the crown about capital cases which they were afterwards to try; and for some time he resolutely kept aloof. But Bacon was equally artful and persevering. "I am not wholly out of hope," said he, in a letter to the King, "that my Lord Coke himself, when I have in some dark manner put him in doubt that he shall be left alone, will not be singular." After some time, Bacon's dexterity was successful; and Coke, sullenly and reluctantly, followed the example of his brethren. But in order to convict Peacham, it was necessary to find facts as well as law. Accordingly, this wretched old man was put to the rack; and, while undergoing the horrible infliction, was examined by Bacon, but in vain. No confession could be wrung out of him; and Bacon wrote to

the King, complaining that Peacham had a dumb devil. At length the trial came on. A conviction was obtained; but the charges were so obviously futile, that the government could not, for very shame, carry the sentence into execution; and Peacham was suffered to languish away the short remainder of his life in a prison.

There were many points of resemblance between the two celebrated courtiers who, at different times, extended their patronage to Bacon. It is difficult to say whether Essex or Villiers was the more eminently distinguished by those graces of person and manner which have always been rated in courts at much more than their real value. Both were constitutionally brave; and both, like most men who are constitutionally brave, were open and unreserved. Both were rash and headstrong. Both were destitute of the abilities and the information which are necessary to statesmen. Yet both, trusting to the accomplishments which had made them conspicuous in tilt-yards and ball-rooms, aspired to rule the state. Both owed their elevation to the personal attachment of the sovereign; and in both cases this attachment was of so eccentric a kind, that it perplexed observers,—that it still continues to perplex historians,—and that it gave rise to much scandal, which we are inclined to think unfounded. Each of them treated the sovereign whose favor he enjoyed with a rudeness which approached to insolence. This petulance ruined Essex, who had to deal with a spirit naturally as proud as his own, and accustomed, during nearly half a century, to the most respectful observance. But there was a wide difference between the haughty daughter of Henry and her successor. James was timid from the cradle. His nerves, naturally weak, had not been fortified by reflection or by habit. His life, till he came to England, had been a series of mortifications and humiliations. With all his high notions of the origin and extent of his prerogatives, he was never his own master for a day. In spite of his kingly title,—in spite of his despotic theory, he was to the last a slave at heart. Villiers treated him like one; and this course, though adopted, we believe, merely from temper, succeeded as well as if it had been a system of policy formed after mature deliberation.

In generosity, in sensibility, in capacity for friendship, Essex far surpassed Buckingham. Indeed, Buckingham can scarcely be said to have had any friend, with the exception of the two princes, over whom successively he exercised so wonderful an influence. Essex was to the last adored by the people. Buckingham was always a most unpopular man; except perhaps for a very short time after his return from the childish visit to Spain. Essex fell a victim to the rigor of the government, amidst the lamentations of the people. Buckingham, execrated by the people, and solemnly declared a public enemy by the representatives of the people, fell by the hand of one of the people, and was lamented by none but his master.

The way in which the two favorites acted towards Bacon, was highly characteristic, and may serve to illustrate the old and true saying,—that a man is generally more inclined to feel kindly towards one on whom he has conferred favors, than towards one from whom he has received them. Essex loaded Bacon with benefits, and never thought that he had done enough. It never seems to have crossed the mind of the powerful and

wealthy noble, that the poor barrister whom he treated with such munificent kindness, was not his equal. It was, we have no doubt, with perfect sincerity that he declared, that he would willingly give his sister or daughter in marriage to his friend. He was in general more than sufficiently sensible of his own merits; but he did not seem to know that he had ever deserved well of Bacon. On that cruel day when they saw each other for the last time at the bar of the Lords, the earl taxed his perfidious friend with unkindness and insincerity, but never with ingratitude. Even in such a moment, more bitter than the bitterness of death, that noble heart was too great to vent itself in such a reproach.

Villiers, on the other hand, owed much to Bacon. When their acquaintance began, Sir Francis was a man of mature age, of high station, and of established fame as a politician, an advocate, and a writer. Villiers was little more than a boy, a younger son of a house then of no great note. He was but just entering on the career of court favor; and none but the most discerning observers could as yet perceive that he was likely to distance all his competitors. The countenance and advice of a man so highly distinguished as the Attorney-General, must have been an object of the highest importance to the young adventurer. But though Villiers was the obliged party, he was less warmly attached to Bacon and far less delicate in his conduct towards him than Essex had been.

To do the new favorite justice, he early exerted his influence in behalf of his illustrious friend. In 1616, Sir Francis was sworn of the Privy Council; and, in March, 1617, on the retirement of Lord Brackley, was appointed Keeper of the Great Seal.

On the 7th of May, the first day of the term, he rode in state to Westminster Hall, with the Lord Treasurer on his right hand, the Lord Privy Seal on his left,—a long procession of students and ushers before him,—and a crowd of peers, privy-councillors, and judges, followed in his train. Having entered his court, he addressed the splendid auditory in a grave and dignified speech, which proves how well he understood those judicial duties which he afterwards performed so ill. Even at that moment,—the proudest moment of his life in the estimation of the vulgar, and, it may be, even in his own,—he cast back a look of lingering affection towards those noble pursuits from which, as it seemed, he was about to be estranged. "The depth of the three long vacations," said he, "I would reserve in some measure free from business of estate, and for studies, arts, and sciences, to which of my own nature I am most inclined."

The years during which Bacon held the Great Seal were among the darkest and most shameful in English history. Every thing at home and abroad was mismanaged. First came the execution of Raleigh, an act which, if done in a proper manner, might have been defensible, but which, under all the circumstances, must be considered as a dastardly murder. Worse was behind—the war of Bohemia—the successes of Tilly and Spinola—the Palatinate conquered—the King's son-in-law in exile—the house of Austria dominant on the Continent—the Protestant religion and the liberties of the Germanic body trodden under foot. In the mean time the wavering and cowardly policy of England furnished matter of ridicule to all the nations of Europe. The

love of peace, which James professed would, even when indulged to an impolitic excess, have been respectable, if it had proceeded from tenderness for his people. But the truth is, that, while he had nothing to spare for the defence of the natural allies of England, he resorted without scruple to the most illegal and oppressive devices, for the purpose of enabling Buckingham and Buckingham's relations to outshine the ancient aristocracy of the realm. Benevolences were exacted. Patents of monopoly were multiplied. All the resources which could have been employed to replenish a beggared Exchequer, at the close of a ruinous war, were put in motion during this season of ignominious peace.

The vices of the administration must be chiefly ascribed to the weakness of the King, and to the levity and violence of the favorite. But it is impossible to acquit the Lord Keeper. For those odious patents, in particular, which passed the Great Seal while it was in his charge, he must be held answerable.

In his judicial capacity his conduct was not less reprehensible. He suffered Buckingham to dictate many of his decisions. Bacon knew as well as any man, that a judge who listens to private solicitations is a disgrace to his post. He had himself, before he was raised to the woolsack, represented this strongly to Villiers, then just entering on his career. "By no means,"—said Sir Francis, in a letter of advice addressed to the young courtier,—“By no means be you persuaded to interpose yourself, either by word or letter, in any cause depending in any court of justice, nor suffer any great man to do it where you can hinder it. If it should prevail, it perverts justice; but, if the judge be so just and of such courage as he ought to be, as not to be inclined thereby, yet it always leaves a taint of suspicion behind it.” Yet he had not been Lord Keeper a month when Buckingham began to interfere in Chancery suits, and his interference was, as might have been expected, successful.

A man who stooped to render such services to others was not likely to be scrupulous as to the means by which he enriched himself. He and his dependants accepted large presents from persons who were engaged in Chancery suits. The amount of the plunder which he collected in this way it is impossible to estimate. There can be no doubt that he received much more than was proved on his trial, though, it may be, less than was suspected by the public. His enemies stated his illicit gains at a hundred thousand pounds. But this was probably an exaggeration.

It was long before the day of reckoning arrived. During the interval between the second and third Parliaments of James, the nation was absolutely governed by the Crown. The prospects of the Lord Keeper were bright and serene. His great place rendered the splendor of his talents even more conspicuous; and gave an additional charm to the serenity of his temper, the courtesy of his manners, and the eloquence of his conversation. The pillaged suitor might mutter. The austere Puritan patriot might, in his retreat, lament that one on whom God had bestowed without measure all the abilities which qualify men to take the lead in great reforms, should be found among the adherents of the worst abuses. But the murmurs of the suitor, and the lamentations of the patriot, had scarcely any avenue to the ears of the powerful. The King, and

the minister who was the King's master, smiled on their illustrious flatterer. The whole crowd of courtiers and nobles sought his favor with emulous eagerness. Men of wit and learning hailed with delight the elevation of one who had so signally shown that a man of profound learning and of brilliant wit might understand, far better than any plodding dunce, the art of thriving in the world.

Once, and but once, this course of prosperity was for a moment interrupted. It should seem that even Bacon's brain was not strong enough to bear without some discomposure the inebriating effect of so much good fortune. For some time after his elevation, he showed himself a little wanting in that wariness and self-command to which, more than even to his transcendent talents, his elevation was to be ascribed. He was by no means a good hater. The temperature of his revenge, like that of his gratitude, was scarcely ever more than lukewarm. But there was one person whom he had long regarded with an animosity which, though studiously suppressed, was perhaps the stronger for the suppression. The insults and injuries which, when a young man struggling into note and professional practice, he had received from Sir Edward Coke, were such as might move the most placable nature to resentment. About the time at which Bacon received the Seals, Coke had, on account of his contumacious resistance to the royal pleasure, been deprived of his seat in the Court of King's Bench, and had ever since languished in retirement. But Coke's opposition to the Court, we fear, was the effect, not of good principles, but of a bad temper. Perverse and testy as he was, he wanted true fortitude and dignity of character. His obstinacy, unsupported by virtuous motives, was not proof against disgrace. He solicited a reconciliation with the favorite, and his solicitations were successful. Sir John Villiers, the brother of Buckingham, was looking out for a rich wife. Coke had a large fortune and an unmarried daughter. A bargain was struck. But Lady Coke—the lady whom twenty years before Essex had wooed on behalf of Bacon—would not hear of the match. A violent and scandalous family quarrel followed. The mother carried the girl away by stealth. The father pursued them, and regained possession of his daughter by force. The king was then in Scotland, and Buckingham had attended him thither. Bacon was, during their absence, at the head of affairs in England. He felt towards Coke as much malevolence as it was in his nature to feel towards any body. His wisdom had been laid to sleep by prosperity. In an evil hour he determined to interfere in the disputes which agitated his enemy's household. He declared for the wife, countenanced the Attorney-General in filing an information in the Star Chamber against the husband, and wrote strongly to the King and the favorite against the proposed marriage. The language which he used in those letters shows that, sagacious as he was, he did not quite know his place;—that he was not fully acquainted with the extent either of Buckingham's power, or of the change which the possession of that power had produced in Buckingham's character. He soon had a lesson which he never forgot. The favorite received the news of the Lord Keeper's interference, with feelings of the most violent resentment, and made the King even more angry than himself. Bacon's

eyes were at once opened to his error, and to all its possible consequences. He had been elated, if not intoxicated, by greatness. The shock sobered him in an instant. He was all himself again. He apologized submissively for his interference. He directed the Attorney-General to stop the proceedings against Coke. He sent to tell Lady Coke that he could do nothing for her. He announced to both the families that he was desirous to promote the connexion. Having given these proofs of contrition, he ventured to present himself before Buckingham. But the young upstart did not think that he had yet sufficiently humbled an old man who had been his friend and benefactor,—who was the highest civil functionary in the realm, and the most eminent man of letters in the world. It is said that on two successive days Bacon repaired to Buckingham's house—that on two successive days he was suffered to remain in an antechamber among foot-boys, seated on an old wooden box, with the Great Seal of England at his side; and that when at length he was admitted, he flung himself on the floor, kissed the favorite's feet, and vowed never to rise till he was forgiven.

He put a strong curb on those angry passions which had for the first time in his life mastered his prudence. He went through the forms of a reconciliation with Coke, and did his best, by seeking opportunities of paying little civilities, and by avoiding all that could produce collision, to tame the untameable ferocity of his old enemy.

In the main, however, his life, while he held the Great Seal, was, in outward appearance, most enviable. In London he lived with great dignity at York-House, the venerable mansion of his father. Here it was that, in January, 1620, he celebrated his entrance into his sixtieth year amidst a splendid circle of friends. He had then exchanged the appellation of Keeper for the higher title of Chancellor. Ben Jonson was one of the party, and wrote on the occasion some of the happiest of his rugged rhymes. All things, he tells us, seemed to smile about the old house,—“the fire, the wine, the men.” The spectacle of the accomplished host, after a life marked by no great disaster, entering on a green old age, in the enjoyment of riches, power, high honors, undiminished mental activity, and vast literary reputation, made a strong impression on the poet, if we may judge from those well known lines—

“England's high Chancellor, the destined heir,
In his soft cradle, to his father's chair,
Whose even thread the fates spin round and full,
Out of their choicest and their whitest wool.”

In the intervals of rest which Bacon's political and judicial functions afforded, he was in the habit of retiring to Gorbamby. At that place his business was literature, and his favorite amusement gardening, which in one of his most pleasing Essays he calls “the purest of human pleasures.” In his magnificent grounds he erected, at a cost of ten thousand pounds, a retreat to which he repaired when he wished to avoid all visitors, and to devote himself wholly to study. On such occasions, a few young men of distinguished talents were sometimes the companions of his retirement. And among them his quick eye soon discerned the superior abilities of Thomas Hobbes. It is not probable, however, that he fully appreciated the powers of his disci-

ple, or foresaw the vast influence, both for good and for evil, which that most vigorous and acute of human intellects was destined to exercise on the two succeeding generations.

In January, 1621, Bacon had reached the zenith of his fortunes. He had just published the *Novum Organum*; and that extraordinary book had drawn forth the warmest expressions of admiration from the ablest men in Europe. He had obtained honors of a widely different kind, but perhaps not less valued by him. He had been created Baron Verulam. He had subsequently been raised to the higher dignity of Viscount St. Albans. His patent was drawn in the most flattering terms, and the Prince of Wales signed it as a witness. The ceremony of investiture was performed with great state at Theobalds, and Buckingham condescended to be one of the chief actors. Posterity has felt that the greatest of English philosophers could derive no accession of dignity from any title which James could bestow; and, in defiance of the royal letters patent, has obstinately refused to degrade Francis Bacon into Viscount St. Albans.

In a few weeks was signally brought to the test the value of those objects for which Bacon had sullied his integrity, had resigned his independence, had violated the most sacred obligations of friendship and gratitude, had flattered the worthless, had persecuted the innocent, had tampered with judges, had tortured prisoners, had plundered suitors, had wasted on paltry intrigues all the powers of the most exquisitely constructed intellect that has ever been bestowed on any of the children of men. A sudden and terrible reverse was at hand. A Parliament had been summoned. After six years of silence, the voice of the nation was again to be heard. Only three days after the pageant which was performed at Theobalds in honor of Bacon, the houses met.

Want of money had, as usual, induced the King to convoke his Parliament. But it may be doubted whether, if he or his ministers had been at all aware of the state of public feeling, they would not have tried any expedient, or borne with any inconvenience, rather than have ventured to face the deputies of a justly exasperated nation. But they did not discern those times. Indeed almost all the political blunders of James, and of his more unfortunate son, arose from one great error. During the fifty years which preceded the Long Parliament, a great and progressive change was taking place in the public mind. The nature and extent of this change was not in the least understood by either of the first two Kings of the House of Stuart, or by any of their advisers. That the nation became more and more discontented every year, that every House of Commons was more unmanageable than that which had preceded it,—were facts which it was impossible not to perceive. But the Court could not understand why these things were so. The Court could not see that the English people, and the English Government, though they might once have been well suited to each other, were suited to each other no longer,—that the nation had outgrown its old institutions, was every day more uneasy under them, was pressing against them, and would soon burst through them. The alarming phenomena, the existence of which no sycophant could deny, were ascribed to every cause except the true one.

"In my first Parliament," said James, "I was a novice. In my next, there was a kind of beasts called *undertakers*,"—and so forth. In the third Parliament he could hardly be called a novice, and those beasts, the *undertakers*, did not exist. Yet his third Parliament gave him more trouble than either the first or the second.

The Parliament had no sooner met than the House of Commons proceeded, in a temperate and respectful, but most determined manner, to discuss the public grievances. Their first attacks were directed against those odious patents, under cover of which Buckingham and his creatures had pillaged and oppressed the nation. The vigor with which these proceedings were conducted spread dismay through the Court. Buckingham thought himself in danger, and, in his alarm, had recourse to an adviser who had lately acquired considerable influence over him,—Williams, Dean of Westminster. He advised the favorite to abandon all thoughts of defending the monopolies—to find some foreign embassy for his brother Sir Edward, who was deeply implicated in the villanies of Mompesson—and to leave the other offenders to the justice of Parliament. Buckingham received this advice with the warmest expressions of gratitude, and declared that a load had been lifted from his heart. He then repaired with Williams to the royal presence. They found the King engaged in earnest consultation with Prince Charles. The plan of operations proposed by the Dean was fully discussed, and approved in all its parts.

The first victims whom the Court abandoned to the vengeance of the Commons, were Sir Giles Mompesson and Sir Francis Mitchell. It was some time before Bacon began to entertain any apprehensions. His talents and his address gave him great influence in the house,—of which he had lately become a member,—as indeed they must have done in any assembly. In the House of Commons he had many personal friends and many warm admirers. But at length, about six weeks after the meeting of Parliament, the storm burst.

A committee of the lower house had been appointed to inquire into the state of the Courts of Justice. On the 15th of March, the chairman of that committee, Sir Robert Phillips, member for Bath, reported that great abuses had been discovered. "The person," said he, "against whom these things are alleged is no less than the Lord Chancellor,—a man so endued with all parts, both of nature and art, as that I will say no more of him, being not able to say enough." Sir Robert then proceeded to state, in the most temperate manner, the nature of the charges. A person of the name of Aubrey had a case depending in Chancery. He had been almost ruined by law expenses, and his patience had been exhausted by the delays of the court. He received a hint from some of the hangers-on of the Chancellor, that a present of one hundred pounds would expedite matters. The poor man had not the sum required. However, having found out a usurer who accommodated him with it at a high interest, he carried it to York House. The Chancellor took the money, and his dependants assured the suitor that all would go right. Aubrey was, however, disappointed; for, after considerable delay, "a killing decree" was pronounced against him. Another suitor of the name of Egerton complained that he had been induced by two of the

Chancellor's jackals to make his Lordship a present of four hundred pounds; and that, nevertheless, he had not been able to obtain a decree in his favor. The evidence to these facts was overwhelming. Bacon's friends could only entreat the house to suspend its judgment, and to send up the case to the Lords, in a form less offensive than an impeachment.

On the 19th of March the King sent a message to the Commons, expressing his deep regret that so eminent a person as the Chancellor should be suspected of misconduct. His Majesty declared that he had no wish to screen the guilty from justice, and proposed to appoint a new kind of tribunal, consisting of eighteen commissioners, who might be chosen from among the members of the two houses, to investigate the matter. The Commons were not disposed to depart from the regular course of proceeding. On the same day they held a conference with the Lords, and delivered in the heads of the accusation against the Chancellor. At this conference Bacon was not present. Overwhelmed with shame and remorse, and abandoned by all those in whom he had weakly put his trust, he shut himself up in his chamber from the eyes of men. The dejection of his mind soon disordered his body. Buckingham, who visited him by the King's order, "found his Lordship very sick and heavy." It appears from a pathetic letter which the unhappy man addressed to the Peers on the day of the conference, that he neither expected nor wished to survive his disgrace. During several days he remained in his bed, refusing to see any human being. He passionately told his attendants to leave him,—to forget him,—never again to name his name,—never to remember that there had been such a man in the world. In the mean time, fresh instances of corruption were every day brought to the knowledge of his accusers. The number of charges rapidly increased from two to twenty-three. The Lords entered on the investigation of the case with laudable alacrity. Some witnesses were examined at the bar of the house. A select committee was appointed to take the depositions of others; and the inquiry was rapidly proceeding, when, on the 26th of March, the King adjourned the Parliament for three weeks.

This measure revived Bacon's hopes. He made the most of his short respite. He attempted to work on the feeble mind of the King. He appealed to all the strongest feelings of James,—to his fears, to his vanity, to his high notions of prerogative. Would the Solomon of the age commit so gross an error as to encourage the encroaching spirit of Parliament? Would God's anointed, accountable to God alone, pay homage to the clamorous multitude? "Those," he exclaimed, "who now strike at the Chancellor will soon strike at the Crown. I am the first sacrifice. I wish I may be the last." But all his eloquence and address were employed in vain. Indeed, whatever Mr. Montagu may say, we are firmly convinced that it was not in the King's power to save Bacon, without having recourse to measures which would have convulsed the realm. The crown had not sufficient influence in Parliament to procure an acquittal, in so clear a case of guilt. And to dissolve a Parliament which is universally allowed to have been one of the best Parliaments that ever sat,—which had acted liberally and respectfully towards the Sovereign, and which enjoyed in the highest degree the favor of the people, only in order to stop a grave, temperate, and constitu-

tional inquiry into the personal integrity of the first judge in the kingdom,—would have been a measure more scandalous and absurd than any of those which were the ruin of the House of Stuart. Such a measure, while it would have been as fatal to the Chancellor's honor as a conviction, would have endangered the very existence of the monarchy. The King, acting by the advice of Williams, very properly refused to engage in a dangerous struggle with his people, for the purpose of saving from legal condemnation a minister whom it was impossible to save from dishonor. He advised Bacon to plead guilty, and promised to do all in his power to mitigate the punishment.

On the 17th of April the houses reassembled, and the Lords resumed their inquiries into the abuse of the Court of Chancery. On the 22d, Bacon addressed to the Peers a letter, which Prince Charles condescended to deliver. In this artful and pathetic composition, the Chancellor acknowledged his guilt in guarded and general terms, and, while acknowledging, endeavored to palliate it. This, however, was not thought sufficient by his judges. They required a more particular confession, and sent him a copy of the charges. On the 30th, he delivered a paper, in which he admitted, with few and unimportant reservations, the truth of the accusations brought against him, and threw himself entirely on the mercy of his peers. "Upon advised consideration of the charges," said he, "descending into my own conscience, and calling my memory to account so far as I am able, I do plainly and ingenuously confess, that I am guilty of corruption, and do renounce all defence."

The Lords came to a resolution that the Chancellor's confession appeared to be full and ingenuous, and sent a committee to inquire of him whether it was really subscribed by himself. The deputies, among whom was Southampton, the common friend many years before of Bacon and Essex, performed this duty with great delicacy. Indeed, the agonies of such a mind, and the degradation of such a name, might well have softened the most obdurate natures. "My lords," said Bacon, "it is my act, my hand, my heart. I beseech your lordships to be merciful to a broken reed." They withdrew: and he again retired to his chamber in the deepest dejection. The next day, the sergeant-at-arms and usher of the House of Lords came to conduct him to Westminster Hall, where sentence was to be pronounced. But they found him so unwell that he could not leave his bed; and this excuse for his absence was readily accepted. In no quarter does there appear to have been the smallest desire to add to his humiliation. The sentence was, however severe,—the more severe, no doubt, because the lords knew that it would not be executed, and that they had an excellent opportunity of exhibiting at small cost, the inflexibility of their justice, and their abhorrence of corruption. Bacon was condemned to pay a fine of forty thousand pounds, and to be imprisoned in the Tower during the King's pleasure. He was declared incapable of holding any office in the State, or of sitting in parliament, and he was banished for life from the verge of the court. In such misery and shame ended that long career of worldly wisdom and worldly prosperity!

No State-Trial in our history is more creditable to all who took part in it, either as prosecutors or judges. The decency, the gravity, the public spirit,—the just-

ice moderated, but not unnerved, by, compassion,—which appeared in every part of the transaction, would do honor to the most respectable public men of our own times. The accusers, while they discharged their duty to their constituents by bringing the misdeeds of the Chancellor to light, spoke with admiration of his many eminent qualities. The Lords, while condemning him, complimented him on the ingenuousness of his confession, and spared him the humiliation of a public appearance at their bar. So strong was the contagion of good feeling, that even Sir Edward Coke, for the first time in his life, behaved like a gentleman. No criminal ever had more temperate prosecutors than Bacon. No criminal ever had more favorable judges. If he was convicted, it was because it was impossible to acquit him without offering the grossest outrage to justice and common sense.

The sentence of Bacon had scarcely been pronounced when it was mitigated. He was indeed sent to the Tower. But this was merely a form. In two days he was set at liberty, and soon after he retired to Gorbamby. His fine was speedily released by the Crown. He was next suffered to present himself at Court; and at length, in 1624, the rest of his punishment was remitted. He was now at liberty to resume his seat in the House of Lords, and he was actually summoned to the next Parliament. But age, infirmity, and perhaps shame, prevented him from attending. The Government allowed him a pension of one thousand two hundred pounds a year; and his whole annual income is estimated by Mr. Montagu at two thousand five hundred pounds,—a sum which was probably above the average income of a nobleman of that generation, and which was certainly sufficient for comfort and even for splendor. Unhappily, Bacon was fond of display, and unused to pay minute attention to domestic affairs. He was not easily persuaded to give up any part of the magnificence to which he had been accustomed in the time of his power and prosperity. No pressure of distress could induce him to part with the woods of Gorbamby. "I will not," he said, "be stripped of my feathers." He travelled with so splendid an equipage, and so large a retinue, that Prince Charles, who once fell in with him on the road, exclaimed with surprise,—“Well! do what we can, this man scorns to go out in snuff.” This carelessness and ostentation reduced him to frequent distress. He was under the necessity of parting with York House, and of taking up his residence, during his visits to London, at his old chambers in Gray's Inn. He had other vexations, the exact nature of which is unknown. It is evident from his will, that some part of his wife's conduct had greatly disturbed and irritated him.

But whatever might be his pecuniary difficulties or his conjugal discomforts, the powers of his intellect still remained undiminished. Those noble studies for which he had found leisure in the midst of professional drudgery and of courtly intrigues, gave to this last sad stage of his life a dignity beyond what power or titles could bestow. Impeached, convicted, sentenced,—driven with ignominy from the presence of his Sovereign, shut out from the deliberations of his fellow nobles, loaded with debt, branded with dishonor, sinking under the weight of years, sorrow and disease,—Bacon was Bacon still.

"My conceit of his person," says Ben Johnson very finely, "was never increased towards him by his place or honors; but I have and do reverence him for the greatness that was only proper to himself; in that he seemed to me ever, by his work, one of the greatest men and most worthy of admiration, that had been in many ages. In his adversity I ever prayed that God would give him strength; for greatness he could not want."

The services which he rendered to letters during the last five years of his life, amidst ten thousand distractions and vexations, increase the regret, with which we think on the many years which he had wasted,—to use the words of Sir Thomas Bodley,—"on such study as was not worthy such a student." He commenced a Digest of the Laws of England,—a History of England under the Princes of the House of Tudor, a body of Natural History, a Philosophical Romance. He made extensive and valuable additions to his essays. He published the inestimable Treatise *De Augmentis Scientiarum*. The very trifles with which he amused himself in hours of pain and languor bore the mark of his mind. The best Jest-Book in the world is that which he dictated from memory, without referring to any book, on a day on which illness had rendered him incapable of serious study.

The great apostle of experimental philosophy was destined to be its martyr. It had occurred to him that snow might be used with advantage for the purpose of preventing animal substances from putrefying. On a very cold day, early in the spring of the year 1626, he alighted from his coach near Highgate, in order to try the experiment. He went into a cottage, bought a fowl, and with his own hands stuffed it with snow. While thus engaged he felt a sudden chill, and was soon so much indisposed that it was impossible for him to return to Gray's Inn. The Earl of Arundel, with whom he was well acquainted, had a house at Highgate. To that house Bacon was carried. The Earl was absent; but the servants who were in charge of the place showed great respect and attention to the illustrious guest. Here, after an illness of about a week, he expired early on the morning of Easter-day, 1626. His mind appears to have retained its strength and liveliness to the end. He did not forget the fowl which had caused his death. In the last letter that he ever wrote, with fingers which, as he said, could not steadily hold a pen, he did not omit to mention that the experiment of the snow had succeeded "excellently well."

Our opinion of the moral character of this great man has already been sufficiently explained. Had his life been passed in literary retirement, he would, in all probability, have deserved to be considered, not only as a great philosopher, but as a worthy and good-natured member of society. But neither his principles nor his spirit were such as could be trusted, when strong temptations were to be resisted, and serious dangers to be braved. In his will, he expressed with singular brevity, energy, dignity, and pathos, a mournful consciousness that his actions had not been such as to entitle him to the esteem of those under whose observation his life had been passed; and, at the same time, a proud confidence that his writings had secured for him a high and permanent place among the benefactors of

mankind. So at least we understand those striking words which have been often quoted, but which we must quote once more—"For my name and memory, I leave it to men's charitable speeches, and to foreign nations, and to the next age."

His confidence was just. From the day of his death his fame has been constantly and steadily progressive; and we have no doubt that his name will be named with reverence to the latest ages, and to the remotest ends of the civilized world.

EVE OF THE BATTLE OF GILBOA.

Night came, and drew her jewel'd drapery
Over the promised land, with still and soft
And quiet gracefulness, as though beneath
Were spread the weary couch of holy ones
Who rested from their labors; or, as there
Innocent creatures, over whose fair frames
Soft slumber and the rosy twilight stole
In their joy's noon, were sleeping, balmily,
Upon the violet's breast.

The gentle Heavens
Shed blessings down on Hermon, and Gilboa
Bath'd his bright verdure, all unwither'd yet
By the prophetic anathema
Of the seer-bard, in the pure dew.

Yet there were sleepless eyes
And trembling hearts that night in Palestine.
The lovely cheek of many a Hebrew maid
Lay, blanch'd and cold, on her supporting hand,
While her dim'd eye gaz'd on the lovely moon
And all the glorious garniture of Heav'n,
Unconscious of their beauty. By the light
Of the dull taper, many a matron glanced
On the untumbled pillow at her side
With sinking heart, and kiss'd the baby-face
That press'd her arm,—sleeping, as roses do,
In purity and sweetness,—with the love—
The deep, deep love—the nameless tenderness,
That swells the heart, when the heart's love is mix'd
With dread solicitude.

Philistia's King
And warlike bands—'midst revelry and mirth,
And joke and jeer, and blasphemy and threat—
Harness'd, and panting for to-morrow's fight,
Lay pitched at Shunem.

To repel the foe—
Proud, vengeful, and malignant—Israel's bands,
With Abner, gallant captain of their host,
Encamp'd at Mount Gilboa. Yet among
That host—the stay and pride, the flower and hope
Of all the tribes of Israel—were fears,—
Those fears, those mystic bodings of the heart
Of coming ill, uncertain, undefin'd,
That fill its throbbings with intenser pain
Than suffering of keen but certain evil.

And there was cause, not vague nor dubious:—
He whose paternal voice, in days now gone,
Had been to Israel like an Oracle,—
Sure to predict, and powerful to restrain,
And wise to guide,—ceas'd from his care, and slept,
Aye, as Earth's faithful ones all shall at last,
Slept a sweet sleep untroubled by a dream.
'Twas as the setting of thy polar star,
Poor storm-toss'd Israel!

Sing Philistia, sing,
For thou shalt triumph—shout, for who shall help

When God forsaketh? and the "ruddy youth,"
 "The stripling," who a pebble from the brook
 Hurl'd from a shepherd's sling and laid in death
 Gath's giant—whom thy king and armies fear
 More than the Lord's anointed—dwells an exile
 From his dear native land in thine own Ziklag.

What a dark air of mystery there is
 About that form that strides so hastily,
 So noiselessly along! what moody airs!
 Now his bow'd head seems buried in the folds
 Of his broad mantle, as he fain would hide
 Forever there, and smother thought and fear
 And life together;—and anon he rears
 His brow, and with a kingly port steps on,
 As he defied the terrors that before
 His soul was sinking under. But he does fear—
 And in his very soul does hate the high
 Magnificent Heavens, that with their pure light
 Mock at his soul's thick darkness.

Those two forms,
 That follow him, just as his shadow does,
 Seem wondering that a man can be so strange,
 Unearthly, miserable.

Is it Saul?—
 The tall, the beautiful, the gallant Saul?
 Who in his loftiness look'd proudly down
 On all the tribes of Israel?—Is it Saul?
 The king of Israel; the Lord's anointed?
 Ah, what has he to do in that poor hut
 That's buried in the dismal ivy-shade,
 And settles back against the damp cold rock,
 As it were shrinking from a curse? Alas, alas!
 He who before God's holy Oracle,
 The Urim and the Thummim, has inquired,—
 Amid the flash of gems, the censer's smoke
 And the refulgent glory of Shechinah,—
 Which way amidst the labyrinthine maze
 Of the dark future lay his duty's path,—
 Now with his gold touches a Witch's palm!

Oh, how his haggard face and trembling form
 Betray the untold anguish of his heart!
 How o'er his eyes he clasps his nerveless hands,
 While the dark signs of astrologic lore,
 Scroll, character and wand, the sorceress brings
 To the pale light.

They're done!—the muttered prayer,
 Propitiating vow, and mystic rite,—
 All done! The sorceress screams and loud pro-
 claims
 The Spectre. Low the affrighted monarch bows,
 And from the spirit-world a hollow voice—
 Sure of the past and in the future wise—
 His crimes rehearses and declares his doom.
 "To-morrow"—yes, "to-morrow, thou shalt be
 With me in Hades!"
 Hope died. He fell upon the un pitying earth:
 God had forsaken him!

Your vigils keep,
 Virgins of Israel, and nurse your fears
 In converse with the melancholy moon;—
 Not with exulting timbrels and the dance
 Shall ye go forth to-morrow;—no loud song
 Upon the lip shall hail a victor-king,
 Nor secret thrill of rapture in the heart
 A victor-lover. One, a peerless reed,
 Tun'd by a wild, romantic shepherd boy,
 While in the solitude he kept his flock,—
 Nor felt it solitude, so well he lov'd
 That lone communion with his pipe, his heart,
 His Heaven—that only shall awake to song
 And fitly celebrate in deathless strains
 The battle of Gilboa.

ELIZA.

LIONEL GRANBY.

CHAPTER XI.

* * * * Ad hoc lamenta parentum seminarum fessa
 senum ac rudis pueritile ætas quique sibi, quique illis consu-
 lebant, dum trahunt invalidos, aut apperitur, pars morans,
 pars festinans cuncta impediabant et sepe dum in tergum res-
 piciant lateribus aut fronte circumveniebantur.

Tact. Ann. Lib. xv.

"Many and many is the house, in which a chasm has been
 made which can never be filled up."

Richmond Enquirer.

In the days of the gay Boccaccio, "Paris was
 a place to know the reasons of things, and the
 causes of the same, as became a gentleman." It
 still freshly bears this label of wit and philosophy;
 and a Parisian finish attracts, even in our utili-
 tarian age, the same respect which the fair story-
 tellers of the Decameron yielded to it. To its
 seductive vortex I rushed with the crowd of fri-
 volity and fashion; yet I was a chilled exotic,
 drooping amid the hollow splendor which blazed
 around me. The glitter of thronged cities—the
 rich historic ruin—the speaking marble, and the
 thrilling canvass, soon glut the appetite of curi-
 osity, and every object which is presented to us
 becomes darkened by our prejudices or discolored
 by the associations of our education. We travel
 to find something new. Alas! man is the same
 creature of tear-moulded clay in every clime.
 And in the beautiful land of France, I turned
 from the blood-stained trophies of kingly ambi-
 tion, to feel for the maimed soldier; and forgot
 the glory of the Corsican, in the gushing tear
 which stained the boyish cheek of the sacrificed
 conscript. I looked not on society as a mass—
 I thought of each unit of character which com-
 posed the gilded fabric, and my heart hourly
 brought before me, in busy comparison, the tran-
 quil prosperity of my own forest-girt land. I
 reasoned as a republican; and therefore I took no
 rank among the leaders of fashion; and should
 have felt the traitor's blush, had I surrendered
 those national manners which, springing from our
 free institutions, are alike the support and pride
 of our liberty.

At Paris I found a letter from my uncle, in-
 forming me of Pilton's unexpected recovery, and
 requesting me to return home. I lost no time in
 obeying the welcome summons, and I was soon
 on the confines of France. A clerical error in
 my passport gave me some alarm, as I was in-
 formed that it would be rigidly examined at the
 last town through which I passed. On reaching
 it, I was taken before a youthful officer for ex-
 amination. My passport, folded like a lawyer's
 brief, lay in my hat, and when I took it up for
 the purpose of submitting it to him, my name,
 with the addition, "of Virginia," was disclosed.
 "Pays du Washington!" he exclaimed—at the

same moment motioning to me to replace the passport, and courteously bowing to my departure.

I was again in Virginia!—and as we ascended the wizard stream of the James river, the stillness of its sleeping banks excited the passion, without the repulsive feeling, of solitude. There it lay before us, an earth-born giant! The midnight moon rode joyously through the sapphire sky. Her massy, cold and silvery light spread itself over the deepening chasms of the woods, and her flickering beams danced among the shadowy vistas of the leafless forest. An eagle perched on a towering oak, the diadem of the woods, mingled his wild scream with the freshening breeze, while ever and anon that solitary cry gently died away in the mazy shade of cloud and forest. A holy and subdued stillness brooded over the slumbering earth. In that solemn hour, I forgot for one moment the treasured hate of my life, and the gushing sympathies of father-land hushed the fierce whisper of revenge.

When I reached Richmond, I took lodgings at the old and venerable "Swan," under the hope of meeting my uncle at that place. He had not yet left home; for he still believed that I had not embarked at France. I lounged in the porch; and while in that situation, a play-bill, with the usual garniture of ink, attracted my listless eye. The theatre—a crowd—and Ellen Pilton rushed on my fancy, and the idle hope of meeting her there instantly occurred to me. My toilet was soon made, and I walked to the theatre; but did not reach it until the play was nearly performed. The beauty, the intelligence, the chivalry of Virginia, were gathered in a dense mass on that fatal Thursday. Old age, smiling youth, and blooming infancy filled the tier of boxes and crowded the rude benches of the pit; and as I gazed on that brilliant assembly of genius and of beauty, I forgot the glare of Parisian society, in the gems and flowers of my own native land. With much difficulty I forced my way to the centre of the pit; and, turning around, I saw Ellen Pilton. Her face was pale, and sadness had set a funereal seal on that brow where genius was wont to hold his proudest festival of thought. Her wavy hair was bound loosely with a tress of its own, and a sickly flower languished amid her dishevelled locks. The box in which she sat was full of glee, spirit and joy. She alone was silent; and though her eye wandered, it yet failed to catch my ardent gaze. The curtain dropped, and the pantomime of the "Bleeding Nun" was announced as the concluding piece. Placing myself directly before her, the curtain had no sooner risen, than her large and lustreless eyes fell on me. A sudden flush athwart her cheek—a tremulous movement of her snowy hand—and the quivering of her coral lips, declared the stormy memory of her heart. She looked on me but for a moment;

and in her averted glance, I read a sentence of contempt and abhorrence!

The pantomime was now commenced; and in the first act, the cottage of Baptist the robber was illuminated by a large chandelier, which oscillated fearfully over the stage. When the curtain fell, at the conclusion of the first act, this chandelier was lifted among the scenery which was suspended to the ceiling. *The fatal lamp was not extinguished!* and it was carelessly suffered to remain among the canvass paintings and paper scenery which were deposited in the roof of the house. At the opening of the second act, every impulse of soul and sense conspired to strew with flowers that path of pleasure which was fast leading to the grave!

The gloom—the sorrows—the despair—the brooding passions of our nature, were hushed in that swelling torrent of joyous mirth. The barque of life, its pennons gaily floating in the breeze, disported itself on the sunlight bosom of a summer's sea. Full of spirit, harmony and hope, it paused on the verge of the gaping sepulchre which awaited it—and in a moment, it was dashed headlong into an abyss of irretrievable woe and wretchedness.

The second act had now commenced; and, turning my eyes towards the stage, I observed several sparks of fire fall on the floor, and each second they increased with frightful velocity. A broad, steady and unwavering flame gleamed from the top of the stage, casting a huge column of muddy light on the horror-stricken countenances of the multitude below. Suddenly, a mass of fire, about the size of a man's hand, fell from the burning roof. It caught for a moment, on a part of the disjointed scenery, which quickly blazed up, and, with the rapidity of the serpent, the ball sped its hissing course, until it descended on the stage, and burst into a thousand fragments of fierce and uncontrollable fire. A player came forward, earnestly gesticulating to the audience to leave the house. The flame increased rapidly behind him; and in a voice whose electric tone penetrated the heart of every human being in that assembly, he exclaimed, "*the theatre is on fire!*" In a moment the whole roof was a sheet of living flame. It burst with irresistible force through the windows. Fed by the vast columns of air in the hollows and passages of the theatre—increased by the inflammable pannels of the boxes, by the dome of the pit, and by the canvass ceiling of the lower seats—like a demon of wrath it converged its hundred arms to the centre of human life. A wild and heart-rending shriek burst from the devoted multitude. Women, frantic with terror, screaming for help, and tossing their arms and dishevelled hair amid the curling flame—fathers and mothers shrieking out for their children, brothers for their sisters, and husbands for their wives, while the plaintive

scream of childhood rose like the knell of hope above that billowy volume of flame, whose approach was despair, and whose embrace was death. All who were in the boxes, and most of those in the pit, immediately rushed for the lobbies. Many escaped through the windows; but the greater portion had no other retreat than to descend the stairs. Here the pressure became closer and closer; each retarded the escape of the other, and every addition (for nearly all sought that mode of escape,) more and more swelled that crowd of devoted victims. The stairways were instantly blocked up, and the throng was so great that many were elevated several feet above the heads of the rest. Hundreds were trodden under foot; and over a prostrate multitude I vainly attempted to reach the box in which Ellen Pilton sat. Twice was I thrown down on the floor of the pit, and the iron heel of a boot crushed my cheek into a stream of blood. One moment more, and impious suicide would have relieved my vindictive despair, for I had drawn a loaded pistol, and with a firm hand had placed it against my heart. Suddenly the throng above me swept itself away, and arising, with a violent effort of strength I leaped into the box where I had seen Ellen Pilton. She was lying on the floor, her head supported by the seat from which she had fallen. Her countenance betrayed neither terror nor alarm, and woman's fortitude seemed in that storm of death to have found its only refuge in her placid brow. The conventional rules of etiquette were laid aside in that hour of wretchedness, and without speaking, I grasped her waist with my left arm. The warm blood from my cheek fell on her face and hair and stained her palpitating bosom. "You are hurt!" she exclaimed; "save yourself!—go! leave me!—dear Lionel, I forgive you!"

I had no time to reply to the endearing tenderness of her language, nor to wonder at those circumstances of horror which disclosed the secret of her heart. Her brother's blood was on my hands, yet she would not bear to a speedy grave the spontaneous forgiveness of a confiding heart. She was woman!—and the early bud of affection, whose opening pride represses, ever finds its season of bloom in the winter of adversity, and bursts into fragrance only on the precipice of the grave. A current of flame now hissed over the box, and redoubling my grasp, I attempted to reach a window in the lobby of the lower boxes. I bore my precious burden over the bodies and heads of a dense crowd between me and the window, and finally reached it, surrounded by the screams and unavailing cries of the multitude who were suffocating and dying around. I stepped within the window, and with great exertion raised its lower sash. My feet were thrust into the opening, and I was gradually escaping, when the sash fell, and

my feet were pressed down. My grasp on Ellen was not relinquished, and she fell with me on the floor. A hot and scorching vapour swept over my face, and I felt its breath coursing through my hair. I rescued one foot from its fatal prison; the other remained fixed and immovable, while my body, partially suspended from the window, became bruised and trodden down by the rushing multitude. Ellen's head sank drooping and convulsed on my bosom, and a plaintive wail issued from her lips. Every limb was wrung with agony, and her labored respiration exhibited the struggle of relentless death. Moving my hand to elevate her head, it passed a rent in the wall, through which streamed a current of cold and untainted air. With great labor I moved our position to this welcome fount of life, and a breeze, fresher than a meadow gale of spring, slaked our bitter thirst, and whispered hope. The crowd above me had now greatly decreased—wounded, bruised and suffocated, they had dropped away like forest leaves in autumn's frost—and the window having been burst open, my foot fell from its fearful position. The grasp of a strong and powerful hand wound itself in my hair, and a voice whose animated tones brought back, even in that terrific hour, the fadeless memory of childhood, exclaimed, "You are safe, Mass Lionel!" My preserver leaped into the window, drawing me with him. Suspended to the outside of the house by one hand, resting on the casement of the window, with the other he received the lifeless form of Ellen. I saw them reach the earth in safety; and ere I leaped beside them, I involuntarily looked behind. A few feet from the window the floor had fallen in. An ocean of flame spread its greedy waves as far as the eye could reach. Like a huge serpent, raging for food, the swelling volume of fire gathered its gigantic bulk and wreathed its spiral course in a thousand hideous and terrific shapes. A low, deep and piercing moan of human suffering arose from the centre of the flames. On, on, rolled the fiery torrent, hissing and gasping in a cloud of sulphureous and scorching vapour. Vain was the arm of valor—impotent the energy of courage—helpless the power of mind! The suffocating groan, the faintly uttered prayer, and the shriek of horror mingled themselves in the sweeping surge of fire. Heaved from their flimsy foundations, the walls tottered, staggered, and fell into an ocean of molten flame. A crushing sound—a hideous crash—a wild and agonizing cry—and all was over.

PARADISE LOST.

There exists a prose version of Milton's *Paradise Lost*, which was innocently translated from the French version of that epic. One Green also published a *new version* of the poem into *blank verse*.

THE COPY-BOOK.

DISMAL SWAMP.

There is a rail road now, running five miles right through the upper part of this great Serbonian bog. It looks like a grand avenue, surrounded on either hand by magnificent forests. The trees here are cypress, juniper, oak, pine, &c. of enormous size, and richest foliage; and below is a thick entangled undergrowth, of reeds, woodbine, grape-vines, mosses and creepers, shooting and twisted spirally around, interlaced and complicated, so as almost to shut out the sun.

The engineer who had constructed the road through this extraordinary swamp, told me that he had found it so formidable a labor, as almost to despair of success. In running the line, his feet were pierced by the sharp stamps of cut reeds; he was continually liable to sink ankle or knee deep into a soft muddy ooze; the yellow flies and moschetoës swarmed in myriads; and the swamp was inhabited by venomous serpents and beasts of prey.

The Dismal Swamp was once a favorite hunting-ground of the Indians; arrow heads, stone knives, and hatchets are yet found there, and it still abounds in deer, bears, wild turkies, wild cats, &c. The water of this swamp is generally impregnated with juniper, and is considered medicinal by the people of the surrounding country, who convey it to some distance in barrels. This swamp is much more elevated than the surrounding country, and by means of the Dismal Swamp Canal, might be drained, and thus a vast body of most fertile soil reclaimed, and the canal might be transformed into a rail road—and the juniper soil, which is vegetable, might perhaps be used as peat.

LAKE DRUMMOND.

There is in the interior of the Dismal Swamp, a body of water bearing this name, after the discoverer, who wandering in pursuit of game, with two companions, was lost, and in his rambling, came upon this lake. His comrades failed to thread their way out. Drummond returned, and gave an account of the sheet of water, which was accordingly called after him. A superstition which finds its "local habitation" in this lake, is the subject of a song by the poet Moore, of a spectre lady and her lover, who paddle a canoe nightly across this water.

"But oft from the Indian hunter's camp,
This lover and maid so true,
Are seen at the hour of midnight damp,
To cross the lake by a firefly lamp,
And paddle their white canoe."

The engineer before mentioned, and myself, visited this lake. We went first on horseback, to the lumber yard of the Dismal Swamp Timber Company, not far from which we dismounted, and embarked on board a boat called a *Periauger*, in which we were pushed with poles, by two negroes, ten miles, along a narrow canal constructed by the Timber Company for the transportation of shingles and staves. On the way, we listened to the marvellous stories of the negroes about bears, wild cats, &c.—or chatted—or admired the huge trees beneath whose spreading branches we were moving—the reeds, flowers and berries, especially the rich crim-

son deer-berry, which was very abundant. There is a sombre grandeur in the aspect of this dark and gloomy swamp; but even in these solitary morasses, the hand of man is changing the face of nature: many giant-trunked cypresses and junipers have sunk before the stroke of the axe.

Arrived at the end of the little canal, we suddenly shot right into Lake Drummond; like entering the door of a saloon, at once the whole scene opens to the view. Drummond's pond, as it is commonly called, is eighteen miles in circumference, six miles across, eight feet deep all over, circular, and surrounded on all sides by magnificent forests. Besides the canal we had come in, there was another, five miles long, connecting the lake with the Dismal Swamp Canal proper. Rowing around the pond, we came to a shed of boards much like a cow-house, in which lived an old fisherman and his family. We afterwards met on the lake another fisherman, with his daughter—a pretty sunburnt girl of fourteen—in a canoe, which was well laden with fish. Indeed this lake abounds in fish of an excellent quality; we hooked a few, bought some from our sunburnt lady of the lake, and pulled away for the centre of the lake. There we gazed awhile with delight on that charming sheet of water, which lay, calm as a mirror, glittering in the morning sun.

THE TOUR.

I found myself in a packet bound for New York, dropping down the James river. There was a Frenchman aboard very intemperate and very communicative. It appeared from his history of himself that he was born in France, educated in Germany, had travelled in Italy, Greece and Turkey. In Constantinople, where he was an *attaché* of the French legation, in the streets a Turk set a number of lean and hungry dogs upon him, which would have torn him in pieces, but for an old woman, who gave him shelter in her house. He had visited Siberia, where he lay sick at Tobolsk, and was most kindly nursed by the natives. He had been in Switzerland—at Geneva saw Lord Byron in the streets, and swimming in lake Leman. Had seen Sir Walter Scott in London. Had often seen Napoleon, and had been present in the *Champs de Mai* where Louis Philippe, King of the French, reviewed 450,000 men. Had been in Spain, and had passed ten years in England, where he was professor of French at the Royal Military Academy, Woolwich. At a gaming house in London, he saw a Spanish officer, a fine looking man, blow himself through with a pistol, on account of losing at play;—his last words were to those about him—"Messieurs, prenez garde de mes enfans."

THE VOYAGE.

Sunday morning—broiling sun—negroes coming off in boats from the plantations along the river, with eggs, roasting-ears, chickens, fruit, &c. to sell. That night, to escape from the heated air of a confined cabin, I slept on deck, in my cloak, my head on a hawser, under a heavy dew.

Monday morning, ran aground off Jamestown—reading lectures by the Moravian poet Montgomery—went down into the cabin—the Frenchman took a seat by me on a chest, and looking at me with a rueful countenance, said, "*Monsieur je suis marié, c'est malade.*"

It appeared that he had been teaching French in the state of New York, had married there a woman of whom he was heartily tired already, although they had not lived together more than two months. They slept in the same birth—lying however heel and point—spanking, quarrelling and kicking half the night, to the diversion of the passengers.

There was also a little Irishman aboard, squint eyed, with a twisted mouth—a papist and a mathematician. The Frenchman was dubbed the Emperor—the Irishman Don Miguel—a New Yorker, who appeared to have the organ of rope-climbing and navigation, the Commodore—and myself, on account of administering a dose of medicine to one of the crew, went currently by the name of the Doctor.

At anchor off Old Point Comfort—no sail in sight—negro canoes along side with oysters for sale. Wrote a letter on deck. Entered Hampton Roads—and next the Atlantic Ocean. The color of the sea is variable—sometimes a dark slate—sometimes a clear pellucid green—again a dark blue or purple. In four days we came in sight of Sandy Hook—the revolving lights—light-houses—mountains and highlands of Neversink—finally New York city. The cholera had broken out, and in some of the streets there was a strong smell of chloride of lime.

THE HUDSON.

Next morning went down to steamboat; on the way, passed the foundation of the Astor Hotel, since completed. Wharf crowded—boys with newspapers for sale—carts and wheelbarrows—porters with trunks on their heads—valises, band-boxes, umbrellas, baskets, mail-bags—men, women and children. Embarked—the noise of the steam, and the dissonant voices of the crowd subside, and give place to the regular thump of the floating hotel, while the city fast recedes from the view.

On board the Albany I observed some blind children—two girls and three boys. One of the girls had a very sweet face; she and her younger sister walked back and forward, arm in arm, on deck. The awning on the upper deck happened to take fire from a spark. Hearing a noise, I went up to see what was the matter. Two sailors were dashing water on the awning, and there was no one else up there except the pretty blind girl, who was alarmed at the noise, and crying bitterly. I took her by the hand, and said what I could to quiet her fears. She said they had gone away and left her. While I was speaking to her, the person that had the care of her, came up and led her away. My heart was touched to see these unfortunate children. Oh, to have the eye—the window of the mind—closed and darkened forever!—never again to behold the cheerful face of man, the light of day, the earth, the sea, the sky.

The Catskill mountains in sight, looking like floating clouds of light bluish ether. Beautiful villas on the Hudson—white—of fair proportions—tasteful roofs and porticoes. Small white sturgeons jumping clear out of the water. Knickerbocker, in his history of New York, gives an authentic account of the eating of the first sturgeon by the Dutch.

I say nothing of the brave Major Andre—of the head-quarters of General Washington—of Rip Van Winkle, nor of the Legend of Sleepy Hollow—of Sing

Sing, where they are imprisoned for killing on a small scale—nor West Point, where they are confined to learn the art of killing on a large scale. The cliffs of the Hudson are in many places lofty smooth walls of trap-stone—as the guide book informs me—varied here and there by a stunted pine, or fir, or cedar. On approaching a landing place, the name is resounded on deck by the sailors, as thus—"Whitehall baggage!—Whitehall baggage!" by a half dozen or more at once. The fashion of letting off a boat by means of a rope attached to the wheel, is dangerous, and ought to be discontinued. Saw the wreck of Burden's new steamer, the Helen, built on a double cylinder plan. Albany, American Hotel, No. 10—fine view of the city from the opposite side of the river—the dome of the Capitol covered with splendid metal.

CANAL.

Rail road to Schenectady, 14 miles. Canal boat—deck like a turtle's back, but a neat cabin. Canal from Albany to Buffalo, 369 miles. Near Utica, scenery pretty, but on a small scale. Canal runs along the Mohawk, a picturesque little Indian river. Early in the morning—the mists floating on the hills. Boat drawn by two horses, a boy mounted on one—travels day and night, at the rate of 4 miles an hour, or 96 miles a day—change horses every 10 miles. Utica contains 10,000 inhabitants; its site is an amphitheatre of rising ground. Here I met with an acquaintance I had seen at a watering place on the sea-shore. Rochester, 13,000 inhabitants, on the north side of the canal—Utica on the south. Clinton Hotel, at Rochester—fleas—high embankment near the town. On the canal, they say "riding" in the boats, instead of "sailing." There are a great many bridges across the canal; they are very low, some of them barely leaving room for the body to pass. Whenever the word "Bridge" is sung out, down go all on deck, and there lie prostrate until the bridge is cleared. Erie canal runs through a poor and uninteresting tract of the state of New York. Some of the villages are beautiful—some paltry; the houses are for the most part of frame. The people on the canal seemed quite temperate; and on the entire canal, I saw only one or two shops open on Sunday. Yet in almost every insignificant village, was to be seen a lazy, trifling, drowsy pack of idle loiterers, lounging listeners, a gabbling, drinking, gazing, gossiping set—ale-house politicians, quid-nuncs, haunters of taverns. Passed a boat-load of Swiss emigrants, a filthy looking crew—the women very ugly. Saw some Indians of the Mohican tribe—more "last of the Mohicans," probably. The weather was hot, it being August; the passengers were unsocial; the smooth motion of the boat was tiresome and monotonous; the bridges were a continual annoyance; everything around seemed cold, heartless, selfish, mercenary, and I cannot commend the grand canal either as an edifying, or as an agreeable route.

FALLS OF NIAGARA.

The best view of the falls is from Table Rock, on the British side—a fine position. Standing on the brink of this rock, the cataract roars beneath you—a thousand mists steam up from its base; over this foaming gulf, a rainbow spans its arch—this is the poetry of

nature. The terrible impetuosity of the rapids above—the awful plunge of the cataract—the roar—the spray—the rainbow,—these constitute a spectacle of inexpressible beauty and sublimity. Nothing less than the language of a Homer or a Milton could paint the scene. Not far from the falls, on the American side, is shown the cave of the winds—much like that of *Æolus*; here too is a rainbow, based on eternal storms and mists. What a pleasure it would be to watch these falls during the changing seasons—to behold them from every point of view—to grow familiar and domesticated as it were with the most stupendous sight on earth, compared with which, all ordinary objects of wonder sink into contempt—a sight which fills the mind with lofty emotions, and stirs up the inmost soul of poetry. There are two falls, separated by a considerable interval, entirely distinct, and which can never be identified. The principal, and by far the most astounding, is that between Grand Island and the Canada shore; it exceeds all description and all conception.

A MEDLEY.

Buffalo, a fine young city on the shore of Lake Erie—Eagle Hotel—Steamer to Detroit. Leaving Buffalo you have from the deck a beautiful view of the place, glittering on the margin of the lake.

The weather was delightful—the blue sky overhead clear as crystal—a cool refreshing breeze played over the water, rippling its glassy surface—a more charming expanse of water, human imagination cannot conceive. Yet such is our prejudice in favor of our native latitude, that while on Lake Erie, I felt a sort of regret that so noble a sheet of water should have been created so far north. Chickens jumping overboard—passengers running to the side to see them in the water—as far as the eye could reach we could see them rocking on the bosom of the lake—came up with a steamer, that had lost her rudder—took up 30 of her passengers—stopped at Cleveland and Sandusky, Ohio—crowds of emigrants, German, Swiss, &c. with lots of luggage. Detroit, handsomely situated on the left bank of Detroit river. I had met with the cholera at New York, Albany, and Buffalo—and I found it again in Detroit—27 dying of the pestilence daily, and the inhabitants in a panic—had to wait there two days for the stage—saw the house of Governor Cass, now Secretary of War, a low old fashioned French house. Among the public buildings is a large Catholic church, with several towers and steeples: on the summit of which swallows and martins were warbling, twittering and sunning themselves. In New York, I bought a guide book—in Albany, Foster's Essays—in Buffalo, the Subaltern—in Detroit, Peter Simple; and afterwards, in Vandalia, Lockhart's Napoleon.

THE PRAIRIES.

Stage to Chicago—military road—properly named—for nothing less than a soldier can stand such a road—first part of the road—the stage—an open wagon—13 passengers—tremendous roads, gullies, ruts, stumps—a gloomy wilderness of woods on each side—passed through Tecumseh, called after an Indian chief—and Ypsilanti, called after a Greek chief—much annoyed

by fleas and post offices—both of which are in great numbers. I was now in the interior of the peninsula of Michigan, when I began to hear the word prairie in the mouths of people. This word is pronounced by the common people pa-ra-ra. At length, after expectation had been sometime on tiptoe, we began to catch glimpses of the upland prairies. An absolute prairie is totally destitute of trees; but there are many partial prairies, that is, clear prairies, interspersed with clumps of trees. A clear prairie looks like an expanse of water; and a house in it, looks like a ship at sea. And as the mind soon grows accustomed to the solitary sameness of the sea, and weary of it, so it will tire of the monotonous uniformity of the prairie in a few days. Not so with the oak openings—for surely the human eye has never rested on more lovely landscapes than these present. I have read of the parks, and lawns, and pleasure grounds of England; but here are the parks, and lawns, and pleasure grounds of nature—fresh and lovely as they first bloomed at the dawn of creation. Among these delightful prairies, in Michigan and in Indiana, are scattered a number of lakes—beautiful little bodies of water which heighten the charms of the scenery. The flowers of every hue, and blades of grass wet with dew, and bending under the summer breeze: the woodlands thinned out with a “grace beyond the reach of art.” These picturesque and romantic little lakes—flocks of wild turkeys trooping together, where

“The wild deer arched his neck from glades, and then
Unhunted sought his woods and wilderness again”

the beams of rosy morning streaming afloat through the woody glades, and lighting up the whole scene: these all make up a picture of beauty worth the journey of a thousand miles to see. Let no man think he has formed an adequate conception of the beauty of this earth, until he has visited the prairies of Michigan and Indiana.

VARIETY.

Passing through the northern part of Indiana, very little of which is yet settled by whites, I came to La-Porte in prairie La-Porte, so called from an opening in a strip of woods between two prairies—like a door. The village of La-Porte was only a year old—execrable fare at the tavern—the maitre d’hotel and wife both intemperate—fleas plenty—water brackish—and no stage for three days.

Opposite to the town is one of those picturesque lakes mentioned before, called Lake Porte; indeed they are so fond of this word, that it is likely they will restrict their potations to Old Port—and the mayor of the town shall be called and known by the title of Sublime Porte. Took a walk in the prairie—land sells \$15 per acre—gathered 24 species of flowers, which I had not seen before—met three little girls gathering hazelnuts—asked their names—one had the same name with myself—a coincidence!

The St. Joseph's river is a clear, pretty stream. At St. Joseph's—a village on the river—saw some Pottawatomie Indians; and among them a frame, in which they carry a papoose or infant. Leaving St. Joseph's, the stage passed through an Indian reserve of twelve miles square—magnificent country.

Michigan city is situated in Indiana, and on the southern coast of Michigan. This city, however, is as yet only "in posse:" it is the germ of a future hypothetical city—and the hero of our national air, were he to visit that place at present, and see no town, it is certain he would not be deprived of that pleasure by the number of houses. Here I saw on the table d'hôtel the Mackinaw shad, famous in those parts.

INDIANS.

To go back a short distance—between St. Joseph's and Michigan city, I think it was—the stage stopped two hours for dinner in the midst of an extensive and fertile prairie. There I saw three young Indians, Potawatomes—two boys and a girl, bartering cranberries for meal, bacon and soap. The girl was beautiful, with the sweetest possible expression, and one of the boys was a noble manly looking fellow, and the other not unhandsome. They wore their hair plaited—a green hunting shirt, and red leggins. Their figures were elegant—hands small and delicate, and every attitude and gesture was easy, natural and graceful; indeed their whole appearance was such as becomes the children of nature's savage nobility. The landlord informed us, that they traded with singular dexterity, being accustomed to it from their earliest years.

AN INVENTORY.

For want of other employment, while waiting for dinner at this log-house in the prairie, I took an inventory of all and singular, the goods and chattels of one room—the which I found to be as follows, to wit: Beds, split-bottom chairs, tin lamps, plaid cloak, powder horn, shot bag, cloak, rifle hung on wooden hooks, great coat, hat, bundle in a handkerchief, slates, flowered paper pasted on logs—as also geography on entirely a new plan, ink-vials, statistics, "For sale &c." tacked up—poker, tongs, shovel, newspapers pasted up, bushes, onions, garden seeds, candlestick, glazed flower pot, jug, pitcher, tin canisters, tea-pot, pickle-jar, coffee-mill, saw, umbrella, coats, grass, whip, tumblers.

HOTCH-POT.

The Indians throw the accent on the last syllable of Chicago. Here there is a little stockade fort, and they are building a mole in the lake to form a harbor. The place is only three years old; 1500 inhabitants—fast increasing. Saw a prairie on fire. Ottawa in midst of a fine picturesque country; two pretty sisters, in pantalottes, waited on table.

An old Quaker from Pennsylvania, at whose house we stopped for breakfast, told me that there was land on his farm, the soil of which was ten feet deep. In the American bottoms, on the Illinois river, the grass on each side of the road was as high as the top of the stage-coach. Peoria, on the Illinois, a flourishing place, and abounding in fleas. Springfield, in Sangamon county, rather a pretty place, in the centre of a fertile, beautiful, and well peopled country. Four fine greys ran away with the stage before we left the town; the driver managed to make them run round in a circle—the coach in the meantime rocking from right to left like a boat in a storm. I caught the leathers on each side of the coach, and held my seat in the centre by way of ballast; by this time the driver became frightened,

(although he was assisted by a stout, square-built, double-jointed fellow from St. Louis, who sat on the boot and pulled with all his might,) and bethought him to run his horses directly on a fence—when the bar-keeper, who was along to take up passengers, jumped down and seized the leader by the bridle-bit; and although he was dragged some distance first, yet succeeded, by the assistance of the citizens, who now came running from every quarter, in stopping the four greys. Vandalia—an uninteresting place—in a rough country—paltry hotel—assembly meets in an ordinary brick building.

WOLVES.

The prairie wolf is by some supposed to be the same as the jackall of Asia. It is so small, as not to be dangerous alone. It is said that they hunt in packs like hounds, sometimes headed by the large grey wolf; that they thus pursue the deer, with a cry like that of hounds, sometimes rushing in full chase by a farmhouse. The officers of the army, at the Indian posts, amuse themselves hunting these animals.

The prairie hen is commonly found in the northern and middle regions of Indiana and Illinois. Its shape is more like a duck than a hen. It must be a fine fowl for sportsmen, as it never flies far at a time. In winter, I was told, they are very abundant, particularly about stacks. As an article of food, they do not rank, I believe, above mediocrity.

SUNDRIES.

From Vandalia, I went to Salem—crossed the Large Wabash river and the Small, to Vincennes, an old town settled by the French. The castle of Vincennes has been celebrated in modern times as the scene of the trial and execution of the Duke d'Enghien. The name is also illustrated by being affixed to an United States sloop of war. Of the town itself I recollect nothing remarkable, except that I had my hair cut there.

From this town we journeyed towards Louisville, Kentucky; and how agreeable the journey, may be gathered from the following syllabus, to wit: Going day and night—bad stage—worse driver—horses worst of all—hills—rain—corduroy roads—stage crowded—cholera—pole cats. One of our passengers was a great character among the Shakers of Lebanon, Ohio. I inferred from what I saw of him in travelling from Vincennes to Louisville, Kentucky, that the substratum of his Shakerism was extremely thin. I saw the other day in the papers, that he had run off with \$100,000, and a fair Shaker.

Louisville is a fine flourishing place. Frankfort on the Kentucky river, is built down in a hollow. The capitol is a handsome edifice.

NAMES.

Ben Jonson's name was often written by himself with an A. Dryden spelt his own with an i. Samuel Butler's name was written Boteler, at least by Charles II. Our great poet's name appears Shakspeare in the register of Stratford church, Shackspeare in the body of his will, and Shackspeare on the back of that instrument.

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1798 to 1830—Drawn from the Portfolio of an Officer of the Empire; and translated in Paris, from the French, for the Messenger.

THE HUNDRED DAYS.

The most extraordinary event in our history, the return from the island of Elba, is already 20 years removed; perhaps the moment has arrived for speaking the truth; in any event it can injure no one. Napoleon is no more, and the glory attached to his name is great enough, to allow the impartial judgment of an epoch in his life, without injury to his immense renown. His lieutenants have, for the most part, descended to the tomb; and the few who are still alive, ought ardently to desire, that a light thrown on facts hitherto viewed through the medium of passion, might dissipate those accusations of ignorance and treason, which have been published as a means of concealing the faults of others.

Here I must explain myself. I am about to speak of military and political events; I have been in service, but I have not attained those exalted positions from which one is allowed to observe and to appreciate facts. I might perhaps, justly be denied the experience necessary to qualify me to pronounce with a mature and certain judgment. But it must have been observed from the commencement of this work, that I alone do not speak—that I do not put forth my isolated opinions. Accident has placed me near a great number of distinguished men; being anxious to acquire information, I have been a witness to many things, have heard and have read much. I have sought after truth through the best sources, and I think I have secured its possession.

Being a young officer at the period of the battle of Waterloo, I judged of that fearful disaster, with the ideas peculiar to my age, and felt the impressions which all my comrades partook. I also cried treason—against whom? I did not know; but it was absolutely impossible that we were not betrayed, for with the Emperor who could conquer us? Besides, a defeat weighs as heavily on the heart of the General, as on that of the lowest soldier, that we dared not avow it, without seeking out some extraordinary cause, some excuse. Afterwards, and with a few more years added to my age, I read everything that was written on the hundred days and the battle of Waterloo. My sincere conviction at this moment, is, that it would have required a miracle to have prevented the actual occurrence. Faults were committed by everybody. The Emperor, the Generals (with some few glorious exceptions), the army, were no longer the Emperor, the Generals, the army of the fine campaigns of the republic and the empire; and, in conscience, could it have been otherwise? All the apologies published at St. Helena and elsewhere, when I read them over at this day, only seem to me to prove, that we would have gained the battle of Waterloo if we had not lost it.

In my anxiety to inform myself correctly, I have applied to every source of information—I have addressed myself to men placed in the best situations, for ascertaining and appreciating the facts. A precious manuscript has been communicated to me, written in 1818, as a refutation of General Gourgaud's history of the

campaign of 1815—it has never been published; the Emperor was still alive, and in misfortune. The author, a general officer, commanding a corps of the army in this campaign, desired to remain faithful to the end, to the man whom he had served: he sacrificed everything to him, even to the publication of a truth, in which his military reputation, and that of many other Generals were interested.*

This manuscript, so far as I am concerned, has not been a revelation, but the confirmation of a former opinion; it was only the opinion I had instinctively formed, supported by facts, theoretical principles, and exact calculations. During the hundred days there was nothing superhuman, nothing supernatural, but the journey from Elba to Paris. Everything which followed that event re-entered the condition of humanity. It is man with his passions, his weakness, his limited faculties; and the disaster of Waterloo was but the inevitable result of a struggle too unequal, and of faults which cannot be denied without refusing to listen to evidence.

The author will not permit me to copy the MSS. now under my eyes. He wrote under the influence of recent grief. The picture of the misfortunes of his country, the presence of foreigners, dictated bitter expressions, which he would at this day efface; but I shall borrow from him the principal features of the examination to which I am proceeding. I do not pretend to present a complete recital of the military events of 1815, but a summary of the most important facts of that short and deplorable campaign.

In the first place, it must be confessed that the miraculous return from Elba was a misfortune both for the Emperor and for France; for the Emperor, inasmuch as it changed his supportable exile to a frightful transportation; for France, in that it cost it an army and treasures, and brought about a second invasion and a prolonged occupation. The Bourbons had proved in 1814, that they had learnt nothing, and had forgotten nothing: the return from Elba made them confess a few faults, but even that event could not force them to learn or to forget. The restoration carried in itself an original vice, a principle of destruction. It was condemned to perish:—the return from the island of Elba prolonged its existence a few years.

The first fault that the Emperor committed, was to arrest his progress at Paris, on the 20th of March. I copy the manuscript.

"The details given, by General Gourgaud, in his history of the campaign of 1815, published at St. Helena, on the situation of the armies of the coalition at the moment that Napoleon, with an inconceivable boldness and unexampled good fortune, passed, as he himself said, from steeple to steeple to Paris, will suffice to convince us that the first fault which he committed was to arrest himself at the Tuileries, instead of continuing his march to the Rhine. It is probable that he would have arrived there as easily as at Paris; and in such enterprises it is always necessary to profit by the astonishment and stupor of the enemy. Above all, he should not have suffered the enthusiasm with which such miraculous success had inspired his partisans, to grow cold. Paris, for him, was not on the Seine—it was on the Rhine.

* See note at end of this volume.

"The moment that he paused, that he began to calculate his means, he should have considered himself lost; for it cannot be thought that he seriously flattered himself with being able to impose on the allies. His feigned moderation, and his pacific declarations, only served to betray his weakness, and perhaps to cool the public enthusiasm. Undoubtedly Napoleon found it necessary to reorganize his army, and to create means, but he might have done everything while marching forward; and the easy conquest of the Rhine would have furnished him an immense increase of resources, of which he would at the same time have deprived his enemies."

The Bourbons had, during the few months of their first sojourn in France, created some interests connected with themselves. The representatives of royalist opinions, weak and scattered, before 1814, were united and strengthened. They formed in 1815, with the representatives of the new interests, a mass of formidable adversaries. On the other side, the friends of liberty, fearing the return of the imperial despotism, only offered their support in exchange for strong guarantees. Napoleon, with only his own partizans, thus found himself thrown between two opinions—one his avowed enemy, and the other armed against him with all its distrust. It was necessary that despotism should reappear powerful, in order to restrain these two parties. The Emperor could do nothing but by men of action, by the men who had brought him from the gulf of Juan to Paris. It was necessary that he should reign as he had reigned; he required that fascination of glory, by means of which, he had for a long time caused everything, even liberty, to be forgotten. In the inevitable struggle which was then coming on between a divided and exhausted nation, and all Europe combined against her, a prompt and decisive march might have electrified men's spirits, and have produced the most brilliant and unexpected results. In a word, there was wanting one of those miracles of the campaign of Italy; and such miracles never spring from an *acte additionel*, or a *champ de mai*. To engage in a struggle of internal politics at Paris, without being able to deceive any one, was only to produce new enemies; and the Emperor had already enough whom there was a much more urgent necessity for combatting.

In the critical situation in which he found himself after his triumph of the 20th of March, Napoleon had to choose between three plans. I have mentioned the first; it was probably the best—not in June, but the 21st of March. It had the immense advantage of leaving everything in the interior undecided. The return from the island of Elba had inflamed men's imaginations. France should have been left under the empire of this first impression, and the national patriotism should not have been suffered to evaporate in the vain debates of the tribune. In Rome, during periods of public danger, a dictator was appointed, and the senate and the tribunes of the people were silent before this supreme officer. The Emperor was a dictator, already nominated. There was but one party on which he could confidently reckon; this party neither asked for guarantees nor liberty, but war and battles—this party could alone serve him; the others made demands of him, but could give him nothing. To sum up the matter, with what has been called the despotism of the

sabre-victory, was doubtful; without this despotism, it was impossible. Time and means were wanting for a regular war; it was necessary to undertake an irregular war—a war without money and without magazines—a war like the first campaign of Italy; and in desperate circumstances, these are sometimes successful.

The apologists of the Emperor have said, as an excuse for his not having marched immediately to the Rhine, that he entertained the hope of peace; and that public opinion would have disapproved his course if he had acted before he had exhausted all means of conciliation. The Emperor never believed in the continuance of peace; he might have desired it, but he could not have expected it but as the consequence of a victory. The true secret of all this is, that Napoleon was no longer General Bonaparte. One cannot expend with impunity, in 20 years, the energy and activity that would have sufficed for ten first rate men. Everything wears out at last, and there are bounds to the human faculties.

The second plan was, to fortify the frontiers, to act on the defensive, to await the attack, to watch a favorable moment, or a fault of the enemy, and to profit by them. But such a course did not suit the character of Napoleon. The conduct and the delays of a defensive war were not adapted to his temperament; and it must be confessed that this sort of warfare is but little in accord with our military spirit. This plan was more in harmony than the two others, with the new system which the Emperor had permitted to introduce itself in France; but this new system was supremely disagreeable to him. The sounds which echoed from the tribune wounded his ears. Already he regretted the concessions which he had been condemned to make; it was despotism which he hoped to re seize when he commenced hostilities. The acclamations of victory, had it remained faithful to the imperial standard, would have soon controlled and silenced the importunate voices of the tribune.

The third plan, that which the Emperor adopted, was identically the same with the first, but with the enthusiasm of the people cooled, and three great months lost: these three months were an age. During these three months the coalition had not remained inactive, and an Anglo-Prussian army of two hundred and twenty thousand men, the *avant-garde* of six hundred thousand Austrians and Russians, already menaced our frontier. We had a hundred and fifteen thousand men to oppose to them.

If any doubts could remain about the immense advantage the Emperor would have derived from commencing the war the morning after his arrival at Paris, the first results of the contest, so tardily commenced, would suffice to remove them. If Napoleon, profiting by the first fault that was committed, that of a concentration too near the extreme frontier, was enabled to surprise the enemy already on its guard, and obtain the first advantage, what might he not have hoped from his troops, suddenly turned loose upon a dispersed enemy, without any plans for the campaign, and deprived of its means of action! On the 15th of June, when two hundred and twenty thousand men were already nearly united, the Emperor desired to prevent a greater assemblage of his enemies: his plan was to surprise his adversaries, and to beat them in detail.

No plan could be wiser or better combined ; but Napoleon should have commenced two months earlier ; he would not then have found before him a force double his own.

A great fault then was committed at this period—it was entirely the Emperor's. In pursuing the examination of facts, it will be easy to perceive the fatal influence of this error on subsequent events.

On the 15th of June the armies of the enemy might still have been surprised. They were so in fact, but the corps of which they were composed, were already near enough to each other to prevent this surprise from being fatal. The plan of the campaign was then, as it should have been, to operate the disjunction of the English and Prussian armies, so as to be able to act separately against the one and the other.

The details of the movements and engagements of the 15th, on the passage of the Sambre, have nothing striking. The Prussians, who were first encountered by the French columns, gave way, and retreated before them. That was a success, but a success of little importance. In the recitals that have been made of this short and deplorable campaign, it is at this point that the intention is first disclosed of representing the conduct of Marshal Ney, as the principal cause of the reverses of Napoleon. He is reproached for not having occupied the position of *Quatre-Bras*. The accusation against the unfortunate Marshal has something plausible in it. Ney commanded the left of the army : the English were opposed to him—and the position of *Quatre-Bras* was really the point of junction between the English and Prussian armies.

Marshal Ney, I do not fear to say so, was beneath himself in the campaign of 1815. His *adieu* and his oath to Louis XVIII, his affair of *Lons-le-Saulnier*, his return to Napoleon, whose abdication he had urged in 1814—all these recollections overpowered him. Ney had not the heart of a traitor ; it was in good faith that he promised Louis XVIII to fight Napoleon. Afterwards he found himself too weak to resist the appeal of him to whom he owed his fortune, under whose eyes he had served so gloriously, and all of whose labors he had partaken. That judges could be found to condemn Marshal Ney, guilty, as he undoubtedly was, but protected by the capitulation of Paris, is a stain upon the page. It is an infamous stain upon the memory of Louis XVIII, to have shed the blood of a man, who had poured out so much for France.

The conduct of Ney at *Lons-le-Saulnier* had been openly condemned by his ancient comrades. His presence at the army had been observed with pain. He felt all the difficulty of his situation ; and this man, whose *coup d'état* had before been so quick and certain, whose action had been so rapid, showed himself, under these circumstances, uncertain and weak. On the 16th, the day of the battle of Ligny, the fate of the army was in his hands. His inaction compromised everything, for it was at the point which he commanded that the greatest events were to be decided.

The battle of Ligny was an unfortunate success, because it advanced nothing. The Emperor required a victory ; he yielded to the vain pleasure of driving Blücher's army before him ; but his purpose, which from the fault of Marshal Ney he failed to obtain, was to separate the English from the Prussian army. If, in

1815, there was any possibility of beating the enemy, of making them suffer those checks which bring about great results, it was undoubtedly on the day of the 16th, and particularly at the left wing of the army.

In fact, it is probable that the position of *Quatre-Bras* might have been easily carried on the morning, and even as late as two or three o'clock in the afternoon, as it was but feebly occupied until that hour, and thus the English army might have been separated from the Prussians, and, perhaps its divisions might have been beaten one after the other, as they arrived on the field of battle from different directions. Afterwards this became extremely difficult. The enemy had discovered the importance of this position, and had strengthened it by forces sufficient to render all chance of a successful attack nearly impossible ; and yet the failure of a desperate attack on this point would not have been fatal.

Marshal Ney had not called his troops to his aid with sufficient promptness ; and when they had successively rejoined him, the enemy had already assembled the greatest part of its own. It was then easily enabled to resist the feeble attacks of Prince Jérôme, who was at the wood of Bouffé, while the right wing, though commanded by an officer whose ardor and intelligence on the field of battle were not less brilliant than his eloquence at the tribune (General Foy), itself made no progress.

At last, stimulated by the reiterated orders of Napoleon, the Marshal felt, but a little too late, all the importance of the position, and the error he had committed, in not carrying it in time. He then made the greatest efforts to succeed, but it was in vain. The divisions of Prince Jérôme and of General Foy were actively engaged without any result, when Colonel Forbin Janson, an ordnance officer of the Emperor, carried the Marshal the particular orders of Napoleon, accompanied by these words : "*Marshal, the safety of France is in your hands.*" In despair, at not being able to possess himself of this position, at seeing the forces of the enemy increase every moment, and the efforts of his infantry continue powerless, the Marshal summoned the lieutenant-general, commanding the Cuirassiers, and repeating the words of the Emperor, said to him—"*My dear General, the safety of France is dependent upon the result ; an extraordinary effort is required. Take your cavalry—throw yourself in the midst of the English army—crush it, and pass over its prostrate bodies.*"

It was the hottest moment of the day : it was between six and seven in the afternoon. Such an order, like that of the Emperor's, was easier to give than to execute. The General represented to Marshal Ney that he had but a single brigade of Cuirassiers with him, that the greater part of his corps had remained, in compliance with the orders of the Marshal himself, two leagues in the rear, at Frumes. In fine, that he had not force enough for such an enterprise. "*No matter,*" replied the Marshal, "*charge with what you have—crush the English army—pass over its body : the safety of France is in your hands. Proceed ; you shall be followed by all the cavalry present.*"

In fact, he had at hand more than four thousand horses of the guard, and of the division Pitré, which were half a cannon shot off.

There was no time for deliberation at such a moment. The General darted forward, as a victim devoted to

death, at the head of six hundred Cuirassiers, and without giving them time to perceive or to calculate the greatness of the danger, he drew them desperately into this gulf of fire.

The first regiment of the enemy which it encountered was the 69th infantry. This regiment, composed of Scotch, fired at thirty paces; but without stopping the Cuirassiers passed over the bodies of the men, utterly destroyed it, and overthrew everything in their way. Some even penetrated into the farm of *Quatre-Bras*, and were there killed. Lord Wellington had only time to leap on a horse, and save himself from this terrible attack.

The charge of the Cuirassiers had succeeded against all probability; a large breach was made; the army of the enemy was staggered; the English legions were wavering and uncertain, awaiting what was to come next. The least support from the cavalry in reserve; the least movement on the part of the infantry engaged on the right, would have completed the success. Nothing moved. This formidable cavalry was abandoned to itself; alone, dispersed, disbanded by the very impetuosity of its charge, it saw itself assailed by the muskets of the enemy, then recovered from their astonishment and fright; it abandoned the field of battle as it had carried it, and without being even pursued by the enemy's cavalry which had not then arrived. The General himself had his horse shot, and returned on foot from the midst of the English, and at last encountered near the point from which he had set out, a division which had just begun to take part in the action, orders having been given to it too late. The attacks of this division, directed against an enemy already recovered from its alarm, were as fruitless as they were tardy.

In war a favorable moment cannot be neglected with impunity, and the numerous cavalry of the left wing did not take advantage of the proper moment to precipitate itself upon the enemy. The distant position of three brigades of the reserve of Cuirassiers, was a great misfortune for the army, and for France. If they had been in the line, and ready to profit by this happy boldness, and to throw themselves in the midst of the enemy, perhaps in less than an hour the English army would have been disposed off. It would have disappeared under the feet of the horses and the swords of the cavalry, and this day would have secured us one of those results which decide the destinies of empires. In fact, the English army once destroyed, the Prussian army would have found itself attacked in the flank, pressed upon in front, and would have been unable to escape complete destruction; it would never have repassed the Rhine. The victory would have brought back the Belgians to our standards, as well as the inhabitants on the banks of the Rhine; and we would have made cheap work of the Russians and Austrians. This dream might have been realized during nearly the quarter of an hour; it agitated more than one head.

It cannot be concluded from these chances of success, that it was prudent to trust everything to chance, as was done in this campaign. The success that we were on the point of obtaining at *Quatre-Bras* would have been a miracle, and, in the disproportion between the contending armies, a miracle was necessary. But war has so many unexpected chances, that it was not impossible, that that which could alone save Napoleon might turn up; it was within an ace of doing so.

With forces so inferior to an enemy, who trust less than ourselves to chance, it was not necessary to have thus hurried a decision of the campaign; but it would seem that a fatality has in all times led us to precipitate ourselves, in gaiety of heart, into the gulf, and always to attack the English bull by the horns. It may be remarked, that from the battle of Agincourt to that of Waterloo, nearly all the victories gained over us by the English have been in battles in which they acted on the defensive. We rush headlong upon them, when in formidable positions selected before hand, which they know marvellously well how to defend. One may say that we take pains to wage precisely that sort of war upon them which suits their courage. We may cite in modern times Vimiera, Talavera, Bussago, Salamanca, and lastly, Waterloo. Whether it be the character, or the military genius of the English, or the spirit of their government, that imposes greater circumspection on their Generals, one would believe the English nation less suited for an offensive than a defensive war. In consequence of great superiority of force as at Toulouse, or of absolute necessity as at Alknaer, they decided with much difficulty to act on the offensive. It has been seen with what success they did so under the circumstances of the last case in 1799. Why then at Waterloo, were they not forced to become the aggressors?

The day of the 16th resulted in the abandonment of Fleurus, after an energetic resistance on the part of the Prussians. For the purpose of supporting the right wing of the Prussians, the Duke of Wellington judged it necessary to retire during the night, leaving only a weak rear-guard at *Quatre-Bras* to make this movement. Marshal Ney had no knowledge of this manœuvre, and, remained in his position, waiting further orders. He was drawn from the inactivity into which he had been plunged by the little success of the previous evening, by the arrival of the Emperor, who moving on the morning of the 17th, with his columns upon *Quatre-Bras*, obliged the rear-guard of Wellington to rejoin the main body of the army.

The Emperor thought he had finished with the Prussians; being ignorant, like Marshal Ney, of the movement of the English army, he supposed that the two armies were separated. Entrusting then to Marshal Grouchy, the care of pursuing the Prussians, and of pressing them without respite, and above all of preventing them from joining the English, he proceeded with the greater part of his forces against the army of Wellington. A sort of fatality presided over the lot of Napoleon. On the right, Marshal Grouchy lost the day of the 17th, and the track of Blücher. On the left, fatigue and the want of order condemned the troops to inaction. It was only at noon that the Emperor, arriving at *Quatre-Bras*, set the troops of Marshal Ney in motion, for the purpose of following and firing on the retreating rear-guard of the English.

Towards three o'clock a beating rain commenced, which continued until the next morning. The army took whatever position it could during the night, not without some disorder and confusion. The Anglo-Belgic army, on the contrary, had effected its retreat without being disturbed, as no one was informed of the movement; and it had been established since the morning in a camp which it had prepared for itself, and

did not suffer either from the bad weather or want of food.

Too little attention is paid to the effect produced on men, especially on the evening preceeding a battle, by excessive fatigue and want of food and rest. Causes of physical exhaustion operate on the moral spirit of an army, and produce discouragement and disgust. Represent then to yourself, the French army, wearied by eight days of forced marches, wanting food, passing through a country covered with water, sleeping in the mud, and without protection against constant rains. You may then judge of the disadvantage under which it had to encounter fresh troops, superior in number, and on ground selected by themselves, and carefully fortified.

The Emperor, after separating from Marshal Grouchy, whom he had perhaps suffered to remain at too great a distance from him on the evening of so important a battle, had not more than 55 or 60,000 men to oppose to 90,000 English, Hollanders and Belgians.

On the 18th, towards 11 o'clock, the weather cleared off. It could then be seen that the movement effected by the English on the preceeding evening, was not a retreat, but a change of position. At the moment that the Emperor was giving his orders to the Generals assembled around him, a cannon, fired from the English camp, gave the signal of combat. The engagement commenced with the left of the French army; the second corps consumed itself in fruitless efforts to carry the wood, and entrenched chateau of Hougomont.

In the centre of the army a corps, manœuvring with a sort of hesitation, was charged by the English cavalry, and had one of its divisions compromised. This movement of the English cavalry necessarily brought on the engagement of our own, and unfortunately involved the greatest part of the French cavalry in the action at a very unlucky moment.

This charge was neither skilfully nor successfully executed. The masses of cavalry did not advance in that compact and imposing order which inspires confidence, and gives promise of success. Instead of reserving the great effort for the moment of meeting the enemy, the cavalry of General Milhaud was let loose first, then that of the Imperial Guard, and lastly, the right of the reserve cavalry of the 4th corps, which was imprudently involved by its General, in consequence of his not receiving the orders of his commander-in-chief; and all arrived in disorder, pellmell, and out of breath, on the ridges occupied by the line of English artillery. The pieces were abandoned, but the horses might have been driven away. This, which it must be confessed, was the only success during the day, is, perhaps, what was called a victory. This pretended success had, it is true, great effect on the distant positions of the enemy, where movements for a retreat were commenced; but in the rear of the artillery there was a double line of infantry formed in a square. Our cavalry had to remain several hours in this cruel position, unable to retire for fear of drawing the army after it, or to charge again for want of room. Without infantry and without artillery to support it, in presence of the enemy's squares (which, however, reserved their fire), but exposed to a cloud of marksmen, whose every fire counted—thus receiving death without being able to return it.

Napoleon quickly recognized the imprudence of a

charge by all the cavalry, when at so great a distance from the infantry. Such a movement must either be successful or compromise everything: it had failed of success, and from that moment there was no further hope of victory. The evil destiny of France seemed to preside over all the false measures of the day. A brigade of carabiniers, of a thousand horses, had been preserved from the fatal charge. Placed near a battery of the guard, the Major-General had received the most express orders not to make the least movement without the order of his immediate chief. This brigade of carabiniers was then in the plain. Marshal Ney observed it, ran to it, showed great indignation at its inaction, and ordered it to precipitate itself on seven or eight thousand English, placed *en echelon* on the inclination of a hill, and flanked by numerous batteries of artillery. The carabiniers were compelled to obey. Whether from want of strength, or unskilfulness, their charge was entirely unsuccessful; half of the brigade was in an instant prostrate on the ground. When, as will be seen, the fate of the battle was afterwards determined by the charge of the English guards, one may comprehend the service this brigade of carabiniers might have rendered, had it remained untouched.

Towards three o'clock the heads of the columns of General Bulow were perceived, and Napoleon had to detach 10,000 men to face this attack.

It has been asserted that the appearance of the heads of the columns of the Prussian corps of Bulow caused a fatal error, and that these troops of the enemy were mistaken for the *avant-garde* of the body of Marshal Grouchy's army, to which numerous officers of ordnance had been despatched. I do not know whether such an error was committed, but there is little probability that it was. The indecision of Marshal Grouchy, under these circumstances, was undoubtedly a great misfortune; but it is doubtful whether the Marshal, had he even acted with decision, could have presented himself in line. The arrival of Bulow's corps had a fatal influence on the result of the battle, but only in consequence of the necessity which it produced, of withdrawing ten thousand men from the main body of the army, already so much weakened. The attack of the Prussians on this point was not only restrained, but repulsed with a vigor above all praise, by Count Lobau and General Duhesme. This was, perhaps, the finest feat of arms of the day; it was a service of the highest importance, for had the movement of Bulow been successful, the French army would have been divided, and the route of Charleroi would have been closed against us.

The old guard still remained untouched; the day drew to a close. The fighting grew more and more feeble, but even while yielding, the field was not deserted by flight, and the corps were not seriously injured. If success was afterwards impossible, a retreat might at least have been effected during the night behind the Sambre, thus securing the only reserve which remained. The Emperor did not, however, judge this expedient; the old guard was suffered to take part in the engagement. This was a decisive stroke—it might save or lose everything; but, if it repaired nothing, the army would be left without resource. The guard, with all its courage, and all its admirable devotion, could not cut through the masses of English, and had soon to fall back before an impetuous charge

of a division of English guards, and a brigade of cavalry, which had just arrived upon the field. Then it was that there was cause to regret the imprudent movement which had involved the brigade of carabiniers. When this fatal movement was ordered, this brigade was stationed precisely at the point where the English cavalry debouched; and to this cavalry Napoleon himself attributed the retreat of the guards. It is probable that this brigade would have been enabled to arrest the movement of the English cavalry, and thus have protected the retreat of the only reserve of the army.

Now, everything was finished; a retreat was inevitable. Night came on—it was impossible to re-establish order, or to arrest those who were running away. There was nothing but confusion and a fearful and irremediable rout, and such as might be expected after a battle, in which the whole army, even to the last battalion, had been engaged.

The causes of the loss of the battle of Waterloo have been long discussed. There was one great cause, predominant over the rest, and that was the great disproportion of the forces. When armies are nearly equal in intelligence, discipline and valor, victory will naturally range itself with the greatest number of troops, unless some miracle, some one of those extraordinary events, on which it is always imprudent to reckon, intervene.

The picture of disorder and confusion on the fearful night that followed this battle was frightful indeed; it was a general *sauve qui peut*.

From this moment the Emperor completely disappears from the military operations. At Charleroi, where he had left no orders for rallying the army, they were even ignorant of the direction he had taken. Some troops of cavalry were united, who succeeded in covering the retreating movement, and corps were formed on the route of such fragments as they encountered. It was only at Avesnes that it was known that Laon was indicated as the rallying point.

We are only at the 20th of June. The second abdication of the Emperor, signed the 22d, was only known to the army on the 24th. But from the 20th the cause of Napoleon was lost, even among his own troops. The word abdication had been pronounced by the army, even before it was debated at Paris. On the 20th of June many of the most distinguished Generals of the army were assembled at Avesnes. At this meeting, in the presence of a Prince of the Emperor's family, and with his approbation, the errors of Napoleon were denounced in the most violent terms, and the necessity of depriving him of the command was as boldly asserted.

Certainly France had still other resources. An army of imposing size might, in the early days of July, have been assembled at Aisne. It might still have been expected that the enemy would march with prudence; it could hardly have been supposed that, inflated with the pride of victory, it would have neglected all the ordinary measures of precaution; that it would have left strong places behind it without taking the necessary steps for masking them, and have marched upon Paris without troubling itself with our army thus left on its flanks. But certain devoted friends had taken the pains to reassure the enemy upon the condition of the interior; and an assembly of disorganized troops, without orders,

and without any supreme head, was of little importance. The Emperor was no longer with them, and the elements of resistance, which the imprudence of the march of the enemy might have rendered powerful, were paralyzed from the want of any direction. It was with difficulty that the exertions of the fourth corps of cavalry at Senlis, succeeded in enabling the wrecks of the French army to arrive before the enemy under the walls of Paris. It has been said that the news of the abdication of the Emperor, decided Wellington and Blücher to march directly on Paris; this is a mistake. The report addressed to the English government by Lord Wellington, immediately after the battle of Waterloo, contains these words: "*I shall direct my course by forced marches, and by the shortest route, towards Paris.*" When he wrote this on the evening of the 18th, he had received various news from Paris, but he could have had no knowledge of the abdication, which was only signed on the 22d.

It was on the 29th of June that the army entered the lines of Paris, and not until the 1st of July that the corps of Marshal Grouchy rejoined it. Marshal Davoust assumed the command. His first care was to send a detachment of three hundred horsemen to St. Germain, for the purpose of guarding that point, and seeing to the destruction of the bridge of Pecq, and watching all the passages of the Seine as far as Mantes; but in the meantime, a Prussian detachment had presented itself, and treason had opened a passage for it. The occupation of this important point, which opened to the enemy a passage over the Seine, decided its general movement in that direction. They had thus the double advantage of turning our positions at Montmartre, and of attacking Paris in the rear, if it was decided to force an entry. It obtained, besides, positions that would menace us. It sufficed, in fact, to glance at the heights of Meudon, St. Cloud, and St. Germain, to be convinced that the French army was not in a condition to dislodge the enemy. Marshal Davoust has been reproached for not having profited by this movement, to fall on the flank of the enemy in passing by St. Denis, and thus to have let slip an opportunity for crushing it. But could so decisive an action have been attempted with troops oppressed by fatigue, and absolutely demoralized? And at what moment could this sortie have been made? The march of the enemy was not known, when, thanks to a timely treason, it was executed; and the instant that it was executed it was too late to act with effect.

But the General-in-chief of the French army was, and ought to have been influenced by an anxious desire of preserving Paris from an assault. He could not have been justified in sacrificing the capital to the hope of a triumph without object, and of which, the result would probably have been unimportant.

The passage of the Seine, and the establishment of the main body of the enemy on the heights of Meudon and Châtenai, had rendered the situation of Paris and that of the French army much more critical. The army had to repass in great haste to the left bank to cover the capital, which was completely exposed on that side. It was anxious for battle, and would have defended, with desperation, the trust confided to it; but the Generals of the enemy would have taken care to avoid hazarding an ill-timed attack against troops, de-

terminated to struggle to the very last, and for the sole purpose of advancing, by only a few days, their entry into Paris. They accordingly took up their positions on the formidable heights of St. Cloud and Meudon, stretching out their right towards the road to Orleans, with a view to surround the French army, and to starve out the capital. Will it be pretended that Marshal Davoust should have sought out the enemy? He might and ought to have received battle on the plain of Montrouge; he desired it and he waited for it, but it would have been the height of imprudence to have offered it elsewhere. He could not suffer himself to be shut up in Paris, necessity forcing him to absent himself before the roads were closed against him; nor could he allow the capital to fall unconditionally into the hands of the enemy. In this delicate situation he was compelled to treat for the surrender of a place which he was unable any longer to preserve; and to take advantage of the impatience of Wellington and Blücher, to secure the fate of Paris and the retreat of the army. These considerations determined the capitulation of the 3d of July. Had that capitulation not been made, it would not have been the less necessary for the army to quit Paris; orders indeed, had been given, to effect that very night a retreat which it would have been imprudent to defer. The loss of a battle would have delivered Paris to the horrors of a city carried by assault—and yet battle was not refused; but in consequence of the enemy's inaction in avoiding a combat, a retreat was forced upon us.

And besides, were the French army and its leaders well convinced of the disposition of the population? The royalist party, overwhelmed by the event of the 20th of March, had been restored to life by the rumor of the defeat at Waterloo. The Emperor had quitted Paris, and left his most decided partisans without defence and without hope. From the 22d, the minister, then become the head of the provisional government, had been negotiating with the Bourbons; a second restoration was inevitable. What good then would have been effected by the floods of blood which might have still been shed? Far from condemning Marshal Davoust (and without minutely scrutinizing his intimate motives), we may thank him for not having yielded to the puerile vanity of risking a battle which might have added something to his military glory, but which, even in the event of the most brilliant success, could not have prolonged the struggle more than eight days farther.

Finally, treason has been spoken of; there was none in the army. There were three desertions on the evening of the 17th; but they had no influence on the events of the campaign. Faults committed at that period, have also been spoken of. There were some, doubtless, but the principal were those of the Emperor. It has been asserted, that the Generals exhibited weakness and indecision, and that the devotion of the soldiery was thus paralyzed. In this statement there is some truth and some falsehood. It will not be asserted that the Generals Count Lobau, Count de Valmy, Dabesme, Foy and some others, exhibited weakness or indecision. But there was but little enthusiasm in the army. The Generals, for the most part, fatigued with war, dared not risk anything, because they no longer found in their soldiers, who were too young, the firm-

ness and *sang froid* of the old regiments destroyed in Russia, and in the campaign of 1813.

That there were treasons in the interior, I have no doubt. I have spoken of that of the bridge of Pecq, the author of which is well known: there were others besides. The Generals of the enemy would not have risked a direct movement on Paris, had they not been invited thither. Fouché, a man of great cunning, perfectly comprehended the dangers of the Emperor's situation; he had foreseen the issue of his attempt, and had abandoned him for the purpose of providing for his own future interests. But these treasons were of but little service to the enemy, who did not require them.

To arrive at the truth concerning the catastrophe of 1815, we must always recur to the same point. Success could only have been secured by a miracle, and fortune was weary of serving us.

WATER.

There is no man, however cold or unexcitable in disposition, that does not at once feel and confess the influence of a body of water. Go where you will, or with whom you may, when you approach the ocean, or an inland stream, or lake, every one will, in some way, by some exclamation, show that if all other things fail, this, at least, will awake the "sleeping poetry of the soul." The most grand and magnificent view of water, is from some craggy cliff, to watch the ocean in its wrath, when lashed to fury by the howling tempest. The most soothing and pleasant view, is of some small lake in the heart of the woods—the sun just tipped by the trees, and not a sound nor a breath moving, or ought to disturb, save some "hastening bird on weary wing." The beautiful and clear reflection of every tint and delicate tracery of the woods in the glassy water, the calmness of its surface, and the holy silence that reigns around, never fail to speak to the heart. There is every variety of water view, all pleasing and exciting—such as the heavy water-fall—the little mountain stream, dashing in merry haste to the valley below—the village rivulet, with its farm houses and rural beauties, or the broad inland river that affords vigorous support to busy industry. But, altogether, I have never met with any water view more varied and beautiful, or peculiar in its influence, than that of the James River, near Richmond. Every stranger, as well as inhabitant, confesses its charms, and the pencil has striven, in vain, to trace its beauties. But lovely as is the river by day, yet to me, there is a melancholy pleasure and fascination in it at night, which I have never experienced elsewhere. The variety of its course, and the steady, unceasing roar, made doubly impressive by the absence of other sounds, lead on the imagination with an irresistible impulse. If I am alone in this peculiar feeling, I am not alone in my admiration of its other attractions. While under this influence a few nights since, I penned the following hasty

ADDRESS TO JAMES RIVER.

'Tis sweet, as falls the twilight hour
O'er river, hill, and scented glade,
When bees have left the closing flower,
And all is soft in deep'ning shade,
To muse within some woody spot,
Or near some gently sighing stream,
'Till worldly cares are all forgot,
And life seems like a pleasant dream.
But sweeter far, when day heat cast
Its closing glance upon the scene,
To moralize upon the past,
And dream of things that once have been.
Fair river! by thy troubled tide

Oft have I watched the daylight fade,
 And marked thy waters onward glide,
 Or idly on thy banks have strayed.
 Though beautiful in sunset hour,
 Thy brightly gilded waters are,
 As still, or foaming on, they pour
 O'er rocks, or by green islands fair ;—
 While all around the dying sun
 Glances a mellow, golden light,
 And slowly fading, one by one,
 The purple clouds are lost in night,—
 Though beauteous at this hour thou art,
 And calm enjoyment soothes each sense,
 Yet 'tis not then the willing heart,
 Confesses meet thy influence ;
 'Tis when fair day has left the sky,
 And yon blue arch is lit with stars,
 When the bound spirit strives to fly,
 And fain would break its weary bars,—
 Ah ! then indeed the bosom feels
 That fancy's wings brook no control,
 And melancholy pleasure steals
 Unconsciously upon the soul.
 When, in the hours of silent night,
 The thousands of the city sleep,
 While, with an eye of tender light,
 The moon its mournful watch doth keep,—
 When winds, and trees, and birds are still,
 And nature's self in slumber lies,—
 When dew-drops shine on every hill,
 And not a cloud floats in the skies,—
 When, turning to itself, the soul
 Communes upon the solemn past,
 And feels that Time's resistless roll,
 Must bring all to the grave at last,—
 How sadly, to the bosom, swells
 Thy voice upon the silent air ;
 For every tone, prophetic, tells
 Fate's stayless step is echoed there.
 Yon beauteous orb, so calm and pure,
 Was there a thousand years ago,
 And softly through its nightly tour,
 Spread o'er the world its silver glow.
 And thou, fair river, raised thy song,
 And swept as now through vale and hill ;
 Thou sped thy sparkling steps along,
 With wild, unchecked, and wayward will.
 Those islands that thy bosom press,
 And dip their verdure in thy wave,
 Blushed forth in summer's lovely dress,
 That found, as now, an early grave :
 Then, o'er thy tide a simple race
 Their light and fragile vessel bore ;—
 But ah ! each bright and fertile place
 That knew them, knows them now no more.
 Upon thy marge, the palace proud
 Now stands with bold and stately air,
 And where the savage meekly bowed,
 Another people bend in prayer.
 A few brief years—Time's blasting breath
 Shall wither all around thee now ;
 This mighty nation, grasped by death,
 To fate's decree, must humbled bow.
 But thou wilt sing and sparkle on,
 And through the night wilt raise thy wail,

When those that hear thee now are gone
 Their journey through the shadowy vale.
 Thus do I muse and sadly dream,
 While listening to thy ceaseless moan ;
 For thou art like life's troubled stream,
 That bears the world tumultuous on :
 O'er rocks thy waves are wildly cast,
 With here and there a clear, calm place,
 Till in the distant ocean lost,
 Thy form or path no eye can trace.
 And man, through waves of smiles and tears,
 Floats on Life's river to the sea :
 The sun that lights his course soon wears,
 And fades within Eternity.

L. R. R.

Richmond, 1837.

THE USURPER OF MILAN.

CHAPTER I.

THE ACCESSION.

I'll tell thee what, my friend,
 He is a very serpent in my way ;—
 And wheresoe'er this foot of mine doth tread,
 He lies before me. Dost thou understand me ?
 Thou art his keeper.

Hub. And I'll keep him so
 That he shall not offend your majesty.

King John.

The death of Lorenzo de' Medici, surnamed the Magnificent, on account of the lustre of his private virtues and his enlightened patronage of letters and arts, preceded the commencement of an era fraught with events destined to be fatal to the interests of Italy. The policy, prudence and reputation of this prince had contributed to maintain the balance of power among the republics, and to restrain the ambition of many petty sovereigns, particularly those of Naples and Milan.

Ludovico Sforza (*Il Moro*) governed Milan as Regent during the minority of his nephew Gian Galeazzo ; and when the latter attained the full age of manhood, continued to exclude him from the exercise of any share of the power belonging rightfully to him. The young duke was feeble and imbecile in character, and of infirm health, ill able to struggle against the encroachments of his uncle ; but he had married Isabel of Arragon, daughter to the Duke of Calabria ; and the lofty spirit of that princess ill brooked Ludovico's usurpation. With the timidity ever attendant on the consciousness of wrong, Ludovico stood in awe of the courageous resolution of this lady, whom he knew to have appealed to her grandfather, the Neapolitan king, in behalf of her husband ; and his fears were increased by the intelligence of a league between Piero de' Medici and Ferdinand of Naples ; intelligence followed speedily by a demand that the Milanese duke should be put in possession of his legitimate authority. Determined not to relinquish the power so unjustly gained, Sforza looked abroad for aid ; endeavoured to persuade the Pope, the Venetians and the Duke of Ferrara to unite with him for their mutual protection, and apprehending this measure insufficient for his security, took the fatal step of inviting the French king into Naples ; thus sealing forever the ruin of Italian independence.

The throne of France was at that time occupied by Charles VIII. A grant of the kingdom of Naples by Urban IV, in 1274, to the brother of St. Louis, the Count of Anjou and Provence, had often been the ground of claims on the part of the French monarchs to the sovereignty of that portion of Italy; and when the promise of aid from Milan offered a fair opportunity for securing so rich a province, Charles VIII, in whose right ancient pretensions had merged, resolved to lose no time in making good his claim. He prepared to pass the Alps with a powerful army.

Though Ludovico had judged his application to the French king to be his only means of humbling Ferdinand, and securing himself against the danger of being compelled to resign his illegal authority, he was not without misgivings in his secret heart, as to the ultimate consequences of the step he had taken, in tendering his arms and treasures for the assistance of Charles. Scarcely was he certain that his invitation had been eagerly accepted—scarcely saw he, in prospect, the first lances of France gleam along the defiles of the Alps, than his restless fears were again awake; and a thousand apprehensions of which he had never dreamed in his eagerness for revenge, started up before him. But it was now no time to shrink; he had but to rush onward in his dark and crooked career, and close his eyes to the dangers that menaced himself.

It was towards the close of a brilliant day in the autumn of 1494. In the castle of Pavia the ill-fated young duke of Milan, then lying dangerously ill, was retained with his duchess, who was permitted to attend him. Apartments were assigned them in a remote part of the castle; and in a solitary room used as the private council chamber, sat he who held their destiny in his hands, the crafty Regent. Ludovico was alone: the rich light of the setting sun streamed through the high arched painted windows, and colored with crimson, fell full upon his figure. He was seated at a table covered with a carpet and strewn with parchments and papers, on which his eye seemed to rest with an expression of vexed dissatisfaction; he looked like some lonely and baffled magician, cheated by the very agents he had summoned to minister to his success. His features, as far as they could be discerned, half shaded by his hand, were most forbidding; his complexion, from the darkness of which he is supposed to have received the appellation of "the Moor," wore yet a gloomier tinge from his aspect of disappointment; his eyes, overshadowed by thick bushy brows, flashed with painful keenness. The whole expression of the countenance, was not one of malignity, but of cunning, and shuffling meanness; the quick glance, and momentary contraction of the brows, showed too the workings of a mind oppressed by fear of approaching evil; while the occasional movement of his lips denoted that he was laboring to form some decisive determination.

A loose robe of dark colored velvet, lined with grey miniver, gathered round his waist by a belt from which protruded the hilt of a poniard studded with gems—and an undervest of silk, composed his dress;—a bonnet of the same material with the robe, was carelessly thrown upon his head, and a chain of gold, depending from a richly ornamented collar, fell as low as his waist, bearing the star of a religious order which had been conferred on him by the king of France.

The apartment was hung with various pictures, conspicuous among which was one larger and more highly finished than the rest, the work of a Cremonese pencil. It was the full length portrait of one of the former Dukes of Milan; a green silk curtain, drawn to one side of the gilded frame, showed the care taken to protect it from dust and smoke, with which defilement it was especially threatened from two chimneys, whose immense jambs, bright with burning faggots, yawned like some tomblike chasm on either side of the room. In front of the portrait was a seat covered with cloth, embroidered with silver, designed for the occupation of the principal individuals in affairs of state business; five or six other seats arranged with less luxury, completed the furniture of the room.

The Regent remained sitting with his head leaning on his hand, apparently lost in thought; nor started from his reverie, when a footstep without, and a pressure on the fastenings of the door, gave notice of the approach of an intruder. When the door opened, his eyes glanced towards it; yet without changing his position, he pursued his meditations; while the air of his visitor indicated the easy familiarity of one used at all times to approach, unbidden the presence of his superior. His garment of black serge was simply fastened by a ribbon of the same color;—thick bushy ~~mustaches~~ gave an air of gravity to features which, though strongly marked, were indicative of low cunning and repulsive to the utmost degree, nor rendered less so by an evidently assumed expression of audacity, meant to pass for conscious dignity. He came near the table, and remained standing a few moments, till Ludovico, with a deep sigh, removed his hand, and spoke, more as if communing with his own mind than addressing his companion.

"It will not do!" he exclaimed in a tone of despondency; "the train is fired, and I fear me, will spread further than we wot of. He has leagued with Maximilian; the cowardly Florentine is ready to throw himself at his feet; fate opens him a golden path to victory—worse than all—Orleans is on his way to Genoa! Ah! well I know at what prize he is aiming!—Signor Malvezzi, look not so fateful! here alas! even thine art cannot avail me—unless I could send thee to cure the distemper at Asti."

"If in aught I could pleasure your highness"—began the courtier-like physician.

"Talk not of pleasure to me—I am foiled—entangled in the web mine own policy hath helped to weave. I would to heaven, Malvezzi, thou wert as wise a statesman as thou art a skilful leech! thou, at the least, art faithful."

"Hath aught chanced to trouble your grace?"

"All—all—falls out to my discomfort. Look at these packets; they bear me the intelligence that ruin, on every side, is falling upon Naples; yet from my soul I repent me that I prepared that ruin! Charles of France is recovered of his malady—and hastens to consummate my vengeance—yet would the ill-fated project had never been born of my unlucky brain!"

"Has your highness fears of him? Hath he not guaranteed you possession of your dominions?"

"Mostro! what is the word of a king, pledged in purchase of men and treasure, when his desires are fulfilled, and its violation can pleasure an ambitious rela-

tive? Thou know'st the claims of Orleans on the Dukedom of Milan?"

"Trust your fortune, my noble lord—shrink not from distant evils!"

"Never! Malvezzi!" returned the Regent, pushing from him the pile of papers, and rising from his seat. "Yet one step—*one*—ay, and that in my power, could place me higher, and secure my elevation. The investiture of this duchy, granted me by the king of the Romans, will avail nought with the discontented populace, nor with foreign courts, so long—so long—as any can dispute my rights."

"I understand you," replied the physician; "you will soon be undisputed lord of Milan."

"Ha! is my nephew——" gasped, rather than spoke the Regent.

"The malady gains strength apace. There are none but myself to attend him"—answered the other—approaching nearer, and speaking in a whisper—while a glance supplied the horrid meaning to his words.

Sforza could not suppress an inward shudder as his "trustful friend" thus announced the partial success of his villainy; but he quickly mastered the emotion—and said in a low voice—"I fear me, we have been too hasty; the life of a prince, good friend, hath too many watchers to be safely tampered with;—and the Lady Isabel——"

"Think not so lightly of mine art—your highness. Her vigilance hath ample employment;—she has a child——"

"Harm him not—on thy life, I charge thee!" exclaimed Ludovico, catching his arm. "They can be readily disposed of whenever—they are no foes to mine ambition! meddle not with the mother and child!"

"Nay"—said Malvezzi—"I will pledge them health and safe passage from this good city, when the young duke is no more. His days, I warrant me, will not be long—for I know your highness' stratagem. But signify your will—he shall not live till midnight."

"My good Malvezzi," replied Sforza, with a slight ironical emphasis on the adjective, "we are beholden for thy zeal. Could the state boast many servants true as thyself——;" but ere he could finish the sentence, an unwonted tumult without, and the sudden winding of a horn, changed the current of his thoughts. The messenger who had sounded the signal for admittance, after a single blast, began to play an air of victory; the wild and exulting tones of the instrument rang through the silent corridors of the castle, and smote with no welcome music on the ears of its master.

"By our Lady"—ejaculated Sforza—"but I should know that peal! without there—*ho!*"

The summons was speedily answered by the entrance of an attendant, who with a deep obeisance presented a packet; the Regent glanced impatiently at the superscription, tore asunder the silken string that secured its folds, and broke the massive seal, which bore the royal arms of France. Whatever intelligence the letter contained, seemed most distasteful to the reader; it was with deeper paleness on his dark features, that he refolded the packet, and calling his attendants, bade them prepare his train to go forth upon the instant; while he whispered some directions in the ear of Malvezzi.

"To-night?" gasped the bewildered physician—"the King of France in Pavia to-night?"

"This very night! I repeat it"—answered Sforza; "the very fiend hath spurred him from Asti hither—to visit, forsooth, his young cousin the duke, who he has heard, lies ill at ease in this castle; I tell thee, leech, his coming must be provided for! I must forth to meet him—and this moment; be it thy care to prevent his sight of the prince. Shorten the business, if needs be—enough—Charles must not behold my nephew alive! I leave *ALL* in thy hands."

The physician placed his hand on his heart—as if to intimate his sense of the responsibility—and with sullen haste, Ludovico departed. Ere an hour had passed, the principal street of Pavia presented a gay and stirring scene. The King of France, accompanied by twelve chevaliers, the flower of his nobility, entered the city, received with the show of cordial reverence and exulting friendship by the Regent. The young monarch rode a superb Arabian horse, richly caparisoned in the Eastern style, which, with others of the same breed, he had received as a gift from Bajazet the Magnificent. The royal armor was of silver, elegantly wrought by Spanish artificers; it covered his shoulders and breast, but descended not lower than the hips; from the lower border hung small plates of silver, light and easily moved aside, so as to prove no impediment to the rider. He wore a species of helmet of the same metal, the front of which was surmounted by a crown of the purest gold, while the back was turned up. It was closed at the side of the crown by a nail in the form of a star, whose rays were alternately of gold and silver. The upper part of the helmet was divided, and resembled in shape the top of a cardinal's hat. The dress was becoming, and added grace to the deportment of the monarch, who had not been so fortunate as to receive from nature the advantages of a fine figure, or a prepossessing countenance.

At his side rode Brissonet, his favorite, and one of his chief encouragers to the present enterprise. His attire was a strange mixture of the dress of the soldier and the ecclesiastic. He wore a vest of white silk and cloth of gold; a white mantle, fastened on his left shoulder with a rich clasp of gems, was suffered to fall, confined, however, at the waist by a belt embroidered with gold. The sword at his side, the gift of his royal master, was curiously ornamented; and in contrast to the implements of warfare, a cross of gold, attached to a violet ribbon, hung on his breast. In his left hand he carried a small shield, destined it would seem, more for ornament than defence: upon a white field were blended two devices;—one in French had for a motto "*L'humilité m'a exalté*;" the other in Latin, ran thus—"*Dilat servata fides*."

The personage who after Brissonet rode next in the king's train, was of a very different character from the ambitious minister, yet one of no insignificant importance in those days in the equipage of the court—the king's dwarf. He was mounted on a low horse, the trappings of the animal adapted to the figure of the rider, who was arrayed in a doublet of yellow silk, with a square cap of deep red, so formed as not to add even the fraction of an inch to his stature. He had at his side a small flat sword, and a horn not unlike those with which the swine herds of Germany were wont to summon home their charge. His small round eyes, quick in motion and flashing with unusual brilliancy,

added to the effect of his singular figure, his rapid movements and unnatural agility.

Such were the principal personages who divided the attention of the crowd. The train of Charles consisted, as we have mentioned, of twelve Knights completely armed, magnificently adorned according to the taste of that period,—their brilliant armor and decorations shining yet more brilliantly in the beams of the setting sun. Each carried his lance leaning against his side, and rode as if proud of forming the guard of a monarch so illustrious, not less than vain of the addition made by his own figure to the cavalcade.

Nor were the subjects of the duke of Milan destitute of anxiety to receive with becoming respect a sovereign who in reliance on their friendly hospitality, entered their city with so slight an escort, wearing the aspect not of an ambitious superior, but of an equal and cordially. The balconies were thronged with spectators of both sexes, who gazed admiringly on the stately train; and wreaths of flowers were thrown from the windows upon the Knights as they passed. Two files of Italian soldiers, at the head of whom rode the Regent himself, accompanied the royal cavalcade towards the castle; their very horses seemed to have received new spirit from the music and the presence of the multitude, and swept proudly along the street—while the waving of plumes, and the floating of rich mantles, and the glittering of steel, increased the gay splendor of the scene, illumed by the picturesque glory of sunset. All was festivity and exultation in outward show, but the secret minds of the spectators were occupied with other thoughts than those of unmixed admiration and delight. National feelings caused them to look with jealousy upon a sovereign who expected to build his glory on the conquest and devastation of the fairest portion of Italy;—at the moment, the narrow feelings of self-interest, that could shut out sympathy for the misfortunes of a neighboring province, separated by arbitrary lines of division, but heir to the same great inheritance of freedom, were swept away—and many who gazed upon the scene felt as Italians and as men. Nor were those wanting whose penetrating vision discerned the gilded snare into which they were falling; who failed not to foresee the probable consequences of a step which joined them in league with the natural enemies of their country.

Dark and tumultuous were the emotions that thronged the breast of Ludovico Sforza, as he passed at the head of his guards conducting the French monarch to the castle; yet fearful of awakening suspicion, he smothered the expression of his disquiet, and strove to assume an aspect of bland satisfaction; his outward gaiety gloomily contrasting with the apprehensions that had taken possession of his inmost soul. He bowed low and repeatedly in reply to the cheers of the people, but the consciousness of his own purposes made him fancy every eye fixed on him with an expression of distrust. His dress had undergone some alteration; a rich robe of black velvet lined with white and ornamented with ermine about the neck and shoulders, was worn by him in common with the chief nobles of the ducal court, who rode at his side.

Arrived at the castle, the Regent hastened to assist his illustrious guest in dismounting, and welcomed him with ostentatious cordiality. The Knights, both French

and Italian, were immediately on foot, and courteously lowered their lances in honor of their superiors. Then mingling and exchanging military greetings, they followed the prince.

Ludovico led his royal visitor into the magnificent apartments of the palace, which the bustling servitors had already fitted up with unusual splendor for his reception. Tapestries of the finest wool, fringed with gold, covered the walls, and paintings from famous pencils served to relieve the vastness of the lofty ceilings. All the windows were illumined; the torches of pure wax, and the huge lamps of wrought gold, were in a blaze, though darkness had scarcely fallen upon the city. Banners hung from the casements, or streamed from posts in the street; trumpets and cymbals were pealing forth a note of welcome, and the tumultuous tread of guards and serving men, announced the suddenness of the occasion, and their zeal in endeavoring to do honor to the distinguished guest.

The banquet prepared for the king and his chevaliers in one of the halls, bore evidence of the same profusion and magnificence. The massive plate, wrought with the richest devices and designs of art, the pitchers and flasks of gold and of Venetian crystal, the vases of alabaster, exhibiting also the triumphs of the artist—with other articles of table furniture equally splendid and expensive—the cushioned seats hastily covered with furs and velvet, and decorated with flowers, the perfumers and the radiant lights, heightened in dazzling effect by the gorgeous reflection of the mirrors of polished metal,—all were arranged to the best possible advantage by the servitors, themselves of no mean rank, moving under the direction of the major domo. This personage, clad in a black dress, the sleeves of which were garnished with lace ruffles, moved as gravely about his task of superintending the preparations of the board, as if he had the care of sacred vessels or instruments destined to the sacrifice of a hecatomb to the infernal deities.

Sforza performed more gracefully the part of host at the feast; but when it was ended—when the rich and delicate viands, which, brought from remote countries, had lately graced the board, were laid waste in ministering to the soldierlike appetites of the noble guests—he was startled and dismayed to hear the monarch drink the health of his “fair cousin the duke;” and express his desire to be led presently to his chamber, “that he might comfort him with the assurance of a kinsman’s love.” This proposal was doubly disagreeable to the Regent, as it recalled to observation his own subordinate rights, and as it awakened his ever ready apprehensions.

“Let me pray your grace,” urged he, “add not to this day’s fatigues. To-morrow morning we will visit my nephew, who will be better prepared by his night’s slumbers to receive you.”

“To-night,” answered Charles, “we must be far on our march to Piacenza. Nay—noble Sforza, we thank you for your hospitable reluctance to part with us,—but necessity is imperative. Lead on, then, to our cousin’s chamber.”

Far different from the brilliant scene of festivity was that which presented itself in the apartment of the young prince. The rooms occupied by him and his attendants were separated by a narrow gallery from the

rest of the castle; his chamber, the remotest of all, was large and gloomy, its only light during the day admitted through two high stained windows, the heavy folds of the curtains contributing still more to diminish the effect of the feeble rays. At present a sufficient light was afforded by large torches of wax in tall iron candlesticks, that flared in the night wind, which found its way through the ill-constructed casements; while from wood smouldering in the antique chimney, the smoke reeked upwards to the bare and blackened rafters of the roof. Yet notwithstanding the want of neatness or taste displayed in the arrangement of the apartment, and the rude and old fashioned style of architecture, there were traits of magnificence which contrasted strangely with the general want of that appearance of comfort which in modern days the humblest peasant's dwelling would present. There were tapestries of silk too rich to be in keeping with the time worn and massive oaken furniture, on which were wrought pictures, which if not life-like, were vaster and more startling than life; gigantic warriors wielding ponderous axes, with bushy beards and muscular limbs; there were carpets of velvet, and mirrors of steel reflected the light of the torches and the figures on the tapestry. The bedstead was of black oak, its spiral posts ornamented with flowers wrought in gold; it was constructed after a former fashion in a triangular form, the base forming the head and the point serving for the foot. Three columns supported a canopy from which depended fringed curtains, fastened back by brass nails;—the bed itself showed none of the luxury of modern times; a scanty mattress, sheets of muslin, for linen in those days was rare even in the chambers of princes,—and a silken coverlet, completed its furniture. A brazen stand in front, projecting from the wall, supported a bronze candlestick whose torch threw a faint light on the countenance of the princely invalid. The silken coverlet but ill concealed the attenuated proportions of a frame wasted by disease and suffering; and there was a ghastly paleness on his face, which too surely betokened that the springs of life were exhausted. The young duke had fallen into a quiet slumber; so deep and quiet indeed, that but for the occasional stirring of a portion of the light drapery, it might have been deemed a breathless one. The physician Malvezzi, leaned against one of the columns at the foot of the bed, surveying his patient with a look of intense anxiety, which he vainly strove to hide beneath his usual cold and indifferent expression. At a little distance, before a table on which were placed books of devotion, knelt a lady of noble air and figure, yet whose beauty was clouded by sorrow. She was robed in black, not above the middle height, yet her lovely features, combined with their natural aspect of gentleness, an expression of heroic pride that might have been nourished or developed by the unhappy circumstances of her condition. She was not apparently occupied in devotion, but remained kneeling on the cushion, her head bent on her hands, as if engrossed by the most painful reflections. Here in the deep silence that reigned through the apartment could be distinctly heard the festive tumult from the great hall; the echoed laugh of the guests, the bustling of servants, and the music that welcomed the revellers. Isabel raised her head, and glanced uneasily and impatiently around, as the sounds of ill-

timed merriment smote on her ear; at the moment a child, three or four years old, crossed from the antechamber with cautious footsteps, for even infancy had learned consideration for the repose of the sick, and glided to the mother. The tears of the hapless lady flowed afresh as she gazed on the little partner of her anguish, and in convulsive grief she strained the child to her bosom.

Presently an unusual bustle in the courts below, the trampling of horses and the shouts of grooms, announced the departure of the French to be at hand. Malvezzi left his place by the bed, and walked to the window, hoping to hear, if he could not see, what might give him more certain information. But he was soon recalled by a shriek from the Lady Isabel; a frightful change had taken place in the countenance of the invalid; the calm stillness of sleep was replaced by distortion, and a death-like rigidity had settled on the features. The physician poured a few drops from a mixture in one of the phials, and raising the prince's head, administered it; the effect seemed for the moment salutary: the duke opened his eyes, and fixing them on the agonized face of his wife, bending over him, moved his lips as if he would speak, while an expression of gratitude and fondness lighted up for an instant his pale and emaciated countenance.

"Now God be praised!" exclaimed Isabel, clasping her hands, "he knows me once again! The crisis is past. Look up, mine own beloved! that glance brings me health and peace once more! Look up—Giovanni!"

The crisis was indeed past. The powers of nature that had rallied for a last effort, were fast sinking forever. The prince could not again raise his eyes to meet the fond glance of affection; the lids closed heavily, no longer obedient to the will; the breast heaved irregularly once or twice—then a deep calmness settled on the face, where a smile yet lingered—though the struggles of nature were over! Not for many minutes did the knowledge of the fatal truth enter the mind of the bereaved lady. When at length it flashed upon her, not by shrieks or outcries would she disturb the awful solemnity of the scene. Sunk on her knees at the bedside, her lifted hands and tearless countenance gave evidence of the extremity of her woe; yet forgetful of her own sufferings and fate, her lips moved in prayer for the departed. The child awed, though unconscious of its loss, knelt by the side of the mother; and two or three female attendants who had entered from the antechamber, formed a group in the back ground, where they stood in wondering silence.

It was at this moment, when DEATH in his majesty and solemnity was present as it were in bodily form, striking terror to the hearts of the living—that the door opened to admit the King of France, accompanied by Ludovico. Not a movement was produced by this addition to the inmates of the apartment, except on the part of the leech, who gliding with a noiseless step across the room, whispered in the ear of his master.

"Sire," said Ludovico in a low voice to the king, half averting his face at the same time, "a more potent and terrible visitor hath forestalled your highness. The prince has just breathed his last. Will it please you—retire with me?"

Without reply, Charles approached the couch where still knelt Isabel; she rose on perceiving him, whom

she knew to be no other than the monarch, and with dignity that shone through her ineffable grief, extended her hand, which the king took in reverence, while he strove to console her by whispering words of comfort. The Regent hung aloof, for he dared not approach the person of the woman he had so grievously injured. Charles expressed in cordial terms his sorrow and sympathy—offering aught in his power to administer to the comfort of herself and her infant son. Common-place words—prompted by indifferent pity!

"Much—much you might do, sire"—cried Isabel, while the tears that refused to flow at the stroke of anguish, rained from her eyes at the first accent of kindness—"alas! we can do nought for ourselves! The heir of this wide dukedom is a helpless pensioner on the charity of his kinsman; he commands nought in the realm he was born to rule!"

"If—noble madam—you would accept our protection"—

"Not so—gracious sire"—interrupted the lady. "The daughter of Naples needs not that. I will retire to the kingdom of my father. Tell me"—she continued, as Charles gazed on her in evident compassion, "tell me, your majesty—for in the seclusion of these chambers I have learned but little of the affairs of courts—is it true that you are come into Italy for the purpose of driving Alphonsus from his dominions?"

This direct appeal pleased not the king; he prayed the princess to be composed, and not seek to know what might give her pain.*

"Nay then"—she cried—"it is so;—the curse of unholly ambition would make our house its prey—smiting down one victim, even while another lies cold and stricken before it! Oh sire!" she faltered in a voice of agony—"be moved to compassion by woes it is in your power to change to gratitude! Spare him—spare my father—and his people—the family of princes who honor you as the model of chivalry and generosity! Pout not—I beseech you, upon my native land the horrors of war!"

"Lady"—said the monarch, "the determinations of statesmen and kings are not wont to be reversed at a woman's supplication. Nor could I recede with honor from this enterprise, even if I chose!"

"Let his head, then, at least, be sacred to you!" exclaimed the princess—looking up to Charles in earnest appealing anguish; "promise me you will spare my father's life!"

"His person and liberty shall be ever sacred in my eyes," answered the king; "doubly so, since he is dear to Isabel of Arragon. If the destinies grant me success, I will promise you he shall not be without a friend."

"Alas! what would be life to him, stripped of fame and the possessions of his ancestors? But I claim, sire, your promise! Farewell!" and the duchess exchanged kind adieus with the king—though she repelled the timidly offered courtesies of Ludovico, as they separated.

The king of France departed for Piacenza, not un-suspicious of the fidelity of Ludovico to his cause, and of the crimes into which the crafty ambition of the Regent had betrayed him; but he expressed not by word or look his rising dissatisfaction. Nor were the

* Guicciardini states the fact of Isabel's appeal to Charles in behalf of her father.

Milanese nobles without dark surmises concerning the mysterious illness and death of their young sovereign; but if any were disposed to open murmurs, they were silenced by the bold measures of Sforza himself.

On the morrow, at sunrise, the ducal council was convened, when the leading members, at his instigation, declared it improper and impolitic, in those perilous times, to suffer the infant son of Galeazzo to ascend his father's throne; declared it necessary to appoint a sovereign of wisdom and established authority; dispensed with the disposition of the law, for the sake of public safety, and transferred the ducal dignity to the person of the Regent. The announcement of the decree was received with applause by the volatile populace; and when the newly elected prince came forth, invested with the title and ensigns of authority, it was amid the cheers of the multitude, mingled with the music of cymbals and trumpets, that the heralds proclaimed LUDOVICO SFORZA—DUKE OF MILAN.

CHAP. II.

THE FALL.

—Soft—I did but dream!
O coward conscience! how dost thou afflict me!
King Richard Third.

Heaven had decreed that the flame Ludovico had kindled in Italy should at last prove the destruction of its author. The death of Charles VIII, instead of delivering Italy from foreign invasion, raised up to her republics a more formidable adversary in the person of his successor, Louis XII, a sovereign more mature in years, more experienced in military affairs, and, beyond comparison, steadier and more inflexible in his resolutions than his predecessor. That which rendered him terrible in the eyes of Ludovico was his claim to the Duchy of Milan, which claim he professed to derive from his grandmother, Valentine Visconti, who had been given in marriage to the duke of Orleans, when her father, Gian Galeazzo Visconti, was as yet only imperial vicar. However questionable the title thence derived, it was at least equal in right to that by which the family of Sforza held the ducal throne.

The situation of the Duke of Milan presented facilities to the French king for effecting his ruin, which appeared auspicious to the enterprise. Unpopular in the eyes of his subjects, by reason of his usurpation, and odious to many of his nobles on account of the mysterious circumstances of his nephew's death, he had, by a selfish and ambitious policy, by frequent breaches of faith and treaty, rendered the neighboring states his enemies. Venice, incensed at his conduct in the war of Pisa, readily entered into the views of France; they concluded a treaty with Louis, by which they bound themselves to assist in the conquest of Milan, by aiding in its invasion, in return for the promised cession of Cremona and a part of the territory. The Pope had already been secured in favor of the designs of Louis XII;—and, deserted on all sides by pretended friends—assailed by enemies of overwhelming power—looking vainly for protection to sovereigns who despised or detested him—Sforza saw the hour approaching in which he was destined to reap the just fruits of a life of usurpation and perfidy. The sovereign of Germany

was at war with the Swiss; the king of Spain had concluded a friendly treaty with France, in which no stipulations were made in favor of any of the Italian States; Florence was attached to Louis; and though the king of Naples, the descendant of the monarch the duke had so basely injured, promised to lend him assistance in repelling the invader, he well knew such aid must be inefficient, since the kingdom of Frederic was so exhausted by recent struggles that he was unable to provide for his own security. In his extremity Ludovico turned his eyes to the enemies of Christendom, and persuaded the Turkish sultan to attack the republic of Venice; but this diversion in his favor could not turn aside the fate that was pursuing him with hasty strides; nor could all his preparations for resistance retard the moment in which it was to overtake him.

The French, in an incredibly short time completed the conquest of the principal cities of the Milanese territory. Their vigor and ferocity, as well as the swiftness of their marches, struck such terror into the Italian soldiery, that they dared not even show face to the invaders; the people, oppressed with taxes, and disaffected to the usurpation of Ludovico, everywhere received their foreign conquerors with demonstrations of joy. The rapid progress of the enemy terribly alarmed Sforza, who seeing his sovereignty, like a weather-beaten edifice, sinking into ruins, lost at once his prudence and resolution, and had recourse to expedients which, the common refuge of despair, served only to discover the greatness of the danger, without procuring comfort or relief. He ordered a list to be taken of all the men in the city of Milan capable of bearing arms, then summoning a general assembly of the inhabitants, to whom he was odious on account of the taxes—abolished many of the heaviest in their presence, and addressed them in a conciliatory speech. This measure, however, had no effect in stemming the tide of his unpopularity.

On the evening of a beautiful day, the citizens of the capital, occupied in discussing, in separate groups, the new and strange events, the intelligence of which hourly reached their ears—all ordinary affairs having given way before those of more pressing importance—were assembled about the palace and public buildings, partly for the purpose of obtaining more readily any news that might be brought by fresh couriers, and partly with that natural love of congregating which in times of extraordinary excitement, brings men invariably together. It would have been difficult for a stranger, who beheld the faces in this motley assemblage, or listened to the conversation, to surmise the nature of those occurrences that claimed public attention; to surmise that these men, who with careless glee, or wonder, unmixed with dismay, were recounting to each other what they had severally learned—were on the point of becoming the prey of a foreign enemy. It mattered little to this volatile race, impatient of change, by whom they were ruled—Ludovico, or Louis of France. The majority of the giddy populace saw in the prospect of a change of masters a certainty of bettering their condition; and heeded little who was to be arbiter of their fate.

"*Per servir sempre, o vincitrice o vinta.*"—
was the reproach uttered against his native land by a

poet of Italy; but alas! oppressed at home as well as abroad—what choice was left her!

Ludovico was not naturally cruel, but his desire of power had betrayed him into crime, and a narrow and selfish policy had shut him out from the means of retrieving his fortunes; he had lost the good will of the multitude by the unreasonable imposition of burthens, and his efforts to regain their allegiance by concessions only provoked their contempt. In like manner his duplicity and false shows of friendship had secured the enmity and scorn of the neighboring republics, who rejoiced unanimously in his downfall.

The crowd grew denser about the palace as the shadows of night fell over the city; and fresh tumult was presently excited by the arrival of a courier. The citizens thronged eagerly around him to question him of his tidings; but he halted not till he had delivered the despatches, of which he was bearer, into the hands of a guard at the great gate, appointed to convey them to the duke.

The duke sat in his cabinet; the apartment was gloomy, for no lights had yet been brought; but not more gloomy than his own breast, racked by stormy passions, and a prey to disordered apprehensions. A shield, a shirt of mail, and other articles of armor, lay in a recess formed by one of the embrasures; their presence, as they lay in confusion, indicated the troubled state of the times, but far less so than the dark visage and deponent air of Sforza himself. A stupor seemed to have settled on his usually elastic and energetic spirit. He sat gazing fixedly, but vacantly, upon a heap of papers and charts confusedly strewn on the table before him; and though the tumult without, and the trumpets summoning the watch, came to his ears, he seemed as if unconscious of aught connected with the external world. Despatch after despatch, bearing intelligence of unexpected loss, or of the defection of some friend, had arrived in the course of the afternoon; and worn out with agitation and disappointment, Sforza had at length ceased, in the depth of his despair, to contemplate the evils before him.

He was soon, however, sensible of the presence of an intruder; the governor of the castle of Milan, Bernardino da Corte, stood at his side, and presented the despatches brought by the last messenger.

"Read them, good Bernardino, read them and tell us of their import: even ill tidings fall less harshly from thy lips—and alas! all tidings are now ill—for Milan. But I forget me—let the varlets bring lights—without there!" and his summons was speedily answered by the entrance of a squire bearing wax torches.

The governor broke the seals, cut asunder the cord which secured the papers, and proceeded to recount their contents to his prince, who listened in sullen apathy till the reader paused as he glanced at one of the letters.

"Say on," said Ludovico.

"The Count Gajazzo—"

"Ha! the brave count! then here is somewhat to retrieve disaster. What of Gajazzo? Hath he joined his brother?"

"The bridge has been laid, but the count never intended such a junction. He hath leagued with the French!"

"Now God defend me, if what thou sayest be true! Give me the paper!" Rising hastily, the duke snatched

the packet from the governor's hands, and read eagerly, while his eyes glared on it as if they would devour the lines. Then, as the certainty of his favorite's treachery forced itself on him, he let fall the letter, and sank again into his chair.

"Your highness was warned of him."

"True—Bernadino—but who could suspect him? so young, so devoted, so loaded with benefits? Ah! those are the weights that sink me downward! He was jealous of his brother's promotion to the command."

"Here is news that will disturb your highness yet more deeply," said Bernadino, showing a few hurried lines from one of the commanders of the Milanese forces at Alexandria. "Alexandria is lost. Galeazzo himself hath deserted his post, and fled with a party of horse. Pavia hath declared for the foe! I grieve to say it, my lord, but we can no longer hold out this city against the arms of Louis, thus deserted by our confederates."

The duke made no reply, but paced the apartment with rapid strides, apparently laboring to make up his mind to some speedy and decisive resolution. At length he stopped, speaking in a determined tone.

"Let the cardinal remove the young princes this night, to Como. I myself will follow in a few days."

"Your highness—and whither?"

"To Maximilian! From him came the investiture of this Duchy—let him protect the sovereign he has created!" and with a laugh of bitterness, Sforza sat down to the table; with unsteady hands traced a few lines, which he folded, and summoning a servant, delivered the letter into his hands.

"This to the cardinal—my brother Ascanio—with speed—varlet—with speed! Let him see to this—I will speak with him further on the morrow."

Fight was the only resource remaining to the fallen duke; and he was resolved to embrace this last alternative. Germany was open to the fugitive, and thither he despatched his sons, intending soon to claim with them the protection of the Emperor.

The watch was set; and dismissing his minister, the duke retired to his chamber;—flinging himself half dressed upon his couch to seek the repose necessary for his fight on the morrow. But though wearied and harassed in spirit, he wooed in vain the sleep which came unsought to his meanest soldier! The events of past years crowded thickly before him—those years which had only recorded his breaches of trust, and the selfish manœuvres of his policy. He had been ruined by the very measures he had adopted for his aggrandizement: the spells he had labored to weave with so much art, had wrought to his own destruction. Yet he felt not remorse in this moment of partial retribution; disappointed and dismayed he was, but he looked not to his own ambitious selfishness as the cause of all his disasters. He lay wrapped in gloomy reflections, as the occasional flourish of trumpets and the clash of arms without announced the change of the guard—and told that hour after hour was elapsing—bringing nearer the dreaded dawn, in which he was to consummate his misfortunes by the abandonment of his dominions to his victorious enemy! The lights grew paler, and the duke sank gradually into a state of partial unconsciousness, rather than slumber, in which his feverish phantasies were embodied in shape, and present to his excited imagination. The phantom of the

mother of his murdered nephew seemed to rise to his view; her dark hair dishevelled, her eyes flashing fire, her lips uttering imprecations against the destroyer of her son. Then appeared the leering visage of the physician, Malvezzi, the instrument of his atrocious designs—whom the duke had sent to Germany—his face wearing its usual expression of impudent cunning—leading by the hand, with a meaning smile, the hapless youth who had fallen a victim to Sforza's ambition. The ghastly eyes of this apparition were fixed full on the face of Ludovico, who chilled with horror, had no power to avert his gaze. He half sprang, in convulsive agony, from the couch;—he grasped the bed clothing and held it up before him, as if striving to shut out the vision; still those stony and immoveable eyes were upon him, and he felt his heart wither beneath them. Then the three seemed, encircling him, to approach more closely; he almost felt the touch of cold and clammy hands;—shivering with terror, he shrunk backward but had no strength to withdraw from them;—then the near clash of armor, and the hoarse peal of the drum, burst on his ear, and he heard the insulting shouts of Frenchmen—and knew he was about to be delivered, a bound and helpless victim into the hands of his foes, by the superhuman avengers who seemed to have the control of his destiny. Bursting with a mighty effort the spell, which had held his senses in horrid thrall—the duke sprang to his feet; but though now fully awake, strove in vain to collect his faculties. The same sounds he had seemed to hear were still in his ears; the roar of musquetry, distant shouts, and the peal of warlike music. The whole palace was in tumult. Presently the door of the royal closet was burst open with impetuous haste, and a figure strode in—whom the bewildered duke might deem at the moment the avenger of his vision. Crouched helplessly beside the couch, his hands clasped and raised upwards as if imploring mercy—in supernatural terror Ludovico awaited the intruder.

"It is well you are awakened," cried Ascanio—for it was he; "away—for the love of heaven! Away—and for life! Ha, brother! forgive my abruptness—but you have not a moment to lose!"

"What hath chanced?" at length faltered the duke.

"The French are upon us! in this town—beneath these very walls! Hark!" as the heavy sweep of ordnance, and the peal of drums and trumpets came nearer and nearer—"they are coming down the square. They were encamped at sunset within six miles of the city."

Sforza listened in a stupor of dismay.

"Philip del Fresco knew of it! Would to heaven you had never trusted the base traitor!"

"Philip! hath he too betrayed me?" cried the unfortunate sovereign, roused to energy as he heard the name of his most cherished favorite coupled with treachery—"then all is gone! I am ready to depart—but where is the governor? We will not leave this castle the prey of the invaders, without striking a blow in its defence. He can occupy them here, while we make good our retreat."

"Brother," cried Ascanio—"this castle is already surrendered! Bernadino is false! The keys of this impregnable citadel he hath laid already at the feet of the French general."

"Perfidious wretch!" groaned the duke.

"Waste not time in reproaches—there is no safety but in instant flight! The people welcome the enemy—we must begone through the darkness, and escape by the private postern. Tarry not for garniture, or leave-taking—away!"

Sforza left the palace hastily under the guidance of his brother; they joined in a place of concealment a small body of infantry and men at arms, and accompanied by the only true servants in all his court, the Cardinal de Este and Sanseverino, the fallen sovereign set out on his midnight flight. As he threaded with his companions the narrow streets of Milan, he heard the warlike music and the exulting shouts of the victorious French, who had thus won the capital without strife; but those sounds thrilled him not with anguish and mortification, as did the insane and riotous delight of the Milanese populace, receiving their conquerors with tumultuous acclamations. Breathing a malediction on the heartless rabble, the duke pursued his way till without the walls of a metropolis, where his reign was at an end; when his party, perceiving a group of French soldiers in the vicinity, approached and prepared to give them battle. Their leader, however, prevented any movement of hostility—and riding up to Ludovico, saluted him with ostentatious courtesy.

"Traitor!" cried the duke, who recognized in the faint light the faithless Count Gajazzo—"darest thou address thine injured master?"

"Nay—good your highness," returned the count, "since it is your princely pleasure to leave your hapless subjects, it were but just they should have liberty to transfer their allegiance to the successor of your highness. A noble one have you chosen in the royal Louis; I commend your selection—and trust me, will do my best to honor the choice. Fair sirs—good even!" and bowing till his plume touched his horse's neck, the count rode back to his troop.

Before Sforza could give vent to the boiling rage the cruel insolence of his revolted servant roused in his breast, he was hurried on by his companions, who would risk no skirmishes in their pressing peril. They reached Como, eighteen miles distant, before daybreak—whence they were rowed as far as Bellagio. The beauty of the lake, illuminated by the beams of the rising sun, and shadowed by the steep mountains that embosomed it, sleeping in its calm loveliness—the deep rich green of the foliage, and the golden glory of the morning—the lively appearance of the numerous small fishing boats shooting here and there over the bright waters—formed a scene that contrasted painfully with the mood of the fugitives.

The duke proceeded to Bornio, his way lying through all the towns where, but a short time before, in the height of his prosperity and glory, he had entertained Maximilian so magnificently, who at that time, had more the appearance of an officer in the Venetian service, than of a king of the Romans. Now, crownless and landless, Ludovico re-entered the cities that had witnessed his triumphs, pursued by a victorious enemy, and by the troops of the traitor Gajazzo, who hung on his footsteps till he reached the borders of the Emperor's dominions.

Thus was the downfall of the artful and ambitious prince, so rapid and complete, prepared by his own

crimes. And when, after tedious and weary months of hope and disappointment, at the court of Maximilian, fortune seemed once more to smile on him—when by use of the treasures he had preserved, he had succeeded in levying an army of Burgundian and Swiss mercenaries, and had nearly recovered his Duchy—recalled by the voice of the fickle people—when he was once more about to taste the cup of prosperity, it was unexpectedly dashed from his lips. The Swiss bands in his service, finding his treasures exhausted, mutinied, and sold his person into the hands of the French—abandoning him in spite of promises, tears and prayers, on the very eve of success! Disguised in the habit of a Swiss private sentinel, as the last chance for escape, he passed through the French army in military order with the rest. Here a fearful retribution overtook him;—as he passed the last battalion, his bosom beating high with hope, and apparently unknown to all—his steps were arrested by a vision of terror, scarce less appalling than those conscience often summoned to his nightly couch; for the voice of MALVEZZI, sounding in his ears like that of the accusing demon, startled him from his fancied security.

"Ha—mine ancient patron! is it thus we meet?"

From Germany the physician had returned to his own country, to find patronage among the conquering French. His recognition of his master was fatal to the unfortunate duke, thus filling the measure of punishment. Ludovico was seized and conducted to the French King at Lyons; an object of wonder and pity to the spectators, who read in his fate a humiliating lesson on human grandeur. Refused admission to the presence of Louis, the remaining years of his miserable life were passed in a foreign prison; a narrow dwelling for the man whose thoughts and ambition all Italy was scarce sufficient to circumscribe!

MISFORTUNE.

BY JOHN CARROLL BRENT.

There is nothing we gain without toil and trouble,
Possession is sadden'd by pain,
And thousands are dup'd with the gleam of a bubble,
Which bursts to entice them again.
'Tis proven by Time and Experience's test,
That he who's the same in misfortune and mirth,
Is only the blest
Of the children of earth.

When the world shall grow cold, and the touches of
sorrow
Shall wither the cords of the mind,
And the fancy evokes all the ills of the morrow
To its own real interests blind,—
There is yet in our power a subject to cheer,
Which pours the sweet balm o'er the wounds of the
heart,
Which dries up the tear
When 'tis ready to start.

In the storm's fearful hour when the mountainous billow
Is dashing in wildness along,

When the north wind has risen in might from his pillow,
And peals forth his terrible song—
The sailor may see with his intellect's eye
The Being who tash'd the deep sea into foam,
And calmly rely
On his mercies to come.

Then shame on the man who when pain is in power,
Shall yield to the ills of to-day—
To-morrow may bring back the sun to the bower
Which now droops because he's away!
Amid the wild storm which a moment unchained
Sweeps far o'er the breast of the perilous wave,
The plank when attain'd
May snatch from the grave!

THE PERILS OF PASSION.

BY HORATIO KING.

"Your sorrows are self-bought, and you may reap
The iron harvest that your hand has sown."

"We have strange news to-night, Julia," said Henry Lee, one evening, addressing his wife.

Henry had just returned from the village; and his countenance betokened that something unusual had occurred.

"What—what news, Henry?" inquired Julia, with some surprise.

"The death of our friend Adams."

"Adams! is James Adams dead? I saw him in apparent good health this morning; what can have caused his death so suddenly?—a fit—a fall—or a duel, perhaps."

"No, neither," replied Henry; "he put an end to his own existence immediately after dinner. His body was found suspended in the chamber of his store at four o'clock."

"Poor man! yesterday his goods were attached; is not his failure in business the supposed cause of this dreadful act?"

"Yes; he left a note, in which he said that he had lost all, and preferred death rather than a life of poverty and disgrace."

"But the fortune promised him by his uncle at Hartford, would have made him independent. Was he not sure of that large estate, at the demise of Mr. Harwood?"

"He was. But he was this morning informed of the death of his uncle. With this intelligence, came also the report that the property had all been willed to his uncle's attorney and particular friend, Mr. Lawson. It was too much—he gave way to the feelings of despair, and committed the fatal deed, without once reflecting that the sun of prosperity might again shine upon him. Had he waited even until now, he would never have been guilty of the awful crime of self-murder; for a letter from his agent in Hartford, received this evening, contradicts the unfavorable report of this morning, and states that Mr. Harwood is recovering from a severe attack of the fever, which had threatened to prove fatal. His uncle had willed him the sum of two hundred thousand dollars."

"We are then left to our own meagre resources," said Julia; "Adams' promised aid will never be realized."

"What aid?" asked Henry, hesitatingly—for he saw in the countenance of Julia a look of disappointment.

"You know it was not for love that I married you, Henry. You have not forgotten that James Adams influenced me to accept your hand. He promised, when he should be possessed of his uncle's immense estate, to furnish me with the means of living in affluence, notwithstanding your poverty. That alone overcame my objections to be your wife," said Julia peevishly.

Henry was struck with astonishment. It is true, he had not always lived on the happiest terms with his wife—having before frequently discovered in her signs of dissatisfaction. Attributing this misfortune, however, more to poverty than the want of affection, which he supposed was only overclouded in consequence of his unsuccessful endeavors to acquire an easy competency, he suffered it in silence. But, to be thus saluted by a wife he sincerely loved, and at such a time too, was calculated to produce in his mind most disagreeable reflections; it was as the funeral knell of his earthly happiness. What—thought he—has it come to this! In two short years, have I thus been brought to experience what, but yesterday, I confidently believed could never be my lot to suffer!

"Julia," said he sternly, "I am astonished! What means this sudden outbreak against your husband? Have I deserved this treatment from you? Do you thus requite my kindness and love?"

"Poverty! poverty! poverty!" responded Julia, with a contemptuous look; "we are doomed to live in poverty. Had you the spirit of a man, there would be some reason to hope that the time might come, when we should not be pointed at as the poorest family in the neighborhood."

"Julia," said the husband, "I have heard enough. You have inflicted a wound on my feelings that I fear never will be healed. This moment would I give worlds, could the scenes of this day prove to be but a dream! I can bear the buffetings and the frowns of a cold and selfish world without; but domestic bickerings and quarrels are too much for me. How often have you heard me declare, that I never would permit this destroying spirit to enter the circle of my domestic life. Alas! it even now threatens to drive me mad!—me—a father, too! Behold that innocent one—she, who has scarcely reached the age of one year—dependent upon us for protection—for life! And shall we suffer ourselves to be torn asunder, and disgraced forever, by our own folly—nay, crimes! Julia, it cannot be. Talk of poverty! But for me, long since would you have been a beggar in the streets."

"Say what you will, Henry, you are the cause of all my unhappiness," continued Julia, covering her face; "and were I free from you, with my own hands would I obtain the means of securing to myself the pleasures of society. Enough have I seen of your incapacity, and of your want of interest in all that renders life agreeable. I will bear it no longer. Would to Heaven, that the scenes, not only of to-day, but of the last two years of my life, were a dream! Widowhood were preferable to my present condition!"

Julia stopped suddenly—for on casting around, she perceived herself no longer in the hearing of her husband. He had taken his hat and overcoat, and left the house precipitately, with a determination never to enter its walls again.

The night was an unhappy one to Julia; for it required but little reflection to convince her that her conduct was most unbecoming and cruel toward her husband—though it afforded him no sufficient apology for hastily abandoning her, as he did. She knew also, that his disposition would not allow him readily to grant her forgiveness, even were it in her power to ask it.

On the following morning, a hat, supposed to be Henry Lee's, was found near the margin of the river, in the town of —, in which he resided, at the distance of about twenty miles from Hartford, (Conn.) Search was now immediately made for him; every part of the river in the vicinity was closely examined, and persons were despatched to the neighboring towns, in the hope that possibly he might yet be among the living. This hope was cherished with the more confidence, from the fact that he had always appeared to view the act of self-murder with great horror. Julia, though suffering severely for her own ill-conduct, and filled with fear, could not believe that he had committed suicide. The conclusion, however, in the public mind was, that Henry Lee was dead; and his death, accompanied with the supposed circumstances attending it, was announced in the papers.

Time passed on. Julia, for several weeks, still entertained hopes that her husband would return to her. She felt, indeed, that she could not leave this world, without first hearing, from his own lips, the word of pardon. But hope finally ceased to administer to her any relief; and she was compelled not only to look upon herself as a widow, but almost as the murderess of her husband! What remorse—what sorrow did she feel! She awoke from disturbed and frightful slumbers in the morning, only to realize the depth of her grief, in sensible and sober reflection. She could now see what happiness was, from experiencing the extremes of misery. Bitterly did she repent that she had reproached her husband for his poverty, when in comparatively happy circumstances—for she saw before her a scene only of want—a life of wretchedness.

We pass over a few years in the life of this unhappy woman, without detailing the many instances of pain which she experienced. Her path was beset with troubles and sorrow, and the messenger of death often seemed about to deliver to her the last summons.

* * * * *

We turn to a more pleasant part of the picture.—It was in the year 17—, when a gentleman, far advanced in years, rode up to the miserable dwelling of Julia Lee in a costly and splendid carriage. On knocking at the door, it was opened by a young Miss, apparently about ten years of age, who invited him to walk in. He accepted the invitation, and at once made known the object of his visit. He had heard of the wretchedness of the poor woman and her daughter. He had come to afford them relief. His first request was, that the mother should allow him to take her daughter, Mary, and call her his own child. His next was, that she should herself accompany them to his

residence in Hartford, and consider herself at home in his family during the few remaining years of his life.

Julia consented—though not without some hesitancy, and a secret apprehension that all would not prove right.

They reached Hartford just at sunset. The evening was enchantingly delightful; and, in spite of all the causes of her unhappiness, Julia felt invigorated from the ride, and a secret joy stole through her heart at witnessing with how much pleasure her daughter relished this, to her, novel mode of exercise and amusement.

"This is my house," said the old gentleman, as he reined his horse up to a magnificent mansion on — street, near the centre of the town.

The truth at once burst upon the mind of Julia. She had seen the house before; it had, in her happier days, been pointed out to her by her friend Adams, as his uncle's. She could not be mistaken;—it was even so. She had time only to raise her heart in thanks to God for His goodness, before she and her daughter were welcomed into the house by Mr. Harwood and his not less kind and benevolent wife.

With that night came more happiness to the bosom of Mrs. Lee, than she had experienced for a long, long time before. Hunger and want disturbed not her repose—and her pillow was no longer a pillow of straw. But for the remembrance of the unpleasant scenes of the past, she would have been happy indeed. But the past could not be blotted from her mind. Her reflections, however, were those of a repenting heart; and most devoutly and sincerely did she pray to be pardoned for the faults, which had already brought upon her so much wretchedness. She felt a secret assurance that she was forgiven.

She was awake in the morning by the voice of her daughter, who, with joyous countenance, was eagerly calling her attention to the ornaments of the room, and the happy contrast between their present and former condition. "Oh, how happy should we be, mother," said she, "if my dear father were here! Would he not come, mother, if he knew we lived in so pretty a place? I am sure he would. Can you not send for him, mother?"

Mrs. Lee could not repress her tears. "Do you not know, my daughter, that your father is dead? We can never see him again;" answered the mother.

"But we will be happy now, mother. I am sure I would not weep—for you have wept enough. I will work for you, and be a good girl, mother. This kind old gentleman will take care of us."

The little girl was correct in the belief that the old gentleman would provide for them; for he proved a guardian to them, indeed. They all soon became warmly attached to each other; and Mr. Harwood was every day strengthened in the opinion, that he had extended the aiding hand in the right direction. He immediately placed Mary at school, where she made great progress. Mrs. Lee had not neglected the moral and intellectual improvement of her daughter; and the superior advantages now secured to her for acquiring a finished education, were highly appreciated by both. In the course of a few years, during which time nothing unusual transpired in the history of the family, Mary found herself esteemed one of the most accomplished

young ladies in her circle of acquaintance. She was particularly partial to the study of the French, and frequently expressed the wish that she might become a perfect scholar in that language. Mr. Harwood narrowly watched the disposition and inclination of his adopted daughter. He saw with peculiar pleasure her love of knowledge, and witnessed her extreme anxiety to become mistress of her favorite study. He soon determined to place her in a situation, where her wishes could not fail to be gratified. He had a brother-in-law, named Jeffreys, who resided in France,—having married a French lady, and adopted that country as his permanent residence. In choosing France for his home, he chose its language also, and soon nearly ceased to speak his own. Mr. Harwood at once made arrangements to place Mary under his protection. She had now reached the age of seventeen, when he communicated to her the object he had in view. She received the proposition with much joy. Though warmly attached to home, she nevertheless entertained the idea that it would be a very pleasant thing to visit France, aside from the advantages afforded of perfecting herself in the French language.

Arrangements being completed, Mary took her departure for Paris. On the voyage, which was a long and tedious one, she more than once wished herself safely in the arms of her mother. Her courage, however, did not entirely forsake her; and she finally reached the end of her journey without experiencing any serious difficulties. She was kindly received by Mr. Jeffreys, who had been apprised of her intended visit.

She now pursued her studies under the direction of one of the most popular teachers in Paris—devoting her attention more particularly to the acquisition of the language of the country. She was also much aided in her pursuit, by the son of Mr. Jeffreys, whose qualifications enabled him to be of great service to her. But a few months had passed, before she found herself prepared to speak the language quite fluently; and the pleasure she derived from conversing with young Jeffreys, and others with whom she became acquainted, tended greatly to relieve her mind from the depression she frequently experienced, in reflecting on the distance which separated her from her home and dearest friends.

About two years had elapsed since her arrival in France, when Mary received a letter from her mother, earnestly desiring her to return home. She was sitting at the open window of the parlor, perusing this letter, when a man, miserably clad, and with dejected countenance, came toward her—and, addressing her in broken French, humbly begged a morsel of bread to save himself from starvation. Her heart was open to the petition, and his request was at once granted. Observing him to be an Englishman, and anxious to learn what misfortune could have reduced him to so miserable a condition, she addressed him in her own tongue, and invited him into the house.

"Sir," said she, "you are a stranger in these parts, I presume; what calamity can have brought you to so wretched a condition?"

"I am what the world may well call a son of misfortune," he replied; "many a dark cloud has hovered over my path, and many a storm, which has nearly

proved my entire destruction, have I encountered. I have sought rest in various undertakings, in which others seemed to experience it; but sought in vain. I despair of ever realizing it, until the past shall be irrevocably buried in oblivion."

"It cannot be that your character is stained by crime, and that you are fleeing from the hand of justice!" exclaimed Mary, with surprise. "If so, we have no protection for you here. Explain yourself," said she, "or we shall be obliged to call the police."

"I am guilty of a great offence," replied the poor beggar; "but I flee from no human hand of justice. The upbraidings of my conscience alone, are what most disturb me, and what I would most wish to be relieved of. Would that it were in my power to heal the wound that I, a long time ago, inflicted in the heart of her whom I solemnly swore to protect, defend, and support, before all others! But the deep, dark gulf of death forever separates us! Poor girl! she sunk in sorrow to the grave, with no one to soothe the aching heart—hastened to her end, it may be, by the very want of the necessities of life to sustain her! And her sweet infant too must have soon followed her!—a daughter, who would have been our comfort and solace through life! Oh the danger—the fatal results of passion! She reproached me for my poverty—she earnestly affirmed that she would be happier without me! With wounded pride, jealous, and filled with passion, I hastily abandoned her. I purposely refused myself time for reflection, before embarking for a distant land, where I well knew I should be beyond the knowledge of all who should seek me! Nay, I took especial pains to create the impression that I had put an end to my existence. But a few months after—having determined to return to her—I heard incidentally that she had died under that awful impression! The circumstances were related in a journal which fell into my hands at the time; and though names were withheld, I was convinced I could not be mistaken. I then dared not return; and sought to banish the recollection of the subject, by constantly searching for new objects to interest and absorb my attention. I have travelled the world over; but life itself has been constantly a burden to me. I have lost all hope of ever bettering my condition. I am indeed far more miserable than even my appearance indicates. No, lady, I flee from the pursuit of no living being; for no punishment can be more severe than that I have already suffered."

"But where," eagerly inquired Mary, "is your native place?"

"I am an American," he replied; "and proud am I of my country—though I expect never to return to it."

"From what part of America are you?" she continued—more and more interested in his history.

"The town of ———, in the state of Connecticut. My father was a poor man; and my wife, who before our marriage, was usually designated as the 'accomplished Julia,' died before she attained the age of maturity."

"And your name is——"

"Henry Lee."

"My father! my father!" she exclaimed, "behold your own daughter before you! I am not deceived—it is my father!"

She was on the point of throwing herself into his arms, when he arose to meet her, anxiously inquiring:—

"Mary, my child! Can it be possible that you live to witness the sorrow and misery of your wicked father! Oh, I discover in you now the image of your own poor mother! Tell me—how came you here? What breeze of fortune hath borne you onward to so favorable a condition? Oh, my wife! would to heaven I could call thee to life again!" he exclaimed, weeping and sobbing most bitterly.

"Stay, father!—she lives! she lives!" cried Mary. "My own dear mother still lives to bless you!"

"What! Julia—my wife? still lives! Gracious heaven! may I dare to meet her! Oh lead me—yes—lead me before her. I deserve no favor from her; but she knows I was not alone to blame—and she will forgive me—yes, she will forgive me!"

"Oh, I bless the fortune that has brought us together!" said Mary. "Compose yourself, my father—and you shall soon know all. Mother still resides in Connecticut. We were wretchedly poor and needy; but a good old gentleman, by the name of Harwood, came one day and took us to his home in Hartford, where she is invited to remain so long as he lives. It is by his kindness and generosity also that I am here pursuing my studies. I was preparing to return—having, the moment you accented me, received a letter from my mother, desiring me to embark for home immediately."

"The poor man was nearly overcome at so unexpected a meeting—with intelligence at once so gratifying, and the prospect of being again united to the bosom companion of his early days.

No time was now lost. The next packet that sailed, took the father and daughter to the shores of their own native country and home. And here let me remark, that on leaving, Mary failed not to give young Jeffreys a most pressing invitation to visit America at as early a day as his engagements would permit.

I need not describe the meeting of the long separated husband and wife. Suffice to say, it was affecting in the extreme. Each felt to have been most in the wrong—each begged most earnestly to be forgiven by the other. The day was one of mutual congratulation and joy; and that night were their hearts unitedly raised to God in humble and sincere prayer for the pardon of all their misdeeds—for His protection against the unhappy consequences of passion—and for His constant guidance and blessing.

In less than one year from that time, Mr. Harwood and his aged companion were both called to their reward in Heaven; and Mary Lee, his adopted and only child, came into possession of his immense estate, subject only to an annuity to her parents, sufficient to ensure them a comfortable and affluent support while living.

Mary's invitation to young Jeffreys was accepted. His visit was one of unusual interest to him, and not less so to her, whose hand he came to solicit. They were united: and blessings ceased not to attend them. They avoided THE PERILS OF PASSION, by attending to the voice of wisdom, "whose ways," in the beautiful language of Scripture, "are ways of pleasantness, and whose paths are peace."

ERNEST MALTRAVERS:

By the Author of "Pelham," "Eugene Aram," "Rienzi," &c. &c. In two volumes. New York. Harpers & Brothers. 1837.

The inexhaustible fountain of Mr. Bulwer's genius continues to pour out upon the literary world its beautiful effusions. Its waters seem as pure and limpid as the mountain stream, and sweet as the honey of Hymettus. But alas! those who drink of them too deeply, I fear will find them poison to the soul!

Among the writers of the present day, there are none who have a stronger hold upon the public taste than Edward Lytton Bulwer. Even on this side of the Atlantic, his productions are eagerly sought after by every class of readers. He has something to fascinate all; love-sick scenes for love-sick girls and amorous boys; fashionable life for modish gentlemen, who look to an English novel as "a glass wherein to dress themselves;" heroic achievements for gallant and romantic youth; profound reflection for the philosophic mind, and intimate knowledge of human life for the man of the world. Withal, the incidents of his tales have often the deepest interest, though the plot is not always without objection; and they are conveyed in a style, which though by no means faultless, is often brilliant and always vigorous and striking.

It is a sad thing that such uncommon powers should be so much misapplied. There is no man more capable than Mr. Bulwer of bringing efficient aid to the cause of virtue; none who could more powerfully inculcate a sublime morality; none who could more successfully penetrate the recesses of the heart, and expose its wicked workings, and its deceitful imaginings; none who could more beautifully portray the loveliness of virtue, or make vice more ugly. What an ally to a school of Ethics! Even our instructors in the pulpit would scarcely decline the aid of such an auxiliary. While the professors of moral philosophy, instead of imbuing the mind with practical wisdom, lose themselves in the mazes of metaphysics, and the preacher of the gospel, intent only on its mysteries, neglects the inculcation of those moral precepts which it was mainly designed to sustain and enforce, the talented novelist "would come to the rescue." Holding the mirror up to nature, he would shew to vice its deformity, and win over converts to virtue by her attractive graces. He would pursue the wicked through all their deceitful windings, trace them through every doubling, and penetrate and expose their base and ignoble motives. He would make meanness blush—abase the selfish—unmask the hypocrite, and detect the cheat. He would appal the gambler, disgust the gross voluptuary with himself, and wither the seducer with the sight of his unhappy victims. On the other hand, his genius

would give new charms to virtue. His pen would teach a sublime morality. It would elevate the soul by examples of nice honor, noble disinterestedness, heroic sacrifices, and a manful triumph over the passions. It would hold up for our imitation, a purity without spot or blemish, a generous philanthropy, and all the gentler affections united to the severer virtues. Such are the elevated paths in which the novelist should tread. They lead to a renown not unworthy of the ambition of any man. The benefactor of his race is best entitled to the wreath of glory. If he who makes a blade of grass to grow where none had grown before, called forth the praise of one deeply versed in the philosophy of life, what language can convey the admiration which is due to him, who makes not a single virtue only spring up in the waste of the human heart, but eradicates every noxious plant, and sows thick the seeds of moral excellence.

History has been said to be philosophy teaching by example: and fictitious history, if true to nature, has scarcely less claim to this exalted praise, than the faithful annals of the most philosophic historian. It may be doubted, indeed, whether the sober narration of actual events teaches half so effectually as the scenes of the drama, or the vivid creations of the novelist. How full of horror are the crimes of Richard, when blazoned by the genius of a Shakspeare! In the history we read the story of the monarch's crimes, but in the drama we behold the hellish workings of a demonic spirit.

But however qualified Mr. Bulwer may be for the office of *censor morum*, and however great the services he might render, as the apostle of truth and virtue, by a proper direction of his acknowledged abilities, it cannot be denied that there is much in his writings the tendency of which is directly and grossly immoral. I do not speak of the want of what is usually called "poetical justice;" I do not here complain of his preference for fictions, which terminate "with the affliction of the good and the triumph of the unprincipled;" I do not insist that he should violate the ordinary occurrences of human life, which often exhibit virtue in distress and vice in prosperity; though the instructor of manhood would naturally prefer so to cast his plot, and to mould his fable, as to give to merit its due, and to vice its condign punishment; but I impute to Mr. Bulwer the fostering of vice by exhibiting it in the most alluring colors—by softening down its revolting features, and taking off the odium which it always should inspire; and notwithstanding the beautiful moral sentiments which are scattered through his works, I will venture to affirm that no young man rises from the perusal of his last novel, without a consciousness that certain vices seem to him more venial than before. No young lady—nay, no mar-

ried lady ought ever to read such productions. They defile the mind of lovely and innocent woman. They introduce into that mind, impure and indelicate images of which it never would have dreamed, and with which it should never become familiar. Say that it is true to nature: shall he who caters for the public, and mainly for the female public, fill his pages with what is vicious or disgusting, under the plea that it is natural? What apology is it for introducing us into a brothel, that the revolting scenes are delineated with truth? "Is everything that is natural to be represented on the stage?" asked Voltaire, in reference to the vulgarities of Shakspeare—illustrating his remark at the same time by an allusion as coarse and as vulgar as those of the author whom he criticised. By no means. He who selects an *improper subject*, which in its development must bring a burning blush upon the modest cheek, is worthy of all censure. To say the least, it is in wretched taste. What cannot decently be read by a gentleman to a lady, is not fit to be read by either, and especially by the latter. Good sense, therefore, will promptly reject whatever is impure, nor soil its pages with a tale equally offensive to modesty and taste.

But "the head and front" of Mr. Bulwer's offending hath not this extent only. The whole force of his genius is sedulously employed in softening down the ugliness of vice. His favorite object seems to be to lessen our abhorrence of crimes, by exhibiting them in connection with eminent qualities. Vice, thus associated with elevation of character and exalted virtues, is forgotten or forgiven in our admiration of *them*; and our principles are undermined by the love of virtue itself. The great moralist has said,—and truly said,

Vice is a monster of such frightful mien,
That to be hated needs but to be seen;
Yet seen too oft, familiar with her face,
We first endure, then pity, then embrace.

But Mr. B. is not content to leave the success of vice to the mere influence of habit. The crimes of his heroes are redeemed by resplendent qualities, and the genius of the writer wins our pity for villains, who should rouse our indignation. The instances of this predilection are not unfrequent in the works of Mr. Bulwer. Take the character of Reginald Glanville, the real hero of Pelham, who begins life with seduction, and well nigh ends it with murder and the gallows. Yet withal he is a most interesting character, and excites our admiration and sympathy. Take Eugene Aram. What laborious efforts to clothe that felon with all the inspiration of genius, with the acquisitions of the scholar, and the sentiments of a man of virtue, while he delights by his intelligence, and is invested with all the graces of a fine exterior and prepossessing manners! Who

risks from his history without a sigh for his fate? Who reads the catastrophe without sympathy for the murderer? And are these sentiments which should be cultivated by the wise and good? Would Mr. Bulwer desire to diminish the odium against crime, and to eradicate the ingenuous revolvings of the heart from deeds of infamy? Would he break down the barriers between virtue and vice, and teach the rising generation, who pore over his speculations by the midnight lamp, to look upon those barriers as erected by the false prejudices of society? If he would not, let him no more introduce to us the most corrupting vices in the most alluring guise. Above all, let him not assail human virtue in its weakest point. Let not his tales furnish apologies for an offence, to which the passions, though unprompted, too naturally lead. He seems to have flattered himself,* that his works have at least had a tendency to divert the young from the imitation of the villains of the Byron school, by the examples which he sets before them. Speaking of Pelham, he says, "it contributed to put an end to the satanic mania—to turn the thoughts and ambition of young gentlemen without neckcloths, and young clerks who were sallow, from playing the corsair and boasting that they were villains." He seems to be content to have multiplied crime by diminishing its intensity; for let him be assured that there is not one who will play the corsair for ten thousand who would be seduced by the imposing character of Ernest Maltravers, and by the alluring scenes of illicit love, which are spread before their eyes in the pernicious work, the title of which stands at the head of this article. "The satanic mania" will always find a salutary check in the terrors of Jack Ketch; but the Lovelaces, and the Lotharios, and the Maltravers' will riot without a compunctious visitation, when even the restraints of public opinion are withdrawn, and illicit love has ceased to inspire for the shameless culprits, the just indignation of every virtuous mind.

It is my purpose to offer some remarks upon the adventures of Maltravers; not indeed from the critic's chair, Mr. Editor, for I am no critic. I am a plain old man—bred up in the simple manners of the "Old Dominion," where seduction is heard of only in romances, and conjugal infidelity may be said to be unknown. Her judicial decisions, from the revolution to the present day, have not the blot of a single case of crim. con.; and unless our manners are corrupted by foreign romances, or our own home manufacture of the like pernicious stuff, we may hope to retain for generations to come, a purity which has never been surpassed in any age or nation.

ERNEST MALTRAVERS is one of the last works of Mr. Bulwer. The hero is a young man of the

Norman line, with all the pride of that noble race, and all the virtuous aspirations of well bred and well educated youth. Mr. Bulwer draws his character for the reader in his prefatory address. "He is a man with the weaknesses derived from humanity—with the strength that we inherit from the soul; not often obstinate in error, more often irresolute in virtue; sometimes too aspiring, sometimes too despondent; influenced by the circumstances to which he yet struggles to be superior, and changing in character with the changes of time and fate; but never wantonly rejecting those great principles, by which alone we can work out the science of life,—a desire for the good, a passion for the honest, a yearning after the true."

Justice is not done, however, to the character of Maltravers by this general outline. He is represented in the work as of a noble and commanding presence; his spirit resolute and intrepid, his manners fascinating and graceful. His character is decidedly intellectual; his mind highly cultivated, his tastes refined, his conversation brilliant and profound, and his aspirations are all for literary renown, or the noble distinction of a great, a pure and disinterested statesman. His love of virtue is deep-seated and pervading; his principles elevated and noble, his tendencies decidedly religious; while his firmness and decision forbid the fear of vacillation, either from infirmity of temper or the seductions of the passions. He is indeed certainly not the creature of feeling,—by no means particularly susceptible. Except in his *liaison* with Alice Darville, (which by the way is wholly at variance with his character, as afterwards developed,) he exhibits little of the ardor of youth in his intercourse with the sex. He is on the other hand rather cold and fastidious, either from pride, insensibility, or devotion to higher objects, and difficult of conquest, though the favorite of the fair.

From such a character, we should scarcely have expected, in his very outset, the grossest violations of that virtue after which he is represented as so anxiously yearning—yet the author plunges him at once into guilt. He had been educated at Göttingen, in obedience to his own whim, and was returning to a kind and indulgent father, in the north of England. He travels on foot, and finds himself benighted on a wild and desolate common. He makes for a light which proceeds from an humble cottage, whose only inmates are a ruffian, with his beautiful daughter, a girl of fifteen. The offer of a guinea for a guide, and the exposure of his watch excite the cupidity of the villain, who urges him to spend the night there. He consents, but the daughter takes occasion to warn him as she retires, that he would be robbed and murdered. A scene ensues, which reminds one of a similar incident in the history of Ferdinand Count Fathom. The doors are locked, the keys remo-

ved, and escape seems impossible. His young proteegee, however, steals the key and releases him. He flies and arrives on the confines of the nearest town, whither also the fair Alice had made her escape from her infuriated father. He takes her under his protection, hires a cottage and an old female domestic—instructs his proteegee in music and *morality*, and procures for her a teacher in other branches of education. Her improvement is most rapid in music, *morality*, *religion*. Some months elapse and he perceives the hazard of their situation. He proposes to place her in some respectable family. Distressed at the thought of separation, she faints—she is revived—he whispers love—his principles give way, and “she loses caste forever in the eyes of her sex.” Such are the first scenes in this reprehensible work. It commences, with a guilty connexion, which the author endeavors, but in vain, to palliate and excuse. The vestibule itself is foul, though filled with images seductive to youth, and designed for their attraction.

When first introduced, Alice is represented as most lamentably ignorant.

“Her countenance was beautiful, nay even faultless, in its small and childlike features, but the expression pained you—it was so vacant. In repose it was almost the expression of an idiot, but when she spoke or smiled, or even moved a muscle, the eyes, color, lips, kindled into a life which proved that the intellect was still there, though but imperfectly awakened.”

Her ignorance would be pronounced to be exaggerated beyond belief, had we not Mr. Bulwer's assurance, that the picture is taken from the life. Here it is—

“Poor child! in what a den of vice you have been brought up?”

“Aman, sir.”

“She don't understand me. Have you been taught to read and write?”

“Oh no!”

“But I suppose you have been taught, at least, to say your catechism—and you pray sometimes?”

“I have prayed to father not to beat me.”

“But to God?”

“God, sir, what is that?”

“Maltravers drew back, shocked and appalled. Premature philosopher as he was, this depth of ignorance perplexed his wisdom. He had read all the disputes of schoolmen, whether or not the notion of a Supreme Being is innate; but he had never before been brought face to face with a living creature who was unconscious of a God. After a pause he said—

“My poor girl, we misunderstand each other. You know that there is a God.”

“No, sir.”

“Did no one ever tell you who made the stars you now survey—the earth on which you tread?”

“No.”

“And have you never thought about it yourself?”

“Why should I? What has that to do with being cold and hungry?”

Maltravers looked incredulous. “You see that great building with the spire rising in the starlight?”

“Yes, sir, sure.”

“What is it called?”

“Why, a church.”

“Did you never go into it?”

“No.”

“What do people do there?”

“Father says one man talks nonsense, and the other folks listen to him.”

“Your father is—no matter. You know, at least, what a school is?”

“Yes, I have talked with girls who go to school,” &c.

Now, without controverting Mr. Bulwer's assurance that such answers were really given by a young girl, to the interrogations of a magistrate upon her examination, I will venture the conjecture, that that young girl bore no resemblance to this intellectual creature, whose quick perceptions and uncommon readiness at learning, are displayed in the subsequent narration. It is inconceivable, that such a girl, with such instinctive virtues, and such lively parts, and who had not been altogether without an intercourse with girls *who went to school*, should have never heard of the existence of a God, or imbibed any knowledge of those common feelings, in relation to female virtue, which are so universal as to deserve above all others the character of being innate.

The object of all this labored attempt, to exhibit this young girl in a state of profound ignorance, is to prepare the reader to look upon the fault of the pretty Alice, as a venial error—and this object is all but avowed in a succeeding passage.

“Oh! how happy they were now—that young pair! How the days flew like dreams! No doubt we blame them, and women very properly: but men, at least, cannot blame them very justly. For all of us male animals have either been as happy once in our lives, or wished to be so.” . . . “But Alice was gentler and purer, and as far as she knew, sweet fool, better than ever. She had invented a new prayer for herself, and she prayed as regularly and as fervently, as if she were doing nothing amiss. But the code of heaven is gentler than that of earth and does not declare that ignorance excuseeth not the crime. If a jury of cherubim had tried Alice's offence, they would hardly have allowed the heart to bear witness against the soul!”

Again:

“Maltravers smiled and stroked those beautiful ringlets, and kissed that smooth innocent forehead, and Alice nestled herself in his breast.”

It is really making heavy draughts upon our credulity, to tell us of the unconsciousness of fault of the lovely Alice, so intelligent, so improved and so improving, when “she blushes and trembles” at the sight of her lover, when they next meet, and is daily imbibing from him lessons of morality and religion, which he as devoutly instills!

In this illicit intercourse, this state of open concubinage, Maltravers lived for some months, when from the columns of a newspaper he learns the illness of his father. He hastens to his bedside (only thirty miles distant), and finds him dying. After his interment he returns to the cottage. Alice, in the meantime, has been found and carried off by her father. Frantic at his loss, he drives to a magistrate's, takes every necessary step for her recovery, but in vain. He sinks into melancholy, becomes *fanatical*, but is soon cured of that by a young man of base heart, but of a powerful

and acute mind. With him he makes a tour to the continent—and here we have a gap in the narrative, after the manner of Vivian Gray. We next meet with our hero four years afterwards at a brilliant ball in Naples, at the Palazzo of the Austrian Embassy. Madame Valerie de Saint Vantadour was the reigning beauty of the hour. She *incontinently* falls in love with him—yet she was “a lady who belonged to a race, in which women are chaste and men are brave.” The passion of the lady flatters his ambition, and without loving, “he is resolved to establish his power over her,” *maigre* her insignificant husband, whose rights are not deemed worthy of the least consideration. At a favorable moment he avows his passion. Madame de Saint Vantadour confesses her love, but “throws herself upon his generosity, beseeching him to *assist her own sense of right*, to think well of her and to leave her.” He drops upon his knee, declares his admiration of her virtue, and after a violent struggle with his feelings he rushes from the apartment. And this is virtue!!! A man of five and twenty makes love to a married woman, who fervently avows her tenderness, utters a spirited declamation in behalf of virtue, declares it to be “*her lover*, her pride, her comfort, her life of life,” attempts a defence of her strange deviation from her avowed principles, and throws herself upon his generosity to aid her, in resisting the promptings of her frailty. And yet we are told* that “Maltravers woke to a juster and higher appreciation of human nature, and of *woman's nature* in especial. He had found honesty, truth and *virtue*, where he might least have expected,” &c. Verily, this is most unparalleled virtue! It is of a piece with that of Macbeth, “who would not play false, and yet would gladly win,” who let “I dare not, wait upon I would, like the poor cat in the adage.” It is utterly at variance with the sublime morality of that religion which teaches that sin is in the heart, and declares in the thunders of the law, “the *SOUL* that sinneth, it shall surely die.”

But what is the moral of this part of the adventures of Maltravers? Is it, that elevated principles, high breeding, cultivated intellect—the sacred pledge of conjugal fidelity are all insufficient to sustain even the noblest lady against the frailties of the human heart? If Valerie de Saint Vantadour, prodigally gifted, imbued with the noblest sentiments, and raised above the rest of her sex in a corrupt society, by a virtue hitherto without blemish, could receive the addresses of a lover without disdain, how shall we censure those, who, with so much more reason, may plead *their weakness* as an excuse for their aberrations?

Such are my objections to this licentious novel. I shall always take pleasure in doing jus-

tice to Mr. Bulwer's merits. But I do protest against seduction and crim. con. as the *materiel* of works designed for the hands of modest women. It is, as I have said, in wretched *taste*—a taste that I am truly sorry to see imitated on this side of the Atlantic. The gross scenes in the “Valley of the Shenandoah,” and “George Balcombe,” could never have found their way into those productions, but for the proneness of our writers to make the British novelists their model. Let them remember, however, that what might suit the British public, and ancient times, is unfit for the less corrupted taste of our unpolished land in this our day. It is the disregard of decency in the drama, even more than the thunders of the pulpit, that has driven many modest females from the theatre: and the same just sense of what becomes the sex has long since banished from their libraries, such works as Tom Jones, and Roderick Random, and the Sorrows of Werter; and such dramas as Farcquar's, and Congreve's, and Otway's: the coarse and vulgar scenes of which are not even redeemed by their wit, their interest, or their tenderness. If, in many things, our world is getting worse, it is some consolation to us to know, that the female part of it, at least, nauseate vulgarity, and shrink sensitively from ribaldry and *double entendre*.

The unpleasant portion of my task is accomplished. I rejoice at it, for I really admire Mr. Bulwer's genius, and take more pleasure in praising than in blaming him. Happily, there is ample room for commendation in all his works. The residue of these volumes is filled with profound reflections, and if the incidents are not altogether unexceptionable, they are not liable to the great objections which have been made to the early scenes in the history of Maltravers. As the reader is by this time, I fear, wearied with my speculations, I shall devote a large portion of the space which remains to me, to extracts from the work.

Our author has several remarks on the female sex, and the advantages of their society, in which I heartily concur.

“To say nothing of the unusual grace and delicacy of Alice's form and features, there is nearly always something of Nature's own gentility in very young women (except, indeed, when they get together and fall a giggling); it shames us men to see how much sooner they are polished into conventional shape than our rough, masculine angels. A vulgar boy requires, Heaven knows what assiduity, to move three steps—I do not say like a gentleman, but like a body that has a soul in it; but give the least advantage of society or tuition to a peasant girl, and a hundred to one but she will glide into refinement before the boy can make a bow without upsetting the table. There is sentiment in all women, and sentiment gives delicacy to thought and tact to manner. But sentiment with men is generally acquired, an offspring of the intellectual quality, not, as with the other sex, of the moral.”

* * * * *

“What a new step in the philosophy of life does a young man of genius make when he first compares his theories and experience with the intellect of a clever woman of the world! Perhaps it does not elevate him, but how it enlightens and refines! What numberless minute yet important mysteries in human cha-

racter and practical wisdom does he drink unconsciously from the sparkling *perisillage* of such a companion! Our education is hardly ever complete without it."

Mr. Bulwer gives us his notion of proper matches in the following sentences:

"People, to live happily with each other, must fit in, as it were—the proud be mated with the meek, the irritable with the gentle, and so forth. We talk of congenial minds, but married persons must not too closely resemble each other."

I cannot agree with the following:

"Perhaps it would be better if we could get rid of love altogether. Life would go on smoother and happier without it. Friendship is the wine of existence, but love is the dram-drink-lag."

"Lady Florence—no—I have friends, it is true, and Cleve-land is of the nearest: but the life within life—the second self, in whom we vest the right and mastery over our own being—I know it not. But is it," he added, after a pause, "a rare privation? Perhaps it is a happy one. I have learned to lean on my own soul, and not look elsewhere for the reeds that a wind can break."

Yet, there is some truth in these reflections:

"Perhaps," she said, after a short pause, "we pass our lives happier without love than with it. And in our modern social system," she continued, thoughtfully, and with great truth, though it is scarcely the conclusion to which a woman often arrives, "I think we have pampered love to too great a preponderance over the other excitements of life. As children, we are taught to dream of it; in youth, our books, our conversations, our plays are filled with it. We are trained to consider it the essential of life; and yet, the moment we come to actual experience, the moment we indulge this inculcated and stimulated craving, nine times out of ten we find ourselves wretched and undone. Ah, believe me, Mr. Maltravers, this is not a world in which we should preach up, too far, the philosophy of love!"

The difference between the influences of devoted love, and of youthful fancy, is forcibly stated:

"The new influences that he had created had chased away her image. Such is life. Long absences extinguish all the false lights, though not the true ones. The lamps are dead in the banquet-room of yesterday; but a thousand years hence, and the stars we look on to-night will burn as brightly. Maltravers was no longer in love with Valerie. But Valerie—ah, perhaps *hers* had been true love!"

"She had once more seen the lover of her youth, and thenceforth all was night and darkness to her. What matter what became of her? One moment, what an effect it produces upon years! One moment! Virtue, crime, glory, shame, wo, rapture, rest upon moments! Death itself is but a moment, yet eternity is its successor!"

How just the sense of self-respect attributed in the following passage to Maltravers, and how admirably hit off is the paltry vanity of Caesarini at a single stroke. Ah! I have seen such Caesarinis.

"He had a Quixotic idea of the dignity of talent, and though himself of a musical science and a melody of voice that would have thrown the room into ecstasies, he would as soon have turned juggler or tumbler for polite amusement, as contended for the bravos of a drawing-room. It was because he was one of the prudent men in the world that Maltravers was one of the least vain. He did not care a rush for applause in small things; but Caesarini would have summoned the whole world to see him play at push-pin, if he thought he played it well."

Mr. Bulwer's remarks upon literature and lite-

rary men, are always interesting. *In sua arte credendum est.* Let us hear him.

"People talk about thinking; but, for my part, I never think, except when I sit down to write." I believe this is not a very common case, for people who don't write think as well as people who do; but connected, severe, well developed thought, in contradistinction to vague meditation, must be connected with some tangible plan or object; and therefore we must be either writing men or acting men, if we desire to test the logic and unfold the symmetrical and fused colors of our reasoning faculty."

"With some, to write is not a vague desire, but an imperious destiny. The fire is kindled, and must break forth; the wings are fledged, and the birds must leave their nest. The communication of thought to man is implanted as an instinct in those breasts to which God has intrusted the solemn agencies of genius."

"Maltravers was not much gnawed by the desire of fame—perhaps few men of real genius are, until artificially worked up to it. There is in a sound and correct intellect, with all its gifts fairly balanced, a calm consciousness of power, a certainty that, when its strength is fairly put out, it must be to realize the usual result of strength. Men of second-rate genius, on the contrary, are fretful and nervous, fidgeting after a celebrity which they do not estimate by their own talents, but by the talents of some one else. They see a tower, but are occupied only with measuring its shadow, and think their own height (which they never calculate) is to cast as broad a one over the earth. It is the short man who is always throwing up his chin, and is as erect as a dart. The tall man stoops, and the strong man is not always using the dumb-bells."

"A man ought not to attempt any of the highest walks of mind and art as the mere provision of daily bread; not literature alone, but everything else of the same degree. He ought not to be a statesman, or an orator, or a philosopher as a thing of pence and shillings: and usually, all men, save the poor poet, feel this truth insensibly."

"No mere drudgery of business, late hours and dull speeches, can produce the dread exhaustion which follows the efforts of the soul to mount into the higher air of severe thought or intense imagination."

"The poor author! how few persons understand, and forbear with, and pity him! He sells his health and youth to a rugged taskmaster. And, oh blind and selfish world, you expect him to be as free of manner, and as pleasant of cheer, and as equal of mood, as if he were passing the most agreeable and healthful existence that pleasure could afford to smooth the wrinkles of the mind, or medicine invent to regulate the nerves of the body!"

Speaking of the pleasures of intellectual ambition, Maltravers is made to say:

"It is not the ambition that pleases," replied Maltravers; "it is the following a path congenial to our tastes, and made dear to us in a short time by habit. The moments in which we look beyond our work, and fancy ourselves seated beneath the everlasting laurel, are few. It is the work itself, whether of action or literature, that interests and excites us. And at length the dryness of toil takes the familiar sweetness of custom. But in intellectual labor there is another charm; we become more intimate with our own nature. The heart and the soul grow friends, as it were, and the affections and aspirations unite. Thus we are never without society, we are never alone; all that we have read, learned, and discovered is company to us."

Yet, afterwards, we find—

"He was disgusted with the littleness of the agents and springs of political life; he had formed a weary contempt of the barrenness of literary reputation. At thirty years of age he had necessarily outlived the sanguine elasticity of early youth, and he had already broken up many of those later toys in business and

ambition which afford the rattle and the hobby-horse to our maturer manhood. Always asking for something too refined and too exalted for human life, every new proof of unworthiness in men and things, saddened or revolted a mind still too fastidious for that quiet contentment with the world as it is, which we must all learn before we can make our philosophy practical, and our genius as fertile of the harvest as it may be prodigal of the blossom. Haughty, solitary, and unsocial, the ordinary resources of mortified and disappointed men were not for Ernest Maltravers. Rigidly secluded in his country retirement, he consumed the days in moody wanderings; and in the evenings he turned to books with a spirit disdainful and fatigued. So much had he already learned, that books taught him little that he did not already know. And the biographers of authors, those ghost-like beings who seem to have had no life but in the shadow of their own haunting and imperishable thoughts, dimmed the inspiration he might have caught from their pages. Those slaves of the lamp, those silkworms of the closet, how little had they enjoyed, how little had they lived! Condemned to a mysterious fate by the wholesale destinies of the world, they seemed born but to toil and to spin thoughts for the common herd; and, their task performed in drudgery and in darkness, to die when no further service could be wrung from their exhaustion. Names had they been in life, and as names they lived forever, in life as in death, airy and unsubstantial phantoms."

The moralizing of our author is often filled with sad reflections. Take the following:

"When we have commenced a career, what stop is there till the grave? Where is the definite barrier of that ambition, which, like the eastern bird, seems ever on the wing, and never rests upon the earth? Our names are not settled till our death; the ghosts of what we have done are made our haunting monks---our scourging avengers---if ever we cease to do, or fall short of the younger past. Repose is oblivion; to pause is to unravel all the web that we have woven---until the tomb closes over us, and men, just when it is too late, strike the fair balance between ourselves and our rivals; and we are measured, not by the least, but by the greatest triumphs we have achieved. Oh, what a crushing sense of impotence comes over us when we feel our frame cannot support our mind---when the hand can no longer execute what the soul, actively as ever, conceives and desires! The quick life tied to the dead form---the ideas fresh as immortality, gushing forth rich and golden, and the broken nerves, and the aching frame, and the weary eyes! The spirit athirst for liberty and heaven---and the damning, choking consciousness that we are walled up and prisoned in a dungeon that must be our burial-place! Talk not of freedom---there is no such thing as freedom to a man whose body is the jail, whose infirmities are the racks of his genius!"

His scorn of the momentary public is strongly expressed:

"Every day he grew more attached to that only true philosophy which makes a man, as far as the world will permit, a world to himself; and from the height of a tranquil and serene self-esteem, he felt the sun shine above him when malignant clouds spread sullen and ungenial below. He did not despise or wilfully shock opinion, neither did he fawn upon and flatter it. Where he thought the world should be humored, he humored---where contemned, he contemned it. There are many cases in which an honest, well-educated, high-hearted individual is a much better judge than the multitude of what is right and what is wrong; and in these matters he is not worth three straws if he lets the multitude bully or coax him out of his judgment. The public, if you indulge it, is a most damnable gossip, thrusting its nose into people's concerns where it has no right to make or meddle; and in those things where the public is impertinent, Maltravers scorned and resisted its interference as haughtily as he would the interference of any insolent member of the insolent whole. It was this mixture of deep love and profound respect for the eternal people, and of calm, passionless disdain for that capricious charlatan, the momentary public, which made Ernest Maltravers an original and solitary thinker; and an actor, in reality modest and benevolent, in appearance arrogant and unsocial. 'Pauperism, in contradistinction to poverty,' he was

went to say, 'is the dependence upon other people for existence, not on our own exertions; there is a moral pauperism in the man who is dependant on others for that support of moral life---self-respect.'"

"The world---are you, too, its slave? Do you not despise its hollow cant---its methodical hypocrisy?"

"Heartily," said Ernest Maltravers, almost with fierceness; "no man ever scorned more its false gods and its miserable creeds---its war upon the weak---its fawning upon the great---its ingratitude to benefactors---its sordid league with mediocrity against excellence. Yes, in proportion as I love mankind, I despise and detest that worse than Venetian oligarchy which mankind set over them and call 'the world.'"

The following remarks prompt to respect for sound sense, and a life of philanthropy and virtue:

"'Good sense,' said he one day to Maltravers, as they were walking to and fro at De Montaigne's villa, by the margin of the lake, 'is not a merely intellectual attribute; it is rather the result of a just equilibrium of all our faculties, spiritual and moral. The dishonest, or the toys of their own passions, may have genius; but they rarely, if ever, have good sense in the conduct of life. They may often win large prizes, but it is by a game of chance, not skill. But the man whom I perceive walking an honorable and upright career---just to others, and also to himself (for we owe justice to ourselves---to the care of our fortunes, our character---to the management of our passions) is a more dignified representative of his Maker than the mere child of genius. Of such a man, we say he has good sense; yes, but he has also integrity, self-respect, and self-denial. A thousand trials which his sense braves and conquers are temptations also to his probity---his temper---in a word, to all the many sides of his complicated nature. Now, I do not think he will have this good sense any more than a drunkard will have strong nerves, unless he be in the constant habit of keeping his mind clear from the intoxication of envy, vanity, and the various emotions that dupe and mislead us. Good sense is not, therefore, an abstract quality or a solitary talent; but it is the natural result of the habit of thinking justly, and therefore seeing clearly, and is as different from the sagacity that belongs to a diplomatist or attorney, as the philosophy of Socrates differed from the rhetoric of Gorgias.'"

"'Besides,' added De Montaigne, with almost a religious solemnity in his voice, 'there is a conscience of the head as well as of the heart, and in old age we feel as much remorse, if we have wasted our natural talents, as if we have perverted our natural virtues. The profound and exultant satisfaction with which a man who feels that he has not lived in vain---that he has entailed on the world an heirloom of instruction or delight---looks back upon departed struggles, is one of the happiest emotions of which the conscience can be capable. What, indeed, are the petty faults we commit as individuals, affecting but a narrow circle, ceasing with our own life, to the incalculable and everlasting good we may produce, as public men, by one book or by one law. Depend upon it, that the Almighty, who sums up all the good and all the evil done by his creatures in a just balance, will not judge the august benefactors of the world with the same severity as those drones of society who have no great services to show in the internal ledger as a set-off to the indulgence of their small vices. These things rightly considered, Maltravers, you will have every inducement that can tempt a lofty mind and a pure ambition to awaken from the voluptuous indolence of the literary Sybarite,'" &c.

Take the contrast---

"His fortune was now gone---gone in supplying the poorest food to a craving and imbecile vanity; gone, that its owner might seem what nature never meant him for---the elegant Lothario---the graceful man of pleasure---the troubadour of modern life! gone in horses, and jewels, and fine clothes, and gaming, and printing unsaleable poems on gilt-edged vellum; gone that he might be, not a greater, but a more fashionable man than

Ernest Maltravers! Such is the common destiny of those poor adventurers who confine fame to boudoirs and saloons. No matter whether they be poets or dandies, wealthy parvenus or aristocratic cadets, all equally prove the adage, that the wrong paths to reputation are strewn with the wrecks of peace, fortune, happiness, and, too often, honor!"

In the following passage, we have some reference to politics. Maltravers, we must remember, is highminded and disinterested; "of upright intentions, unpurchaseable honor, and correct and well considered views." In a rapid sketch of the character of the Roman republic, he gives us some strongly marked opinions on the subject of Government.

"In the last days of their republic, a *coup-d'état* of their social date might convey to us a general notion of our own. Their system, like ours, a vast aristocracy rather than a monarchy; an aristocracy, heaved and agitated, but kept ambitious and intellectual by the great democratic ocean which roared below and around it. An immense distinction between rich and poor—a nobility sumptuous, wealthy, cultivated, yet scarcely elegant or refined; a people with mighty aspirations for more perfect liberty, but always liable, in a crisis, to be influenced and subdued by a deep-rooted and antique veneration for the very aristocracy against which they struggled; a ready opening through all the walls of custom and privilege for every description of talent and ambition; but so deep and universal a respect for wealth, that the finest spirit grew avaricious, griping and corrupt almost unconsciously; and the man who rose from the people did not scruple to enrich himself out of the abuses he affected to lament; and the man who would have died for his country could not help thrusting his hands into her pockets. Cassius, the stubborn and thoughtful patriot, with his heart of iron, had, you remember, an itching palm. Yet, what a blow to all the hopes and dreams of a world was the overthrow of the free party after the death of Cæsar! What generations of freemen fell at Philippi! In England, perhaps, we may ultimately have the same struggle; in France, too (perhaps a larger stage, with far more inflammable actors), we already perceive the same war of elements which shook Rome to her centre, which finally replaced the generous Julius with the hypocritical Augustus, which destroyed the colossal patricians to make way for the glittering dwarfs of a court, and cheated a people out of the substance with the shadow of liberty. How it may end in the modern world, who shall say! But while a nation has already a fair degree of constitutional freedom, I believe no struggle so perilous and awful as that between the aristocratic and the democratic principle. A people against a despot—*that* contest requires no prophet; but the change from an aristocratic to a democratic commonwealth, is indeed the wide, unbounded prospect upon which rest shadows, clouds, and darkness. If it fail, for centuries is the dial-hand of time put back; if it succeed—"

"Maltravers paused.

"And if it succeed?" said Valerie.

"Why, then, man will have colonized Utopia!" exclaimed Maltravers, with sparkling eyes.

"But at least, in modern Europe," he continued, "there will be fair room for the experiment. For we have not that curse of slavery which, more than all else, vitiated every system of the ancients, and kept the rich and the poor alternately at war; and we have a press, which is not only the safety-valve of the passions of every party, but the great note-book of the experiments of every hour—the homely, the invaluable ledger of losses and of gains. No; the people who keep that tablet well, never can be bankrupt."

Of the style of Mr. Bulwer, it may be presumptuous in me to say anything. His admirers might be disposed to cry out—

A falcon towering in his pride of flight,
Was by a mousing owl hawked at and killed;

or rather, "hawked at" without a feather being ruffled. The public, indeed, must long since have passed judgment upon his merits in this as in other regards; yet I will hazard the remark, that his deservedly high reputation is sustained by the depth and vigor of his thinking, rather than by the beauty of his style. It cannot be said of his works—

Materia superabat opus.

The finish of the workmanship bears no sort of comparison with the rich materials on which it has been bestowed. His thoughts are bullion. His style is clumsy and ungraceful. His language is sometimes careless and awkward; as in the following instance: "there is *nearly always something* of gentility," &c. Sometimes it is not English, as in these words—"noticeable," "untranslatable," "exultant," "soberize." Often it is deformed by forced conceits, and overstrained and mixed metaphors. Thus he speaks of "*crushing bitterness*"—of "an author's *entailing* on the world, an *heir* loom of instruction"—of "an aristocracy *heaved* and *agitated*, but kept *ambitious* and *intellectual* by the democratic ocean which rolled around it." Here aristocracy, I suppose, is a ship, and this ship is *ambitious* and *intellectual*! Again, he speaks of one's "*setting* in the same phrase the two *jewels* of his own *courtliness* of flattery and *profundity* of erudition"! Again, we hear of "The eyes' deep *wells* of love, in which *truth* lay hid, and which neither *languor* nor disease could *exhaust*"! And lastly, one of the personages is made to ask, "Have I not *girded* myself with *changes*?" Such instances are innumerable. They are to be found in every didactic or moralizing passage. These very often require a second reading to be perfectly comprehended; a fault which arises partly from his taste for inversion, partly from the use of new coined words, or of common words in a strained signification, and partly from the exuberance of his thoughts and metaphors, which are poured out in such profusion and so heaped together in masses, as to be beyond the ready management of ordinary minds. Of these faults, the extracts already given furnish ample evidence. Take, however, the following from the 'Disowned':

"Thou for whom I have dipped into *Lethæ*, the pen which once wrote thought in characters of *fire*, and *wood* for these idle pages, the *light* themes which my heart disowneth, that I might keep forever *involute* to thy remembrance the *fountain* of passionate romance which I once dedicated to thee as to its spirit, oh why," &c. &c. *Disowned*, 1 Vol. 175.

Speaking of our griefs in mature years, he says,

"Alas, they have now neither commune nor consolation in the voices of nature or the mysteries of romance: they become the petty *stings* and the falling *drops*, the irritating and vexing littleneesses of life. One by one they *cling* around us like *bonds* of iron; they multiply their *links*, they *grow* over our hearts, and the *feelings*, once too wild for the very earth, fold their

broken wings within the soul. Dull and heavy *thoughts* like *dead walls*, close around the laughing flowers and fields that so enchanted us of yore; the *sins*, the *habits*, the *reasonings* of the world, like *rank* and gloomy *fogs*, shut out the exulting heavens from our view," &c. &c. *Dissoned*, Vol. 1, p. 41.

All this is in wretched taste, though in the rude ore we find rich materials, which well wrought would be striking and brilliant. The truth is, the first requisite of a good style is perspicuity. Language is designed to convey our thoughts, and that which conveys them most clearly is best. Good writers, therefore, reject as far as possible the use of uncommon words, or of common words, in a remote or radical signification. Compare the simple yet beautiful diction of Goldsmith, the graceful ease of Addison, and the manly and vigorous, though plain and downright, style of Swift, with the ambitious and artificial sentences I have just quoted. What a difference. We glide on with the former without a pause. We drink in the outpourings of their wit or of their wisdom with ease and with delight. We converse with those who speak our mother tongue. We are puzzled with no French idioms, or foreign constructions. We have no Latin in disguise—no Greek in English dress, to call for the aid of our lexicons. All is English—downright English—not in words only, but in idiom—in construction—in forms of expression, and in the order of language. The natural order is indeed the genius of the English tongue. The requirements of rhyme and the stately march of blank verse, demand, it is true, occasional inversion. But our prose is rarely improved by a departure from the natural order. That departure always leads to obscurity, and the obscurity becomes "darkness visible," when every sentence is loaded with metaphors following each other in rapid succession, when every line presents new images, and when thought is entangled with thought, in all the mazes of parenthetical confusion.

I beg leave to conclude this protracted paper with the following extract from the Review of Mr. Bulwer's Athens, in the Edinburg Quarterly:

"The accomplished author will pardon us for closing the present paper with a protest against certain peculiarities of idiom, which we are sorry to find countenanced by so popular a pen. A few of these may plead in their behalf the rare authority of old writers in our tongue. They belong, however, in actual usage, either to the North American dialect, or to such assassins of her Majesty's English at home, as a master of composition must regret to have upon his side. We complain, for instance of expressions like these:—*Irregularized*—*in stealth*—*re-ventured* for *reverend*—*to neighbor*—*to concentrate*, as a verb active—*to prodigialize*—*to border*, for *to border on*. We think that *impatient of conquest* cannot mean *impatient to conquer*. We don't like *arriving at* the things we have been in the habit of *arriving at*. The adverbs *both* and *only* are now and then misplaced. False antithesis is too frequently admitted. *Cause* is once at least put for *effect*. A verb of one number is often forced to do duty with a nominative of another. Mr. Bulwer is not yet *talented*—a pseudo-participle which no one will use who is not ripe for any atrocity—but he *progresses* at a fearful rate. These are, it is true, slight matters in themselves; but at a time when purity of taste is not in the ascendant—at a time when a single

class of readers is able to push 'Poems' into the fourteenth edition, and 'Prize Essays' into the ninth or tenth thousand, which are not more repulsive from the impudent extravagance of their doctrine than from the base unseel of their style—at such a time, the man of real genius should be more than ever on his guard against sanctioning, by his negligence, the adulteration of our noble language."

ANTHONY EVERGREEN.

[We are not sure that our estimate of the following article is not unduly enhanced by the interest we take in the writer. We may rate her talents too highly; but we are satisfied that we do not give more than is due, of respect for her virtues, or sympathy for her misfortunes. But of these we knew nothing when we published the "*Curse*," and we remember the unbiassed judgment which we then formed of that work. For invention, for variety of character, for distinctness in its development, and for truth to nature, we know no tale of the same length superior to it. We hope to see the same powers displayed in the novel from which this extract is taken. We give it to the public, not more with a view to adorn our columns, than in the hope of engaging the favor of our readers in its behalf. A native of Virginia, the authoress has strong claims on the sympathy of her countrymen. Descended from a proscribed sect, whose virtues near two hundred years ago, found refuge from persecution in the "Ancient Dominion," the calamitous destiny of her race has pursued her, and overtaken her in the cradle. No conceited blue-stocking; no vain belle whose admirers persuade her that her flippant nonsense is worthy of the public eye, she meekly tasks her powers to aid a widowed mother in the support of a family of helpless orphans. The promptings of genius have told her that this can better be done with the pen than with the needle. We are sure she does not deceive herself in the estimate of her own talents. We trust that her confidence in the justice of the public will prove to be equally well placed.]

FROM THE CONSPIRATOR, A NOVEL,

By the Authoress of the "*Curse*."

CHAPTER III.

Oh dire ambition! what infernal power
Unchained thee from thy native depth of hell,
To stalk the earth with thy destructive train?
* * * * * To waste domestic peace
And every heartfelt joy!

Barbarossa.

As soon as supper was over, Colonel Alwin withdrew, and conducted Zavala to his own apartment. He closed the door and carefully locked it—he then examined the deep recesses of the windows before he was satisfied that they were alone. Calmly drawing forward a table covered with loose papers, he placed the shaded lamp in such a position as to throw the light on the face of his companion, and seating himself opposite to him, he spoke in a quiet tone.

"Now, sir, I am ready to receive your communications."

Zavala could not refrain from admiring the self-command of the man; for in the situation in which he then stood, he was not certain that the tidings he was about to hear did not bring with them the destruction of all his views—nay, involve his life. Zavala drew a packet from his bosom, and presenting it to him, said:

"Read those despatches, and then I will speak of my own private wishes."

Colonel Alwin took the papers, and as he broke the seals a slight tremor was perceptible in his fingers—no other sign of impatience or agitation escaped him. He shaded his face with his hand, and carefully perused the documents, and as he read, his observant companion saw that the flush of triumph mounted even to his pale temples.

More than an hour was thus spent, when slowly re-folding them, and locking them in his desk, he arose and walked several times across the floor. Stopping suddenly before Zavala, he said quickly, almost sternly,

"Do you know the contents of those papers?"

"I do," was the concise reply.

"And are you prepared to abide by me in life or death?"

"On one condition." "Name it."

"Miss De Bourg"—

"Of that we will speak hereafter," said Alwin, waving his hand impatiently. "When heard you from the south? From thence I am most anxious to gain information."

"I have private letters from my uncle, who, you are aware, is an officer high in command in the Spanish army. The troops dissatisfied with their present situation, are ready for any changes: he assures me that very little will be necessary to induce them to struggle for a change of masters. The soldiers are entirely devoted to him, and will follow wherever he leads. Your object, if I understand it correctly, is to revolutionize Mexico, and wrest from the present chief magistrate the rich territory of Louisiana, which adds another gem to this fair Union. At any hour Colonel Zavala is ready to cross the Sabine, and thus give you an excuse for placing yourself at the head of an armed body of troops devoted to your interests. Nothing then will be easier than to unite your forces, and defy the laws of your own country. Zavala has constant communication with some of the most influential men in the city of Mexico, and they are ready, when the first blow is struck, to range themselves on the side of those who will free them from the Spanish yoke. There is a theatre before you worthy of your abilities, and the power refused you in your own country, courts your acceptance in another as fair. For myself, if my aid is of any worth, you know it is yours to command at all times, on one condition."

"I thank you: it is of inestimable importance to me, as no one knows better than yourself; but to gain that aid, Don Pedro, I am unwilling to force Miss De Bourg to accept you, for it seems the wayward girl will not consent to the proposal. You may think me cold, hard, and unfeeling, but I love this girl as if she were in reality my child. If you can gain her consent, as I have before told you, you have mine; but of that I am hopeless—so we will consult your ambition in offering you an adequate reward for your services, hoping your love may be more successful in another quarter."

As he thus spoke, the brow of Zavala darkened, and it was with difficulty his impatient spirit could brook the implied impossibility of inducing any fair lady to accept his offered love.

"Allow me to try, sir: armed with your authority, she will listen differently. Let her see how much to your interest it is, to lend a favorable ear to my suit. I ask not for the rewards of ambition—I can gain them without your assistance. I seek for the hand of your ward; her heart I will win, if devoted love can win a woman."

Colonel Alwin shook his head, as he replied:

"She will not be won by you. I have reasoned with her—urged every motive that could influence or dazzle her mind, and she was still firm in her refusal. I cannot command her to marry you."

"Listen to me, Colonel Alwin," said Zavala, firmly but respectfully. "I am acquainted with the scope and bearing of all your plans—I am possessed of their most secret details, and one word from me would precipitate you into a prison, from which death might be your only release. What you are now preparing to execute, will brand your name as a traitor to your country and her best interests. Think of the consequences to yourself, if your enterprise is discovered before it is ripe for execution, and then think how trifling in comparison are a few tears shed by a romantic girl, because you consult her interest and happiness, by commanding her to accept a man who adores her. With the hope of obtaining Miss De Bourg, I am anything you choose to make me; but, on the contrary—you know the alternative: choose between them."

A smile of bitter scorn writhed the livid lips of Alwin as he listened to the words of Zavala. For an instant, his rage at being thus braved by one so much his junior in years and inferior in standing, threatened to burst forth and overwhelm the presumptuous man who thus dared to offer terms to him. A moment's reflection however, convinced him, that in giving vent to his passion, his safety would be compromised. He felt that he was in the power of one who could make his own terms, and he resolved to speak him fair.

"Certainly," said he slowly, and apparently with a slight effort; "certainly you speak truly. Julie should view you with different sentiments if she consults her own happiness, and though it gives me more pain than perhaps you think my stern nature is capable of feeling, I must wound her gentle heart by commanding her to accept one she has assured me she can never love: one who dares to tell the protector of the woman he professes to adore, that if she does not consent to marry him, he will denounce the friend of her orphan years, and in so doing destroy her happiness. 'Tis well, however, Don Pedro De Zavala, we understand each other. The only tie (and he laid a strong emphasis on the word *only*) that binds us together is interest. Julie shall be yours, if you pledge yourself to sustain my cause. I know the influence which your connexions possess—also, that which your talents give you; and you must bind yourself to devote it all to my interests."

"Of course—but Miss De Bourg must be mine before we leave this island."

"What, sir, do you doubt my word?" said Alwin, and his eye flashed fearfully bright over the person of the other. "Do you *dare* to doubt the word of a man of honor!"

"Colonel Alwin, it is useless for us to use the language of passion. You know the prize for which I contend: if you have ever loved, you can excuse my eagerness to secure her mine, before I leave her for an indefinite space of time."

"Your haste is excusable, though it has not much delicacy to commend it either to my ward or myself; but since we are making a bargain, the conditions must be fulfilled."

None but a spirit as haughty and overbearing could measure the bitterness that filled his heart as he turned from his companion. Deeply did he resolve to avenge the implied distrust of himself, when the power to do so with impunity was his.

Who that had seen him return to the drawing-room with a smiling lip and smooth brow, could have imagined the dark tide of emotion which swelled beneath that calm exterior? His voice was as bland, his smile as frequent, as though no unpleasant occurrence had aroused his impetuous passions—as though he had not deeply implicated the happiness of one of that little circle, and that one dependant on his kindness and affection. Did not his heart shrink back as he met her deep eye fixed on him, and felt that he was then meditating the possibility of turning the benefits he had conferred on her, into the means of forcing her grateful heart to seal its own misery, in order to save him from the precipice on which he stood?

Life! thou teachest many a strange lesson of duplicity to the heart of man!

DOCTOR FAW.

Dr. Faw was considered a complete gentleman. He came a few years ago into our village, and ever since his arrival had been continually progressing in the good opinion of all. At the time when the facts, of which this is the true narrative, occurred, the Doctor had secured to himself a fine practice. It may not be amiss to let the reader be very particularly acquainted with our hero. In person, or face, the Doctor was not very prepossessing; his blue eyes and sandy hair presented a contrast far more striking than handsome: as regards dress and manners, however, he was "the very thing itself." He always wore either black, or other dark colors. You never found showered over his body that rainbow profusion and variety of hues, so revolting to the eye of genuine taste; never was he guilty of the barbarism of a blazing vest, or pantaloons like Joseph's coat of many dies. His apparel was always of a make punctiliously nice, and usually he disported a light cane with a golden head. His white kerchief was barely perceptible in his pocket corner, as he tripped with lightness and activity along; and as he passed you by, how delightfully you felt the air perfumed by his presence! Then the Doctor was so accommodating, so polished, so polite, so popular among the ladies. Was there a ball announced—Dr. Faw was sure to be at the head of the list of managers. Did a party of misses want an attendant to the theatre, on a sleighing in winter, or in summer on a fishing excursion—the Doctor always could spare the time to serve them. If a married lady was fond of sunshine and the footpaths, and her husband was too busy earning his bread to be at her side, the Doctor would kindly supply his place. He would gallant the wife, and if need be, he would dine and drink with the husband. Among the young gentlemen he was the arbiter of dress and the judge of style. With all these pleasant qualifications, the Doc-

tor was gay and witty in conversation, and of a temper which might be defined as perpetually calm. The practice of his profession had naturally very much extended the circle of the Doctor's acquaintance, and as his character was thus amiable, the field for its exhibition was proportionately enlarged. His younger brethren in the healing art were the only individuals who were ever heard to whisper or insinuate anything against him. They would occasionally observe that public taste was very curious—that they could see nothing so very particularly deserving in the mind or manners of the Doctor, to justify the extravagant estimate put upon them, and they would ask, *who is this Dr. Faw? what is he? where did he come from?*—but as the profession, whether justly or not we will not stop to inquire, have been accused of habitual unkindness and envy towards successful merit, these queries were considered as originating in this cause, and no one cared to listen to them, or gave themselves the trouble to reply. Like some noble and gallant barque, with a freshening breeze filling every sail, the blue waters swelling gently under her, and the white foam curling up against her prow—the heavens all blue and joyous above—so sped our hero propitiously onwards upon the ocean of human life.—Alas! alas! but you shall hear it all.

MISS LAVINIA LINT, &c.

Miss Lavinia Lint was a very pleasant young lady. She had a handsome fortune left to her entire control and exclusive enjoyment, by a worthy and deceased parent, and resided in the house of her father's brother. She was a plain, sensible girl, and was rather corpulent than otherwise; and as is usual with most of the human race blessed with pinguidity, she was very sweetly tempered. There was but one thing she needed to complete the happiness of her situation, and that was—(but the reader anticipates me)—a husband. She was quite pretty; none of your two-volume modern novel heroines—pale, pensive and melancholy—but rosy, with round plump features and a face perpetually in smiles. Having money, of course she had suitors; none however of whom had as yet suited her. On a fine sunny day in October, Miss Lavinia sat by a blazing fire, in company with her cousin, about the same age, and if ever on earth there were two beings innocent, comfortable and happy, they were they. "Law me," said her cousin to Lavinia, "why don't you get married?"—"How you do rattle on," responded Miss Lavinia. At this point in the conversation the bell answered loudly to a rapid pull, and in a few moments Dr. Faw was shown in, and made his bow to the ladies. The conversation was briskly carried on—all parties in the highest glee—they talked of the weather, of the marriages and deaths in the vicinity, of the love matches existing or likely about to be, of the latest novels, and all the various other matters and topics which are supposed to be acceptable to the better portion of our species. The Doctor began at length to be thoughtful. Miss Lavinia and her cousin monopolized the utterance of all that was said. Mr. Faw became rather uneasy, and sat restless: he relieved his unaccustomed taciturnity by deliberately taking up the tongs and stirring the fire—an act of supererogation, as the room was sufficiently warm and the wood as completely in a state of combustion as could well be desired. The fire, alas, which troubled the Doctor was, as his brethren would say, internal. Mr. Faw drew his chair to the centre-table, and from beside a glass vase filled with the richly colored flowers of the autumn, he picked up a book—and very much it is to Miss Lavinia's credit that such a book was there, and very suitable likewise it was to the Doctor's purpose—it was the Holy Bible—the Doctor opened it at random, and read aloud, "It is not well for man to be alone"—a text which the fair cousin of Miss Lavinia took the liberty of interpreting, as the vulgar do dreams—by contraries; and suddenly remembering that she had left in her room a favorite piece of work which *must* be immediately finished, she

darted off with a bounding step and a look towards both the Doctor and Miss Lavinia, which seemed to say, "a fair field and no interruption."

In human life there are two things which are terrible—I mean to gentlemen who have delicate nerves—the one is the having a tooth drawn, and the other the asking a pretty girl, abounding in charms and worldly possessions, to do you the favor of accepting you, as the partner of her person and her property, till death dissolves the connection. Does the reader suppose that I mean to lay open to his inquisitive eye, the scene that ensued between the Doctor and Miss Lavinia? If he does, he is very much mistaken; all that I shall let him know is, that the embarrassing question, just above alluded to, was put by the Doctor to Miss Lavinia, and by her answered affirmatively. Her cousin says that Miss Lavinia, when the interview was over, blamed her very much for leaving her alone with the Doctor, and that when Mr. Faw departed, he seemed in very good humor, flushed in the cheeks, smiling, and brushing the knees of his pantaloons with an elegantly bordered white muslin handkerchief.

SOMETHING OUT OF THE COMMON ORDER OF THINGS.

The evening for the wedding at length arrived. How the Doctor's happiness and good fortune were envied! The world of beauty and fashion was thenceforth to lose its sun of light and radiance. It was a cold wintry night. The hospitable mansion of old Mr. Lint, Lavinia's uncle, seemed to rejoice on the occasion. The large grates were brimful of coal, and each seemed one solid mass of intense red heat. The candles were all ornamented with richly cut papers—the work of the fair hands of Lavinia's cousin. The whole edifice, from the garret to the kitchen under ground, was illuminated. Carriages rolled up after carriages and emptied their loads of finery and beauty. The very servants bustled about and grinned and seemed unusually happy. The bride's-maids had arrived, the company had assembled—among other things, the hour for the ceremony had arrived, so had the refreshments, so had the groomsmen, so had the priest—the bride was dressed, and her blooming attendants were prepared to escort her; every thing was ready but the groom—where was he? "The Doctor must be a very absent man," said Mr. Ruffles, "to be absent on such an occasion." Mrs. Sneezer took a large pinch of snuff, and remarked, "that it was very mysterious." Mr. Lint was in a curious predicament, and although in his own house, felt very little at home; and he walked to the passage door—opened it—looked out—the snow was whitening the tops of the thick array of carriages, the great-coats and the hats of the coachmen—the breeze was very cool; he saw no carriage in motion, nor other indication of the expected coming of the esculapian; he looked at his watch—blew his fingers—and returned to the fireside. "This is very strange," said Mr. Lint. Mrs. Lint was very busy, marshalling and drilling her servants, pouring the wine out into the glasses, mixing lemonade, splitting up the oranges, and arranging the trays and waiters of cakes and fruit; and as industry and occupation are the "sovereignest thing on earth" against the approach of ennui, she hardly knew that the time appointed had arrived. At length she drew from her girdle a gemmed repeater, which gave her the first intimation of the lateness of the hour. She called out, "Samuel!" Samuel, all neatness and apron, immediately answered, "Madam!" "Samuel," said Mrs. L., "what are we waiting for?" "The groom, madam, has not come." "The groom!" said Mrs. L., "that's very singular;" and off whisked Mrs. L. to inform Mr. L. of a truth of which he was already painfully aware. The worthy priest had exhausted interrogation itself in inquiries about the prospects of the parties about to be wed, and concerning the health of every family, a member of which happened within reach of his voice—and turning his face towards the fire-place, observed by the time-

piece on the mantel that he had waited longer than he saw any good reason for. He rubbed his hands briskly, but said nothing. The company became impatient. The bride's-maids sent down to know the cause of the delay. The bride looked amazed, and well she might. The company became uneasy. Several gentlemen began to remember engagements elsewhere for the evening and to depart. The hours moved heavily along. The folks, at length, by degrees had all disappeared. Mr. Lint was finally left alone. He paced the well lit rooms with a quick step, and silently. He walked mechanically to the windows, and gazed out upon the snow-flakes as they drove against the panes of glass. The carriages had all rumbled off. The darkness of the night seemed doubly cheerless. "Well, this," muttered Mr. L., "is a matter which I do not, I cannot, understand." The old lady was in terrible agony—all her labor had been in vain—and then "people would talk so." "What a pity," said Mrs. L., "every thing was so well arranged," as she glanced her eyes around upon the rare and beautiful flowers, a bouquet of which was perched wherever a foundation could be made for it. "Dear me," she continued, "and poor Lavinia!" "I will see this farce out," said Mr. L. with clenched teeth and fist also clenched.

Poor Lavinia! to her indeed this was an awful night. Her bride's-maids did all they could to alleviate her sufferings. Her temples were rubbed with all manner of essences, and lest she should faint away, a bottle of salts was kept continually at hand. She bore it however quite philosophically, and at a reasonable hour, "solitary and alone," she retired to rest. Early the next morning she breakfasted in her room, and her features seemed so round and pretty, that care itself could not find a spot upon them rude enough to answer for a foothold. "Dear me," said Miss Lavinia, helping herself to a buckwheat cake, "now I come to think of it, the man had red hair—what an escape!"

But the Doctor—what did become of the Doctor? I know that the reader is dying with anxiety to hear. I must therefore be very deliberate in telling him; but patience, and a few periods, will lead him to the information desired. I think when the whole truth is fairly told, that Mr. and Mrs. and even Miss Lint, will excuse the absence of our hero, "situated as he was," as Sir Patrick O'Plenipo would say. But where was the Doctor? I will let you know in the course of the following chapter.

AN UNEXPECTED PATIENT.

Upon the evening appointed for the ceremony, the Doctor repaired to his room at an early hour, to prepare for the interesting occasion. When completely dressed, he surveyed his figure fully reflected in a psyche glass. His pantaloons and vest were of white—the former of the finest cassinet, the latter of satin; his coat was black, and of the best broad-cloth, fitting without a wrinkle; his stock and gloves, of course, corresponded in color with the vest and pantaloons; white silk stockings, and well polished pumps, covering feet unusually small, concluded his adornment. Thus to himself did his faithful mirror represent Dr. Faw, on the evening already referred to. As the Doctor stood before the glass, a rap was heard, and an individual obtruded himself upon him. "I am desired," said he, "Doctor, to request you to call immediately upon a lady who is alarmingly ill." The intrusive character then went on to describe exactly the place where the lady was to be found. "Will it not answer to-morrow?" said the Doctor. "I am particularly engaged." In this style of expression, I think that the Doctor was pretty accurate, for a wedding in which our position is that of first performer in the ceremony next the priest, might very fairly be called a particular engagement. "For the love of God, do come, Doctor; the woman may die. She cannot detain you more than a few minutes," was the further appeal addressed to our hero. The heart of Mr. Faw being just then in a condition particularly propitious to the action upon it of the

finer and kindlier sympathies, and as he supposed that it would be a charitable way of spending an hour which otherwise must move on leaden wings, he concluded that he would comply with the request. So taking his hat and cane, and hurrying on his gloves, he sallied forth. The reader now finds the Doctor on the public street in his wedding attire, hurrying to the bedside of his patient. Arrived at the passage door, he encountered an Amazonian, on her knees, laboriously busy at that work of all detestation—scrubbing—her arms bared, and her frock tucked up. Her ladyship looked askance very knowingly and grinned, which the Doctor supposed to be her rude way of wishing him joy of the coming nuptials. She instantly abandoned her occupation, and with her mop in hand accompanied the Doctor into the chamber and presence of his patient. The room, to all appearance, was that of the sick: a cheerful fire was blazing in the hearth, and numerous vials were ranged upon the mantel. The bed-curtains were closely drawn. The patient was bolstered upright in a sitting position. The Doctor took his seat by the bedside, and began feeling her ladyship's pulse. The Doctor always was a man of feeling. The sick woman immediately made a desperate spring, and clasped her arms around the neck of Mr. Faw, exclaiming, "Your wife! your wife! you traitor!" Immediately three red-haired successors to the features and name of the Doctor crawled from under the bed, and clinging to his knees, cried out most lustily, like Maelzel's Androides, "Papa! papa!" Doctor Johnson observes that when we are in any emergencies of danger or perplexity, the mind acts with extraordinary rapidity, and that an immense number and variety of ideas are compressed into an inconceivable minute period of time. Not Laocoon, with the serpents contorting around his limbs with fatal pressure, ever felt with more intensity the horror of his situation, than did our man of medicine. He thought in an instant of the various modes of escape. The window was too high from the earth, and the pavement too hard to meditate a leap. The fire was too hot and dangerous for him to attempt the chimney. In his desperation, loaded as he was, he turned towards the door. It was locked, and the lady who had shown him up stood with her back against it, tall as a grenadier and twice as powerful, with the dripping mop in her hands, uplifted like an axe in the butcher's grasp. Reconciling himself to his fate, the Doctor struggled back into the chair from which he had risen, and sank down upon it completely hopeless and unnerved.

If ever the organ of "adhesiveness" was clearly developed upon any cranium, it must have been upon that of the veritable Mrs. Faw, judging from the manner she adhered to her husband. Sitting on his knees, her arms still around him, she continued pouring out a lava flood of invective, "You wretch! you undertake to deceive and ruin a poor innocent and confiding woman, and spend her money, after having a wife—and she living, and you run away from her." Such, and other like terms of reproach, was the poor Doctor doomed to hear rattled in his ears, and no means of escape. He was like a wretch bound to some instrument of torture and shame, and compelled to receive and bear all that might be meted out to him. Motionless he sat, unresisting and mute. At length the heart of the janitor relented. "Come," said she of the mop, roaring with laughter, "fair play is a jewel—the Doctor deserved a good deal, and he has got it—he came, at any rate, as he supposed, on an errand of mercy; let not his treatment, however he may have earned it, be merciless—he has been under the pump long enough." So saying, and tearing the husband from his wife's embrace, she raised him up aloft and bore him to the door. Like the hare, when the loud yelp of the pursuing hound breaks upon his ear, so leapt the Doctor forwards, and so he bounded along the stairs and the passage-way to the open street—the last that Mrs. Faw, or any body else, ever saw or knew of him with any absolute certainty, whether, like Curtius, the earth gaped and swallowed

him; or like Morgan, of anti-masonic memory, he was abducted; or like Elijah, he went heavenward in a chariot of fire, the author of this narrative would not undertake to hazard a conjecture. All that he assumes to speak of, is what actually did occur; and further, as the form of the affidavits in the law run, he saith not.

TIME, TROUBLE, &c.

Time is a great physician. It cures most of the maladies of the heart, and frequently furnishes a specific where nothing else medicinal could be of any avail. The affections of Miss Lint, as the reader may have opined, were not very deeply engaged in the affair with the Doctor, although matrimony was intended to result from it. It has happened, and probably will happen again, that women marry without any very overpowering sense of irresistible love. All of the sex are not framed of materials of which even a Shakespeare could make Juliets. Nature had intended Lavinia for as much happiness as belongs to our condition here, and hence she was denied the more lively emotions out of which arise as often intense pain as the highest enjoyment. She was never boisterously happy, nor did her feelings ever relapse into a correspondent degree of gloom. The groomless wedding caused much talk in the village when it occurred, as did all the accompanying circumstances, as we have narrated them; but other stories and other excitements succeeded it, and after a few years, it came to be but infrequently even alluded to. The swarm of admirers which Lavinia's charms, including the metallic ones, commanded, were brushed away for a season, like insects by the breath of a frosty breeze. They returned, however, eventually, and the house of Mr. Lint became as joyous and as gay as ever; so true is that trite maxim, handed down to us from the ancients, "*ubi mel, ibi apes*"—where there is good entertainment, there will always be sufficient guests.

MRS. AND MR. RUFFLES, AND THE CONCLUSION.

Will the reader be kind enough to take it for granted, that some four or five years have elapsed since Dr. Faw departed so abruptly from the bedside of the unmanageable patient, to whom we alluded in a preceding chapter. On a dreary December morning, Mrs. Ruffles (formerly Miss Lavinia Lint) was seated at the head of a neatly arranged breakfast table, busily engaged pouring out coffee. The buckwheat cakes were sending up into the room wreaths of steam. On each side of Mrs. R. was seated a curly haired young one, intent upon swallowing any and every thing that might come to hand. "Dear me," said Mrs. R. looking out of a window opposite, "how very like this day is to that evening on which it was appointed that I should be Mrs. Dr. Faw." Mr. Ruffles was sitting before the grate, drying the morning's paper and looking at the coals. Mr. Ruffles always read the newspaper whilst he breakfasted—a commendable custom, and a combination of luxuries. When Mr. Ruffles was seated, he commenced reading—"Drowned, in attempting to cross — river, in the State of —, on Monday last week, a gentleman, lately arrived in the neighborhood; his name and residence unknown; he was of middle size, well dressed, with sandy hair: letters were found upon him addressed to Dr. Faw. It is hoped that this account may reach his friends." "How strange," said Mrs. Ruffles, "that I should just then have happened to have spoken of him." "Very," said Mr. Ruffles—"but these things, you know, my dear, are unaccountable." "Are you ready for your coffee, my dear." "Yea." And so this story ends.

Pierius Valerianus wrote an Eulogium on Beards; Holstein on the North Wind; Heinsius on the Ass; Erasmus on Folly; Sallengre on Drunkenness; Syne-sius on Baldness. (Greek.)

THE MECHANIC ARTS, AND EVERETT'S ADDRESS.*

In September last, the 'Massachusetts Charitable Mechanic Association' held, in Boston, an exhibition of machines, implements, and fabrics, recently produced by the mechanic arts; and at the same time held a fair, at which many articles made for the occasion, were sold: the profits of the exhibition and fair being applied to the charitable uses for which, mainly, the Association was formed. In variety, richness, and depth of interest, no exhibition of the kind, probably, ever surpassed, if any ever equalled, this one. 'More than fifteen thousand articles, in almost every department of art,' were displayed to the wonder-stricken eye. Specimens of manufacture the most rare, of machinery the most ingenious, courted attention on every hand. Agricultural implements, the tools proper to a hundred different trades, steam engines,—all presenting some useful or curious invention or improvement—filled the most knowing beholder with new admiration for a fertility of mind and canningness of hand, which seemed here to have been well nigh superhumanly creative. Foremost of wonders, was the model of Davenport's electro-magnetic engine; applying the power of the loadstone to drive machinery. The model was of sufficient force to work a turner's lathe; and judicious observers, after examining its principles of action, deemed it easily susceptible of such increase in power, while it might remain so portable and cheap, as to be far superior to those hitherto matchless agents, water and steam.—The throng of spectators was proportioned to the attractiveness of the sight. Daily, for eight or ten days, thousands crowded the immense halls of the exhibition. The city, and the neighboring villages and towns, poured out almost their entire population. By the fifth or sixth day, sixty thousand people were supposed to have been admitted; and the sum received for admittances alone, was reckoned at twelve or fifteen thousand dollars.

The occasion was seized, to elicit the Address mentioned above. Its objects were, to swell the charity fund (for each auditor paid an admittance fee), and to impress mechanics and all others with a just sense of the dignity and importance of the mechanic arts. But there is one circumstance, especially worthy of notice. The author of the Address,—who, from the manner in which the title page mentions him ('Edward Everett, an Honorary member,' &c.) might be taken for merely some retired master mechanic,—is the distinguished Governor of Massachusetts; and even less distinguished by that title, than as an enlightened member of Congress, an eloquent orator, and an accomplished scholar: confessedly, one of the foremost men of that state, itself among the foremost in this confederacy.

We dwell with mingled pleasure and regret, upon this spectacle so frequent in the North, of genius, learning, and high official dignity, descending with cheerful frankness from their natural elevation, to a task of such humble usefulness: *pleasure*, to find that not everywhere in this our country, does greatness disdain to instruct common minds in lowly and homely truths; regret, to think how utterly, in their solitudes touching

the government, Southern great men have despised or forgotten that, without which, popular government can have no hope—the increase and diffusion of knowledge among the people. Vast, splendid, imposing objects, monopolize their regards. To thunder in the Senate, or electrify the multitude at some great national or party jubilee; to meditate exploits in war; or to propose some grand scheme of legislation for showering wealth upon millions at once; or to defend, with tongue and pen, the political rights of large masses of men;—these are the only quarries dignified enough for Southern ambition. It never deigns to bestow a thought upon the details of means, by which individual men and women may be made to covet, and to acquire, a knowledge of their various duties and rights—of Nature's wonders—and of Art's triumphs. Far less does it deign, like Bacon, or (may we add) like Brougham and Everett, to drudge personally (*operarius et bojulus fieri*) in so unshowy a work. What infatuation! to imagine that the edifice of state will withstand sapping and the storm, because its proportions are happy and the blocks which compose it are strong; when their joints are uneven and the cement which should unite them is a crumbling sand!—Men who will devote their powers to none but the vulgar aims of ambition—oratory, statesmanship, and arms—err as fatally as those do, (and in a manner not unlike) who reserve all their virtue for great occasions, when it may shine as heroism; slighting the 'lesser morals,' the daily and hourly courtesies, which make so nearly the sum of human happiness, and form so much the largest part of human duty. The would-be hero, unblest and unblest, diffuses no joy, and receives none, in his domestic or social circle. The would-be orator, statesman, or warrior, leaves undone almost all that he should have done for the peace, freedom, and happiness of his country. He speedily suffers the proper doom of all misguided seekers after Fame;

'In dark oblivion drown'd,
He sleeps forgot, with mighty tyrants gone;
His statues moulder'd, and his name unknown.'

The truest benefactors of mankind are those who, in *their sphere*, be it high or low, wide or narrow, do what they can to enlighten the minds and improve the morals of their fellow-men. Accordingly, especial honor is due to him, who adds this merit to the ordinary constituents of greatness.

Such is the honor due to Mr. Everett. Besides having figured, we need not say how conspicuously, in the great arena at Washington; besides having, in the ablest articles of the ablest American Review, signalized his pen in the cause not only of letters, but of human rights and human improvement; he has, by numerous instructive lectures and addresses, before associations and assemblies of different kinds, spread abroad a large amount of useful knowledge; and what is much better, created in many a mind, an ardent thirst for more of that knowledge; nay, what is best of all, has set an impressive and infectious example, which will multiply the effect of his own work a thousand fold.

The misdirected or slumbering geniuses of the South, whom we would fain arouse by pointing to that example, may possibly suppose that the field in which Mr. E. has thus labored, is barren of what is commonly deemed *glory*: that it yields no laurels: and that the only compensation to the plodding toiler, is the con-

*An Address delivered before the Massachusetts Charitable Mechanic Association, 20th September, 1857, on occasion of their 5th exhibition and fair. By Edward Everett, honorary member of the association. Boston: Dutton and Wentworth—1857.

sciousness of doing much good. So, before a trial, any one might have supposed. So, probably, Mr. Everett himself thought, when, inspired by patriotism and philanthropy (we do not like to employ the much abused word), he first girded himself for the work. But he has found it otherwise. He has found the field a full worthy one, for the best efforts of genius. It has furnished some of the most verdant and enduring chaplets that entwine his brow. His powers of reasoning and illustration, his treasures of diversified knowledge, eye, and his eloquence, have been signalized so, as the first talents in all the land might be proud of being signalized. The Address delivered at the late exhibition and fair, is an instance of this. We shall quote considerable portions of it, (as we have made the foregoing remarks) not to please the author, to whom we are unknown, and owe nothing save our quota of the whole country's gratitude; but to shew how entirely susceptible such themes and such occasions are, of being handled in the style of a master, and to strengthen our recommendation of his example to his countrymen. The passages quoted, at the same time, will enrich our pages, and amply reward the reader's trouble in perusing them.

The following paragraph displays the wonderful increase of man's power, from the use of machines, and other material agents:

"Man, with his unaided strength, can lift but one or two hundred weight, and that but for a moment; with his pulleys and windlasses, he sets an obelisk upon its base,—a shaft of solid granite a hundred feet high. The dome of St. Peter's is one hundred and twenty feet in diameter; its sides are twenty-two feet in thickness, and it is suspended in the air at an elevation of three hundred and twenty feet from the ground,—and it was raised by hands as feeble as these. The unaided force of the muscles of the human hand is insufficient to break a fragment of marble, of any size, in pieces; but, on a recent visit to the beautiful quarries in Sheffield, from which the columns of the Girard College at Philadelphia are taken, I saw masses of hundreds of tons, which had been cleft from the quarry by a very simple artificial process. Three miles an hour, for any considerable space of time, and with ample intervals for recreation, food, and sleep, are the extreme limit of the locomotive capacity of the strongest frame, and this confined to the land. The *arts* step in: by the application of one portion of them to the purposes of navigation, man is wafted, night and day, alike waking and sleeping, at the rate of eight or ten miles an hour, over the unfathomed ocean; and, by the combination of another portion of the *arts*, he flies at the rate of fifteen or twenty miles an hour, and if need be with twice that rapidity, without moving a muscle, from city to city. The capacity of imparting thought, by intelligible signs, to the minds of other men,—the capacity which lies at the foundation of all our social improvements,—while unaided by art, was confined within the limits of oral communication and memory. The voice of wisdom perished, not merely with the sage by whom it was uttered, but with the very breath of air on which it was borne. *Arts* came to the aid of the natural capacity; and, after a long series of successive improvements, passing through the stages of pictorial and symbolical representations of things,—the different steps of hieroglyphical writing, (each occupying, no doubt, long periods of time for its discovery and application),—it devised a method of imprinting on a material substance an intelligible sign, not of things, but of sounds forming the names of things; in other words, it invented the A B C. With this simple invention, and the mechanical contrivances with which it is carried into effect, the mind of man was, I had almost said, re-created. The day before it was invented, the voice of man, in its utmost stretch, could be heard but by a few thousands, intently listening for an hour or two, during which alone his strength would enable him to utter a succession of sounds. The day after the art of writing was invented, he stamps his thoughts on a roll of parchment, and they reach every city and hamlet of the largest empire. The day before this invention, and the mind of one country was estranged from the mind of all other countries. For almost all the purposes of intercourse, the families of man might as well not have belonged to one race. The day after it, and Wisdom was endued with the gift of tongues, and spake by her interpreters to all the tribes of kindred men. The day before this invention, and nothing but a fading tradition, constantly becoming fainter, could be preserved by the memory, of all that was spoken or acted by the greatest and wisest of men. The day after it, Thought was imperishable; it sprang to an earthly immortality; it seized the new-found instruments of record and commemoration, and, deserting the body as it sunk with its vocal organs into the dust, it carved on the very grave-stone, "The mind of man shall live forever."

These illustrations of the important aid man derives from the mechanic arts, lead to the inference, that *they are the great instruments of human civilization*. Then come the subjoined striking views of the differences between civilized and savage life; closing with a graphic description of the work done by a weaving mill; and some wonderful results of the steam engine:

"It is a somewhat humiliating reflection, that, in many things dependent on the human organs and senses,—unaided by the arts,—the savage greatly excels the most improved civilized man. Thus man, with one set of glasses, penetrates the secret organization of the minutest insect or plant,—marks the rise of the sap in the capillaries of a blade of grass,—counts the pulsations of the heart in an animalcule a hundred times smaller than the head of a pin; while, with another set of glasses, he fills the heavens with a hundred millions of stars, invisible to the naked eye. To the savage, the wonders of the microscope and the telescope are unknown; but he can, by traces which elude our keenest vision, tell whether it is the foot of friend or enemy which has passed over the grass before his tent in the silence of night; and he can find his way through the pathless and tangled forest without a guide. Civilized man, with his wheels and his steam, runs a race with the winds, but, left to the natural force of his members, soon sinks from fatigue. The indefatigable savage, ignorant of artificial conveyance, outtrots, on foot, the hound and the horse; and, while the famished child of civilized life faints at the delay of his periodical meal, a three days' hunger makes no impression on the iron frame of the poor Indian. Civilized man, although surrounded by his arts, with enjoyments that seem to render life a hundred fold more precious, lies drenched in sleep one-third of his precious hours, and may well envy the physical training which enables his hardy brother of the forest, when occasion requires, to bid defiance, night after night, to the approach of weariness.

"But this superiority which the savage possesses over civilized man, in the discipline of some of the natural capacities of our frame, is turned to little account of human improvement and happiness, for want of those arts which create, combine, and perpetuate the powers and agents by which our wants are supplied. Even the few comforts of which his forlorn condition is susceptible, are mostly derived, not from this superior training of his natural faculties and senses, but from his possession of some few imperfect arts. The savage, needy at best, without his moccasins, his snow-shoes, his dressed buffalo skin, his hollowed tree or bark canoe, his bow and arrow, his tent and his fishing gear, would be a much more abject being. And these simple inventions, and the tools and skill required by them, no doubt occupied a considerable period in the early history of our race. But the great difference between savage and civilized life consists in the want of those more improved arts,—the products of which we have been contemplating,—by which no inconsiderable quantity of human power and skill can be transferred to inanimate tools and machinery, and perpetuated in them; the arts whereby the grasp of the hand, which soon wears, can be transferred to the iron gripe of the vice, the clamp, the bolt, that never tire; the arts by which stone, and metal, and leather, and wood, may be made to perform the offices of poor flesh and bone. The savage, when he has parched his corn, puts it in a rude mortar, which with infinite toil he has scooped out of a rock, and laboriously pounds it into meal. It is much, if, in this way, he can prepare food enough to keep him alive while he is preparing it. The civilized man, when he has raised his corn, builds a mill with a water-wheel, and sets the indefatigable stream to grinding his grain. There are now two or three laborers at work; one, it is true, with forces which soon weary, and which can only be kept up by consuming a part of the corn as fast as it can be made into food, but endowed with an untiring and inexhaustible invention;—the other patient fellow-laborers of wood and iron, the stream, the wheel, and the mill-stone, without capacity for head-work, are willing to grind corn all day, and not ask a mouthful back by way of sustenance.—Civilization is kept up by storing the products of the labor thus economized, and imparting a share of it to those engaged in some other pursuit, who give a portion of its products in exchange for food.

"Take another illustration in the arts employed in furnishing the clothing of man. The savage, when he has killed a buffalo and dried his skin, prepares it with the manual labor of several weeks for a garment;—a substantial and slightly garment; but it has taken him a long time, and he has made but one. The civilized man, having a world of business on his hands, has contrived a variety of machines, which perform almost all the work required for his clothing. He cuts a mass of curled wool from the sheep's back,—a confused, irregular heap of fibrous threads, which would seem to defy the skill and industry of the artificer. How long will it not take the busiest pair of fingers to piece those fibres together, end to end, to lay them side by side, so as to give them substance, coherence, dimensions,—to convert them into a covering and defence, excluding cold and wet! The savage, in taking the skin, seems to have made the wiser choice. Nature has done the spinning and weaving to his hand. But wait a moment:—there is a group of iron-fingered artificers in yonder mill will show you a wonder. They will, with a rapidity scarcely conceivable, convert this uncouth fibrous heap into a uniform mass; they will draw out its short, curly fibres into long even threads,—lay them side by side, and curiously

cross them over and under with magical dexterity, till they form a compact tress, covered with a soft down and a glossy lustre, smooth, impervious, flexible,—in quantity sufficient to clothe a family for a year, with less expense of human labor, than would be required to dress a single skin.

"Consider the steam engine. It is computed that the steam power of Great Britain, not including the labor economized by the engine in putting in motion, performs annually the work of a million of men. In other words, the steam engine adds to the human population of Great Britain another population, one million strong. Strong it may well be called. What a population! so curiously organized, that they need neither luxuries nor comforts,—that they have neither vices nor sorrows,—subject to an absolute control without despotism,—laboring night and day for their owners, without the crimes and woes of slavery; a frugal population, that wastes nothing and consumes nothing unproductively; an orderly population, to which mobs and riots are unknown; among which the peace is kept without police, courts, prisons, or bayonets; and annually lavishing the product of one million pairs of hands, to increase the comforts of the fifteen or twenty millions of the human population. And yet the steam engine, which makes this mighty addition to the resources of civilization, is but a piece of machinery. You have all seen it, both in miniature and on a working scale, at the halls. In the miniature model, (constructed by Mr. Newcomb of Salem,) it can be moved by the breath of the most delicate pair of lips in this assembly; and it could easily be constructed of a size and power, which would rend these walls from their foundation, and pile the roof in ruins upon us. And yet it is but a machine. There is a cylinder and a piston; there are tubes, valves, and pumps,—water, and a vessel to boil it in. This is the whole of that enginery, with which the skill and industry of the present age are working their wonders. This is the whole of the agency which has endowed modern art with its superhuman capacities, and sent it out to traverse the continent and the ocean, with those capacities which Romance has attributed to her unearthly beings:

Tramp, tramp, along the land they ride,
Splash, splash, across the sea.

"It is wholly impossible to calculate the quantity of labor economized by all the machinery which the steam engine puts in motion. Mr. Baines* states, that the spinning machinery of Great Britain, tended by one hundred and fifty thousand workmen, "produces as much yarn as could have been produced by forty millions of men with the one-thread wheel!" Dr. Buckland remarks, that it has been supposed that "the amount of work now done by machinery in England is equivalent to that of between three and four hundred millions of men by direct labor."†

We dare say most of our readers will find something new to them in the passage we are now going to quote, touching the progress of certain improvements in one familiar art.

"It is not yet, I believe, more than two or three centuries, since the only mode of spinning known was by the rock and spindle. The simple spinning-wheel, moved by the hand, and which was thought, in the times of our grand-parents, to show a graceful form and a well-turned arm to nearly as much advantage as a harp at the present day, and to make a music almost as cheerful, is at once an obsolete and a modern invention. The Greeks and Romans are said to have been unacquainted with the spinning-wheel. The monarch's heavy purple and the nymph's airy tulle were alike manufactured by twirling the distaff, and drawing out a thread with the fingers; and no improvement was made on this tedious process, in Great Britain, before the fifteenth century. It is evident that much more labor must have been requisite, with this rude machinery, to supply the indispensable article of clothing, than with the modern improvements. The introduction of the spinning-wheel produced a great economy of this labor; but the introduction of the spinning and weaving machinery of the last century, has pushed this economy to an extent, at which it is in vain to attempt to calculate it. This economy operates, first, to multiply the comforts of the existing population, and then, by necessary consequence, to increase the population capable of subsisting in a given circuit. Yes, the man who, in the infancy of the arts, invented the saw or the plane, the grindstone, the vice, or the hand-mill; and those who, in later periods, have contributed to the wonderful system of modern machinery, are entitled to rank high among the benefactors of mankind,—the fathers of civilization,—the creators, I had almost said, of nations. No, it is not the fabulous wand of the enchanter, it is the weaver's beam, and instruments like it, which call thousands and tens of thousands into being. Mind, acting through the useful arts, is the vital principle of modern civilized society. The mechanician, not the magician, is now the master of life. He kindles the fires of his steam engine,—the rivers, the lakes, the ocean, are covered with flying vessels; mighty chain-pumps descend, clanking and growling, to the deepest abymes of the coal mine, and rid them of their deluging waters; and spindles and looms ply their task as if instinct with life; it is the necromancy of the creative mechanician. In a moment a happy thought crosses his imagination,—an improvement is conceived. Some tedious process can be superseded by a chemical application, as in the

modern art of bleaching. Some necessary result can be attained, in half the time, by a new mechanical contrivance;—another wheel,—a ratchet,—a screw will effect the object; he tries a few experiments; it will succeed; it is done. He stamps his foot, and a hundred thousand men start into being; not, like those which sprang from the fabled dragon's teeth, armed with the weapons of destruction, but furnished with every implement for the service and comfort of man. It is stated by James Watt, (before whose time the steam engine was an imperfect and inefficient machine,) that the moment the notion of "separate condensation" struck him, all the other details of his improved engine followed in rapid and immediate succession, so that, in the course of a day, his invention was so complete that he proceeded to submit it to experiment.* Could that day be identified, it would well deserve an anniversary celebration by the universal tribes of civilized man."

Sentimentalists have complained of "the mechanical tendency" of the present age, as having an unfavorable influence upon morals and intellect. Mr. Everett vindicates the mechanic arts from this imputation; regarding their intellectual and moral influences as among their happiest results. We cannot abridge his observations without greater injustice to them and to our readers, than we are willing to burthen our conscience with. The manner in which, at the close of the following extract, he is 'warned back from his digression' by his watch, equals those happy transitions adduced by Dugald Stewart† from Thomson, Goldsmith, and Virgil.

"The immediate result of every improvement in these arts, as has been already stated, often is, and always might and should be, by making less labor and time necessary for the supply of human wants, to raise the standard of comfortable living,—increase the quantity of leisure time applicable to the culture of the mind,—and thus promote the intellectual and moral progress of the mass of the community. That this is the general tendency of a progress in the useful arts, no one can doubt, who compares the present condition of the world with its condition in the middle ages, and the fact is confirmed by the history of single inventions. I have already spoken of alphabetical writing. Pliny remarks of the Egyptian reed, (the first material of which paper was made,) that our reed rested the immortality of man. The thought, though savoring of heathenism in the expression, is just. This single art of alphabetical writing was a step absolutely essential in the moral and intellectual progress of our race. To speak of the art of printing, in its connection with morals and mind, would be as superfluous as it would be difficult to do justice to the topic. Its history is not so much an incident as the summary of modern civilization. Vast as the influence of this art of arts has been, it may well be doubted whether other improvements will not yet be made in the mechanism connected with it, which will incalculably increase its efficiency. If I mistake not, the trumpet-voice of Truth from this machine is yet destined to reach to distances and depths of society, which have hitherto remained unexplored and neglected.

"Again, in reference to the intimate connection of the useful and mechanic arts with intellectual progress, let us but advert for a moment to the mariner's compass, the telescope, the quadrant. For myself, I never reflect upon their influence on the affairs of man, and remember that they are, after all, merely mechanical contrivances, without emotions of admiration bordering upon awe. This sentiment, I know, is so worn away by habit, that it seems almost to run into sentimentality. But let us not be ashamed to reproduce the emotions that spring from the freshness of truth and nature. What must not have been Galileo's feelings, when he pointed the first telescope to the heaven, and discovered the phases of Venus and the moons of Jupiter! When I behold the touched needle trembling to the pole,—when I know that, beneath the utter blackness of the midnight storm, when every star in heaven is quenched, and the laboring vessel, in mid-ocean, reels, like a drunken man, on the crested top of the mighty waves, that little bar of steel will guide the worn and staggering helmsman on his way,—I feel that there is a holy philosophy in the arts of life, which, if I cannot comprehend, I can reverence.

"Consider the influence on the affairs of men, in all their relations, of the invention of the little machine which I hold in my hands; and the other modern instruments for the measurement of time, various specimens of which are on exhibition in the halls. To say nothing of the importance of an accurate measurement of time in astronomical observations,—nothing of the application of time-keepers to the purposes of navigation,—how vast must be the aggregate effect on the affairs of life, throughout the civilized world, and in the progress of ages, of a convenient and portable apparatus for measuring the lapse of time!

*Lardner's Popular Lectures on the Steam Engine, p. 61. Dr. Lardner, in the context of the passage above quoted, speaks of the notion of "separate condensation" as the "happy conception which formed the first step of that brilliant career which has immortalized the name of Watt, and which has spread his fame to the very skirts of civilization."

Who can calculate in how many of those critical junctures when affairs of weightiest import hang upon the issue of an hour, Prudence and Forecast have triumphed over blind Casualty, by being enabled to measure with precision the flight of time, in its smallest subdivisions? Is it not something more than mere mechanism, which watches with us by the sick-bed of some dear friend, through the livelong solitude of night, enables us to count, in the slackening pulse, nature's trembling steps toward recovery, and to administer the prescribed remedy at the precise, perhaps the critical, moment of its application? By means of a watch, punctuality in all his duties,—which, in its perfection, is one of the incommunicable attributes of Deity,—is brought, in no mean measure, within the reach of man. He is enabled, if he will be guided by this half-rational machine, creature of a day as he is, to imitate that sublime precision which leads the earth, after a circuit of five hundred millions of miles, back to the solstice at the appointed moment, without the loss of one second, no, not the millionth part of a second, for the ages on ages during which it has travelled that empyreal road.* What a miracle of art, that a man can teach a few brass wheels, and a little piece of elastic steel, to out-calculate himself; to give him a rational answer to one of the most important questions which a being travelling toward eternity can ask! What a miracle, that a man can put within this little machine a spirit that measures the flight of time with greater accuracy than the unassisted intellect of the profoundest philosopher; which watches and moves when sleep pales like the hand of the maker and the mind of the contriver, nay, when the last sleep has come over them both! I saw the other day, at Stockbridge, the watch which was worn on the 8th of September, 1765, by the unfortunate Baron Deskau, who received his mortal wound on that day, near Lake George, at the head of his army of French and Indians, on the breaking out of the seven years' war. This watch, which marked the fierce, feverish moments of the battle as calmly as it has done the fourcore years which have since elapsed, is still going; but the watch-maker and baron have now for more than three-fourths of a century been gone where time is no longer counted. Frederic the Great was another and a vastly more important personage of the same war. His watch was carried away from Potsdam by Napoleon, who, on his rock in mid-ocean, was wont to ponder on the hours of alternate disaster and triumph, which flled up the life of his great fellow-destroyer, and had been equally counted on its dial-plate. The courtiers used to say, that this watch stopped of its own accord, when Frederic died. Short-sighted adulation! for if it stopped at his death, as if time was no longer worth measuring, it was soon put in motion, and went on, as if nothing had happened. Portable watches were probably introduced into England in the time of Shakspeare; and he puts one into the hand of his fantastic jester, as the text of his morality. In truth, if we wished to borrow from the arts a solemn monition of the vanity of human things, the clock might well give it to us. How often does it not occur to the traveller in Europe, as he hears the hour tolled from some ancient steeple,—that iron tongue in the tower of yonder old cathedral, unchanged itself, has had a voice for every change in the fortune of nations! It has chimed monarchs to their thrones, and knelled them to their tombs; and, from its watch-tower in the clouds, has, with the same sonorous and impartial stolidity, measured out their little hour of sorrow and gladness to coronation and funeral, abdication and accession, revolution and restoration; victory, tumult, and fire!† and, with like faithfulness, while I speak, the little monitor by my side warns me back from my digression, and bids me beware lest I devote too much of my brief hour, even to its own commendation. Let me follow the silent monition, sustained, perhaps, by the impatience of the audience, and hasten to the last topic of my address."

Our last extract closes the address. Bright and grand as are its anticipations of future improvement, none can deny them to be rational. And it is difficult to perceive how any mechanic can hear, or read, the concluding paragraph, without a conscious increase of that self-respect, and that real elevation of character, with which the whole address tends to inspire him.

"So numerous are the inventions and discoveries that have been made in every department, and to such perfection have many arts been carried, that we may, perhaps, be inclined to think that, in the arts, as on the surface of the globe, after all the brilliant discoveries in navigation in the last three centuries, there is nothing left to find out. Though it is probable that, in particular things, no further progress can be made, (and even this I would not affirm, with any confidence,) yet, so far from considering invention as exhausted, or art at a stand, I believe

* It is not, of course, intended that the sidereal year is always of precisely the same length, but that its variations are subject to a fixed law. See *Sir J. Herschel's Treatise on Astronomy*, §563.

Et vivum certis motibus urget opus.

Claudian. in Sphæ. Archimides.

‡ The associations here alluded to have lately been rendered familiar to the public by the Mayor's spirited translation and adaptation to music of Schiller's splendid poem of *The Bell*. The idea was originally glanced at in one of Mrs. Elizabeth Montague's Letters.

there never was a moment when greater improvements were to be expected: and this for the very reason that so much has already been done,—that truth, in its nature, is at once boundless and creative,—and that every existing art, invention, and discovery, is but an instrument of further improvement. Even when any particular art or machine seems to have reached the highest attainable point of excellence, nothing is more likely than that it will, by some wholly unexpected discovery or improvement, be greatly advanced; or that, by accidental or natural association, it will lead to some other very important improvement in a branch of art wholly dissimilar; or, finally, that it will be superseded by something quite different, but producing the same result. Take, as an example, the art of printing. The simple process of printing with moveable types, and a press moved by hand, does not seem, in the lapse of four hundred years, to have undergone any very material improvement; but the introduction of solid plates, and the application of artificial power to the press, are improvements wholly disconnected, in their nature, from the art of printing, and yet adding incalculably to its efficacy and operative power. In a word, the products of art are the creations of rational mind, working with intelligent and diversified energy, in a thousand directions;—bounding from the material to the moral world, and back from speculation to life; producing the most wonderful effects on moral and social relations by material means, and again, in an improved political and moral condition, finding instruments and encouragement for new improvements in mechanical art. In this mighty action and reaction, we are continually borne on to results the most surprising. Physical and moral causes and effects produce moral and physical effects and causes, and every thing discovered tends to the discovery of something yet unknown. It rarely, perhaps never, happens that any discovery or invention is wholly original; as rarely, that it is final. As some portion of its elements lay in previously existing ideas, so it will awaken new conceptions in the inventive mind. The most novel mechanical contrivance contains within itself much that was known before; and the most seemingly perfect invention—if we may judge the future by the past—admits of further improvements. For this reason, the more that is known, discovered and contrived, the simpler the materials out of which new discoveries, inventions, and improvements, may be expected.

"Perfect as the steam engine seems, it is a general persuasion that we are in the rudiments of its economical uses. The prodigious advances made in the arts of locomotion, teach nothing more clearly, than the probability that they will be rendered vastly more efficient. The circulation of ideas by means of the press is probably destined to undergo great enlargement. Analytical chemistry has, within the last thirty years, acquired instruments which enable the philosopher to unlock mysteries of nature before unconceived of. Machinery of all kinds, and for every purpose, is daily simplified and rendered more efficient. Improved manipulations are introduced into all the arts, and each and all of these changes operate as efficient creative causes of further invention and discovery. Besides all that may be hoped for by the diligent and ingenious use of the materials for improvement afforded by the present state of the arts, the progress of science teaches us to believe that principles, elements and powers are in existence and operation around us, of which we have a very imperfect knowledge, perhaps no knowledge whatever. Commencing with the mariner's compass in the middle ages, a series of discoveries has been made connected with magnetism, electricity, galvanism, the polarity of light, and the electromagnetic phenomena which are occupying so much attention at the present day, all of which are more or less applicable to the useful arts, and which may well produce the conviction that, if in some respects we are at the meridian, we are in other respects in the dawn of science. In short, all art, as I have said, is a creation of the mind of man—an essence of infinite capacity for improvement. And it is of the nature of every intelligence endowed with such a capacity, however mature in respect to the past, to be at all times, in respect to the future, in a state of hopeful infancy. However vast the space measured behind, the space before is immeasurable; and though the mind may estimate the progress it has made, the boldest stretch of its powers is inadequate to measure the progress of which it is capable.

Let me say, then, Mr. President, and Gentlemen of the Mechanic Association,—**PERSEVERE.** Do any ask what you have done, and what you are doing for the public good? Send them to your exhibition rooms, and let them see the walls of the temple of American Liberty,* fully covered with the products of American art. And while they gaze with admiration on those creations of the mechanical arts of the country, bid them remember that they are the productions of a people whose fathers were told by the British ministry they should not manufacture a hob-nail! Does any one ask in disdain for the great names which have illustrated the Mechanic Arts! Tell him of Arkwright, and Watt, of Franklin, of Whitney, and Fulton, whose memory will dwell in the grateful recollections of posterity, when the titled and laureled destroyers of mankind shall be remembered only with detestation. Mechanics of America, respect your calling, respect yourselves. The cause of human improvement has no firmer or more powerful friends. In the great Temple of Nature, whose foundation is the earth,—whose pillars are the eternal hills,—whose roof is the star-lit sky,—whose organ-tones are the whispering breeze and the sounding storm,—whose architect is God,—there is no ministry more sacred than that of the intelligent mechanic!"

* The exhibition was held in Faneuil Hall.—*Ed. Messenger.*

FIVE DOLLARS PER ANNUM.

DABNEY CARR.

*Quis desiderio sit pudor aut modus
Tam chari capitis.*

Horace.

How often have I wished to possess that talent for delineating the characters of eminent men which might enable me to send down to posterity the portraits of the great and good with whom it has been my happy lot to be associated in the journey of life! How should I delight to accompany them with reminiscences of their virtues and talents, of their racy wit and humor, and of the interesting scenes which they dignified by their presence or enlivened by their good fellowship! I should have a picture gallery that would attract the gaze of every amateur! And, oh! my dear, my ever lamented friend! what benignant countenance would fix the admiration of the beholder more steadfastly than thine?

DABNEY CARR, the regretted subject of this notice, was born at Spring Forest, in Goochland county, in May 1772. He was but three weeks old at the death of his father, and the care of himself and his brothers and sisters devolved upon his widowed mother, the sister of Thomas Jefferson. I had the pleasure of knowing her. She was a lady of singular worth, and fulfilled with fidelity and sound judgment the duties which were demanded of her by the numerous family left her by her husband. Her son Dabney went to school to Parson Murray, and in due season was sent to Hampden Sidney College, where he was the fellow student of the present Judge Cabell, and of other interesting persons who have since played conspicuous parts on the theatre of life. On his return home, he read law at Bearcastle, in Albemarle, which had been the old family mansion of his grandfather, I think; and afterwards at Dunlora, in the same county, adjoining Pennpark, the residence of Dr. Gilmer, whose daughter Mr. Wirt had married, and with whom he lived. Here commenced that intimacy which continued unbroken till sundered by death. They were constantly associated, and cultivated together their taste for literature, with the aid of the fine libraries of Dr. Gilmer and Mr. Jefferson. Under the superintendence of the last of these gentlemen Mr. Carr's studies were conducted. About the age of twenty-one, he obtained a license to practise the law, and settled in Charlottesville, the seat of justice of Albemarle, to which county he for some time confined himself. The first occasion of his extending his practice to another county occurred in the following manner. I give the narration from the lips of one of his nearest connexions.

Mr. Wirt one morning rode up to his little office, and addressing him by an appellation by which he was known among his youthful friends, remarked, "Well, Chevalier, I'm come to carry you to the State

to-day;" meaning Fluvanna county, then and yet familiarly called the *State of Flu*. "But," said Carr, "I have no business." "Neither have I," said Wirt. "But I have not any money," said Carr. "Nor have I," said Wirt; "but by going there we shall get both. I won't be denied: you must go." They went. On the way Wirt was in "a great gale;" his spirits high, his hopes buoyant, his gaiety of heart overflowing. "Here," said he, at last, "are we two poor county court lawyers going to the State of Flu, without money and without business; but I foresee you will one day or other be *Judge of the Court of Appeals*; and as for me," said he, laughing, "I shall not be content with less than the *Presidency*." Strange vaticination!!—They went on;—they got business and money; and fortune soon smiled upon their labors and their worth. Mr. Carr shortly after married his first cousin, and soon extended his practice to Buckingham and Amherst, and afterwards to the Chancery Court at Staunton. At length, on the 26th March, 1811, he was appointed a Judge of the General Court by the Executive, but the appointment was not confirmed by the Legislature, professedly because he was not at the time of appointment a resident of the Circuit; but principally, I believe, from the very great personal popularity of another gentleman, who had for some time been a member of the Legislature, and whose position thus gave him great advantages over his opponent. Judge Carr kept aloof from the contest, and upon its unsuccessful termination prepared to return to the bar. *Utriusque paratus* might well have been his motto. The canvass however had brought into full view his great merits, and all became sensible of the injustice that had been done him. A desire to repair it, has always been supposed to have aided in that division of the Chancery Court at Staunton by which the Winchester and Clarksburg Chancery Districts were created. Of these Districts he was appointed Chancellor by the unanimous vote of the same Legislature which had refused to confirm his first appointment as Judge of the General Court. This was on the 29th of January, 1812. The law was passed the day before.

Mr. Carr accordingly removed to Winchester in the month of March succeeding his appointment. He was received with the greatest cordiality into that excellent society, with which he soon mingled in the most delightful intercourse. His fine qualities made him the object of universal esteem, and secured to him the entire devotion of those friends who formed the circle of his acquaintance. Never was there a more pleasant, or a more hospitable and sociable little community. Let me solace myself by running over the names of some of them. There were, Judge Holmes, Judge White, Judge Carr, General Singleton, Daniel Lee, Frank Gilmer, Mr. Heterick, Dr. Macky, Dr. Conrad, Col. Magill, Alfred H. Powell, Henry Tucker, Dr.

Balmain, Mr. Tidball, Mr. McGuire, General John Smith, Mr. Edward Smith, and others not so well known beyond the limits of the town, but not less amiable or interesting. Among those I have mentioned, the reader will recognise many names with which he is familiar. Alas! but one of the whole number survives! Never was a society more completely swept away in a few years! And though the places of those I once knew and loved there, are filled by others both interesting and intelligent, yet my aged heart cannot warm towards them as it did to my old companions, who are now sleeping the sleep of death on the silent hills above the town, or have found their last resting place in some distant spot.

Judge Carr entered upon the duties of his station with the zeal and assiduity for which he was always so remarkable. His task was a laborious one, but he always accomplished it faithfully and honestly. He never cheated himself or the public with the false notion that he had done much when he had done but little. He went through his business regularly, and never had occasion to sigh forth the mortifying confession, "I have left undone those things which I ought to have done;" and if we may judge from the affirmances of his decrees by the Court of Appeals, he was equally exempt from the imputation of having "done those things which he ought not to have done." In his western court he met with much to put in requisition the steadfastness of his character; and the felicity with which he united to a determined and unshrinking discharge of duty, a suavity of manner that excluded the possibility of personal offence, is, through all that country, to this day, the subject of remark and admiration.

But though faithful to his duties, Judge Carr found ample time to devote to society, to general literature, and to occasional composition. Conspicuous for his liberal hospitality and for his love of cheerful society, he delighted in the free and intimate intercourse which he found in the society of Winchester, and entered heartily into the project of the "Frugal Fare Club," suggested by Judge Holmes, for bringing together the congenial spirits of the circle one or two evenings in every week. The members met in succession at each other's houses, and enjoyed most truly "the feast of reason and the flow of soul." Politics were excluded by universal consent as the bane of good fellowship, and the absence of sumptuousness in the entertainment was always compensated by intellectual pleasures. The conversation, sometimes grave and philosophical, and usually literary and instructive, was nevertheless often gay and amusing, and interspersed with wit, anecdote and humor; and even a favorite song would sometimes give a fillip to the spirits of the company. "Give me, nymph, my heart again," and Burns's "Tam Glenn," were my good friend's accustomed contributions to this part of the entertainment, and his soft and mellow tones seem even now breathing on my ear,

"My heart is a-breaking, dear Titty,
Some comfort then to me come len."

Poor Singleton had but a single song in the world—"You are welcome to Paxton, Robin Adair"—but such was its whimsicality, and such the indescribable and unearthly tones in which he uttered it, that he rarely failed to be encored. Holmes's stock was inexhausti-

ble—from the pathos of "Highland Mary" and the sentimental humor of "John Anderson," to the broadest specimens of Irish wit or Yankee notions.

Judge Carr's tastes were eminently literary. He had formed them at an early day and upon the finest models of English literature. The writers of the reign of Queen Anne were decidedly his favorites, and the humor of Swift was exactly to his mind. He has obviously made it his model in some of his essays, while in others of a graver cast he seems to have formed himself upon the style of Addison. A specimen of his composition may be seen in the *Old Bachelor*, under the signature of Obadiah Squaratoes, while others are to be found only in the public prints, which he sometimes adorned by effusions of a humorous or literary character, though he never, I believe, entered upon the arena of politics. He preferred the calm and philosophical pleasures of literary pursuits to the exciting and maddening topics of political controversy. He was intimately acquainted with the Latin classics, in which he took great delight, but mainly, I think, in Cicero; for I heard him declare but a few months before his death that he anxiously looked forward to the period when he might resign his public employments and indulge himself with a thorough perusal of the works of Tully in the original. Shakspeare he was devoted to. He knew his works thoroughly, and repeated with the most scrupulous accuracy most of the fine passages of that noble poet. He was as particular as the late Mr. Randolph about exactness in quotation, and was himself never detected in the slightest variation from his author.

In February, 1824, Judge Carr was elected to supply the vacancy on the bench of the Court of Appeals occasioned by the death of the venerable Judge Fleming. In the volumes of our Reports from that date until his death in the winter of 1837, will be found the history of his public life—the memorial of his public services—the faithful record of his patient and untiring industry, and the enduring evidences of his powers of mind, his profound learning, and thorough acquaintance with the philosophy of his profession. Those volumes form for him an imperishable monument. Nothing but the incursion of a barbarian horde, the devastations of an Attila or the conflagrations of an Omar can destroy it. Precedents are the basis of our jurisprudence; and unless that is subverted, unless there be a *bouleversement* of all our institutions, these volumes must go down to posterity and transmit to generations yet unborn the able opinions of Dabney Carr. They form indeed the best chance of immortality both for bar and bench. It is some reward for their labors, that the good they do will live after them, even if their evil be not "interred with their bones." It is some solace to think that a century hence the learned will pore over the decrees of Chancellor Wythe, the expanded views of Edmund Pendleton, the vigorous opinions of Spencer Roane, and the profound investigations of Dabney Carr, as we look back to the judgments of old Hobart or the authoritative institutes of the great Sir Edward Coke. What an incentive to the faithful discharge of their important duties by judicial functionaries, to know that their names will be "familiar in the mouths of men as household words;" and that a faithful record will pass down to the latest times, of their wisdom and of their weakness; of their profound and well reflected

judgments, and of their rash and ill considered resolutions.

On turning to the Reports, we cannot but be struck with the fact, that in most of the cases, Judge Carr delivers his own opinion at length, and all bear the stamp of the most careful preparation. It is impossible that investigations, whether of law or fact, could have been more thorough and searching than those of this indefatigable man. He took minute notes of the arguments at the bar. He then sifted the records to the brain. Not a word escaped him; not a fact eluded his examination. Every particle of evidence was weighed with the most scrupulous care. And when the facts were perfectly mastered, his researches into the law were pursued with the same untiring zeal. Every authority cited in argument, and many others which his own diligence brought to light, were critically scanned, and most commonly reviewed. He was never content with turning to the dictum of the judge alone; but he studied the facts of each case, and was thus enabled to understand more justly the application and the truth of the principles decided. In short, he slurred over nothing. Pains-taking exactness was conspicuous throughout all his actions, and particularly in the discharge of official duty; and lest he should fall into error, he very frequently transcribed the opinions of the court in the cases cited at considerable length. Thus it was that every new decision added new and valuable materials to the ample stores of his well informed mind; and thus it was that he saw nothing "through a glass darkly," but that all his perceptions were clear, and all his knowledge accurate and profound.

But such labors were too much for his strength. The faithful discharge of his judicial duties, together with the time he devoted to other mental occupations, broke in upon his hours of repose. After finishing his records, he had still to keep up with the news of the day and the passing political occurrences, which he generally took from the columns of the National Intelligencer; and after all this, I am inclined to think he rarely omitted to bestow some portion of the night upon those favorite fountains from which he had drawn the early lessons of wisdom and virtue, and imbibed the chastened principles of a correct and classical taste. The consequence was, that during the eight months' session of the courts, he allowed himself ordinarily but five hours' sleep, rarely retiring till long after midnight, and always rising at the dawn of day. Residing nearly two miles from the market, he nevertheless regularly attended it for the sake of the exercise, and his more self-indulgent neighbors who lived in its vicinity would often meet him returning from it as they were repairing to it. Exercise indeed he found essential to him, and no circumstances prevented his taking it. After a severe attack of gravel, in Winchester, it had been urged upon him by Dr. Physic, in whose judgment he reposed the most unbounded confidence. Accordingly he regularly walked a certain number of miles every day, and when the weather was bad, he frequently resorted to the spacious quadrangle of the market-house, under cover of which he walked a stated number of times, often without his hat if the weather was warm, scoring each successive circuit at the starting place. A person who casually saw him thus coursing, and chalking down his performance, and then recommending his

career with rapid strides, without his hat, imagined he was deranged, and so reported, to the no small amusement of the good judge himself and of all his friends. When he came to Richmond, he selected, with a view to exercise, a residence more than a mile and a half from the Capitol, so that he rarely walked less than six, and often as much as ten miles in a day. This he did through all weather, never using his carriage, however tempestuous it might be, and never missing a day in his attendance upon the court for any cause save sickness. In this too he was fortunate. He was rarely away from indisposition; and even after his decline was evident, his friends unavailingly urged him to absent himself. His health was greatly impaired for three months before his death, yet he so persevered that he lost but one week, and that week was the last of his life! Admirable—conscientious man!!!

His deportment on the bench was characterized by that modesty, and forbearance, and deference for the opinions of others, which marked his conduct through life. He rarely interrupted the counsel, and when he ventured to suggest a difficulty, he always did it in such a manner as neither to embarrass or to damp their ardor, by the apprehension that they were addressing a prejudiced hearer. He was indeed not hasty in making up his opinions, or in yielding to the first suggestions of his mind upon the argument of a case, though when his judgment was once formed, it was inflexible. It has been objected to the celebrated Pothier, that he suffered his mind to be too soon preoccupied in the trial of a cause. In the Eloge pronounced upon him in the University of Orleans by M. La Trosne, the king's advocate, we are told it was his custom to "express his opinion aloud" at the hearing of a case. "Scarcely had an advocate opened a cause before he became master of it; he anticipated all the arguments of the respective parties, and had formed a judgment within himself almost before the bar could perceive what was the matter in dispute. He had afterwards only to observe the manner in which the case was supported and defended. If it was a cause of slight importance, he allowed his mind to amuse itself with other subjects; if he exercised his attention, he could scarcely avoid intimating his concurrence or dissent by his gestures, or by a half utterance, so that his opinion was known well enough previous to going to consultation.

"But he allowed himself much greater liberty when he presided. The fondness for despatch, which is confessedly laudable, but which ought to be kept within proper limits, carried him away, and made him forget the patience that is proper for a judge, and is due to the parties. The party that fails in a contest ought not to have the opportunity of complaining that he has not been heard." "If the advocates wandered from the point in question, he was in haste to bring them back to it; but if they advanced an improper argument, or maintained a false principle, he could not command his impatience, and interrupted them for the purpose of fixing them to the true principles and arguments of the cause. The audience sometimes degenerated into dissertations and a kind of conference. His friends sometimes remonstrated with him upon the subject, which he approved, but he was not master of his conduct."

These were not the faults of Judge Carr. His mind was not only candid and fair in entering upon a case,

but he preserved it as free from bias during the argument, as in the nature of the thing is possible. When that was over, he set his vigorous intellect to work, and after forming his judgment, had little difficulty in reducing it to paper: for he was a ready writer, and poured out his thoughts from a full mind. His style was pure and perspicuous, often strong and nervous, and not unfrequently embellished by a figure, where it tended to illustrate his meaning, or to give force to his expression. But otherwise, it was chaste and unadorned, partaking of his own unpretending simplicity and aversion to display.

In the relations of private life, Judge Carr never had a superior. His temper was the finest I ever knew. His gentleness of manners, his unaffected modesty, his perfectly respectful deportment to all, his warm and devoted feelings, his upright and conscientious principles, his punctuality and exactness in all his dealings, his liberal hospitality, his stainless honor, his unshrinking firmness, won for him universal love, respect and esteem. He truly said, upon his death-bed, he left not an enemy behind him; and oh, miracle of men! with his moderate revenues, he left not a creditor!! And yet, with all his exactness, he had a heart of warm benevolence, and a hand open as day to melting charity! Upon the whole, his character presented the most remarkable union of the gentler and severer virtues, that I have ever met with. At the head of them stood CONSCIENTIOUSNESS, sustained and fortified by STEADFASTNESS and CONSTANCY!

The attachments of Dabney Carr were strong and abiding. He grappled his friends to him with hoops of steel, and he could boast of such friends as were worthy of his fidelity: among them were William Wirt, John Coalter and William H. Cabell. They were as brothers from their early manhood, and their friendship grew while life was waning. Mr. Wirt was the earliest—the dearest of the ties. They had in youth been at the bar together, and a similarity of tastes had contributed to draw them to each other, and to bind them in an indissoluble friendship. This indeed is one of the advantages of the cultivation of a taste for the classics, both ancient and modern. They bring together congenial spirits. They are a bond of union between ingenuous youth. They furnish a mirror in which we may not only see ourselves, but one another. And when we find the bosom of our young companion dilating with noble sentiments, and his eye glistening with the exquisite sense of classical beauty, we feel at once that we have met with one whose similarity of tastes must bind him to us. *Idem velle atque idem nolle, ea demum firma amicitia est.* And if this be so with boon companions in their gay pursuits, with sportsmen in the manly chase, and with soldiers marching shoulder to shoulder to the field, why should it not be so with those, who together walk with Socrates or Tully, who together hold familiar converse with the mighty dead, and in their sacred volumes read

The songs
Of Grecian bards and records writ by fame
For Grecian heroes?

How many an intimacy must have been formed over the pages of Roman and Grecian story! how many a fast friendship has grown up out of the beauties of Ad-

dison and Swift, of Pope and of Akenside, and how many strong attachments from the scenes of the immortal Shakspeare! Horace and Cicero have been dead 2,000 years; yet still from the united perusal of these works, young friendships spring through the influence of that strong feeling, the sympathy of tastes. So was it with the friends of whom I speak. Their friendship was cultivated through the medium of the same tastes, the same elevated principles, the same devoted love of virtue and honorable distinction, and was cherished through life by the same influences, sustained and augmented by the warm and generous feelings of their own amiable hearts.

I shall not be guilty, I trust, of invading the sanctity of the domestic circle, when I observe, that in the most interesting of all our relations, the subject of these sketches was as remarkable, as in any other whatever. There was something almost romantic, in his devotedness to one, who had from youth to age, travelled with him the journey of life; and who had merited by her gentle affections and unvarying solicitude for his happiness, all the tenderness which belongs to so endearing a connexion. They were indeed most happy in each other, and in their children also. He left two daughters, on whom his affectionate attentions were lavished with the peculiar tenderness which always distinguishes a father's feeling for his daughters. They were educated principally at home, and to his other labors was added the interesting task of instructing them in the French language, in which he was himself very well versed. In short, there was no duty for the exact performance of which he was not remarkable. He marked out for himself a plan of life which he ever pursued with the most scrupulous exactness. From it he indulged in no deviation. With a gentleness of disposition and a softness of manners without a parallel in our sex, he was withal a man of the most determined and unshaken purpose that I have ever known. As was said of Fabricius, "It would have been as easy to turn the sun from his course, as him from the paths of duty and of honor." Never was there a human being to whom the beautiful and familiar lines of Horace more truly applied:

Justum ac tenacem propositi virum,
Non civium ardor prava jubentium
Non vultus instantis tyranni
Mente quatuor solida.

He was constant as the northern star,
Of whose true fixed and resting quality
There is no fellow in the firmament.

Such was Dabney Carr! Those who knew him well, will bear testimony to the fidelity of this portrait. Their own hearts will tell them that it has not a single exaggerated feature. Those who knew him not, may rest assured of its truth. And all will feel a deep interest in the similarity of some of its traits to those of the immortal Newton, delineated in the following passage, from the eloquent lips of Doctor Chalmers. He speaks of that great man as "the throned prince of all the philosophers, in whom the gentleness and modesty of a childlike piety at once irradiated and softened the lustre of his genius, moulding him into the goodliest specimen of humanity which earth hath ever seen. Never did meekness and genius combine to realize upon the character of man so rare a union; so that while he

stands forth to a wondering species upon the loftiest summits of an intellectual elevation, he yet mingled so gently, so gracefully, in ordinary life, that he was not more honored for the surpassing lustre of his genius, than he was loved for the milder glories of his nature; and that, while raised almost above his species in the grandeur of philosophy, he yet exhibited among men the unpretending grace of a cottage patriarch."

I shall conclude this imperfect sketch of the best of men, by the following obituary, which appeared in the public prints upon the occasion of his death, together with the proceedings of the Court of Appeals in honor of his memory; though I am well aware that the sentiments expressed in them are already embodied in the preceding pages.

Departed this life, on Jan. 9, 1837, at his residence near this city, the *Honorable Dabney Carr*, one of the Judges of the Court of Appeals. The following hasty sketch of his life and character have been submitted at our request, by a friend, accompanied by the expression of a hope that the portrait of the fine and noble character of the deceased, will be carefully drawn by some more able pencil.

Judge Carr was born in May 1773, about one month before the death of his father. He was brought up by his excellent mother, the sister of Mr. Jefferson, and at maturity commenced the practice of the law, in Albemarle, where he became distinguished for his sound sense and professional ability, and eminently remarkable for his diligence, punctuality and fidelity. In 1811 he was promoted to the office of Chancellor of the Winchester district, which he held until the spring of 1824, when he was elected to fill the vacancy in the Court of Appeals created by the death of the Hon. Wm. Fleming. Upon the adoption of the new Constitution, the seats of all the Judges having been vacated, and a new election taking place, he was re-elected to a seat on the bench of the newly organized Court, which he adorned for more than twelve years by his eminent virtues, his great learning, and his sound and judicious opinions. His assiduity was without example—and the failure of his fine constitution is fairly set down to his uncommon labors. It has been his good fortune to have been rarely absent from his seat from indisposition, and even in his last illness, he has lost but one week of the term. The first that struck you on an acquaintance with Judge Carr, was his native modesty, which a commerce with the world of sixty years, had never abated. In conversation you knew not which most to admire, the soundness and purity of his opinions, or the deference—approaching even to humility—with which they were ever advanced. In argument, though cogent and earnest, he was never betrayed into a sophism, nor tempted to pass the boundaries marked out by forbearance and moderation. His gentleness of disposition and suavity of manners, were on all occasions, conspicuous. They were not confined to his family or his brethren of the Bench, with whom his intercourse was delightfully harmonious. They won for him the regard even of strangers, upon his first introduction, while the substantial good qualities of his head and heart never failed to rivet the affections which had at first been the result of his engaging demeanor. The virtues indeed seemed to cluster around his character. In all his relations he was distinguished for truth, fidelity, and constancy; for firmness, and manly fortitude; for scrupulous honor, laudable prudence, exact punctuality, and a faithful discharge of every duty. His plan of life was systematic and steadfastly pursued, for it was formed upon upright and well reflected principles, which he adopted with the utmost care, and adhered to with unwavering tenacity. As a public officer, filling the highest judicial stations in the State, his untiring industry, his sedulous attention, his patient investigation, his steadfastness to principle, and his stern rebuke of vice, were above all praise; and the virtues of his heart were not more conspicuous, than the ability and learning which were ever displayed in his judicial opinions. These form his monument—a monument more enduring than brass, more lasting than marble. The volumes which contain his opinions, will go down from generation to generation as the repositories of our jurisprudence, and posterity will find there an imperishable memorial of his greatness and the goodness of this admirable man.

The mind of Judge Carr was clear, vigorous and accurate; his style was pure, classical, and strong; his learning was extensive, well digested, and profound; his acquirements in every field of literature, considerable. With the ancient classics, and the best writers of our own language, he was largely and intimately acquainted; and one of his greatest enjoyments was to spend a leisure moment with his favorite Cicero, of whose works he was eminently fond. With a mind thus stored, it was not wonderful that his society was the delight of his friends, and accordingly all who were fortunate enough to enjoy it, sought it with avidity. In his private relations, indeed, his life was truly lovely; always urbane—never censorious; always benevolent—never stern; among the foremost in the liberal hospitality of a gentleman,—to his friends, warm and devoted, and as a husband, father and brother, never surpassed. In his last moments, all these gentle and amiable qualities beamed forth with conspicuous brightness. It was an affecting evidence of his tenderness, that he desired that his last look might dwell on the amiable partner, who for nearly forty years had shared his cares and his fortunes, and whose privilege it had been to enjoy, for such a length of days, a happy union with one of the noblest of men. He met death with the fortitude and resignation which might well have been expected from such a man in the evening of a well spent life. He ordered the curtains of his windows to be withdrawn only a few hours before his death, (for he retained his senses to the last,) and looking out upon the bright world that lay before him, he exclaimed, "Beautiful! beautiful! all is bright, and now I want to go up. But it is not fit that we should be impatient at leaving so beautiful a world as this. We must wait our time"—and accordingly, though his last moments became more distressing and led him to wish repeatedly that the struggle was over, his patience and calmness never for a moment deserted him.

To such a man we may point the rising generation, and say to them, in the language of his favorite poet—

Respicere exemplar vitæ morumque jubete.

At a meeting of the surviving Judges of the Court of Appeals, the Members of the Bar, and the Officers of the Court, held at the Capitol, on Monday, the 9th day of January, 1837:

On motion of Henry St. George Tucker, Esq. Francis T. Brooke, Esq. was called to the Chair. Sidney S. Baxter was appointed Secretary.

Benjamin W. Leigh, Esq. announced the death of *Dabney Carr*, Esq., one of the Judges of the Court of Appeals, and moved the following preamble and resolutions, which were unanimously adopted:

The surviving Judges, the Members of the Bar, and the Officers of the Court of Appeals, assembled on occasion of the death of the Hon. *Dabney Carr*, have to express, not only their sense of the public loss sustained in this afflicting dispensation of Providence, but deep and lasting regret peculiar to themselves. In the judicial stations, first of Chancellor, and then of Judge of this Court, which the deceased for so many years filled and adorned, his learning and ability, his indefatigable industry, and devotion to his official duties, the entire exemption from every passion that might warp the judgment; the ardent love and zeal for pure justice, and the perfect fairness of mind which he brought to the decision of every cause, as well as the integrity of his life, and the spotless purity of his morals and conduct, were known to his country, and commanded universal respect, esteem and confidence. But to his brethren of the bench, to the members of the bar, and to the officers of the Court, he was not only an object of respect, esteem and confidence—he was endeared to them by the gentler virtues he displayed in the constant intercourse of business; by the evenness and suavity of his temper, the amiable simplicity of his manners, his unaffected modesty, his unassuming dignity, and above all, his kindness of heart, flowing in one uninterrupted current for a series of years, and flowing to us all. He has not left an enemy behind him; and among us, he has left those who mourn him as a brother or a father.

Resolved, That in testimony of respect to the memory of the deceased, the Judges, the Members of the Bar, and the Officers of the Court, will wear the usual badge of mourning for one month.

That the Chairman and Secretary be requested to communicate a copy of these proceedings to the widow and family of the

deceased, and to assure them of our deep sympathy in their distress.

That they be also desired to lay before the Court of Appeals, the request of this meeting, that a copy of these proceedings be entered on the order book of the Court.

And that they also cause these proceedings to be published.

On motion, the meeting adjourned to attend the funeral of Judge Carr.

FRANCIS T. BROOKE, Chairman.

S. S. Baster, Secretary.

WILLIS'S POEMS.*

The prose writings of Mr. Willis contain much to prove that he is a poet: but whoever has failed to find the evidences of it there, needs only read a few pieces in the volume mentioned below, to be satisfied of their author's claim to that title. It is not intended to assert for him a very high place on the Muses' hill. His own sound taste and good sense would be among the first to revolt at an association of him with Byron, Scott, or Campbell; far more with the great, earlier masters of song. Perhaps he cannot be raised quite to the level even of James Montgomery, Mrs. Hemans, Rogers, Halleck, and Bryant: but the place he merits, if below these, is just below them. His poetry does not excite the deepest or stormiest emotions. Scarcely a sublime passage is to be found in it—either of the calm, or of the terrible kind: none, for example, possessing in ever so small a degree, either the quiet grandeur of the stanzas to the ocean, in *Childe Harold*, or the awful magnificence of those describing a tempest and shipwreck, in *Don Juan*. The gentle and tender affections are those moved by his strains. His breathings of filial, fraternal, and parental love; his picturings of mental suffering; his exhibitions of human feeling, in whatever form he has occasion to display it; are true, forcible, and touching. The images he presents are sometimes of exquisite beauty, and the most happily appropriate to the subjects they are designed to illustrate.

The poem especially named in the title page, is one of the longest in the book; being of nearly 22 pages' length—loose, wide-lined pages, however. We cannot much praise its plot; its catastrophe is the instantaneous death of the heroine, Melanie,† at the altar, where she discovers that the lover she is about to marry, is her own brother! The next, "Lord Ivon and his daughter," of 24 pages, is a better conceived tale, and more thrillingly told. Both these contain passages worth quoting; but we hasten on to shorter pieces.

The first stanza of the lines 'To —,' written during a long sojourn in Europe, has been often copied, and justly admired. Its turn of thought bears some analogy to that contained in Shenstone's pathetic sentence,—

"Hæu, quanto minus est cum reliquis versari,
Quam tui meminisse!"

which Moore has translated;

'Though many a gifted mind I meet,
Though fairest forms I see;

* Melanie and other Poems. By N. P. Willis. New York. Saunders & Otley. pp 242. 12mo.

† To be pronounced *Mel-a-sie*, in three syllables; the accent on the first.

To live with them is far less sweet
Than to remember thee!

Mr. Willis has expanded the thought, and given it new illustrations:

'As, gazing on the Pleiades,
We count each fair and starry one,
Yet wander from the light of these
To muse upon the Pleiad gone—
As, bending o'er fresh gathered flowers,
The rose's most enchanting hue
Reminds us but of other hours
Whose roses were all lovely too—
So, dearest, when I rove among
The bright ones of this foreign sky,
And mark the smile, and list the song,
And watch the dancers gliding by,
The fairer still they seem to be,
The more it stirs a thought of thee!"

The 'Lines on leaving Europe' have three stanzas almost worthy of Moore's happiest mood. The last of them refers to the author's young wife, whom he had married in England:

'Adieu, oh fatherland! I see
Your white cliffs on th' horizon's rim,
And though to freer skies I flee,
My heart swells, and my eyes are dim!
As knows the dove the task you give her,
When loosed upon a foreign shore—
As spreads the rain-drop in the river
In which it may have flowed before—
To England, over vale and mountain,
My fancy flew from climes more fair—
My blood, that knew its parent fountain,
Ran warm and fast in England's air.
My mother! In thy prayer to-night
There come new words and warmer tears!
On long, long darkness breaks the light—
Comes home the loved, the lost for years!
Sleep safe, oh wave-worn mariner!
Fear not, to-night, or storm or sea!
The ear of heaven bends low to her!
He comes to shore who sails with me!
The wind-tost spider needs no token
How stands the tree when lightnings blaze—
And by a thread from heaven unbroken,
I know my mother lives and prays!

'I come—but with me comes another
To share the heart once only mine!
Thou, on whose thoughts, when sad and lonely,
One star arose in memory's heaven—
Thou, who hast watch'd one treasure only—
Watered one flower with tears at even—
Room in thy heart! The heart she left
Is darken'd to lend light to ours!
There are bright flowers of care bereft,
And hearts that languish more than flowers—
She was their light—their very air—
Room, mother! in thy heart!—place for her in
thy prayer!

English Channel, May, 1836.

'The Dying Alchemist' is a successful representation of well-imagined horrors. The lonely and comfortless chamber in a solitary tower; the agony of death, trebled by disappointment in the visionary's quest of that mysterious essence which had been the hope of his lifetime; are depicted with great truth and power. The aged sufferer gasps out a soliloquy, of which the following is the commencement;—the *Italics*, ours, to mark what we think extraordinary beauties:

'I did not think to die
Till I had finished what I had to do;
I thought to pierce th' eternal secret through
With this my mortal eye;
I felt—Oh God! it seemeth even now
This cannot be the death-dew on my brow.

'And yet it is—I feel
Of this dull sickness at my heart afraid;
And in my eyes the death-sparks flash and fade;
And something seems to steal
Over my bosom like a frozen hand,
Binding its pulses with an icy band.

'And this is death! But why
Feel I this wild recoil? It cannot be
Th' immortal spirit shuddereth to be free!
Would it not leap to fly,
Like a chain'd eagle at its parent's call?
I fear—I fear that this poor life is all!'

The scene is closed by these fearfully graphic passages:

'Twas morning, and the old man lay alone.
No friend had closed his eyelids, and his lips,
Open and ashy pale, th' expression wore
Of his death-struggle. His long silvery hair
Lay on his hollow temples thin and wild,
His frame was wasted, and his features wan
And haggard as with want, and in his palm,
His nails were driven deep, as if the throes
Of the last agony had wrung him sore.

'The storm was raging still. The shutters swung
Screaming as harshly in the fitful wind,
And all without went on—as aye it will,
Sunshine or tempest, reckless that a heart
Is breaking, or has broken in its change.

'The fire beneath the crucible was out;
The vessels of his mystic art lay round,
Useless and cold as the ambitious hand
That fashioned them, and the small silver rod,
Familiar to his touch for threescore years,
Lay on th' alembic's rim, as if it still
Might vex the elements at its master's will.

'And thus had passed from its unequal frame
A soul of fire—a sun-bent eagle stricken
From his high soaring down—an instrument
Broken with its own compass. Oh how poor
Seems the rich gift of genius, when it lies,
Like the adventurous bird that hath out-flown
His strength upon the sea, ambition-wrecked—
A thing the thrush might pity, as she sits
Brooding in quiet on her lowly nest!'

But of all his compositions, Mr. Willis has been most happy in some blank verse narratives of several Scriptural incidents. The titles of these pieces are 'The Leper,' 'Christ's Entrance into Jerusalem,' 'The Healing of the Daughter of Jairus,' 'The Baptism of Christ,' 'The Shunamite,' 'Absalom,' 'Hagar in the Wilderness,' and 'The Widow of Nain.' Three of them strike us with especial admiration: 'The Leper,' 'The Widow of Nain,' and 'The Healing of the Ruler's Daughter.' He must have very strong eyes, or a very weak head (as Sterne said, with reference to the first scene of *Samson Agonistes*), who can read any one of the three, without tears. At the hazard of over-quotation, we shall copy one of them; founded upon the incident in Luke's Gospel, chapter vii.

'THE WIDOW OF NAIN.'

'The Roman sentinel stood helmed and tall
Beside the gate of Nain. The busy tread

Of comers to the city mart was done,
For it was almost noon, and a dead heat
Quiver'd upon the fine and sleeping dust,
And the cold snake crept panting from the wall,
And bask'd his scaly circles in the sun.
Upon his spear the soldier lean'd and kept
His idle watch, and, as his drowsy dream
Was broken by the solitary foot
Of some poor mendicant, he rais'd his head
To curse him for a tributary Jew,
And slumberously dozed on.

'Twas now high noon.
The dull, low murmur of a funeral
Went through the city—the sad sound of feet
Unmix'd with voices—and the sentinel
Shook off his slumber, and gazed earnestly
Up the wide street along whose paved way
The silent throng crept slowly. They came on,
Bearing a body heavily on its bier,
And by the crowd that in the burning sun
Walk'd with forgetful sadness, 'twas of one
Mourn'd with uncommon sorrow. The broad gate
Swung on its hinges, and the Roman bent
His spear-point downwards as the bearers past
Bending beneath their burthen. There was one—
Only one mourner. Close behind the bier
Crumpling the pall up in her wither'd hands,
Follow'd an aged woman. Her short steps
Falter'd with weakness, and a broken moan
Fell from her lips, thicken'd convulsively
As her heart bled afresh. The pitying crowd
Follow'd apart, but no one spoke to her.
She had no kinsmen. She had lived alone—
A widow with one son. He was her all—
The only tie she had in the wide world—
And he was dead. They could not comfort her.

Jesus drew near to Nain as from the gate
The funeral came forth. His lips were pale
With the noon's sultry heat. The beaded sweat
Stood thickly on his brow, and on the worn
And simple latchets of his sandals lay
Thick the white dust of travel. He had come
Since sunrise from Capernaum, staying not
To wet his lips by green Bethsaida's springs,
Nor wash his feet in Kishon's silver pools,
Nor turn him southward upon Tabor's side
To catch Gilboa's light and spicy breeze.
Genesareth stood cool upon the East,
Fast by the sea of Galilee, and there
The weary traveller might bide till eve,
And on the alders of Bethulia's plains
The grapes of Palestine hung ripe and wild,
Yet turn'd he not aside, but gazing on
From every swelling mount, he saw afar
Amid the hills the humble spires of Nain,
The place of his next errand, and the path
Touch'd not Bethulia, and a league away
Upon the East lay pleasant Galilee.

Forth from the city-gate the pitying crowd
Follow'd the stricken mourner. They came near
The place of burial, and, with straining hands,
Closer upon her breast she clasp'd the pall,
And with a gasping sob, quick as a child's,
And an inquiring wildness flashing through
The thin, gray lashes of her fever'd eyes,
She came where Jesus stood beside the way.
He look'd upon her, and his heart was moved.
"Weep not!" he said, and, as they stay'd the bier,
And at his bidding laid it at his feet,
He gently drew the pall from out her grasp
And laid it back in silence from the dead.
With troubled wonder the mute throng drew near,
And gaz'd on his calm looks. A minute's space
He stood and pray'd. Then taking the cold hand
He said, "Arise!" And instantly the breast

Heav'd in its cerements, and a sudden flush
Ran through the lines of the divided lips,
And, with a murmur of his mother's name,
He trembled and sat upright in his shroud.
And, while the mourner hung upon his neck,
Jesus went calmly on his way to Nain.'

'The Leper' is perhaps even superior still, in beauty and pathos.

Throughout the volume, are many pieces of uncommon excellence; and detached passages, embodying thoughts fine enough to be enrolled among those uttered by the best poets in the language. How expressive is this image of a lovely woman:

'Never awan
Dreamed on the water with a grace so calm!'

And this, of a young girl's innocent buoyancy, contrasted with the blighted hopes and seared feelings of one who had experienced how 'all is vanity.'

'But life with her was at the flow,
And every wave went sparkling higher;
While mine was ebbing, fast and low,
From the same shore of vain desire.'

The following lines, from the 'Healing of Jairus' Daughter,' present a water scene with more than the vividness of painting:

'It was night—
And softly o'er the sea of Galilee,
Danced the breeze-ridden ripples to the shore,
Tipp'd with the silver sparkles of the moon.
The breaking waves play'd low upon the beach
Their constant music; but the air beside
Was still as starlight.'

And where can be found a more exquisite picture of Jesus than follows?

'On a rock
With the broad moonlight falling on his brow,
He stood and taught the people.' * * *
* * *
'His hair was parted meekly on his brow,
And the long curls from off his shoulders fell
As he leaned forward earnestly, and still
The same calm cadence, passionless and deep,
And in his looks the same mild majesty,
And in his mien the sadness mix'd with power,
Fill'd them with love and wonder.'

A great merit of Mr. W.'s poems, is the admirable moral tone that pervades them. There is not an indecent word or allusion: no holding up of villainy, or gentlemanly vice, to admiration; no attempt, by sneer or innuendo, to throw ridicule upon any of man's good affections. On the contrary, no one can read the volume, with clear understanding and proper feeling, without having the generous principles of his nature refined and strengthened. Nor is Mr. W.'s always a tearful or pensive muse, like that of Mrs. Hemans. Serious, she generally is: but now and then, her frolic step and joyous note shew a just consciousness that life has a due mixture of gladness with its gloom. The piece called "Saturday Afternoon," is an instance of this. The supposed speaker is a cheerful old man:

'I love to look on a scene like this,
Of wild and careless play,
And persuade myself that I am not old,

And my locks are not yet gray;
For it stirs the blood in an old man's heart,
And makes his pulses fly,
To catch the thrill of a happy voice,
And the light of a pleasant eye.

'I have walked the world for fourscore years;
And they say that I am old,
And my heart is ripe for the reaper, Death,
And my years are well nigh told.
It is very true; it is very true;
I'm old, and "I bide my time:"
But my heart will leap at a scene like this
And I half renew my prime.

'Play on, play on; I am with you there,
In the midst of your merry ring;
I can feel the thrill of the daring jump,
And rush of the breathless swing.
I hide with you in the fragrant hay,
And I whoop the smothered call,
And my feet slip up on the seedy floor,
And I care not for the fall.

'I am willing to die when my time shall come,
And I shall be glad to go;
For the world at best is a weary place,
And my pulse is getting low;
But the grave is dark, and the heart will fail
In treading its gloomy way;
And it wiles my heart from its dreariness,
To see the young on gay.'

Notwithstanding all this praise, however, there is some ground for censure.

Our first quarrel is with the metre which Mr. Willis often uses. It is so much out of the common way, that ordinary readers cannot find in it half the pleasure which the same thoughts would afford, if couched in rhyming couplets, or in quatrains with alternate rhymes;—those old-fashioned, but smoothest, most transparent, and most captivating forms of poetical diction. Writers who adopt either the spenserian stanza, or the more new-fangled one preferred by our present author, may be assured that they diminish very much their chances of popularity; for both the latter are unmanageable and with difficulty understood, by readers whose ear is charmed by the melody while their minds are alive to the meaning, of Campbell, Goldsmith, and Pope. How much better are the metrical forms of these poets adapted to quotation, and therefore how much more likely to win that fame which all poets long for, than the really beautiful ideas embodied in the following stanzas! They are a part of some lines 'On a picture of a girl leading her blind mother.'

'But thou canst hear! and love
May richly on a human tone he pour'd,
And the least cadence of a whisper'd word
A daughter's love may prove—
And while I speak thou know'st if I smile,
Albeit thou canst not see my face the while!

Yes, thou canst hear! and He
Who on thy sightless eye its darkness hung,
To the attentive ear, like harps, hath strung
Heaven and earth and sea!
And 'tis a lesson in our hearts to know—
With but one sense the soul may overflow.'

There is an occasional want of exactness in Mr. Willis's rhymes. In the last extract, 'love' and 'prove,' 'pour'd' and 'word,' are unnaturally yoked together.

Elsewhere, 'love' is made to rhyme with 'wove,' and 'flow' with 'bow' (to bend the body.) Let us not be misunderstood. We would not alter a syllable, an accent, or a pause, in several of the pieces here, which vary from the modes of versification we generally prefer. "Saturday Afternoon," above quoted, is not more exquisite in conception, than musical and appropriate in its bounding numbers. Many of Moore's poems,—'Birth Days,' for instance—are unsurpassably melodious; and print themselves in the memory without an effort, and almost without volition on the reader's part. And who can be insensible to the varied flow of Walter Scott's epic verse, so happily commingling sweetness and strength? But even there, our favorite forms predominate; and are only sometimes departed from, to prevent monotony.

The sense of his verses is not always clear. It was only after thrice reading, that we could discern what the last six lines of the following stanza mean; and even now, they seem a jumble of ill assorted and infelicitous metaphors, leaving no distinct idea in the mind:

'I fear thy gentle loveliness,
Thy witching tone and air,
Thine eye's beseeching earnestness
May be to thee a snare:
The silver stars may purely shine,
The waters taintless flow—
But they who kneel at woman's shrine,
Breathe on it as they bow—
Ye may fling back the gift again,
But the crushed flower will leave a stain.'

But the greatest fault in the whole book, is the honorary tribute to Benedict Arnold. In boyhood, he was selfish and cruel: in riper years, he added speculation and swindling to increased selfishness and cruelty: later still, he grafted upon those vices, constantly growing more intense in his bosom and in his practice,—a treason unparalleled in its blackness and enormity: and the sun of his life went down amid clouds of just contempt, and storms of revenge, drunkenness and avarice. Yet in 'The Burial of Arnold,' Mr. Willis calls this prodigy of crime 'the noble sleeper' and 'the noblest of the dead.' Of him, whose childhood, like Domitian's, was signalized by torturing brutes and insects, as well as by oppressing his weaker playmates,* Mr. Willis asks and answers,

'Whose heart, in generous deed and thought,
No rivalry might brook,
And yet distinction claiming not?
There lies he—go and look!'

So far from not claiming his share of *distinction*, Arnold was greedy even of that which properly belonged to others.

Of him, whose last years were those of a drunkard, and whose eyes were therefore probably bloodshot, his eye-lids inflamed, and his features discolored and bloated, in accordance with the usual effect of drunkenness,—Mr. W. says (beautifully, were it not so untruly,)

'Tread lightly—for 'tis beautiful,
That blue-veined eye-lid's sleep,
Hiding the eye death left so dull—
Its slumber we will keep.' [!]

* See Mr. Sparks' Life of Arnold.

We have no objection to fancy-pictures, when they are happily conceived and well drawn: but when they falsify Nature or History, they deserve ridicule or reprobation, accordingly as the untruth is merely ludicrous, or positively mischievous. The latter imputation, certainly, rests upon the verse, which crowns treason and all baseness, with the laurels of patriotism and virtue: which says of Arnold, almost all that could be said of Washington. We entreat Mr. Willis, if he loves historic truth and justice, to blot out this piece from his book.

LORD BACON.

PART II.

HIS CHARACTER, AND WRITINGS.

The Baconian Philosophy—its chief peculiarity—its end, 'Fruit'—Bacon contrasted with Seneca—superiority of the Baconian, to the ancient Philosophy, even to that of Socrates—still more, to that of Epicurus—Fruitlessness of ancient philosophy—Why?—its disdain of the merely useful—its disrepute, even before Bacon's time—its false use, and false estimate, of the Sciences—arithmetic—geometry—astronomy—alphabetical writing—medicine—difference of Bacon in these respects.

The chief peculiarity of Bacon's philosophy seems to us to have been this—that it aimed at things altogether different from those which his predecessors had proposed to themselves. This was his own opinion. 'Finis scientiarum,' says he, 'a nemine adhuc bene positus est.* And again, 'Omnium gravissimus error in deviatione ab ultimo doctrinarum fine consistit.†' 'Nec ipsa meta,' says he elsewhere, 'adhuc ulli, quod sciam, mortalium posita est et defixa.' The more carefully his works are examined, the more clearly, we think, it will appear, that this is the real clue to his whole system; and that he used means different from those used by other philosophers, because he wished to arrive at an end altogether different from theirs.

What then was the end which Bacon proposed to himself? It was, to use his own emphatic expression, 'FAVIR.' It was the multiplying of human enjoyments and the mitigating of human sufferings. It was 'the relief of man's estate.' It was 'commodis humanis inservire.‡' It was 'efficaciter operari ad sublevanda vitæ humane incommoda.§' It was 'dotare vitam humanam novis inventis et copiis.||' It was 'genus humanum novis operibus et potestatibus continuo dotare.' This was the object of all his speculations in every department of science,—in natural philosophy, in legislation, in politics, in morals.

Two words form the key of the Baconian doctrine—utility and progress. The ancient philosophy disdained to be useful, and was content to be stationary. It dealt largely in theories of moral perfection, which were so sublime that they never could be more than theories; in attempts to solve insoluble enigmas; in exhortations to the attainment of unattainable frames of mind. It could not condescend to the humble office of ministering to the comfort of human beings. All the schools regarded that office as degrading; some censured it as immoral. Once indeed Posidonius, a distinguished writer of the age of Cicero and Cæsar, so far forgot himself as to enumerate among the humbler blessings which mankind owed to philosophy, the discovery of the principle of the arch, and the introduction of the use of metals. This eulogy was considered as an af-

* The proper aim of science, no man hath as yet determined.'

† The most grievous of errors is, to miss the true and main end of learning.'

‡ To promote the good of mankind.'

§ To strive to alleviate the ills of human life.'

|| To endow life with new inventions and resources.'

front, and was taken up with proper spirit. Seneca vehemently disclaims these insulting compliments. Philosophy, according to him, has nothing to do with teaching men to rear arched roofs over their heads. The true philosopher does not care whether he has an arched roof or any roof. Philosophy has nothing to do with teaching men the uses of metals. She teaches us to be independent of all material substances, of all mechanical contrivances. The wise man lives according to nature. Instead of attempting to add to the physical comforts of his species, he regrets that his lot was not cast in that golden age when the human race had no protection against the cold but the skins of wild beasts—no screen from the sun but a cavern. To impute to such a man any share in the invention or improvement of a plough, a ship, or a mill, is an insult. 'In my own time,' says Seneca, 'there have been inventions of this sort,—transparent windows,—tubes for diffusing warmth equally through all parts of a building,—short-hand, which has been carried to such perfection that a writer can keep pace with the most rapid speaker. But the inventing of such things is drudgery for the lowest slaves: philosophy lies deeper. It is not her office to teach men how to use their hands. The object of her lessons is to form the soul—*Non est, inquam, instrumentorum ad usus necessarios opifex*.* If the *not* were left out, this last sentence would be no bad description of the Baconian philosophy; and would, indeed, very much resemble several expressions in the *Novum Organum*. 'We shall next be told,' exclaims Seneca, 'that the first shoemaker was a philosopher.' For our own part, if we are forced to make our choice between the first shoemaker, and the author of the three books 'On Anger,' we pronounce for the shoemaker. It may be worse to be angry than to be wet. But shoes have kept millions from being wet; and we doubt whether Seneca ever kept any body from being angry.

It is very reluctantly that Seneca can be brought to confess that any philosopher had ever paid the smallest attention to any thing that could possibly promote what vulgar people would consider as the well being of mankind. He labors to clear Democritus from the disgraceful imputation of having made the first arch, and Anacharsis from the charge of having contrived the potter's wheel. He is forced to own that such a thing might happen; and it may also happen, he tells us, that a philosopher may be swift of foot. But it is not in his character of philosopher that he either wins a race or invents a machine. No, to be sure. The business of a philosopher was to declaim in praise of poverty with two millions sterling out at usury—to meditate epigrammatic conceits about the evils of luxury, in gardens which moved the envy of sovereigns—to rant about liberty, while fawning on the insolent and pampered freedmen of a tyrant—to celebrate the divine beauty of virtue with the same pen which had just before written a defence of the murder of a mother by a son.

From the cant of this philosophy—a philosophy meanly proud of its own unprofitableness—it is delightful to turn to the lessons of the great English teacher. We can almost forgive all the faults of Bacon's life when we read that singularly graceful and dignified passage:—*Ego certe, ut de me ipso, quod res est, loquar, et in iis quæ nunc edo, et in iis quæ in posterum, mediator, dignitatem ingenii et nominis mei, si qua sit, æquius sciens et volens proijcio, dum commodis humanis inserui;* quique architectus fortasse in philosophia et scientiis esse debeam, etiam operarius et bajulus, et quidvis demum fœ cum haud pauca quæ omnino fieri necesse sit, alii autem ob innatam superbiam subterfugiant, ipse sustineam et exsequar.† This *philanthropia*, which, as

he said, in one of the most remarkable of his early letters, 'was so fixed in his mind as it could not be removed,' this majestic humility, this persuasion that nothing can be too insignificant for the attention of the wisest, which is not too insignificant to give pleasure or pain to the meanest—is the great characteristic distinction, the essential spirit of the Baconian philosophy. We trace it in all that Bacon has written on physics, on laws, on morals. And we conceive that from this peculiarity all the other peculiarities of his system directly and almost necessarily sprang.

The spirit which appears in the passage of Seneca to which we have referred, tainted the whole body of the ancient philosophy from the time of Socrates downwards; and took possession of intellects with which that of Seneca cannot, for a moment, be compared. It pervades the dialogues of Plato. It may be distinctly traced in many parts of the works of Aristotle. Bacon has dropped hints from which it may be inferred, that in his opinion the prevalence of this feeling was in a great measure to be attributed to the influence of Socrates. Our great countryman evidently did not consider the revolution which Socrates effected in philosophy as a happy event; and he constantly maintained that the earlier Greek speculators, Democritus in particular, were, on the whole, superior to their more celebrated successors.*

Assuredly, if the tree which Socrates planted, and Plato watered, is to be judged of by its flowers and leaves, it is the noblest of trees. But if we take the homely test of Bacon,—if we judge of the tree by its fruits,—our opinion of it may perhaps be less favorable. When we sum up all the useful truths which we owe to that philosophy, to what do they amount? We find, indeed, abundant proofs that some of those who cultivated it were men of the first order of intellect. We find among their writings incomparable specimens both of dialectical and rhetorical art. We have no doubt that the ancient controversies were of use in so far as they served to exercise the faculties of the disputants; for there is no controversy so idle that it may not be of use in this way. But, when we look for something more—for something which adds to the comforts or alleviates the calamities of the human race,—we are forced to own ourselves disappointed. We are forced to say with Bacon, that this celebrated philosophy ended in nothing but disputation; that it was neither a vineyard nor an olive ground, but an intricate wood of briars and thistles, from which those who lost themselves in it, brought back many scratches and no food †

We readily acknowledge that some of the teachers of this unfruitful wisdom were among the greatest men that the world had ever seen. If we admit the justice of Bacon's censure, we admit it with regret, similar to that which Dante felt when he learned the fate of those illustrious heathens who were doomed to the first circle of Hell.

'Gran duol mi prese al cuor quando lo' vesi,
Ferochè gente di molto valere
Conobbi che'n quel limbo eran sospesi.'

But, in truth, the very admiration which we feel for the eminent philosophers of antiquity, forces us to adopt the opinion, that their powers were systematically misdirected. For how else could it be that such powers should effect so little for mankind? A pedestrian may show as much muscular vigor on a treadmill as on the highway road. But on the road his vigor will assuredly carry him forward; and on the treadmill he will not advance an inch. The ancient philosophy was a treadmill, not a path. It was made up of revolving questions,—of controversies which were always beginning again. It was a contrivance for having much exertion

* *Novum Organum*, Lib. 1, Aph. 71, 79. *De Augmentis*, Lib. 2, Cap. 6. *De principis atque originibus. Cogitata et visa. Redargutio philosophiarum.*

† *Novum Organum*, Lib. 1, Aph. 72.

‡ Great sorrow seized my heart, when I heard it, for I knew that persons of great worth were suspended in that limbo.'

* 'She, I say, is [not] a mere artisan, to drudge with tools.'

† 'If I may be allowed to say so,—I do often, both in my present and in my meditated works, lay aside the dignity of genius and of reputation (if any I have,) in my zeal for the good of mankind; and I, who should perhaps be an architect in science and philosophy, drudge as a hodman; doing and bearing many things indispensable to the work, but which others, through pride eschew.'

and no progress. We must acknowledge that more than once while contemplating the doctrines of the Academy and the Portico, even as they appear in the transparent splendor of Cicero's incomparable diction, we have been tempted to mutter with the surly centurion in Persius—"Cur quis non prandeat hoc est?" What is the highest good,—whether pain be an evil,—whether all things be fated,—whether we can be certain of anything,—whether we can be certain that we are certain of nothing,—whether a wise man can be unhappy,—whether all departures from right be equally reprehensible,—these, and other questions of the same sort, occupied the brains, the tongues, and the pens, of the ablest men in the civilized world during several centuries. This sort of philosophy, it is evident, could not be progressive. It might indeed sharpen and invigorate the minds of those who devoted themselves to it; and so might the disputes of the orthodox Lilliputians, and the heretical Blefusudians, about the big ends and the little ends of eggs. But such disputes could add nothing to the stock of knowledge. The human mind accordingly, instead of marching, merely marked time. It took as much trouble as would have sufficed to carry it forward; and yet remained on the same spot. There was no accumulation of truth,—no heritage of truth acquired by the labor of one generation and bequeathed to another, to be again transmitted with large additions to a third. Where this philosophy was in the time of Cicero, there it continued to be in the time of Seneca, and there it continued to be in the time of Favorinus. The same sects were still battling, with the same unsatisfactory arguments, about the same interminable questions. There had been no want of ingenuity, of zeal, of industry. Every trace of intellectual cultivation was there except a harvest. There had been plenty of ploughing, harrowing, reaping, thrashing. But the garner contained only smut and stubble.

The ancient philosophers did not neglect natural science; but they did not cultivate it for the purpose of increasing the power and ameliorating the condition of man. The taint of barrenness had spread from ethical to physical speculations. Seneca wrote largely on natural philosophy, and magnified the importance of that study. But why? Not because it tended to assuage suffering, to multiply the conveniences of life, to extend the empire of man over the material world; but solely because it tended to raise the mind above low cares, to separate it from the body, to exercise its subtlety in the solution of very obscure questions.* Thus natural philosophy was considered in the light merely of a mental exercise. It was made subsidiary to the art of disputation; and it consequently proved altogether barren of useful discoveries.

There was one sect, which, however absurd and pernicious some of its doctrines may have been, ought, it should seem, to have merited an exception from the general censure which Bacon has pronounced on the ancient schools of wisdom. The Epicurean, who referred all happiness to bodily pleasure, and all evil to bodily pain, might have been expected to exert himself for the purpose of bettering his own physical condition and that of his neighbors. But the thought seems never to have occurred to any member of that school. Indeed their notion, as reported by their great poet, was, that no more improvements were to be expected in the arts which conduce to the comfort of life:

* *Ad victum quæ flagitat usus
Omnia jam ferme mortalibus æsè paratæ.*†

This contented despondency,—this disposition to admire what has been done,—and to expect that nothing more will be done,—is strongly characteristic of all the schools which preceded the school of fruit and progress. Widely as the Epicurean and the Stoic differed

on most points, they seem to have quite agreed in their contempt for pursuits so vulgar as to be useful. The philosophy of both was a garulous, declaiming, canting, wrangling philosophy. Century after century they continued to repeat their hostile war-cries—virtue and pleasure; and in the end it appeared the Epicurean had added as little to the quantity of pleasure as the Stoic to the quantity of virtue. It is on the pedestal of Bacon, not on that of Epicurus, that those noble lines ought to be inscribed:

* *O tenebris tantis tam clarum extollere lumen
Qui primus posuisti, illustrans commoda vitæ.*‡

At length the time arrived when the barren philosophy which had, during so many ages, employed the faculties of the ablest men, was destined to fall. It had worn many shapes. It had mingled itself with many creeds. It had survived revolutions in which empires, religions, languages, races, had perished. Driven from its ancient haunts, it had taken sanctuary in that church which it had persecuted; and had, like the daring fiends of the poet, placed its seat

* *'next the seat of God,
And with its darkness dared affront his light.'*

Words, and more words, and nothing but words, had been all the fruit of all the toil, of all the most renowned sages of sixty generations. But the days of this sterile exuberance were numbered.

Many causes predisposed the public mind to a change. The study of a great variety of ancient writers, though it did not give a right direction to philosophical research, did much towards destroying that blind reverence for authority which had prevailed when Aristotle ruled alone. The rise of the Florentine sect of Platonists,—a sect to which belonged some of the finest minds of the fifteenth century,—was not an unimportant event. The mere substitution of the academic for the peripatetic philosophy would indeed have done little good. But any thing was better than the old habit of unreasoning servility. It was something to have a choice of tyrants. 'A spark of freedom,' as Gibbon has justly remarked, 'was produced by this collision of adverse servitude.'

Other causes might be mentioned. But it is chiefly to the great reformation of religion that we owe the great reformation of philosophy. The alliance between the schools and the vatican had for ages been so close, that those who threw off the dominion of the vatican could not continue to recognize the authority of the schools. Most of the great reformers treated the peripatetic philosophy with contempt; and spoke of Aristotle as if Aristotle had been answerable for all the dogmas of Thomas Aquinas. 'Nullo apud Lutheranos philosophiam esse in pretio,'† was a reproach which the defenders of the church of Rome loudly repeated, and which many of the Protestant leaders considered as a compliment. Scarcely any text was more frequently cited by them than that in which St. Paul cautions the Colossians not to let any man spoil them by philosophy. Luther, almost at the outset of his career, went so far as to declare that no man could be at once a proficient in the school of Aristotle and in that of Christ. Zwingle, Bucer, Peter Martyr, Calvin, held similar language. In some of the Scotch universities, the Aristotelian system was discarded for that of Ramus. Thus, before the birth of Bacon, the empire of the scholastic philosophy had been shaken to its foundations. There was in the intellectual world an anarchy resembling that which in the political world often follows the overthrow of an old and deeply rooted government. Antiquity, prescription, the sound of great names, had ceased to awe mankind. The dynasty which had reigned for ages was at an end; and the vacant throne was left to be struggled for by pretenders.

* *'Thou, who man's dreary path didst first illumine,
And show where life's most solid pleasures bloom!'*

† We quote on the authority of Bayle, from Malchoir Cano, a scholastic divine of great reputation.

* Seneca, *Nat. Quæst. præf.* Lib. 3.

† All the means of human subsistence were now attained.

The first effect of this great revolution was, as Bacon most justly observed, to give for a time an undue importance to the mere graces of style. The new breed of scholars, the Aschams and Buchanans, nourished with the finest compositions of the Augustan age, regarded with loathing the dry, crabbed, and barbarous diction of respondents and opponents. They were far less studious about the matter of their works than about the manner. They succeeded in reforming Latinity; but they never even aspired to effect a reform in philosophy.

At this time Bacon appeared. It is altogether incorrect to say, as has often been said, that he was the first man who rose up against the Aristotelian philosophy when in the height of its power. The authority of that philosophy had, as we have shown, received a fatal blow long before he was born. Several speculators, among whom Ramus was the best known, had recently attempted to form new sects. Bacon's own expressions about the state of public opinion in the time of Luther are clear and strong: 'Accedebat,' says he, 'odium et contemptus, illis ipsis temporibus ortus erga scholasticos.* And again, 'Scholasticorum doctrina despectui prorsushaberi cœpit tanquam aspera et barbara.†' The part which Bacon played in this great change was the part, not of Robespierre, but of Bonaparte. When he came forward, the ancient order of things had been subverted. Some bigots still cherished with devoted loyalty the remembrance of the fallen monarchy, and exerted themselves to effect a restoration. But the majority had no such feeling. Freed, yet not knowing how to use their freedom, they pursued no determinate course, and had found no leader capable of conducting them.

That leader at length arose. The philosophy which he taught was essentially new. It differed from that of the celebrated ancient teachers, not merely in method but in object. Its object was the good of mankind, in the sense in which the mass of mankind always have understood, and always will understand, the word good. 'Meditor,' said Bacon, 'institutionem philosophiæ ejusmodi quæ nihil inanis aut abstracti habeat, quæque vitæ humanæ conditiones in melius provehat.‡'

The difference between the philosophy of Bacon and that of his predecessors, cannot, we think, be better illustrated than by comparing his views on some important subjects with those of Plato. We select Plato, because we conceive that he did more than any other person towards giving to the minds of speculative men that bent which they retained till they received from Bacon a new impulse in a diametrically opposite direction.

It is curious to observe how differently these great men estimated the value of every kind of knowledge. Take arithmetic for example. Plato, after speaking slightly of the convenience of being able to reckon and compute in the ordinary transactions of life, passes to what he considers as a far more important advantage. The study of the properties of numbers, he tells us, habituates the mind to the contemplation of pure truth, and raises it above the material universe. He would have his disciples apply themselves to this study,—not that they may be able to buy or sell,—not that they may qualify themselves to be shopkeepers or travelling merchants,—but that they may learn to withdraw their minds from the ever-shifting spectacle of this visible and tangible world, and to fix them on the immutable essence of things.†

Bacon on the other hand, valued this branch of knowledge only on account of its uses with reference to that visible and tangible world which Plato so much

despised. He speaks with scorn of the mystical arithmetic of the later Platonists; and laments the propensity of mankind to employ, on mere matters of curiosity, powers, the whole exertion of which is required for purposes of solid advantage. He advises arithmeticians to leave these trifles, and to employ themselves in framing convenient expressions, which may be of use in physical researches.

The same reasons which led Plato to recommend the study of arithmetic, led him to recommend also the study of mathematics. 'The vulgar crowd of geometers,' he says, 'will not understand him. They have practice always in view. They do not know that the real use of the science is to lead man to the knowledge of abstract, essential, eternal truth. Indeed, if we are to believe Plutarch, Plato carried this feeling so far, that he considered geometry as degraded by being applied to any purpose of vulgar utility. Archytas, it seems, had framed machines of extraordinary power, on mathematical principles. Plato remonstrated with his friend; and declared that this was to degrade a noble intellectual exercise into a low craft, fit only for carpenters and wheelwrights. The office of geometry, he said, was to discipline the mind, not to minister to the base wants of the body. His interference was successful; and from that time, according to Plutarch, the science of mechanics was considered as unworthy of the attention of a philosopher.'

Archimedes in a later age imitated and surpassed Archytas. But even Archimedes was not free from the prevailing notion that geometry was degraded by being employed to produce anything useful. It was with difficulty that he was induced to stoop from speculation to practice. He was half ashamed of those inventions which were the wonder of hostile nations; and always spoke of them slightly as mere amusements—as trifles in which a mathematician might be suffered to relax his mind after intense application to the higher parts of his science.

The opinion of Bacon on this subject was diametrically opposed to that of the ancient philosophers. He valued geometry chiefly, if not solely, on account of those uses which to Plato appeared so base. And it is remarkable that the longer he lived the stronger this feeling became. When, in 1606, he wrote the two books on the 'Advancement of Learning,' he dwelt on the advantages which mankind derived from mixed mathematics; but he at the same time admitted, that the beneficial effect produced by mathematical study on the intellect, though a collateral advantage, was 'no less worthy than that which was principal and intended.' But it is evident that his views underwent a change. When, nearly twenty years later, he published the *De Augmentis*, which is the treatise on the 'Advancement of Learning,' greatly expanded and carefully corrected, he made important alterations in the part which related to mathematics. He condemned with severity the high pretensions of the mathematicians,—'delicias et fastum mathematicorum.' Assuming the well-being of the human race to be the end of knowledge,* he pronounced that mathematical science could claim no higher rank than that of an appendage, or an auxiliary to other sciences. Mathematical science, he says, is the handmaid of natural philosophy—she ought to demean herself as such—and he declares that he cannot conceive by what ill chance it has happened that she presumes to claim precedence over her mistress. He predicts,—a prediction which would have made Plato shudder,—that as more and more discoveries are made in physics, there will be more and more branches of mixed mathematics. Of that collateral advantage, the value of which, twenty years before, he rated so highly, he says not one word. This omission cannot have been the effect of mere inadvertence. His own treatise was before him. From that treatise he deliberately expunged whatever was favorable to the study of pure mathematics, and inserted several keen reflec-

* Besides—a hatred and contempt of the schoolmen had then arisen.

† 'The learning of the schoolmen began to be despised, as rugged and barbarous.'

‡ *Radegutlo Philosophiarum*.—'I aim to new-model Philosophy; so that it may have no empty abstractions, and may improve the condition of mankind.'

§ Plato's *Republic*, Book 7.

* *Unut et commodis hominum consulimus.*

tions on the ardent votaries of that study. This fact, in our opinion, admits of only one explanation. Bacon's love of those pursuits which directly tend to improve the condition of mankind, and his jealousy of all pursuits merely curious, had grown upon him, and had, it may be, become immoderate. He was afraid of using any expression which might have the effect of inducing any man of talents to employ in speculations, useful only to the mind of the speculator, a single hour which might be employed in extending the empire of man over matter.* If Bacon erred here, we must acknowledge that we greatly prefer his error to the opposite error of Plato. We have no patience with a philosophy which, like those Roman matrons who swallowed abortives in order to preserve their shapes, takes pains to be barren for fear of being homely.

Let us pass to astronomy. This was one of the sciences which Plato exhorted his disciples to learn, but for reasons far removed from common habits of thinking. 'Shall we set down astronomy,' says Socrates, 'among the subjects of study?' 'I think so,' answers his young friend Glaucon: 'to know something about the seasons, about the months and the years, is of use for military purposes, as well as for agriculture and navigation.' 'It amuses me,' says Socrates, 'to see how afraid you are lest the common herd of people should accuse you of recommending useless studies.' He then proceeds in that pure and magnificent diction, which, as Cicero said, Jupiter would use if Jupiter spoke Greek, to explain, that the use of astronomy is not to add to the vulgar comforts of life, but to assist in raising the mind to the contemplation of things which are to be perceived by the pure intellect alone. The knowledge of the actual motions of the heavenly bodies he considers as of little value. The appearances which make the sky beautiful at night are, he tells us, like the figures which a geometrician draws on the sand, mere examples, mere helps to feeble minds. We must get beyond them; we must neglect them; we must attain to an astronomy which is as independent of the actual stars as geometrical truth is independent of the lines of an ill-drawn diagram. This is, we imagine, very nearly, if not exactly, the astronomy which Bacon compared to the ox of Prometheus—a sleek, well shaped hide, stuffed with rubbish, goodly to look at, but containing nothing to eat. He complained that astronomy had, to its great injury, been separated from natural philosophy, of which it was one of the noblest provinces, and annexed to the domain of mathematics. The world stood in need, he said, of a very different astronomy—of a *living astronomy*; of an astronomy which should set forth the nature, the motion, and the influences of the heavenly bodies, as they really are.

On the greatest and most useful of all inventions,—the invention of alphabetical writing,—Plato did not look with much complacency. He seems to have thought that the use of letters had operated on the human mind as the use of the go-cart in learning to walk, or of cork in learning to swim, is said to operate on the human body. It was a support which soon became indispensable to those who used it,—which made vigorous exertion first unnecessary, and then impossible. The powers of the intellect would, he conceived, have been more fully developed without this delusive aid. Men would have been compelled to exercise the understanding and the memory; and, by deep and assiduous meditation, to make truth thoroughly their own. Now, on the contrary, much knowledge is traced on paper, but little is engraved in the soul. A man is certain that he can find information at a moment's notice when he wants it. He therefore suffers it to fade from his mind. Such a man cannot in strictness be said to know any thing. He has the show, without the reality of wisdom. These opinions Plato

has put into the mouth of an ancient king of Egypt.* But it is evident from the context that they were his own; and so they were understood to be by Quinctilian.† Indeed they are in perfect accordance with the whole Platonic system.

Bacon's views, as may easily be supposed, were widely different.‡ The powers of the memory, he observes, without the help of writing, can do little towards the advancement of any useful science. He acknowledges that the memory may be disciplined to such a point as to be able to perform very extraordinary feats. But on such feats he sets little value. The habits of his mind, he tells us, are such that he is not disposed to rate highly any accomplishment, however rare, which is of no practical use to mankind. As to these prodigious achievements of the memory, he ranks them with the exhibitions of rope-dancers and tumblers. 'The two performances,' he says, 'are of much the same sort. The one is an abuse of the powers of the body; the other is an abuse of the powers of the mind. Both may perhaps excite our wonder; but neither is entitled to our respect.'

To Plato, the science of medicine appeared one of very disputable advantage.§ He did not indeed object to quick cures for acute disorders, or for injuries produced by accidents. But the art which resists the slow sap of a chronic disease—which repairs frames enervated by lust, swollen by gluttony, or inflamed by wine—which encourages sensuality, by mitigating the natural punishment of the sensualist, and prolongs existence when the intellect has ceased to retain its entire energy—had no share of his esteem. A life protracted by medical skill he pronounced to be a long death. The exercise of the art of medicine ought, he said, to be tolerated so far as that art may serve to cure the occasional distempers of men whose constitutions are good. As to those who have bad constitutions, let them die;—and the sooner the better. Such men are unfit for war, for magistracy, for the management of their domestic affairs. That however is comparatively of little consequence. But they are incapable of study and speculation. If they engage in any severe mental exercise, they are troubled with giddiness and fulness of the head; all which they lay to the account of philosophy. The best thing that can happen to such wretches is to have done with life at once. He quotes mythical authority in support of this doctrine; and reminds his disciples that the practice of the sons of Æsculapius, as described by Homer, extended only to the cure of external injuries.

Far different was the philosophy of Bacon. Of all the sciences, that which he seems to have regarded with the greatest interest was the science which, in Plato's opinion, would not be tolerated in a well regulated community. To make men perfect was no part of Bacon's plan. His humble aim was to make imperfect men comfortable. The beneficence of his philosophy resembled the beneficence of the common Father, whose sun rises on the evil and the good—whose rain descends for the just and the unjust. In Plato's opinion man was made for philosophy; in Bacon's opinion philosophy was made for man; it was a means to an end;—and that end was to increase the pleasures, and to mitigate the pains of millions who are not and cannot be philosophers. That a valetudinarian who took great pleasure in being wheeled along his terrace, who relished his boiled chicken and his weak wine and water, and who enjoyed a hearty laugh over the Queen of Navarre's tales, should be treated as a *caput lupinum* because he could not read the Timæus without a headache, was a notion which the humane spirit of the English school of wisdom altogether rejected. Bacon would not have thought it beneath the dignity of a philosopher to contrive an improved garden chair for such a valetu-

dinarian,—to devise some way of rendering his medicines more palatable,—to invent repasts which he might enjoy, and pillows on which he might sleep soundly; and this though there might not be the smallest hope that the mind of the poor invalid would ever rise to the contemplation of the ideal beautiful and the ideal good. As Plato had cited the religious legends of Greece to justify his contempt for the more recondite parts of the art of healing, Bacon vindicated the dignity of that art by appealing to the example of Christ; and reminded his readers that the great physician of the soul did not disdain to be also the physician of the body.

When we pass from the science of medicine to that of legislation, we find the same difference between the systems of these two great men. Plato, at the commencement of the fine Dialogue on Laws, lays it down as a fundamental principle, that the end of legislation is to make men virtuous. It is unnecessary to point out the extravagant conclusions to which such a proposition leads. Bacon well knew to how great an extent the happiness of every society must depend on the virtue of its members; and he also knew what legislators can, and what they cannot do, for the purpose of promoting virtue. The view which he has given of the end of legislation and of the principal means for the attainment of that end, has always seemed to us eminently happy; even among the many happy passages of the same kind with which his works abound. '*Finis et scopus quem leges intueri atque ad quem jussiones et sanctiones suas dirigere debent, non alius est quam ut cives felicitat degant. Id fiet si pietate et religione recte instituti, moribus honesti, armis adversus hostes externos tuti, legum auxilio adversus seditiones et privatas injurias muniti, imperio et magistratibus obsequentes, copiis et opibus locupletes et florentes fuerint.*' The end is the well-being of the people. The means are the imparting of moral and religious education; the providing of every thing necessary for defence against foreign enemies; the maintaining of internal order; the establishing of a judicial, financial, and commercial system, under which wealth may be rapidly accumulated and securely enjoyed.

Had Plato lived to finish the '*Critias*,' a comparison between that noble fiction and the '*New Atlantis*,' would probably have furnished us with still more striking instances. It is amusing to think with what horror he would have seen such an institution as '*Solomon's House*' rising in his republic; with what vehemence he would have ordered the brewhouses, the perfume houses, and the dispensaries to be pulled down; and with what inexorable rigor he would have driven beyond the frontier all the fellows of the college, merchants of light and depredators, lamps and pioneers.

To sum up the whole: we should say that the aim of the Platonic philosophy was to exalt man into a god. The aim of the Baconian philosophy was to provide man with what he requires while he continues to be man. The aim of the Platonic philosophy was to raise us far above vulgar wants. The aim of the Baconian philosophy was to supply our vulgar wants. The former aim was noble; but the latter was attainable. Plato drew a good bow; but, like *Acestes* in *Virgil*, he aimed at the stars; and therefore, though there was no want of strength or skill, the shot was thrown away. His arrow was indeed followed by a track of dazzling radiance, but it struck nothing.

*'Vulnus liquidum in nubibus aret arundo
Signatque viam flammis, tenuisque recessit
Consumpta in ventos.'*

Bacon fixed his eye on a mark which was placed on the earth and within bow-shot, and hit it in the white. The philosophy of Plato began in words and ended in words,—noble words indeed,—words such as were to be expected from the finest of human intellects exercising boundless dominion over the finest of human languages. The philosophy of Bacon began in observations and ended in arts.

The boast of the ancient philosophers was, that their doctrine formed the minds of men to a high degree of wisdom and virtue. This was indeed the only practical good which the most celebrated of those teachers even pretended to effect; and undoubtedly if they had effected this, they would have deserved the greatest praise. But the truth is, that in those very matters in which alone they professed to do any good to mankind, in those very matters for the sake of which they neglected all the vulgar interests of mankind, they did nothing, or worse than nothing. They promised what was impracticable; they despised what was practicable; they filled the world with long words and long beards; and they left it as wicked and as ignorant as they found it.

An acre in Middlesex is better than a principality in Utopia. The smallest actual good is better than the most magnificent promises of impossibilities. The wise man of the Stoics would, no doubt, be a grander object than a steam-engine. But there are steam-engines; and the wise man of the Stoics is yet to be born. A philosophy which should enable a man to feel perfectly happy while in agonies of pain, may be better than a philosophy which assuages pain. But we know that there are remedies which will assuage pain; and we know that the ancient sages liked the toothache just as little as their neighbors. A philosophy which should extinguish cupidity, would be better than a philosophy which should devise laws for the security of property. But it is possible to make laws which shall, to a very great extent, secure property. And we do not understand how any motives which the ancient philosophy furnished could extinguish cupidity. We know indeed that the philosophers were no better than other men. From the testimony of friends as well as of foes—from the confessions of *Epictetus* and *Seneca*, as well as from the sneers of *Lucian* and the fierce invectives of *Juvenal*, it is plain that these teachers of virtue had all the vices of their neighbors, with the additional vice of hypocrisy. Some people may think the object of the Baconian philosophy a low object, but they cannot deny that, high or low, it has been attained. They cannot deny that every year makes an addition to what Bacon called '*fruit*.' They cannot deny that mankind have made, and are making, great and constant progress in the road which he pointed out to them. Was there any such progressive movement among the ancient philosophers? After they had been declaiming eight hundred years, had they made the world better than when they began? Our belief is, that among the philosophers themselves, instead of a progressive improvement, there was a progressive degeneracy. An object superstition, which *Democritus* or *Anaxagoras* would have rejected with scorn, added the last disgrace to the long dotage of the Stoic and Platonic schools. Those unsuccessful attempts to articulate which are so delightful and interesting in a child, shock and disgust us in an aged paralytic; and in the same way, those wild mythological fictions which charm us when lisped by Greek poetry in its infancy, excite a mixed sensation of pity and loathing when mumbled by Greek philosophy in its old age. We know that guns, cutlery, spy-glasses, clocks, are better in our time than they were in the time of our fathers; and were better in the time of our fathers than they were in the time of our grandfathers. We might, therefore, be inclined to think, that when a philosophy which boasted that its object was the elevation and purification of the mind, and which for this object neglected the sordid office of ministering to the comforts of the body, had flourished in the highest honor for many hundreds of years, a vast moral amelioration must have taken place. Was it so? Look at the schools of this wisdom four centuries before the Christian era, and four centuries after that era. Compare the men whom those schools formed at those two periods. Compare *Plato* and *Libanius*. Compare *Pericles* and *Julian*. This philosophy confessed, nay boasted, that for every end but one it was useless. Had it attained that one end?

Suppose that Justinian, when he closed the schools of Athens, had called on the last few sages who still haunted the portico, and lingered round the ancient plane trees, to show their title to public veneration:—suppose that he had said, 'A thousand years have elapsed since, in this famous city, Socrates posed Protagoras and Hippas; during those thousand years a large proportion of the ablest men of every generation has been employed in constant efforts to bring to perfection the philosophy which you teach; that philosophy has been munificently patronised by the powerful; its professors have been held in the highest esteem by the public; it has drawn to itself almost all the sap and vigor of the human intellect—and what has it effected? What profitable truth has it taught us which we should not equally have known without it? What has it enabled us to do which we should not have been equally able to do without it?' Such questions, we suspect, would have puzzled Simplicius and Isidore. Ask a follower of Bacon what the new philosophy, as it was called in the time of Charles the Second, has effected for mankind, and his answer is ready—'It has lengthened life; it has mitigated pain; it has extinguished diseases; it has increased the fertility of the soil; it has given new securities to the mariner; it has furnished new arms to the warrior; it has spanned great rivers and estuaries with bridges of form unknown to our fathers; it has guided the thunderbolt innocuously from heaven to earth; it has lighted up the night with the splendor of the day; it has extended the range of the human vision; it has multiplied the power of the human muscles; it has accelerated motion; it has annihilated distance; it has facilitated intercourse, correspondence, all friendly offices, all despatch of business; it has enabled man to descend to the depths of the sea, to soar into the air, to penetrate securely into the noxious recesses of the earth, to traverse the land on cars which whirl along without horses, and the ocean in ships which sail against the wind. These are but a part of its fruits, and of its first fruits. For it is a philosophy which never rests, which has never attained it, which is never perfect. Its law is progress. A point which yesterday was invisible is its goal to-day, and will be its starting-post to-morrow.'

[Part 3d, and last, in our next number.]

THE MOTHER FOR HER SON.

BY B. W. HUNTINGTON.

Oh God! the giver of all good! defender from all ill!
To thee a mother pours her tears, before thy holy hill;
Omniscience knows for whom they flow; Omnipotence can shed
Their gushing current, redistill'd, in blessings on his head.

Thy presence fills immensity—oh! dwell within his heart,
Nor let his thoughts on things of time provoke thee to depart;
Thy voice goes forth—the angry winds back to their caverns hie,
So let each tumult of his breast, before thy bidding, fly.

I would not ask his cup exempt from time's allotted strife,
But mingle with its woes the draught of everlasting life;
Thy providence afar from friends hath made his lonely bed,
Be thou his friend and comforter; and his, thy living bread.

In mercy, every needless boon withhold, however sought;
Each needed blessing kindly grant, though blindness ask it not;
Oh! measure not thy bounties by our feebleness of prayer,
But let them so outcompass speech, as doth the earth, the air.

He left us—'twas but yesterday—his brow was lit with bloom,
But yet our threshold may have been his passage to the tomb;
His kiss yet trembles on my cheek—I feel his parting breath;
Those lips may ne'er again be met, 'till they are kiss'd by death.

Thy will be done—there is no power, unless that power be thine,
To whom a mother's only son, a mother may resign;
Is life his boon? let not his soul be barter'd for its pelf;
Is death to hide his form from me? oh! take him to thyself.

Camden, S. C.

THE SHIPWRECK.

BY W. GILMORE SIMMS.

There was a goodly barque, that from her home
Went freighted on the deep. A noble freight—
Fond hearts, brave spirits, and a fearless crew—
And lovely woman too, that vessel bore,
And she went forth in sunshine. Pleasant winds
Bore her, with gentle sounds most musical,
Cutting the lifted seas, that kept a peace
Most treacherous, and whispered not of storms
Lurking in wait, like savage foes, that smile
In moment of their stroke. If a cloud lay
Along that vessel's track, it lay in light,
A picture for the eye. They had no fear,
They that were in her,—and three days went by
In trust and sunshine. Inconsiderate mirth
Laugh'd out, and youthful maidens sang aloud,
'Till the rude sailor, charm'd against his toils,
Forgot his long experience of the seas,
And thought of wreck no more.

But, the fourth day
There was a sudden change upon the deep,
That groan'd in all its hollows. Night rose up
In anger. Wild and sheeted shapes of cloud
Came trooping fast to follow in her wake,
And do her bidding. Faintly, in her halls,—
As fearing to be seen, and faltering still,
Amidst the scowling of those ruffian forms,
That, like rude boars, wine-swill'd and insolent,
Would intercept her path of purity,—
The pallid Moon stole forth. With trembling step
She struggled through the gloomy crowds that rush'd
In fierce delight, on wrath-intending wing,
And jostled in their flight. But, vain her toil,—
She faints at last—is swallowed up in storm,
And the fond eyes that watch'd her from that barque
Now look for her in vain. A pitchy mass
Hangs, brooding, like a dusky conqueror, down,
Above, and shadows all her lovely face.

And wilder grows the tempest,—louder yell
The winds;—and, goaded by their vigorous lash,
The billows, madly plunging, like the bull
Press'd by the hunter on Peruvian plains,
Toss their huge limbs on high, and foam with rage.
Man strives—proud man!—brave man!—and woman
cheers,

Sweet woman!—and her prayers are for his strength,
And his strength for her safety!—But the deep
Is clamoring for its prey. Upon the sea
A terrible Spirit rides, and rules the rest,
And laughs with equal scorn at woman's pray'r
And man's endeavor. In white foam he sits,
A tri-fermed Giant. In one hand he bears
The mounted winds, that spurn the curb, and leap,
Trampling the raging waves, and laughing wild
In their excess of might. Another flings,
Uncheck'd, the engulfing waters:—from a third
He frees the rock that grows beneath the keel,
And rends its ribs asunder. Thus he rules
The elements of storm—the winds, the seas,—
And from the unfathomable caldron there,
Where haggard Night, a sullen witch, presides,
He waves his ministers forth. Ready they rise,

And terrible in their promptitude set out,
 Like unlash'd Fury with her thousand whelps
 Bred by the gnawing Famine. Wing after wing
 A cloud of measureless forms that whirl and wheel
 Like night-born vultures, darting through the void,
 Make it a populous world, where Terror strives
 With Danger, and grows fearless from Despair!
 The seas rage in their caverns of the deep
 And its green hollows gape. God keep that ship,
 Toss'd like a shell, and the poor souls that strive,
 And shriek within her! Her tall taper masts,
 That were so lovely in their leftiness,
 What can they now against the giant wings
 That strain upon them? Now they bend, they break,
 And into splinters dash'd, strew the wild waves
 That hurry them from sight. The billows grow
 Like angry demons to colossal bulk,
 Until they touch the clouds;—and now they fall
 Upon the wretched hulk that lies a wreck
 On the black waters. Through her sides they rush,
 And in their wantonness they lift her high,
 As the strong wrestler lifts his yielding foe,
 To dash her into pieces. But she springs
 Once more above them—mounting them, as still
 With all her wonted energies endued,
 She could assume the way as oft before
 Her buoyant prow maintain'd it;—but in vain:—
 They rise, they gather fast,—they press her down,
 And rage in fierce delight, as glad to bow
 That noble crest, erewhile, that moved along
 Their monarch, and in beautiful disdain
 Queen'd it in state above them.

Never more

Shall she thus queen it. The rebellious waves
 Have risen upon their ruler. The wild steed
 Hath hurl'd his rider down—bath trampled him,
 And bounds away in the fierce consciousness
 Of his new power of flight. The pale moon
 Comes forth, that late was shrouded. Her sweet orb
 Shall be no more a beautiful isle to those,
 Heart-hoping and heart-sick,—the gay, the proud,
 Watchful and weary—light o' thought and sad,
 That moved along the deck of that proud ship
 Late speeding o'er the waters like a God.
 The raging seas, thrown off, once more ascend,
 Gaining from opposition double strength,
 And climb her painted sides, and break away
 Her bulwarks, and rush through her secret hold
 With greedy rage that knows not to consume
 And only to destroy. Troop follows troop—
 The last retreat is won,—yet still they strive,
 They that are in her;—but a mother's shriek
 That follows her lost child—she following too,—
 Proclaims the struggle over. The black wings
 Of the grim Tempest settle on her brow,
 And the gaunt winds grow palpable and sweep
 Resistless o'er her deck—meeting the seas
 That roar in the embrace. A moment more,
 A single moment,—that Despair may see,
 And madden in the sight—and all is done.
 Fear shrieks in agony, and Horror gapes
 Incapable of strife. Man looks around
 As seeking means of flight; while woman clings
 To man, and childhood chides parental love
 That will not save it. Hope, that linger'd long,

Flies shrieking with the winds,—and down she sinks,
 That shatter'd barque, as one, who, long fatigued
 By aimless struggle, yields at last to fate,
 Resign'd—nay, almost glad,—that all is o'er.
 God! what a cry was that! a living death
 Spoke in it, and the roaring winds grow still—
 They have no agony to match with that,
 And cower in silence while it passes by.

There shall be weeping for that fated barque!—
 Sad eyes shall watch to hail her loitering sails,
 And strain themselves to redness when they see
 Some white cloud resting with a dusky edge
 On the gray foam of ocean. They will watch
 That sweet delusion, till it fades at last,
 Like the fond hope it cherish'd for awhile
 To crush forever.

Brightly the young Morn
 Leaps from his saffron couch, and shakes his hair,
 Sprinkling the east with pearly drops that turn
 To gold beneath his smiles;—and not a speck
 Is on the billows, now reposed in peace,
 Grim, terrible, so late. The tempest sleeps
 Above the fragments of that broken wreck,
 With all his cruel agents, calm and still,
 Like some fierce conqueror that lays him down
 Upon the battle-field among the dead,
 And slumbers 'midst the ruin he has wrought.
 No sign of wrath!—still as the gallant ship
 That men will look for with expectancy,
 And find a broken spar that was a mast,—
 Dreaming at night, they see her homeward bound,
 With a rich cargo of choice spices stored,
 And gentle spirits wafting her with breath
 Of most impatient hope. Dream on, dream on!
 The gallant ship is lost with all her crew,
 The gold of her brave hearts is in the deep,
 Her spices perfume, and her silks invest
 The giant limbs of Ocean when he sleeps.

1837.

HUMAN NATURE VINDICATED.

Dr. Johnson's pointed remark, that 'Whoever charges all mankind with knavery, convicts at least one,'—has been often quoted: and there can be little doubt, that it expresses his real estimate of human character. High churchman, bigot, monarchist, nay and (strongest cause of misanthropy) valetudinarian as he was,—he was not hopeless of his species. There is a testimony, entitled perhaps to still greater weight; that of his friend Savage. For the calamitous and often profligate life of Savage, both by the associates it gave him and by the turn of thought it betokened and was calculated to engender, might lead us to expect from him the very worst opinion of mankind. Yet it was far otherwise; as his biographer, Johnson, tells us in the following nervous passage—which manifests, at the same time, his own concurring opinion.

"His" [Savage's] "judgment was eminently exact, with regard both to writings and to men. The knowledge of life was indeed his chief attainment: and it is not without some satisfaction that I can produce his suffrage in favor of Human Nature, of which he never appeared to entertain such odious ideas as some, who possess neither his judgment nor experience, have published, either in ostentation of their sagacity, in vindication of their crimes, or in gratification of their malice."

[Johnson's Life of Savage, *sub finem*.

PROF. TUCKER'S DISCOURSE.

[Charlottesville, Dec. 21st, 1837.]

To George Tucker, Esq., University of Virginia:

Sir,—By a resolution of the Charlottesville Lyceum, we are appointed to convey to you the thanks of that body, for the interesting Address delivered by you at its desire, on Tuesday evening last; and to request of you, a copy, for publication in the Southern Literary Messenger.

To this communication of the thanks and request of the Lyceum, we beg leave, sir, to add an expression of our hearty individual concurrence in them; and to assure you of the high respect with which

We are your obt. servants,

LUCIAN MINOR,
E. R. WATSON,
CHAS. CARTER.

University of Virginia, Dec. 22d, 1837.

Gentlemen,

In answer to your note of the 21st inst. which reached me only last night, I do myself the pleasure of saying that I am much gratified to learn that the Discourse delivered before the Lyceum on Tuesday night proved acceptable to its members, and that a copy of it, sent herewith, is at their service for publication.

I beg you, Gentlemen, to receive my thanks for the obliging terms in which you have conveyed to me the resolution of the Lyceum, and to believe me to be,

With sentiments of high respect and esteem,

Your obedient servant,

GEORGE TUCKER.]

[Addressed to the Committee.]

DISCOURSE

ON AMERICAN LITERATURE:

Delivered before the Charlottesville Lyceum, Dec. 19, 1837.

Mr. President, and Gentlemen of the Lyceum,

I regret that my engagements at the University and elsewhere, which, as some of you know, have been more than usually pressing since I received your invitation to address you, have put it out of my power to comply with your request at an earlier day, and the same circumstances must plead my apology for the imperfections of what I am about to submit to your consideration.

The nature and purpose of your Institution has suggested American Literature for the subject of my remarks. It is a subject of growing importance with every liberal minded American, whether he regards its own intrinsic recommendations, or yields to the impulses of an honest national pride.

It is with nations as with individuals: after the more imperious wants of their nature are satisfied, they solicit new gratifications, and covet higher distinctions. Man, we know, is so constituted as never to be content with his present condition; but under the most favorable concurrence of circumstances, he unceasingly sighs for new powers and enjoyments, and aspires to a yet more exalted destiny.

This is a part of our common nature at which we ought not to repine. It has been wisely so ordered; for this is the main source of his continued improvement. It is indeed a spark of his divine origin, which makes him look to another and a better life to console him for his sufferings and disappointments in this. It is this which sustains him in his toilsome ascent up the narrow and rugged path of virtue, by presenting to his imagination the glorious visions that there await him. His better nature is thus always making efforts to rid itself of the earthy impurities which cling to it, that it may appear in a form more worthy of its celestial origin, and we may hope, of its final destiny. Desire of praise, of glory, of excellence is a part of man's inmost soul, and if it is sometimes the source of evil, it is also the parent of all that is great and good. It is not then the passion that we should condemn, but only its ob-

jects, when they are unworthy: and if we naturally wish to excite the sentiment of admiration for ourselves, we in like manner wish it for our country, in which all that is dear to us is embodied.

Of all the sources of national pride, and all the modes in which a nation may challenge the admiration and esteem of surrounding nations and the world, there is none which seems so elevated in itself, and so worthy of being cherished as its intellectual superiority. In the same degree that man is superior to brutes, and his immortal soul is more worthy than the clayey tenement it inhabits, so ought excellence in letters to take precedence of superior strength, or power, or wealth. Such too has been the testimony of all nations who have had the means of making the comparison. Of what name has Greece, so fertile in illustrious men, ever been so proud as of that of Homer? Has any prince or warrior that Italy could boast, flattered her self-esteem like DANTE or PETRARCH, TASSO or ARIOSTO?

—"the momentary dews
Which, sparkling to the twilight stars, infuse
Freshness in the green turf that wraps the dead,
Whose names are mausoleums of the Muse,
Are gently prest with far more reverend tread,
Than ever paced the slab which paves the princely head."

Which of all the great men of England have so contributed to her real glory as SHAKESPEARE and MILTON—as BACON, NEWTON and LOCKE, and who of her princes, or statesmen, or generals, would she not surrender, if the alternative were presented to her, rather than either of these proud exemplars of her mental power? What name could supply the place of that of CERVANTES to Spain, of SCHILLER or GOETHE to Germany, of CORNEILLE or RACINE, or MOLIERE* to France, of WALTER SCOTT or BYRON to Scotland? Of the native dignity of genius, and the reverence with which men bow to its supremacy, we have a remarkable instance recorded in Plutarch.

When the Syracusans gained a signal victory over the Athenians under Nicias, and reduced to slavery such of the vanquished as escaped slaughter, some owed their preservation to Euripides. "Of all the Grecians," says Plutarch, "his was the muse whom the Sicilians were most in love with. From every stranger that landed in their island, they gleaned every small specimen or portion of his works, and communicated it with pleasure to each other. It is said that a number of Athenians, on this occasion, upon their return home, went to Euripides, and thanked him in the most respectful manner for their obligations to his pen, some having been enfranchised for teaching their masters what they remembered of his poems, and others having got refreshments when they were wandering about after the battle, for singing a few of his verses." Such is the homage which man pays to the genius of man.

Supposing then, Mr President, we all partake of these principles of our common nature, and that after we have become populous and powerful—after we have built up the superstructure of our civil Institutions in a way worthy of the solid foundation we have laid—we shall be desirous of excelling in the noblest of human pursuits, I propose to make some remarks on the present state of literature in the United States, its recent progress, and the most effectual means of furthering its future advancement.

If we compare the present state of letters in the United States with that in some other civilized communities, we may find abundant cause of national congratulation at our past proficiency. But if we compare it with that of the most enlightened and improved nations of Europe—as England or France, or Germany—we must frankly admit that we are yet far in their rear in the contest, whether we compare the number, variety, or merit of our intellectual productions. There are probably more books published in London or Paris in

* Perhaps nine Frenchmen out of ten are prouder of Voltaire, than of either of the great dramatists mentioned.

a month, than in the United States in a year. On a comparison with Germany, the difference is yet greater. A much larger proportion of our publications too are of an ephemeral character, or are mere compilations, such as statistical or geographical details, exhibiting little indication of genius in the writer, or materials for gratifying the taste of the reader.

Whilst we honestly admit this disparity, let it not be supposed for a moment that it implies any inferiority of American genius. Such an inference cannot fairly be drawn, and we must look farther and deeper into the subject to explain the diversity, and to enable us to see what we are capable of achieving, in this way, and what we are likely to achieve.

At present the whole stock of capable and cultivated minds among us are put in requisition to fill the more difficult and important duties of society, and cannot devote their powers to the exclusive purpose of imparting gratification or instruction to their contemporaries. They constitute the statesmen, judges, and legislators; the divines and other teachers; the lawyers and physicians of the community. It is only here and there at this time, that we see a solitary example of a mind which, disembarassed from any of these active duties, and impelled by its own inherent impetus, is led to devote itself to literature, and on these occasions, the success that has attended its votaries affords us a sure presage of what we may one day hope to attain.

In a country like ours, in a rapid state of advancement, where there is so much to do to provide for the more pressing demands of a growing population, and where those who provide it are so liberally rewarded, the number of the literary class is likely to be very small, for the most powerful incentives operate to give their pursuits another direction. But supposing these inducements resisted, there are still further impediments to the formation of such a class in the present state of our country.

In the first place, an individual has not the same facility of qualifying himself for the pursuit of literature, *as a profession*, in the United States, as in most of the countries of Europe; and this profession, always partaking of the character of a manufacture, becomes a more refined and difficult art, as civilization advances. Acquisition—extensive acquirement—is more essential to a writer's success at the present day than it formerly was. He must indicate an acquaintance with that diversified knowledge which every educated man is now expected to attain; and he must have undergone a long and severe course of training to attain that delicacy of taste which modern fastidiousness requires in every branch of polite literature. Who can now endure, much less choose to read the crude effusions of an unlettered, unpolished mind? Whatever substratum of good sense it may possess, we should hardly have the patience to search for it under an exterior so rough and uninviting. But the productions of such a mind have seldom any claim to our favor, for indeed those truths which are not obvious to ordinary observation, as well as the beautiful imagery of an exuberant fancy, and those felicities of diction that come uncalled for, are all the result of a mind polished and improved by high cultivation. A good education is therefore essential in the present day to qualify one to distinguish himself as a writer.

This advantage, however, it falls to the lot of but few of our citizens to possess. The means of instruction with us as yet are neither numerous, nor cheap, nor particularly good; of course they are not of easy attainment. Our young men, besides, are generally too impatient to enter on the theatre of active life to devote that time to mental improvement which is usual in older countries. What then with the shorter time devoted to academical pursuits, and in general, the different use they make of that time, they are much worse prepared for the difficult office of amusing and instructing the public.

But supposing these difficulties overcome—that a ca-

pable instructor has been met with, and a youth has been thoroughly, not superficially taught, he is not likely to succeed as an author, unless his whole time and attention are given to literature. With the very formidable competition which he must encounter among those English writers who have gone before, and those who are every day coming on the stage, what chance has he of success unless he can give himself up to the pursuit, wholly, earnestly, and unremittingly? But such an engrossing interest cannot be felt in a subject which is to be taken up and laid down as his other avocations require,—which is liable to be perpetually interrupted by the cares, the vexations, the feverish hopes and fears of active life. Who can enter into that world of gay dreams and brilliant idealities to which genius delights to transport its votaries, when he is every moment rudely pressed by the gross realities around him? If his mind attempts to soar in the pinions of fancy, it is straightway brought to the ground by the leaden influence of some petty cause of disquiet, or some animal want for himself or those who may be dependant on him. Should he for a brief moment be elevated to a pitch of lofty and enthusiastic feeling, so propitious to his success, his intercourse with those around him soon reminds him of their frailties and his own.

Such must be the condition of most of our educated men. Destined from the first for some particular profession, as the means of earning a livelihood, all that they are likely to read, or think of, or aim at is with a view to qualify them for that particular pursuit. To seek knowledge for its own sake, to woo literature for her own surpassing loveliness, and not for the dowry she brings with her, never comes into his mind, because another motive has always been present to it. He seeks knowledge then partially, not generally—selecting that which he can turn to profit in his commerce with the world, and rejecting that which though intrinsically more valuable, is not suited to the tastes of his customers, in his little traffic with society.

If the circumstances attending the study of a profession are thus unfavorable to general mental improvement, how much greater are they when the student has entered on the duties of the profession. The time that he once had for study is then greatly curtailed, and in some instances, it is entirely taken away. Where any portion of it remains, it will naturally take the same course as his thoughts and wishes direct, and thus, while he is adding to his professional knowledge and talents, and preparing himself to write better on one subject, he is perhaps disqualifying himself to write on any other. He may indeed be better fitted for writing on the subject of his profession, but what time, I would ask, has an eminent lawyer in full practice, or even a judge, burdened as he is with heavy and responsible duties, to write dissertations on law—or on the principles of equity—or of jurisprudence? and it is only such men who would be likely to write on these subjects ably and usefully. The same remark applies more or less to all our professional men; for though the medical profession does occasionally put forth books on the subject of medicine, yet they are in general either reports of cases, or mere compilations; of great utility indeed, and profiting by all the latest discoveries and improvements of the science, but exhibiting little of the higher powers of mind or of original genius.

But though want of time is a serious bar to the literary labors of professional men, yet it would probably be in some instances overcome, if their minds had been in early life well imbued with the love of letters, and had the requisite training and discipline for communicating the results of their experience and reflection in a skilful and attractive form.

It follows then, gentlemen, that we have not as yet a distinct literary class, from those very circumstances of our condition which are intimately connected with its prosperity. More urgent pursuits call them off from the peaceful pursuits of literature, and though their minds are in a high state of improvement during their

professional career, besides that they are exclusively directed to one subject, they have neither the preparation nor time required for the business of authors.

But under these manifest and weighty impediments, it is truly gratifying to witness the rapid advancement of literature among us; to see that the taste for letters has become more generally diffused among the people, and that the ability to administer to its gratification is equally progressive. It will now be my more pleasing task to call your attention to the evidences of this progress.

At the time of the Revolution which made these States independent, the number of books which had been written under the colonial government was very inconsiderable. Dr. FRANKLIN had indeed made himself known to the European world, but it was chiefly by his discoveries in electricity, rather than as one of the most pleasing writers in the English language. There had also been published some meager histories of the several colonies, but they exhibited nothing more than industry, and a spirit of inquiry, but were illuminated by no ray of genius, and were imbued with nothing of that philosophy which regards the facts of history as phenomena of human nature; and, tracing out the connection of causes and effects, makes of its narratives so many lessons of wisdom. None of them seem to have had the smallest forebodings of the important consequences that were to result from the humble adventures they were then recording—that its actors were laying the foundations of a fabric that was to influence the destinies of the civilized world.

There had also occasionally appeared controversial writings and state papers which possessed merit of a higher order, but none of these now recollected, have any peculiar claims to distinction except JONATHAN EDWARDS' work on free will, which is still regarded as a master piece of acute reasoning, and as the most cogent piece of logic that was ever brought to bear on that much mooted and very subtle question of the freedom or necessity of our actions. I may here too with propriety notice a treatise on the Bible, which though written in Edinburg, was the production of a Virginian, Dr. JAMES McCLOSKE—and though it professes merely to exhibit a series of experiments on human bile, yet its introduction is written in so philosophical a spirit, and is expressed with such beauty and classic elegance of diction, that it was translated into all the languages of Europe.

The spirit of poetry might at that time be seen occasionally to show itself in light effusions among our educated classes, but they constituted the sport of an idle hour, rather than a serious occupation. They were little fountains playing and sparkling in the lonely spots they at once refreshed and embellished, but no where bursting forth in a bold and continued stream. They showed the germ of the *vis poetica* indeed, but one which had not yet been nurtured into enthusiasm. DUNBAR'S Conquest of Canaan* is believed to be the first poem of any length and of much merit that was published on this side of the Atlantic. These sallies of gaiety, or gallantry, or tenderness, like the beautiful wild flowers of our forest, bloomed and perished in the spot where they first appeared, and like them indicated the strength of the soil rather than the diligence of its culture.

In the meanwhile, European writers, listening to the ever ready suggestions of national vanity, maintained the contrary proposition—that such a dearth of intellectual products, by a people consisting of from two to three millions, proved the native barrenness of our minds, rather than their want of cultivation: and we were for ever twitted with the inferiority of American genius. The revolution came, and was at once seen to give a new spring to all our faculties. The whole nation became charged with the same all-pervading spirit of freedom. Men's minds expanded with their desires and ef-

forts, and the effect was visible in every species of intellectual exertion, whether in the form of state papers, of public addresses, of speeches in legislative halls, or of political essays. It would be tedious to refer to these particularly, but we may be allowed to mention that then PATRICK HENRY, RICHARD HENRY LEE, and JOHN ADAMS who had been previously known as men of talents, put forth their powers of eloquence, and breathed their own fervid patriotism into the hearts of their countrymen. Then too the eloquence of the pen was called out in the writings of DICKINSON, of JAY, and of JEFFERSON. Even the Muse, who commonly suspends her song amidst the clangor of arms, and the turmoil of Revolution, brought forth TRUMBULL'S McFingal, a burlesque epic, the rival and almost the equal of Hudibras; and Judge HOPKINSON of Philadelphia, in like manner enlisted poetry and ridicule in the cause of patriotism. The memorials and addresses of the Old Congress manifest great intellectual vigor, but are yet more to be admired, in these our mercenary days, for their generous self-devotion, their rare disinterestedness, and their noble disdain of every thing low, little and sordid.

After the contest was over, peace and independence brought with them new duties; and in the course of a few years, the necessity which all felt of the total insufficiency of the old confederation for the successful management of the common concerns of thirteen States, differing so widely in their institutions, habits, and pursuits, produced, in 1787, the Convention which formed the Federal Constitution.

This presented a fit occasion for calling forth the sagacity, the practical wisdom, the logic and the eloquence of the ablest men in the nation, either to support or oppose the proposed change in the General Government; and the talents then displayed were decidedly greater than any which had been previously exhibited. The debates of the convention, which will probably soon be published in the authentic form in which they have been reported by Mr. MADISON, will enable the world to estimate the ability of those several members, whose joint work has long been the theme of national praise. But in the meanwhile we know that the body contained among its members WASHINGTON, MADISON, HAMILTON, ROBERT MORRIS, GOVERNOUR MORRIS, WILSON, ELLSWORTH, L. MARTIN, KING, FRANKLIN, LIVINGSTON, DICKINSON, RUTLEDGE, PINCKNEY, &c.—names that give assurance of the wisdom and skill they brought to their memorable work. They scanned with the eyes of real statesmen the different governments of the civilized world; and examined the various guards and provisions that had been devised for resisting or balancing the evil passions and motives of men, so as best to promote and secure public and private prosperity. The results of their best reflections they were able to exhibit in reasoning the most cogent, to adorn with imagery the most captivating, and to recommend with eloquence the most resistless.

After the Constitution was submitted to the several states for their adoption or rejection, a new field was presented for the exercise of the same talents as in the Federal Convention; and to judge from the debates that have been published, the displays both of legislative wisdom and of eloquence in debate were well worthy of the occasion.

The new constitution was also defended and assailed by its respective friends or foes in the newspapers, and among these publications the letters of Publius, now better known by the title of the *Federalist*, stand preeminent. They were the joint production of ALEXANDER HAMILTON,* JAMES MADISON, and JOHN JAY, and are by the concurrent voice of all, placed at the head of all our American writings on the subject of government. As to mere composition this work is very peripatetically written, and it contains many passages of great beauty

* This gentleman, is to be numbered among American authors, for though not born in the United States, he was by birth an American.

*The author finds he was mistaken in the date of this poem. It was not published until 1795.

and eloquence. There were also some able publications on the other side, but not harmonizing with the subsequent state of public opinion, or the course of events, they have been consigned to oblivion.

For a few years subsequent, like the few years preceding, our best intellectual efforts manifested themselves only in connection with the General Government. The debates in Congress, at least in one house, were then made public for the first time, and being taken by a stenographer, were regularly published. This no doubt contributed to improve their character. The reports which were then made on various subjects of legislation by Mr. HAMILTON as Secretary of the Treasury, and Mr. JEFFERSON, as Secretary of State, are written with great ability. The correspondence of the latter with the English and Foreign ministers to the United States has received the meed of praise from all parties.

The British Treaty in 1794 and 1795 gave rise to several pamphlets and newspaper essays; and in congress it called forth some brilliant displays of eloquence, especially from FISHER AMES of Massachusetts. A short time before, the President's Proclamation gave occasion to a series of essays by Mr. HAMILTON and Mr. MADISON, who, lately fellow-laborers, were now in the ever-changing relations of politicians, opposed. Mr. ADAMS the elder had also some time before, in 1787, made himself known as a writer on the subject of government, and he afterwards was an essayist in the newspapers.

In the interval between the peace of 1783 and that of General Washington's administration, the Vision of Columbus, by JOEL BARLOW, was the only poem which attracted notice, and it met with a more favorable reception in that form than it subsequently experienced when it was dilated by its author into a national epic, under the title of the Columbiad. RAMSAY's History of the Revolution, was the only historical work of any note which had then appeared. From the Federal Constitution, in 1789, to 1800, our literature was signalized by nothing that I now recollect, but party politics, and I have particularized the most distinguished pamphlets of the day to make you more thoroughly sensible of that fact. In Medicine, indeed, Dr. RUSS distinguished himself above all his contemporaries, by the ingenuity and variety of his theories, and by his eloquent defence of them. Whatever we may think of the soundness of some of his hypotheses, we must acknowledge the power and resources of that mind which could so impress its peculiar views upon his contemporaries. Something was done too, by the Philosophical and Historical Societies that had been established in the different States, especially those of Philadelphia and Massachusetts; but their papers, though respectable, must be regarded rather as exhibiting our taste for science, and our disposition for inquiry, than as very valuable contributions to the departments of science or history.

It was not long after the commencement of the present century, that manifest symptoms of an improvement in our literature began to show themselves in Philadelphia and New York. At this time, the *Portfolio*, a weekly paper printed in the former city, afforded a channel for the youthful literateurs of the United States. The paper was edited by Mr. DENNIS, whose contributions are, in general, the best part of the paper. CAREY's *Museum* had preceded it as a useful periodical, but was far inferior to it in the character of its fanciful and lighter productions.

The novels of CHARLES BROCKDEN BROWN appeared at the same period, and in some of the qualifications of this department of literature, he has never been surpassed by those who have succeeded him, if he has been equalled. The *British Spy*, that was written and published in this state, and the genius of whose gifted author was partly nurtured in this village, also belongs to this period, as well as SALMAQUINDI, a humorous series of essays in the manner of Swift, written by JAVIER, PAULINO and others.

This may be regarded as the commencement of a new era in the history of our literature. It assumed now a

higher stand, and took a nobler aim. The more gifted of its votaries escaped from the smoky atmosphere of politics for the loftier regions and brighter skies of wit, humor, and fancy. They were no longer content to speak to the *understandings* of their countrymen, but they also addressed themselves to their imaginations, and to their tastes for the refined, the fanciful, the beautiful and the ludicrous. The American public, for the first time, was presented with original pictures of native manners and scenery, copied from the life, instead of being compelled to look for this species of literary gratification to what was imported from abroad, or what was yet worse, to feeble and servile copies of European productions. Then broke forth somewhat of the same spirit of independence in letters, which thirty years before had showed itself in government.

These praiseworthy efforts were well seconded by the public approbation; and from that period to the present, literature has been steadily and rapidly advancing in the United States. Though our first essays in this branch of domestic manufacture were few, and within a limited range, it was no small achievement to show that we had both the materials and the skill for future excellence, whenever the condition of our country became fitted for calling them forth.

The works that have since issued from the American press, have so multiplied, that grateful as is the theme, the enumeration would fatigue you. Let me however notice some of the most prominent, under the several departments of literature. On the subject of jurisprudence, Mr. LIVINGSTON's Principles of Penal Law and of Codification, are equally honorable to the literature of the country and the profession to which he belongs. He has given to the dry abstractions of the jurist a degree of classic elegance of which they had not seemed susceptible before the days of Blackstone and Sir William Jones, and which no one besides has subsequently attained.

Mr. MADISON, while Secretary of State, produced an Examination of the British Doctrine respecting Neutral Trade, that is as close and conclusive a piece of reasoning as the Law of Nations, which professes to be the law of pure reason, ever produced. It presents a model of logical skill and method. The works of CHANCELLOR KENT of New York, and JUDGE STORY of Massachusetts, are admired for their clear, manly, forcible reasoning in interpreting the principles of jurisprudence and the constitution and laws of the Federal Government. The opinions of some of our judges, both in the General and the State Governments, show that this branch of knowledge has kept pace with the general progress of intellect. The late Chief Justice MARSHALL, had, for more than thirty years, put forth the utmost powers of his vigorous mind in expounding the constitution, according to his views of it, and those who may not always coincide with him in opinion, cannot refuse to do homage to his commanding intellect.

No one of the learned professions has more advanced than the clerical. Divines are not now satisfied as formerly with inculcating orthodox opinions, with sensible expositions of obscure and doubtful passages of scripture, or with simple and pious outpourings of humility and thanksgiving to the Giver of all Good. No—they now summon to their aid the refined arts of the accomplished orator; the imposing weight of deep learning and diligent research; and in the fervid strains of impassioned eloquence, address themselves to the fears and the hopes, to the self-love and the sympathy of their hearers,—now alarming the awakened conscience of the sinner, and now opening visions of beatitude to the enthusiastic believer. Pulpit oratory, that formerly was little known but in name, may in our day be heard in almost every church of every sect in the United States, as a powerful engine of good in its holy ministry. The same profession has made some excellent contributions to general literature; among which we may mention the writings of Dr. DWIGHT, and the recent historical work of Dr. HAWKES. Dr. CHANNING too for richness and

finished elegance of style, has no superior on either side of the Atlantic.

In *history*, besides the large contributions of Dr. RAMSAY of South Carolina, we have MILLER'S RETROSPECT, MARSHALL'S LIFE OF WASHINGTON, (for it belongs rather to history than biography,) IRVING'S LIFE OF COLUMBUS, BANCROFT'S HISTORY OF THE UNITED STATES, and LEE'S LIFE OF NAPOLEON. I will not obtrude on you my views of these several distinguished works. As to a part, it would be altogether superfluous. Marshall is familiar to all, and to bestow praise on the Life of Columbus is "to gild refined gold, or to add a perfume to the violet." But I will add, because it has had less circulation, that I regard the Life of Napoleon as inferior to no contribution our literature has ever received. In its nice discrimination of character, its spirited and often graphic descriptions, its peculiar aptness of phrase, and rare felicities of diction, I know no work of history or biography its superior; and if it sometimes indicates extraordinary care and effort, we must admit that the brilliancy of the polish is altogether worthy of the labor which effected it. This work, and the life of Columbus, to which I may add Mr. Bancroft's, are sufficient to vindicate the claims of this country to equality with any other, at this time, in the elevated department of historical writing.

In the lighter departments of *biography, voyages, and travels*, the American press has of late years been very prolific. Many of them have considerable merit, and will compare with the same description of works in other countries. Perhaps IRVING'S ASTORIA, COOPER'S SWITZERLAND, SLIDELL'S TRAVELS in Spain and England and, WILLIS'S PENCIL-LINES, deserve to be distinguished from the rest. Two works on *Moral Philosophy*, UPHAM'S and WATLAND'S, both of great respectability, have appeared within a few years.

In *Political Economy* our writers have been numerous. Besides numerous tracts on banking, currency, protecting duties, and other detached parts of the subject, there have been five or six general treatises. There have been no less than four works on this science published during the present year.

Works of imagination have more multiplied perhaps than any other. Among so many, we may be permitted to distinguish the *novels* of COOPER, BARR, MISS SEDGWICK, and KENNEDY. Virginia has also produced two, that will not suffer on a comparison with the preceding. I allude to EDGE HILL and GEORGE BALCOMB. *Poetry* too, that beautiful art which transports us into a world of its own delightful creations; which makes us oblivious of the cares, the littleness, and the grossness of life—which at once purifies, animates and ennobles us, has not been stationary while the other departments of letters were progressive. If in that which requires the highest gifts of intellect, we had not made correspondent progress, we might have afforded some color to the taunts of European arrogance. But in the course of this century, the United States, and but a small portion of them too, have produced a constellation of poets, and although none of them are stars of the first magnitude, such as are equally objects of the admiring gaze of common and of learned observers, they may be well placed in the second rank, and are perhaps equal to any living poets that Europe now can boast. The names of HALLECK, PERCIVAL, BRYANT, SIGOURNEY, WILLIS, ALSTON, and MELLEN,* have ably vindicated the claim of their country to poetical talent, and to these I may add two, whose premature genius found a premature grave—Miss DAVIDSON of New York, whose gentle, delicate, plaintive muse has met with due honor on both sides of the Atlantic, and J. RODMAN DRAKE of the same state. Though he died at a very early age, perhaps two or three and twenty, he had given proofs of high poetical genius. He already showed that he could soar at least as high as his most gifted rivals, and soar too with a more untiring wing.

*I have no doubt omitted some who ought to be included in this list, but the sound of whose harps have not reached my ears.

His CULPRIT FAY is indeed incomplete in its plan and unfinished in its versification, but it shows a fertility and originality, and manageable wildness of fancy, as well as an ardent love of his subject, that must have placed him on the summit of Parnassus. But too soon for us these ethereal spirits ascended to their congenial skies.

In *classical or mathematical learning*, we have not done much as yet. BOWDITCH'S translation of La Place, and ANTHON'S editions of some of the classics, prove that these branches of knowledge are thoroughly cultivated by some, while they also indicate that they are less so than could be wished. But the few lonely lamps that yet burn for the retired student may serve to keep alive the flame that will by and by spread and break forth with the effulgence of a Newton or La Place, a Heyne or a Porson. I ought not to omit WEBSTER'S DICTIONARY, as a great achievement of labor and research in philology.

In *physical science*, our progress has been commensurate with our general intellectual improvement. Our learned societies and institutes in our largest cities all publish their transactions, and they all exhibit a more thorough and general acquaintance with the subject than formerly. NUTTALL, GODMAN, SAY and others have made large and valuable contributions to the natural history of the country. In the *medical science*, there have been numerous publications of great respectability. Nor ought we to omit the names of FULTON, HARE and PERKINS in the department of physics.

In *essay writing and miscellaneous literature*, our improvement has been very conspicuous. In this department we may mention IRVING, PAULDING, COOPER, WIET, WALSH, EVERETT, INGERSOLL, JEFFERSON, JOHN QUINCY ADAMS, CASS, FLINT, DWIGHT. The number is indeed too great for particular notice. I must however except WASHINGTON IRVING, whose tales and sketches are as yet unmatched. One is sure to find in whatever comes from his pen thoughts just without being commonplace, wit the most delicate and refined, without one spice of spleen or misanthropy, and a singular playfulness of humor, all clothed in the most captivating graces of language. COOPER'S Sketches, though far inferior to IRVING'S, have also great merit, and have not been sufficiently appreciated by that well meaning, but often whimsical personage, the public. Mr. COOPER though sometimes splenetic, loves his country and is proud of it. These sentiments breathe through all his works, and next to Mr. IRVING and Dr. CHANNING, no living man has done so much to raise the literary character of his country abroad.

But it is in our *periodical, or ephemeral literature*, that we are to see the image of our national talent and taste most truly reflected. Let us first observe the astonishing increase as to number. In 1775 we had 37 newspapers in the United States. In 1810, 35 years afterwards, the number had swelled to 359, and in 1834, 24 years afterwards, it amounted to 1265. The number is now without doubt upwards of 1600. Many of these journals contain five or six times as much as the largest in former times, and they are published much more frequently. Besides these, the periodical journals for religion, medicine, law, and miscellaneous literature, had increased from 27, in 1810, to 130, in 1834—that is five-fold, while the population was nearly doubled.

If we compare the contents of these publications at different periods, we shall be satisfied that they have improved in character almost as much as in quantity. In our best conducted journals, the editorial portions which forty years ago were so dull, flat, and insignificant, are now among their best written articles, and some of them have a spirit and force, and unstudied elegance, that few of their correspondents can reach. In the multiplication of our magazines, and reviews; our religious journals; our temperance journals; our journals of medicine, and law, and agriculture; our railroad, and beat sugar, and silk culture journals—who does not see that the American mind is awakened to the

beauties and the benefits of literature, and that what the improved taste of the nation craves, the improved talent of the nation seeks to supply? The reviews and magazines of the present day, such as the *KNICKERBOCKER* and *MIRROR* of New York, or our own *LITERARY MESSENGER* and *FARMERS REGISTER*, are as superior to similar publications forty years ago as the richest gems of the mine are to the tawdry imitations of them that please the indiscriminating eyes of the savage.

We may also refer to the improved style of the debates in our Legislative assemblies with similar feelings of congratulation, with this difference, however, that there have always been a few public speakers who could compare with the best of the present day. But the number of accomplished orators and debaters is far greater now than formerly, after allowing for the increase of our numbers. The Senate of the United States has for some years, been able to boast of orators which would compare with those of England in her best days. Virginia, in the rear of some of her sister states in the successful prosecution of physical science, and in the exhibition of poetical talent, may here claim precedence. And it must be gratifying to those who hear me, to be reminded that a year or two since, no less than seven of the eight or ten of those public speakers whom public opinion had placed foremost in that body, were native Virginians.

After this comparative view of our literary advancement, so grateful to every liberal and patriotic mind, let us turn our eyes to the prospect of its further improvement, and consider what can be done to promote and secure its onward progress.

We are well warranted in expecting that the same causes which have hitherto operated so beneficially on our literature, will continue to produce the same effects. These causes may be regarded to be principally our civil liberty, and the federative character of our government.

Civil liberty, gentlemen, if experience is a true instructor, is favorable to a development of all the faculties of man; for in a free government he is most sure of receiving the rewards which are due to a successful exertion of those faculties, either in fame, power, popularity, or emolument. If he is successful as an orator or writer, statesman or legislator, to what may he not aspire? We every day see men, both in this country and occasionally in England, occupying the most elevated stations in the land, who have raised themselves to distinction by the force of their virtues or talents. They have all been the artificers of their own fortune, and if chance and circumstances have concurred to their elevation, they have been such circumstances as are within the reach of every one.

But in the government of one or a few, men can with difficulty emerge from the obscurity in which they are born, and if now and then we see examples of extraordinary elevation from the humble ranks of life, they are exceptions which attract notice and excite wonder by their rarity. By far the greater number who attain rank and power, and high station, owe it mainly to the accident of birth. This difference must give a powerful incentive to exertion, and it is exercise and exertion which are the chief sources of excellence.

It is true that the character of our government has a tendency to give intellectual pursuits a particular direction. They hold out especial encouragement to the talents for public speaking, or for the duties of the politician and statesman, and to the arts of winning the public favor. But the disadvantage of this condition of things must be regarded as temporary, and not likely long to impede the other influences that have hitherto had so extensive and salutary an operation. So long as the educated classes of our citizens are not more than sufficient to fill the learned professions, and to supply the public offices, their intellectual culture will be directed that way which is likely best to qualify them for those dignified duties. But the number of educated and cultivated minds is rapidly advancing,

and the excess, will, whether it be by way of attaining a high accomplishment, of finding relief from ennui, or of earning a livelihood, devote their leisure exclusively to literature, and thus become the Johnsons and the Goldsmiths, the Southes and the Scotts, the Campbells and the Byrons of America.

It may be set down as a maxim that the more free and popular a government is, the stronger is the influence of popular esteem and popular applause. The greater power of the people gives a higher value and a greater dignity to its approbation. Where men acknowledge no sovereign but his fellow-men, in their corporate capacity, they become the dispenser of public honors of all kinds, and their favor bestows the laurel not only on the warrior, but also on the poet's brow. Their huzzas cheer and reward the victories of a *PERRY* or a *DECATUR*—a *JACKSON* or a *SCOTT*—but they also stimulate the intellectual efforts of an *IRVING* or a *COOPER*—a *PINCKNEY* or a *WEBSTER*—a *RANDOLPH* or a *CLAY*. Fame is valued according to the number and force of the voices that speak through her trumpet, and they are never so numerous or so loud as where all are disposed to speak, and every one is free to utter what he thinks.

Here then we find the powerful incentive of public praise, which gives to the object of it, assurance of the esteem of his fellow men; the potent influence of which once made a garland of oak preferred by the high-minded victor to a crown of gold; which is at once the cheapest and richest reward of public virtue; which is all, next to a sense of duty, that stimulated *WASHINGTON*, the pride of America, and the admiration of the world.

There is moreover an unseen influence which free institutions possess, of imparting force and vigor to every pursuit in which its citizens engage whether it be in amassing wealth, or acquiring glory, whether they engage in the pursuits of commerce or of war—of speculation or of literature and science. They are likely to be less unduly biased by the dicta of their preceptors; to be less trammelled by the tyranny of custom—to be more bold, fearless, and adventurous—more pliant and accommodating to uncontrollable circumstances. We see this manifested in various ways. What merchants or navigators exhibit the same vigorous daring enterprise as ours? What explorers of the wilderness? Where has sagacious industry achieved so much in the way of canals, and railroads, and bridges? All this indicates extraordinary mental activity and energy of purpose, which will assuredly one day produce the same salutary effects in letters that it has already achieved in arts and arms.

But there is another cause of improvement to be found in the character of our government, the influence of which is not yet fully felt. By reason of the separation of the States, the spirit of emulation, that exerts so propitious an influence on the character of a people, may be expected to be particularly active here. Need I remind you that those nations which have been most conspicuous and illustrious have all felt the force of national emulation? France and England owe much of their success in letters, arts, and arms to the rivalry of more than two centuries. Even the division of Great Britain between the English and Scotch, has had a sensible effect; though ever since the union, it has been the sentiment of generous emulation that has animated them, rather than a rivalry inflamed by anger and hatred. It was this spirit among the little Grecian states which kept their faculties ever on the stretch, and goaded them on in the pursuit of excellence, not only in arms, but also in literature, the fine arts, and philosophy, until the most successful of them far transcended the other portions of the world; and in some departments of skill have never yet found their equals among the thousands of millions that have lived after them.

It is partly to the greater force which this desire of superiority exercises in a large city, that it has always been found the most favorable theatre for genius and

talents of every kind. Here competitors in every profession and pursuit are placed side by side, and their respective merits being so accurately measured and compared, the rival candidates are urged to redouble their exertion for superiority. We know the force of this principle in juvenile instruction, and while men in a populous city are like children in a public school, those who are dispersed over the country may be compared to the children who are instructed at home.

This principle of emulation must always exert more influence among the American people from their being distributed into separate States, having their governments, laws and institutions independent of each other; and the more distinct are their interests, the more contrasted their general character, the stronger is this spirit likely to be. Hence the dissimilarity between the Northern and the Southern States, if it occasionally give rise to some illiberal and inconvenient prejudices, is also productive of this good effect. And though it has hitherto shown itself principally in efforts to obtain the power and patronage of the general government, or in jealousy and disappointment at not having obtained them, it may hereafter also manifest itself in literary rivalry. Of this we have already seen some symptoms, in the reviews and magazines. We also occasionally see signs of it between New York and Philadelphia, and between Boston and New York. The West, the ardent, generous West, also shows its ambition to excel, and that affords a sure presage of excellence. We there behold a boldness, a freedom from the dominion of habits and prejudices that is most auspicious to originality; and there, if any where, we may expect in time to see new modes of administering pleasure or interest to the intellectual tastes of mankind.

These circumstances of our political and social condition may therefore be expected to continue their benignant influence on the advancement of letters and science in the United States; and it only remains for us now to notice the modes by which we may best encourage and assist that influence.

We should, in the first place, do all in our power to advance the cause of education, both in its elementary, and more difficult branches of knowledge. The seed that is sown in the humblest country school, if it chance to fall on a fruitful soil, may shoot up into luxuriance and become the lordly oak, the pride of the forest. But in general, the distinguished man of civilized society is so much the creature of artificial culture, he is like the same oak in a city. It has been planted there, and its size and growth have been in proportion to the care with which it has been nurtured, until it could support itself by its own inherent vigor. We ought then to be unsparing in our efforts to provide adequate schools, academies, and colleges: to endow them liberally; and to improve their internal economy, regulations, and discipline, to the utmost. The nation seems now fully sensible of the importance of juvenile instruction. The number of schools and colleges has been greatly multiplied within a few years, but I fear that their character has not advanced in the same proportion as their number.

Associations such as that it is now my pleasure to address, should be multiplied and be supported with untiring zeal. All such institutions concur to introduce a literary spirit, to give it a wider diffusion and a more vigorous growth. This spirit is the more to be cherished, as affording the best counteraction to the love of gain, if it is likely to prove stronger in a democracy, as has been supposed, than in those governments in which there are privileged orders of men.

We should also encourage public libraries and library companies, which will at once favor a taste for reading and afford the means of gratifying it. Nor ought we to neglect female education, since it devolves on the mother to give the first direction to the child's thoughts and acts. I have come to the conclusion, from no very slight or hasty course of observation, that more distinguished men owe the impetus which

has made them what they are, to their mothers, than to their fathers.

A disposition to encourage domestic literature must also have a good effect. It must be recollected that the American writer, laboring under the disadvantages that have been mentioned, is placed in competition with the writers of a nation that are second to those of no other on the globe; and that the consciousness of this disadvantage is calculated to repress and dispirit the efforts of the native author.

Let us constantly bear in mind, gentlemen, that, next to a character for virtue and integrity, we should be most ambitious of obtaining one for letters. This is a higher glory than distinction in wealth, power, or arms. For

"The beings of the mind, are not of clay;
Essentially immortal, they create
And multiply in us a brighter ray,
And more beloved existence."

Let us remember too, that a taste for literature and science, besides what it has done for the well-being of society, affords to individuals the best security against vicious and immoral habits; and that it is essential to the preservation of civil liberty: that for a people to be capable of administering their own affairs wisely, they must be well instructed. They must understand the elementary principles of government, of legislation, and political economy; must be well acquainted with the human character, and be able to distinguish between their real and their pretended friends, through all the disguises which crafty ambition or love of gain may throw around them. We are then urged to the intellectual improvement of the people, whether we regard the happiness, the safety, or the dignity of the nation.

The vetary of literature in our country has indeed much to stimulate his efforts. There are some who now hear me, who may live to see the population of these states amount to some 50 or 60 millions; and in 25 years afterwards, they will reach 100 millions without having as dense a population as there is at this time in Massachusetts. With so numerous a people, all speaking the same language, and agreeing in the great fundamental principles of religion, morals and government; but having endless diversities of manners, habits, usages and institutions, what a field is presented for the successful cultivator of English literature! The writer of the next generation, who is so fortunate as to win the public favor, will, besides hearing his name re-echoed from the Atlantic to the Pacific, from Hudson's Bay to the Mexican Gulf, have a greater number of readers than are now living on the habitable globe. His gains, if gain should be his object, will be as much greater than Byron's or Scott's, as theirs were greater than those of their predecessors. And though minds best qualified to delight the world by the productions of their genius, may find their highest reward in the glory they acquire, yet even *they* will see, in the extensive sale and circulation of their works, the surest indications of that glory.

In consequence of the great multiplication of books, all over Europe, within the last forty or fifty years, and their continued further increase, it has been apprehended by some that literature must eventually suffer a decline. They say that if books thus go on increasing, it will be impossible for any one reader, however diligent, to read them all; and that the conviction of this fact will proportionally discourage men from writing, or from qualifying themselves to write; and that literature may thus, like the Roman vestal, be buried under the wealth she had too eagerly coveted.

But the very hypothesis, in assuming that further productions of intellect will be checked by the redundancy of previous productions, supposes that consequence of the evil which will effectually bring its remedy, which is a diminution of the supply until it is level with the demand. Such a redundancy, when it is felt, may indeed have the effect of discouraging trivial, or second rate productions. It may also call into exist-

ence new and strange creations of a misapplied ingenuity, by way of provocative to man's incessant craving for novelty, but it can do no more. The means of communicating instruction, or interest, or delight, to the minds of others, are as exhaustless as is the desire to receive them, and by far the larger part of these means every generation has to provide for itself. It is true that so far as concerns human passions and feelings, or the beauties of scenery, or poetical imagery, there are natural limits, and the best part of the stock may be preoccupied, or nearly so; but even these may be served up again in a form, which when modified by the ruling taste of the day, may not only seem to have the recommendation of novelty, but give more lively pleasure than pictures of the same natural features, painted according to the taste of other times. It is with language as with dress, though the materials are the same as they were centuries ago, silk, cotton and wool, feathers and flowers, gold, diamonds and pearl, yet the diversified modes in which they can be combined, are infinite; and though the belles of the present day may now and then seem to tread in the steps of their grandmothers, it will generally be found, on a closer inspection, that there is some important modification of the ancient prototype; and that, at all events it has, to the eyes for which it was intended, the charm of novelty, so as to make each succeeding generation manifest the same lively sensibility to ornament, and the same exquisite taste in gratifying it, as when Belinda was thus exhibited at her toilet more than 130 years since:

"And now, unveiled, the toilet stands display'd,
Each silver vase in mystic order laid,
First rob'd in white, the nymph intent adores,
With head uncover'd, the cosmetic powers.
A heavenly image in the glass appears,
To that she bends, to that her eyes she rears!
Th' inferior priestess, at her altar's side,
Trembling, begins the sacred rites of pride.
Unnumbered treasures ope at once, and here
The various offerings of the world appear;
From each she nicely culls with curious toil,
And decks the goddess with the glittering spoil.
This casket India's glowing gems unlocks,
And all Arabia breathes from yonder box.
The tortoise here and elephant unite,
Transform'd to combs, the speckled and the white;
Here files of pins extend their shining rows,
Puffs, powder, patches, bibles, billet-doux.
Now awful beauty puts on all its arms," &c.

As to science, that is, and must ever be, continually progressive, and every new discovery seems but the prolific parent of many more. It forms a new stem from which spring numerous ramifications, each of which branches out again, and thus leads to new facts and new laws of matter. The fear then is utterly groundless, that there can be any necessary check to intellectual activity, either in the class of writers or readers. And as to the supposed influence of the multiplicity of books, or the character of subsequent works in encouraging quaintness, affectation, or licentious novelty, we must trust to the natural growth of good taste for the prevention or correction of this evil. To resume my former illustration, the same danger might seem to exist as to dress; and yet it has been steadily advancing for the last fifty years towards simplicity, and losing much of the very forced and artificial character it formerly assumed.

I had intended, Mr. President, to have said something in behalf of cultivating CLASSICAL LEARNING, as the best means of forming a good taste, and as affording the most improving exercise to the mental faculties; and also to have dwelt on the advantages of SIMPLICITY in writing and speaking; but the unexpected length to which this discourse has been already extended, forbids me from further tasking your patience.

On the whole then, the prospects before us, gentlemen, are no less brilliant and grand in our literature, than in national power and opulence, if we are only true to ourselves; and the sun of civilization, which has been travelling to the west, as far back as history re-

cords, will, when it has completed its circle round the earth, by traversing the American continent, be found to have still increased in splendor, in its course; and as it shone more brightly in Greece and Rome, than it had done in Asia; and in England and France, than in Rome or Greece—so, if the auguries do not prove deceitful, its progressive brightness will continue with us, and when it shall be setting to Europe, it will here in its meridian,* beam with an effulgence that the world has never yet witnessed.

* Some of our readers may not know, that when it is sunset at London or Paris, it is noon on the Mississippi.—*Editor.*

THE FORESTER'S SERENADE.

Awake! gentle dreamer, and hide thee with me,
Where the free and the fearless dwell;
A sylvan home is waiting for thee,
Deep, deep in the shade of the dark waving tree,
That hangs o'er the Forester's dell.

There linger the hours of beautiful bloom,
And when the gay Summer is past,
'Neath the angry clouds of Winter's gloom,
Still smile we, my love, though our leafless home
May shake with the terrible blast.

And softly, and sweetly, at Eve's silent hours,
When earth seems fading away,
A holy calm, from heaven's fair bowers,
Shall brightly shadow that sleep of our's,
With visions too pure for day.

Oh come!—'tis the moment when all things are still,
Save the leaves on the trembling trees,
Or the plaintive wail of the lone whip-poor-will,
Or the moan of the stream, as it winds round the hill,
Or the voice of the murmuring breeze.

Why linger, my love?—the glorious stars
Are glistening brightly for thee—
Tho' the moon rides high, and the night slowly wears,
Yet tarry we not till morning appears—
In shadow and silence we flee.

Tho' yonder wild mazes together we'll stray,
Where the wolf and fierce panther roam,
Ere the skies grow light with opening day,
O'er mountain and valley away—let's away—
Far, far, to the Forester's home.

LEXICOGRAPHIC ACUMEN.

In Johnson's Dictionary is this article: "*Curmudgeon*, a vicious way of pronouncing *cœur méchant*—An unknown correspondent." By the last three words Johnson acknowledges his obligation to an anonymous writer in the Gentleman's Magazine—but Ash copied the word into his Dictionary thus: "*Curmudgeon*—from the French *cœur*, unknown, and *méchant*, correspondent."

JOURNAL

OF A TRIP TO THE MOUNTAINS, CAVES AND SPRINGS
OF VIRGINIA.By a *New-Englander*.*

To CHARLES E. SHERMAN, Esq., of Mobile, Ala.

These fragments of a Diary, kept during a tour made in his
society, are respectfully and affectionately inscribed, by his
friend and fellow-traveller, THE AUTHOR.

— Virginia! Yet I own

I love thee still, although no son of thine!
 For I have climbed thy mountains, not alone,—
 And made the wonders of thy vallies mine;
 Finding, from morning's dawn till day's decline,
 Some marvel yet unmarked,—some peak, whose throne
 Was loftier,—girt with mist, and crowned with pine:
 Some deep and rugged glen, with copse o'ergrown,—
 The birth of some sweet valley, or the line
 Traced by some silver stream that murmurs lone:
 Or the dark cave, where hidden crystals shine,
 Or the wild arch, across the blue sky thrown.

CHAPTER I

Locomotive from Boston to Providence—Railroads and rail-
 ings—Sleepers in Steamboats—New York, New Jersey, and
 Philadelphia—Judge Marshall—Baltimore—Page's—Rip-
 Rap—Hampson Roads—James River—Steamboat Racing—
 Arrival at Richmond.

Steamboat President, July 8, 1835.

Your correspondent is a quiet man and hates a fuss, or he would hardly have composure enough to sit down so quietly and collectedly, as he is now doing, to write you an account of himself, considering the traveller's disappointment to which he has been doomed. He thought, and experience had taught him that he was right in the conjecture, that to take a trip to New York in the good "President, Bunker," was the very realization of all that is comfortable in the way of travelling; so starting from the city of notions by the "Whistler" locomotive, and shooting over the forty intervening miles between that and its sister city, at the rate of five and twenty miles an hour, he marched up to the gentlemanly clerk of the said steamer, to secure a good berth in which to stretch his invalid limbs while going round that most lovely of capes, Point Judith. But by some misunderstanding, a disappoint-

* This Journal is made up from a series of letters, written in 1835, for some of the northern papers, which at the time attracted some attention, not only at the north, but in other parts of the country. There had at that time been little said, and less written, in relation to the now more generally known watering places, which these letters describe; and to that cause, rather than to any merit discernible in their composition, was to be attributed the interest at first so generally taken in them. It is at the suggestion of a friend who was induced to try the virtues of the Virginia waters, by the descriptions of their qualities set forth in these ephemeral letters, and who experienced a perfect cure of his complaints by doing so, that they are now embodied in this form. If they shall induce a single additional cure of any of those numerous "ills that flesh is heir to," the writer will not regret the toil of editing them anew.

Washington, July 4th, 1837.

ment arising out of the detention of the other boat Providence was filled with hordes of applicants, who, unfortunately, had taken up all the state-rooms, berths, settees, cots and pegs, on which a poor wight could sleep, lie or hang. This was a damper. Ma'am Judy was weathered by your unlucky friend in a recumbent posture, upon "the soft side of a pine board," and his rheumatic bones had to suffer racking in an out of the way hole, away forward, which they call the saloon-cabin.

From Boston to Canton, we came along in a fine easy car, in which we could sit or stand as we pleased, and the seats in which were made as is usual in coaches, width-wise and very comfortable. At Canton we took to our feet, to go down and up a deep valley, over which a most splendid viaduct of massy granite is in the progress of erection, an ingenious and stupendous work indeed. We then got into a long jolting omnibus-looking car, in which we rode side-wise, and although we went over the road rapidly, the noise of this crab-like mode of progression materially marred the pleasure of the thing. However we finished our journey at last, so far as rails (and I suppose you hope as far as *railing* also,) are concerned,*—and here am I, at table, between the jingling of champagne glasses on one side, and the rattling of dice on the other, as a whist party and a pair of backgammon players are amusing themselves at their respective games. What a love of excitement is suddenly contracted upon coming on board a steamboat! People in such a predicament seem to think they shall die of ennui, if a source of amusement is not immediately opened to them, so soon as they place their feet on board.

I have been taking a stroll round the boat, to see how the land lies, what way we are making, what the weather is, and who, if any body, had stolen my birth. We are half way to New York, are going at the rate of thirteen miles an hour, the night is cloudy but mild, and the steward and I turned a big bully of a fellow out of my narrow accommodations in "the saloon cabin." I am sure they were not worth stealing. My Hector showed fight, and now stands glowering at me like a chained mastiff. Cannot help it, my dear fellow,—take my rheumatics and you may have my berth and welcome—and I'll sit up all night and scribble. He shags off upon this fair proposal; it must have been convincing of his reason, and assuaging of his wrath.

How queerly folk appear while asleep! I should not like to occupy one of those settees or cots as they call them, all conglomerated as they are into a dense mass; it is so disagreeable to have a half dozen waking strangers making game of your dreaming disclosures, as you lie there on your back, talking about your most private affairs, with as much *sans froid* as if you were but exchanging the time of day with your hearers. And then how singularly people differ in their ideas of comfort on these occasions! One twists a yellow bandanna round his head for a night cap, while another puts on *the real thing*, in the shape of a red silk bag, a white knit skull-cover, or a black velvet toupee. One fellow sleeps in his clothes like "my man John," in the nursery song, who "went to bed with his trousers on."

* This road is now finished, and in all its apartments is one of the very best in the United States.

Another is very particular in arranging himself to rest, with all the minute particularity to the little observances of the toilet in which he is so fond of indulging at home,—he places his watch and pocket-book under his pillow, folds away his coat smoothly, and puts his boots orderly under his “cot” in such wise as to keep them out of the reach of that shilling loving caitiff, *John*, who brings them all shining in the morning, and looks glowering if he gets not his *avonims*. One lies on his pillow as Nero reclined on his, laughing at the woes of the good citizens around him, who, as he grows merry and boisterous in his enjoyment of the varied scene before him, toss about as if on the rack to get one wink of sleep under his merciless inflictions: while another sneaks off quietly to bed, and from mere habit drops to sleep in despite of all the noise and bustle that surround him. The lucky berth-holders retire with a kind of dignified reserve to their respective places of comparative ease,—the aristocrats of the steamer,—while the deck passengers lie about on the luggage and freight, covered with old plaid cloaks, with carpet bags for pillows. Thus the Steamboat is but a map of busy life—and furnishes to the contemplative mind a lesson not unworthy of its study.

* * * * *

Steamboat Trenton, July 9.

The warm weather is beginning to thaw people out from their winter quarters, and to set them in motion towards the North, South, East and West, for recreation and health. The steamboats, railroads, and public houses literally swarm with travellers, and all seem determined to make up for the lost time which the cruel cold weather has caused to hang so heavily on their hands.

Arriving at New York this morning, and finding the city empty and hot, and the hotels full and incommensurable, I concluded to hasten onward, and accordingly took the steamer *Swan*, at seven o'clock, reached Amboy in the usual time, and proceeded at the leisurely pace of fifteen miles an hour upon the railroad, as far as Bordentown, where we again take steamboat. Pray tell me if the hot weather is any excuse for such tardiness in locomotive engines? Here was I flying over those Providence rails at the rate of five and twenty miles, but yesterday—*voilà!* the difference! And now I am in the bragging vein, let me remark that the railroads from Boston, are incomparably superior to these Jersey ones. There is more care in the construction, the cars are far more commodious, and the whole is quite another affair, in every respect. I suppose there is no more perfect railroad in the country than that from Boston to Lowell, if indeed there be in the world.

The general appearance of that part of New Jersey through which we journeyed this morning is by no means indicative of much susceptibility of cultivation. The soil is red and clayey,—and for the most part barren, on the track we traversed to-day. There are interspersed here and there, spots of something more promising in the way of farming and gardening,—but they are rare. The place of Joseph Bonaparte is the most elegant of any on this part of the route—but it struck me that it appeared to less advantage, and in worse condition than formerly. There evidently wants the careful, tasteful and interested supervision of the proprietor. Near this, we were much gratified and

refreshed by the reception of an abundance of ripe cherries and other fruit from the children that surround the cars at every stopping place, and earn their *tips* by these grateful dispensations. Fruit of all kinds is abundant and good here, and we are promised a profusion of it in Philadelphia.

The Delaware upon which I am now sailing, looks lovely, in this clear summer afternoon. The beautiful farm houses, country seats, and villages with which it is studded on each side, form a succession of picturesque landscapes, unrivalled by any which were presented during yesterday's sail. At the pretty village of Bristol, we took in and landed passengers, and among several taken up at Burlington, a short distance lower down, were several good humored, jolly Dutchmen, and their brisk buxom frouws, going to carry the produce of their gardens to Philadelphia. The former spoke not, but smoked their pipes in silent quietude, while the good women arranged their tidy baskets upon the deck, and sat down to watch them, and see the fashions. But the city of Brotherly Love is in sight, and I must break off.

Philadelphia, July 10.

After being bandied about from pillar to post, from the United States to Head's, from Head's to the Tremont (for they have a “Tremont House” here too) and from thence to the Congress Hall, I at length obtained a room sufficiently large to hold my bed and myself, and learned to be thankful for even so much. The travelling mania has really begun to rage with a violence proportioned to its restraint hitherto. The city is filled with strangers, while its own citizens are fast deserting it.

I cannot like Philadelphia. I have given it a fair trial, and many fair trials,—but I do not “cotton to” its stiffness, its preciseness, its coldness, its cold water washings, its white wooden window shutters, its everlasting red brick walls, unrelieved by anything light or lively in the shape of Venetian blinds, verandahs, porticoes, porches, or piazzas. It looks very well on a printed plan, but it is a very odd city in reality. And then its narrow paved streets, innocent of McAdamsization and gas light,* its thousands of watch boxes for people to break their heads against at every corner, and its toleration of that disgusting nuisance,—cigar-smoking, by men calling themselves gentlemen, in its streets at evening,—combine to render it far from delightful to me. It is true, there are the United States Bank, the Mint, the Fair Mount Water Works, and the new Exchange, to relieve all this sameness and monotony: but I am constrained to confess that I consider the constant self-gratulation and boasting of the Philadelphians upon the score of these attractions as almost destructive of the pleasure to be derived from an examination of them. I hope I am not too censorious.

The melancholy news of Judge Marshall's demise met me as I came from the steamboat yesterday. It is certainly a great event in our history. The loss of John Marshall is a public incident, and viewed aright is full of public interest. As the historian of Washington, he is the historian of America,—as the presiding justice of the highest court in the United States during a long and most interesting period of its history,

* This was in 1835, be it remembered.

he is to be considered as the father as well as the administrator of its jurisprudence. * * *

Baltimore, July 11.

After a very fine passage from Philadelphia in the noble steamers Robert Morris and George Washington, and by the locomotive Virginia,—during which I may truly say I enjoyed the very first pure breath of real summer that has been vouchsafed to me as yet during this backward season; after a delightful sail upon the beautiful Delaware, a ride through a country looking more like a garden than any thing that has as yet greeted my eyes since I left New England,—and a charming trip down the Elk, and over Chesapeake Bay; I arrived at “the City of Monuments” at noon this day. My quarters are at Page’s, and I hope those of my readers, who intend to travel, will not forget a name, the remembrance of which will secure to them the best of accommodations when they visit Baltimore—the most gratifying attentions—and every comfort which can possibly be desired by the traveller. The city is hot, as other cities have been on my route—but not so full of strangers, at present. Many of the citizens who can afford to enjoy their “otium cum dignitate,” are seeking the cooling breezes on the Eastern Shore, or have preceded your correspondent to the Hot Sulphur, or the White, Red, Yellow, Blue, and Salt Sulphur Springs of Virginia. They complain very much here of the backwardness of the season, of the failure of the crops, the badness of the grain, and the necessity of coal fires (sometimes) at night. So you see you “down-easters” have nothing to complain of in the way of partiality against “our good mother nature.”

July 12.

The first thing that particularly struck me upon walking through the streets of this city, was the frequency with which I met ruins of buildings by fire. Here lie strewed the displaced stones of one edifice that lately towered aloft in all the beauty of perfect architectural proportion; there smoulder the scarcely exhausted cinders of a more recent conflagration. Many of these wrecks are fast disappearing, and giving place to new and modern structures—but still enough remain to bear melancholy witness to the ravages of the ruthless incendiaries. While I was thus musing, at night-fall, over the ruins of former beauty and elegance, the cry of fire was raised, and soon the engines and the hose carriages, boys, men, and horses, were rattling and tramping along the streets, over which the moon was just rising. The scene, though startling, appeared to be looked upon, by all but the firemen, as an affair of every day occurrence, and of hardly sufficient importance to deserve more than a passing glance—while the firemen did not dash along with their engines with all that impetuosity and enthusiastic defiance of fatigue and danger, which are generally noticeable in such cases. This no doubt arose from the actual commonness of these alarms in Baltimore of late: a melancholy thought, but I am inclined to think it is the only true solution of the rare apathy which seemed to pervade the whole of this devoted city upon the occasion referred to. I believe the fire was gotten under without difficulty.

They are digging a cellar, over which to lay the foundation of a new Custom House here—and have opened a constantly flowing spring of water, which

they are endeavoring now, night and day, to pump dry. Uncle Sam is employing a multitude of honest Irishmen to perform this labor, equal in difficulty to that of the Danaides. Last night there was nothing heard all over this part of the city, but pump, pump—pump, pump—pump, pump—incessantly from sunset to cock-crowing; occasionally relieved by the chanting of some of those sweet Irish ballads, which, sung in chorus at Donnybrook Fair, or at the Cove of Cork, would doubtless have been received with unbounded applause, and encored into the bargain. But they were not so welcome to the tired traveller, whose windows being open on account of the heat, drank in the dulcet sounds with very much the same effect upon the feelings of the would-be slumberer within, as would have been produced by a concert of cats, or the ululations of a convocation of owls. As I write, the pumps are still audible, and give promise of a repetition of my night’s delights.

The business of Baltimore strikes me as on the increase. There are tokens of improvement visible in every part of the city. Real estate, if certain operations which have casually come to my knowledge are to be relied upon as tests, is improving every day. Many new structures are in the progress of erection, and there is a decided air of business enterprise pervading the city. They laugh at the late Canton excitement in the northern cities, and describe it as mere mid-summer madness. There is no very lively expectation here, that Baltimore is very soon to be eclipsed by the great city of Canton!*

July 13.

It is very amusing to sit at a large public table—unknown and unknowing,—and to watch the progress of events during that great festive occasion,—a dinner at an ordinary. The *gourmanderie*, the epicurianism, the Apician smacking of the lips over a new and rare tit-bit, are to me far less striking and full of moral than the gusto displayed upon these occasions by the critics in wines. I was much moved to these reflections by the course of incidents at Page’s ordinary to-day. Mr. P. himself, a pleasant, gentlemanly, attentive host, sits at the head of his own table, and in a very elegant and genteel manner does its honors. But he is the unfortunate butt at which every body else levels a glass, and a challenge to a trial of “the very best of wine” he ever drank. Every sample is “the very best,”—and the polite host sips here a drop of claret, and there a drop of hock,—swallows now a glass of champagne,—and now a bumper of burgundy,—with one, tastes sherry, and with another, Madeira—until at length it seems to me, he must have lost the taste of all, by tasting so many. The game goes on among all the other guests at the same time—and by the time the cloth is removed, there is one general guzzle, all round the board. What a ridiculous custom! I have seen pretenders to a very accurate taste in, and judgment of wines, most egregiously hoaxed by the waggishly disposed. A great lover of the juice of the grape, who pretended to be a great *connoisseur* in the matter, and who invariably smelt, and sipped, and looked with one eye through the up-raised glass, as he held it between his optic and the light, I once saw taken in this way, by the substitute of

* Canton is still *in statu quo*. 1838.

a very fine claret for a low-priced, inferior article, which he was drinking. His own was pronounced far superior so long as it was thought to be the more expensive wine. But when the fact came out that the substituted article was worth eight or ten times as much money as the other at the vintner's, the critic was fain to shelter himself behind the plea of having lost his taste by reason of a very bad cold! "Of all the cants in this canting world, the cant of criticism," says the satirist, "is the worst," and of all criticism, methinks, the criticism of gourmanderie is the most absurd. There is a gentleman at this table who seems to be a general puffer of every dish that comes upon it, from the soup to the desert. He must be a proprietor, or part owner, or perhaps he gets his dinners *gratis*, for this sort of duty, which he so faithfully discharges every day. Splendid soup, charming chickens, delightful ducks, delicious hams, fine puddings, rich pastry, nice strawberries, uncommon sweet butter, prime cheese, and unrivalled wines! are epithets constantly issuing from his mouth—as if no one else at the table could discern its luxuries but himself. How inferior is this kind of ambition in a full-grown man—to keep a bill of fare at his fingers' ends,—a vintner's invoice registered in his memory, and the *tang* of wines on the tip of his tongue! To be proud of knowing and calling all the tavern-servants by name,—to criticize cooking, and "chronicle small beer."

I have been to see the lions of Baltimore this afternoon. The Washington monument stands on the summit of a hill at the upper part of the city, a tall white column of marble, surmounted by a statue of the venerable sage to whose memory it is erected. I did not ascend to its summit, for I am *going to*, not *returning from* the Springs. The monument commemorating the names and bravery of the officers and men who fell at the battle of North Point, and the bombardment of Fort McHenry, in 1814, is certainly a beautiful structure. It is by Capellano, and was erected in 1820. Its situation is central, and its execution tasteful, appropriate and elegant. I walked all around it,—studied its *relievos*,—read the names of the fallen soldiers,—admired the fierceness of the griffins, without clearly comprehending what they had to do there, and came away with the reflection that Baltimore had indeed done more to perpetuate the memory of our two wars than any other city in the Union. I next went to view the far-famed Catholic Cathedral. I had always imagined it to be a most splendid building externally as well as internally: but I was disappointed. Its exterior has too much flagree and composition work about it. Indeed, that is a fault with most of the public buildings of Baltimore. I was unsuccessful in my attempt to view the interior of this church, being told that it was the hour of "confession," and that that service was then performing within.

The private houses of Baltimore are neat, commodious, well built, and many of them expensive: but there is not one *splendid* dwelling in the city, that I have yet seen: I mean of the stamp of the Beacon street houses, in Boston, and those in Lafayette and Waverly places in New York. They are built of handsome brick, sometimes with, but oftener without blinds or shutters of any kind on the outside, and many of them with the purest white marble door steps and posts,

which are kept as clean and polished as if they were a portion of the interior of the mansion. There is a great deal of taste displayed here in equipage,—there being but few coaches in the streets, with the usual retinue of liveried coachmen and footmen,—a thing supremely ridiculous in our country,—but many tasteful and elegant barouches, phaetons, carriages and gigs, of beautiful construction,—as often driven by the owner, as by a servant. The manners of the mass of the Baltimore population are in the highest degree civil and respectful to strangers,—I do not mean upon acquaintance, merely—that of course: but such manners seem to pervade the whole city,—the people being uniformly obliging, orderly, attentive and quiet. There is much elegance of style observable in the private establishments of the citizens of Baltimore,—more, I should think, as a general remark, than in other cities—and their hospitality is boundless. * * * * *

Off the Rip Repe, July 14.

Here we are, on board the good steamer "Kentucky," passing Fort Monroe at a fine rate, and distancing the "Columbus," in which we came very pleasantly from Baltimore yesterday: She has just put us on board this boat, and is herself going to Norfolk, while we pursue our way to Richmond. The "Kentucky" is a swift boat, and belongs to the established line between Baltimore and Richmond; but there is a competitor, dignified with the appellation of "Thomas Jefferson," which has just been put upon this route by an opposition company, that is now nearly abreast of our boat and gaining rapidly upon us. Of course we are passing Old Point Comfort in great style; three steamboats of the first class being within hailing distance of each other.

This is the day appointed by the President of the United States, at the request of the officer in command, for a grand review of the troops and inspection of the garrison at this point. It is now about 8 o'clock, A. M. and the parade, I learn, is to begin at 10. Of course we shall see nothing of the show. There is to be target firing from the fort. It is by no means to be wondered at that the old gentleman prefers Old Point Comfort as his summer residence; for a more beautiful locality does not exist, I verily believe, in our country. We were all yesterday afternoon sailing over Chesapeake Bay, and saw little to interest or amuse us, though the night on the waters was quiet, serene and mild. But we were richly repaid for the monotony of the scenes through which we passed yesterday by the glorious view that burst upon us as we looked from the upper deck of our boat, this morning. The sun was shining brightly,—the waves were brilliantly illustrated by his beams, and danced gaily under their sparkling influence. The porpoises were gambolling in the clear light, and, fearless of our approach, seemed to greet us amid their frolic play, as they surrounded our prow in shoals. Two gallant boats, both well stored with passengers, are gradually nearing us,—and now we are all three abreast. Passengers going to Norfolk are transferred, the utmost regularity being observed,—the boats are again sundered, and each goes on its several way at full speed. We pass between two garrisoned points: that on our left is an artificial island of sunken stone, upon which there is, in the progress of erection, a strong fortification defending this important approach to Nor-

folk and Richmond, in conjunction with that point on our right, on which stands fort Monroe, and over whose batteries floats the proud ensign of our country. These two forts secure the impregnability (by the seaward enemy at least,) of those cities. * * * *

James River, 12 o'clock, M.

We are now beginning to see the beauties of opposition lines in travelling. The "Thomas Jefferson," having dropped behind to leave some passengers at one of the thousand little landing places that are continually occurring from the Roads up James River, has given us an opportunity of coming up with her, and Captain Chapman of the "Kentucky" is fast raising his steam and our fears, as the strife of speed waxes warmer. The "Thomas Jefferson" shows fair play, and although she knows that we can keep ahead, yet she sees that it is by but small odds, and her backers have bragged that she can beat the "Kentucky" ten miles in the trip. Of course she is nettled at our holding her a pretty equal poll; and as she nears us, our helmsman keeps steadily in the mid-channel. The enemy turns,—her Captain is crazy,—she is crossing our bows! Every foot on our decks is set; every breath drawn; every voice hushed, in apprehension of certain concussion. The stern of our opponent clears our bows by a single inch—but only by the noble and praiseworthy forbearance of our Captain, who, rather than endanger the lives of those on board the "Jefferson," stopped both his engines, as the foolish infatuation of the opposing Commander seemed securing for him and his passengers a dreadful fate. Thus she clears the "Kentucky," and runs stern-foremost towards our left, and drops far behind. She must have touched the bottom, as she has lost way considerably, and is vainly endeavoring to get up with us once more. Whatever may be the comparative speed of the two boats—of this truth the proprietors of the line running the "Thomas Jefferson" should hereafter enjoy the full benefit—that there is less danger to life and limb incurred by passengers in the old line. James River presents the traveller with but very few objects of interest. Its waters are turbid and reddish, and run in a broad full stream between shores of beech and birch, with here and there a pleasant plantation interspersed. There is no such thing here as a division of that part of the State lying in the interior country, into the innumerable small villages and towns into which the northern States are subdivided. *Jamestown*, somewhat noted in the old history of this country, is now but a landing place for passengers to Williamsburg. A but or two, and the ruins of a brick church, the first ever built in Virginia, alone designate the *locale*. This ruin is really quite picturesque: trees have grown up to a great height on the site of the aisles; and a small remnant of the tower overgrown with ivy, alone marks the worshipping place of the earliest settlers of Virginia.

We arrived at Richmond at sunset, and took lodgings at the Eagle.

HERETICAL BEASTS.

In the "Erotemata de malis ac bonis libris," of Father Raynaud is an 'Alphabetical Catalogue of the names of Beasts by which the Fathers characterized the heretics.'

THE GOVERNESS.

"Ah little will the lip reveal
Of all the burning heart can feel."

L. E. L.

Extract of a letter from Mrs. Mathews to Mrs. Somers.

"You would oblige me very much, my dear Louisa, if you would procure a teacher for my children. I should prefer a lady, on account of my loneliness since the death of my husband. I should wish her to be very accomplished, of course; to be a perfect musician, and a good French scholar; also a graceful dancer, for in this out of the way place, it is impossible to procure a teacher of that delightful art. The minor branches, such as grammar, philosophy, &c. of course, she must be qualified to teach. She must be perfectly good tempered, and always ready to read to me, and bear me company when not engaged with the children; they, poor little dears, have been used to so much indulgence, that a cross governess would never suit them. If you can find such a person as I have described, pray engage her to come to me. The terms I leave to yourself, though as there will be only three scholars, I should not think they ought to be very extravagant."

Mrs. Somers read aloud the above extract from a letter she held in her hand, to a young fair girl, dressed in deep mourning, who was seated beside her.

"Since you will leave me, my dear Constance," she continued, "I do not know of any situation that would suit you so well. I should prefer your living in a private family as governess, to being an assistant in a public seminary. I think you will like it much better."

Thus spoke Mrs. Somers, to Constance Beverly, a young orphan, whose father had died a short time before, and left his only child dependant on the cold charities of the world. Until the death of Mr. Beverly, his daughter was considered an heiress; when his estate was wound up, she was penniless. In her distress, an old friend of her mother stepped forward and offered a home to the afflicted girl.

Possessing great independence of character, and an education which she knew would enable her to gain her own subsistence, Miss Beverly had resolved to leave the friend by whom she had been received, so soon as she could obtain a situation which suited her views. When she mentioned her determination to her kind protectress, it was opposed with ardor, but finding Constance resolute, Mrs. Somers was compelled to yield an unwilling consent.

"Mrs. Mathews was one of my early acquaintances, for friend I can scarcely call her," continued Mrs. Somers. "Owing to a distant connexion, we were thrown much together in youth, and thus a sort of intimacy sprung up between us, though there was little congeniality in either our dispositions or pursuits. Caroline is not such a woman as will suit you, my dear, with your fine taste and cultivated manners; but that is a matter of little importance; you are to teach her children, not herself. I have the utmost confidence in her good feelings, or I would not intrust you to her."

She is a woman who has managed to appear well in the world, without the advantages of education, or early intercourse with good society. A spoiled child, and a fortune, she married young, and returned to her native state as ignorant as when she left it to receive the advantage of a year's polishing in one of our eastern seminaries. I am told that her husband improved her very much, and of late years she rather affects the *bas bleu*. He died about a year since, and left her with three children—two daughters and a son; the last a little spoiled to be sure, as he is an only one, and the youngest child, but that can easily be got over; and you, with your winning ways, can soon gain his affections, and manage him through his feelings."

"If he has feelings," said Constance. "Spoiled children are usually too selfish to have much feeling for any one but themselves. But you have not told me where Mrs. Mathews resides."

"Ah true—I forgot—she is a native of Louisiana, and the interests of her children compel her to remain where their property is situated. She cannot bear to be separated from them, and therefore wishes for a private teacher who can devote herself to them."

"But it is so far away from all I love," said Constance, sighing deeply. "Could I not be as well situated nearer home?"

"I think not: and, besides, your health has suffered lately. I have observed that you have a bad cough, and I do not like the lassitude of your step. Remember, my love, that your mother died with consumption, and you should be careful of yourself. She was scarcely more than your age when she died."

"True," said Constance, an expression of anguish passing over her features, which Mrs. Somers scarcely believed could have been caused by her allusion to her mother's fate; "true—and perhaps it had been better had her child have gone with her. Say no more, my dear madam, I will go to Louisiana, if Mrs. Mathews will accept my terms."

There was a silence of some moments; and Mrs. Somers laid her hand impressively on that of her young companion, and spoke—

"Constance, I would not be impertinent; but, my dear child, confide in the friend of your mother. There is something painful weighing on your mind: I know it is not your situation—that you can struggle against—no, I see with pain, it is concealed anguish, which robs your cheek of its bloom, and darkens your spirit with a deeper sorrow than even the losses you have sustained should warrant."

The pale cheek of Constance became scarlet, and she sank back on her seat, for some moments incapable of speaking. She at length commanded herself sufficiently to say—

"I will not conceal from you, dear Mrs. Somers, that you are not mistaken; yet, believe me, had the cause of my sorrow been such as sympathy could alleviate, I should long since have confided it to my best and dearest friend. Time will enable me to conquer the weakness in which I have indulged. Say no more on the subject—I cannot bear it just now. Pray let us talk of my intended journey."

Mrs. Somers kissed her affectionately, as she murmured,

"Be it so, my Constance; yet, remember the duties

you owe to those who love you, and arouse yourself from the indulgence of feeling that may unfit you for all enjoyment."

In about three months from the time of the above conversation, Miss Beverly was nearly at the end of her long journey. It was autumn, yet few of the evidences of the dying year were around her. An unclouded sun was pouring his last rays on the verdant foliage of the trees, whose giant arms overshadowed the road through which the carriage wound its way, and the bland air which came wooingly to her cheek, brought with it no chill to the frame of the young stranger.

It was night when she arrived at the plantation of Mrs. Mathews, and she had little opportunity for making observations on the appearance of her new home. When the carriage drove up to the door, nearly a dozen black servants rushed from the house to see who the new comer was; and as Constance alighted from the vehicle, she heard one of them say to his mistress, who was standing on the gallery, "dat it was dat young lady comed, who was to gib young massa and young missuses dere larnin'."

Mrs. Mathews advanced to meet her, with outstretched arms, exclaiming, in an affected tone—

"I am delighted to welcome you to Allingham manor, Miss Beverly. Your society will lighten the tedium of many weary hours; and I am certain, that you will prove a congenial friend—such a friend as my forlorn heart has sighed for since it lost its dear partner. Such a man! my dear Miss Beverly. Ah! my too keen sensibility!" and the lady put her handkerchief to her face, as if much affected.

During this nonsensical tirade, Mrs. Mathews conducted her astonished companion through a wide hall into a large and handsomely furnished parlor, where a fire dispelled the damps of evening. Determined on playing the sentimental, Mrs. Mathews threw herself on a sofa, and sighed deeply, while her sable handmaidens disencumbered Constance of her shawl and bonnet. Miss Beverly then turned to take a look at her hostess.

She was a small, thin woman, with sharp features and a cadaverous complexion: there was nothing striking in her face except its extreme insipidity. She wore black for her husband, but her person was loaded with ornaments; even her large chalky forehead was made to look yet more chalky by having a black band passed across it, and fastened in front by a clasp of jet. She had read of marble brows, and imagined her own one of that class. It was easy to perceive that a desire to shine was her ruling passion, unfortunately combined with no ideas either natural or acquired, except such as had been gained from reading novels. Constance sighed at the prospect of such a companion, but Mrs. Mathews did not long allow her to indulge in reflections.

"My dear Miss Beverly, I have sinned against friendship in not before inquiring of my charming and tenderly beloved Louisa—Mrs. Somers I mean. My eldest daughter is called for her. A charming child, I assure you—such eyes too! exactly like her poor, dear father. (Here the handkerchief was applied.) But about Louisa, she was my *chceramy*, as the French say; we were very intimate—like "two cherries on one stalk," as my favorite poet Gray says. A charming poet—don't you think so?" She stopped to take breath, and Constance

answered, that Mrs. Somers was well, and had entrusted her with a letter, which she would deliver to her as soon as her baggage was brought in.

"Run—fly, Sylvia, and see if Miss Beverly's things are in. I tremble with eagerness to read the missive of my beloved Louisa."

The letter was soon produced, and Sylvia held the light, while her mistress perused the contents of it.

"What a horrid cramped hand Louisa writes! I declare I can scarcely make out what she says."

"Do you think so?" said Constance. "I admire her writing very much. She usually writes well."

A flush passed over the face of Mrs. Mathews, and she hastily answered—"I am no judge perhaps of good writing: I usually judge a hand by the ease with which one reads it."

Constance felt that she had offended, and was at a loss what to say, when two children burst into the room. The boy was screaming at the top of his voice—

"Ma—ma—has that 'oman come to make me stay in the house, and learn bad lessons? I won't learn—I will play with Pooto, and go with big Jim to shoot squirrels."

"Yes, my dear love, you may, but you can say your lessons also, won't you my son? I know mama's pet, her own dear pet, will be a good child and mind Miss Beverly, won't he?"

"No, I won't," screamed the child. "I don't choose to learn, nor to mind nobody but big Jim, when he tells me to come with him and shoot squirrels."

"Go away then, you naughty boy. Mama won't have you for her boy. I will send you out to mammy Sue, and tell her to keep you with the little negroes."

"But I shan't go, Miss. I'll knock mammy Sue down." So saying, the young hopeful rushed out again.

In the meantime, the little girl had drawn close to Constance, and was gazing on her with a mixture of admiration and fear.

"Come here, my dear," said she to the child, "I wish to become acquainted with you."

She approached timidly, and raised her large soft eyes to her face. She was about eight years of age, with a fairy-like figure, and a face which promised to be beautiful. Pleased with the softness of Miss Beverly's manner, she was soon won to stand beside her, and answer the questions she put to her. Mrs. Mathews left the room to call her eldest daughter, and the little girl came closer to her new acquaintance, and whispered—

"Mama has gone for Louisa—pray do not love her so much more than you do me. I should like you to love me."

"Why should you think so, my dear? If you are good, I shall love you both alike."

"Ah, no—you cannot. I try to be good, but mama loves Loo the best. She never calls her a little pest, or refuses to kiss her."

Constance imprinted a kiss on the fair brow, whose brightness was shadowed, even at her age, by the culpable preference of a parent for one child before another.

At that moment, Mrs. Mathews returned, leading by the hand a girl of ten—the very counterpart of herself. "I bring you a new claimant on your affections, Miss Beverly. My dear Louisa, hold up your head, and

speak to your governess. She is very bashful, and you must excuse her. You will find her quite a different child from Mary—much more tractable. Mary, I am sorry to say, is not all I could wish—you will find her difficult to manage—I can do nothing with her."

"Oh, mother!" said Mary, bursting in tears.

"There it is! you great baby, you cry if any one looks at you. Go to bed—get out of my sight—you cannot behave yourself!"

Thus was a child of great promise, and extreme sensibility, treated by her only parent, while the two who needed correction were suffered to act as they pleased, and completely tyrannized over their weak mother.

"I flatter myself, that you will find Louisa all you could desire a pupil to be," continued Mrs. Mathews. "Her mind is admirable, I assure you: I am qualified to pronounce a judgment on it, for I have taught her for some time myself. Come here, my dear love, and let Miss Beverly hear how well you understand geography."

Miss Louisa sullenly approached her mother.

"Tell me, my dear love, what is the shape of the earth?"

"Flat."

"Flat! my love, you forget—try again."

"I say it is flat; for, if it wasn't, we'd all fall off it."

"Fie, fie, Louisa! you should remember better. Now tell me where the Mississippi (that great river we sailed down in the steamboat) empties?"

"In the Pacific Ocean."

"Very well said; now come, and give mama a kiss. Now, tell Miss Beverly, what range of mountains that is which crosses Africa."

"The Andes," said the child, "the loftiest mountains in the world."

"There is a charming child. You will really be quite a prodigy. Go now, with Sylvia, and get an orange for your cleverness."

Away ran Miss Louisa, and Constance sat in mute astonishment, at the extent of the mother's ignorance, while Mrs. Mathews went on:

"Louisa is so much like her father, that really my heart glows with unremitting affection for her. Like the tendrils of the vine clasping the oak, she has wound herself around my heart until it would be death to part us. Oh, Miss Beverly, no affection yields so much delight as parental affection! To see the sweet blossoms opening around us, gives brightness to the darkest hours."

Constance assented with a smile, hoping that something like natural feeling was concealed beneath all this affectation and folly. Alas, for poor Constance! condemned to associate with a being so much beneath her in the scale of intellect, she looked forward to a life of wearying duties uncheered by companionship of mind or feeling. She wept bitterly on retiring to rest; but she gradually became more calm as she prayed for support from "Him who heareth the orphan's cry," and resigned herself to his care.

The following morning was calm and bright—the sun was just gilding the tree tops, as she stepped out on the gallery and looked around her. It was yet early in autumn, and the trees wore not their "sere and yellow" livery. Allingham manor was one of the finest plantations in the state, and the late proprietor had spared no expense to render it a pleasant residence for

his family. The house was spacious and airy: in front of it was a large reservoir of water, surrounded by the most beautiful shrubbery. China trees, with their bright green leaves and yellow berries, were scattered in groups over the large yard, beyond which, were the extensive fields, spreading on three sides, as far as the eye could reach, white with the cotton balls, which about a hundred negroes were engaged in gathering, while their merry songs greeted the ear.

While leaning against one of the pillars which supported the roof of the gallery, and thinking of her absent friends, Constance felt her dress pulled, and looking down, she saw Mary with a bouquet of beautiful flowers—many of them entirely new to her.

"Thank you, my dear. This is a charming bunch of flowers—I must pay you for them with a kiss. As she spoke, she seated herself beside the child on the upper step of the gallery. Mary threw her arms around her, and, exclaiming, "Ah, if you will only love me!" burst into a hysterical passion of tears.

"Poor little dear," said Constance, folding her in her arms, "you must have been strangely neglected by those whose duty it was to love and cherish you. I will love you, indeed, my sweet Mary, if you will be a good child."

"Indeed—indeed, I will try. Father loved me, and why should not you?"

At that moment, Mrs. Mathews issued from the house. After the usual salutations of the morning, she commenced—

"So you have been looking around you this morning. I hope you are pleased. I flatter myself that Allingham manor has one of the most *demanding* prospects in the country, and I consider myself a good judge, as I have travelled entirely over the state of Rhode Island, and through New York and Ohio, besides coming down the Mississippi: I call that being pretty much of a traveller. My poor dear husband was always wishing to travel: he desired to go to Europe. Every body talks of Europe, and wants to go there; but for my part, when I go a travelling, I am determined to be singular; I shall not put my foot in Europe, I shall only go to Italy. That is the land of "beauty and of bloom," as that divine writer, Sir Walter Scott, says. Have you ever read his "Pleasures of Hope?"

"No, madam," said Constance, I did not know that such a work had been written by him."

"Bless me, Miss Beverly, you don't say so. Mrs. Somers told me that you knew everything, and I certainly expected you to be acquainted with the literature of the day. I wish you to form the literary taste of my daughters. Loo is passionately fond of poetry, and already repeats some sweet poems by heart."

"I am pleased to hear that she has a taste for reading, as I shall have less difficulty in teaching her. Your youngest daughter appears to be a very interesting child."

"That is what Colonel Maitland says; but for my part I cannot see what anybody can fancy such a dull little animal for. She is always moping about, and never has anything amusing to say, like her sister. Now Loo is as lively as a cricket. Mr. Mathews was very fond of Mary, and called her his little genius; but what she has a genius for, I never could discover. I could never teach her anything; she would not even

learn that charming ode to the Robin Redbreast, which her sister repeated for Col. Maitland the last time he was here."

"But mother," said Mary, timidly, "you know Col. Maitland laughed at Louisa's mistakes, and told me not to learn to make myself ridiculous."

"No, Miss, I did not know it. Ridiculous, indeed! I would thank Col. Maitland not to be making you more unmanageable than you already are, by such speeches. I shall tell him of it. Ridiculous, indeed! Come, Miss Beverly—I hear the bell for breakfast; let us go in."

During the time they were at the table, Mrs. Mathews continued to pour forth the same volume of words, and Constance wondered when she found time to eat. The silly conversation of the mother was varied by occasional reproofs to her daughters for any little improprieties; but the son Bad (as she very affectionately called him,) was allowed to act as he pleased. He reached over the table and helped himself—called to the attendants every moment to bring him what he could not get hold of, and ended by throwing a fork at one who did not move fast enough to please him.

"What independence! what charming spirit he has!" said the mother, addressing Miss Beverly. "I would not check him for the world; it would destroy the germ of that dignity and independence which the manly character should always possess. My son, I flatter myself, will be a noble fellow."

"How am I ever to manage this creature?" thought the dismayed Constance. "He seems to me beyond the pale of civilization."

When she was ready to go into the school-room, she inquired of Mrs. Mathews if her son must be taken in school with the two girls?

"Oh, by all means. I will send him in, but you must be kind and affectionate to the dear child. He has never been used to severe measures. I will accompany you to the library, which I have converted into a school-room. Here is food for the mind," continued she, as they entered a large room, the walls of which were lined with book cases and maps. She threw open the doors of a case filled with novels and poetry. "Here you will find everything in the literary line. Here are *The Forty Thieves*, written by the inimitable Scott. I wonder if he was a native of Turkey—he knew so much about the manners and customs of the Turks. Ah no, I forgot; as you are not *or fide* to the literary characters of the day, as the French say, I will tell you his history. He was not a Turk, but an Englishman, who kept guard over Napoleon, and wrote his life from his own confessions. Because his name is Scott, he took a fancy to Scotland, and wrote some pretty things about the people. *The Cotter's Saturday Night* and *Tam O'Shanter* are his most creditable productions, though for my part I think he is very much overrated. What can be more vulgar than to write about a dirty cottager coming home from his daily labor? There is no fancy—no elegance in such stuff. Talking about poetry, reminds me of a piece given to me last week by a friend. I think it a sweet, pretty effusion—it was written on my performance on the piano. I will show it to you."

She took a rose-colored note from a small basket on the centre table, and opening it, commenced—

"Ah little did you know the feelings of me,
As I stood by the side of your piano-forte."

What was to follow this precious morceau, can never be known; for at that moment a terrible noise was heard coming toward them, and Mrs. Mathews escaped from the room, exhorting Constance to be "gentle to the dear little creature." An athletic black entered, bearing Master Hopeful on his back, kicking and screaming with all his might. The negro's face bore evident marks of a conflict with his turbulent burthen.

"I tell you, big Jim, put me down, and let me go, or I will put my ten commandments in your face," making an effort, as he spoke, to claw the cheeks of the negro.

"No, no, young massa—me no let you go. You cum say you lesson fust. Missus say you mus stay in de school room."

So saying, he deposited the boy on a cricket, by the side of Constance. The servant went out, and the child made an effort to rush after him, but was prevented by the key being turned on the outside. Constance suffered him to lie on the floor and kick against the door, until he became exhausted, and fell asleep. She then selected a large book, filled with colored engravings, hoping by degrees to interest him in acquiring the elements of education.

It is not my purpose to give an account of the many weary days she spent in bringing her pupils into anything like subjection. Henry showed both good feeling and quickness when they were fairly brought into play. Louise, in character, as well as person, resembled her mother. Superficial, vain, and fond of display, she thought more of adorning her little person, than of attending to the instructions of her governess. Mary had many faults, but they were those of an ingenuous and high-spirited child, who had been treated with injustice by her parent. Highly gifted she certainly was; she possessed all that precocious talent which is said by the superstitious to be given only to the early doomed; and when one looked into her deep dark eyes, they could not but yield to the belief, that their sad expression betokened the early fate of their interesting possessor. She attached herself entirely to Constance, and in all her rambles, Mary was her constant companion.

"What can be the reason Col. Maitland does not call?" said Mrs. Mathews some weeks after the arrival of our heroine. "I never knew him to stay away so long before. You will find him a man of fine information, Miss Beverly—quite a savañ, as the French say."

"Who is this Col. Maitland?" thought Constance, for his name was so continually rung in her ears that it was impossible not to think of him. That he was a man of sense and judgment she was certain, from the remarks she had heard quoted, as coming from him. Some superannuated bachelor, thought she, "who wears a wig and takes snuff." We always form our beau ideal of a person who has been much spoken of to us—this was Miss Beverly's of Col. Maitland.

He at last called. She was sitting alone in the parlor when a servant threw open the door and announced Col. Maitland. Constance looked up: a man who could not have numbered more than twenty-six summers was before her, strikingly handsome, yet strangely awkward; for he stood as if transfixed to the spot.

Constance sunk on the seat, from which she had

risen on his entrance—one moment pale as death, and the next, cheek, neck, and brow in a crimson glow. Maitland was the first to recover; he advanced, and bowing, said with assumed coldness—

"Will not Miss Beverly recognize an old friend under a new name?"

"I did not know—I was not aware that—that—"

"That I had changed my name, you would say. I believe it is not often customary with my sex. You are aware that I went to Scotland to visit my maternal grandfather: by a clause in his will I took his name, when I inherited his estate."

There was a pause which was broken by Constance. Putting considerable constraint on her feelings, she endeavored to speak calmly. "I was not informed of your residence in this neighborhood, or I should not have accepted the situation in this family which has brought me here."

"Situation! Good Heavens! Con—Miss Beverly! You are not the governess who is engaged by Mrs. Mathews?"

"The same."

"What! you! Constance Beverly—the courted—the admired—the accomplished coquette, a governess! How came this to pass?"

"By a common reverse. My father died insolvent. I would not be dependant on others, while I possessed the means of procuring my own subsistence; and Miss Beverly in her hour of triumph never felt prouder than now, for she feels that she is independent."

"Noble—admirable Constance! Yet, I see that the pride of your nature is not subdued. To that pride I owe—"

"Say no more," said Miss Beverly, rising with dignity. "I was not aware until we met, that you had returned from Scotland. Let the past be buried in oblivion by both. We must meet as strangers; I could not bear that our former acquaintance, and all connected with it, should be known to Mrs. Mathews."

"Oh, Constance!" said Maitland, with an impassioned air, "why bury the past in oblivion? To me it has been the talisman to preserve my heart from all other impressions. You once said that—yet why recal it to your mind, cold, proud beauty—trifling with the hearts you have won with as little remorse as—"

"Col. Maitland you forget yourself—I must leave you. Remember that we meet as strangers." And she glided from the room and hurried up stairs. Poor Constance! what a tide of deep emotion was struggling in her heart!

Three years before, she had parted with George Ogilvie almost a plighted bride. He had been summoned to Scotland to see his grandfather, whose heir he was, previous to the old man's death. The father of Ogilvie and Mr. Beverly were friends, and at an early age George was placed in the counting-house of the latter to learn the routine of business. His father died, and from that time young Ogilvie became an inmate in the family of Mr. Beverly. Constance was then a fair girl, just bursting into womanhood. She was not strictly beautiful, but few looked on that charming face who did not look again with renewed delight.

"Where were such dark eyes as hers?
So tender, yet withal so bright,

As the dark orbe had in their smile
Mingled the light of day and night.
And where was that wild grace which shed
A loveliness o'er every tread,
A beauty shining through the whole,
Something which spoke of heart and soul."

The radiant expression and brilliant eyes of Miss Beverly, made her the belle of the season. Followed, flattered, almost worshipped, Constance laughed, flirted and danced with every cavalier, though it was only in her home that she really suffered her feelings to come in play. Ogilvie was proud, sensitive and retiring; and it was not until the eve of his departure, that he unfolded his feelings to the being in whose presence he had only lived for months past. Constance—the proud—the admired Constance, listened with a cheek suffused with blushes, and a trembling of the heart which sufficiently informed her of the state of her feelings. Her father would not permit a positive engagement to be formed. He suffered the lovers to correspond, and on the return of Ogilvie, if both continued true to their vows, he was willing that they should be united.

They parted, and Constance was to all outward seeming still the same; "yet a change had come o'er the spirit of her dream." Her heart was no longer in the revel, though her eye shone brightest, and her step was lightest, where all was gay and fair to view: even when music filled the gay saloon, and the voice of flattery was pouring its honeyed words in her ear, her spirit was on the deep waters with her betrothed—her fancy picturing him to her as dreaming of his absent love.

Letters came from Maitland, breathing the most passionate devotion, and Constance read them again and again, and thought, that until absence had proved the depth of her affection, she had not known what love was. The absence of her lover was prolonged from month to month, until a year had elapsed. He then wrote that his grandfather would not consent to part from him, and the old gentleman might linger for years in the state in which he then was. He told Constance that it wrung his heart to give up the only hope that made life desirable; yet, he could not be so ungenerous as to ask her to spend her youth in waiting for the return of a lover, who might be detained from her for years by the imperative claims of duty.

Constance was wounded where she was most vulnerable. She had never dreamed of any contingency that could influence her to break the engagement which had been formed from the purest motives of affection. She compared the feelings of Maitland with her own, and in her heart she felt that "man's love is of man's life a thing apart," and not worn as hers had been, in the inmost sanctuary of the spirit, until it had become to her as a part of her existence. He was willing to give her up, without leaving her the liberty of choosing between the evil of waiting years for his return, or seeking in newer ties forgetfulness of the dreams which had woven their spells around her soul. Had she loved him less, her pride had not felt the blow so keenly, but the wound was dealt by the hand which should have been raised to shield her.

She wrote to him a cold, formal letter. It seemed to her as if an ice-blast had passed over her soul, chilling and desolating it forever; and the language she

addressed to Maitland, was well calculated to leave the impression on his mind that she considered herself freed from a galling chain, in breaking the engagement she had formed with him. Several letters subsequently came, addressed to her by Maitland, but she did not open them. She had determined to obliterate the past from her memory as far as possible, and every memento she possessed of her absent lover, was either destroyed or returned to him with all the letters he had ever addressed to her.

In their envelope, she merely wrote—"Let the past be forgotten. You are free. It is useless to address me again, as I have determined to return all letters unopened."

A few months afterwards Mr. Beverly died, and his daughter found herself reduced from the station of an envied heiress, to the necessity of using her talents for her own support.

In the meantime, the elder Maitland had also died, bequeathing his estate to his grandson, on the condition of his assuming his name. A few days after his death, the young heir received Miss Beverly's answer to the letter, which he now bitterly regretted having written. He accused her of being fickle, cold hearted, and tried to think he was well pleased that such a woman would never be his wife, but it would not do. He remembered the pride of Constance, and attributed her coldness to the right source. His answer was all that the most exacting affection could have required, but it was never read by her. It was not until every trifling gift that he had ever bestowed on her was returned, that he felt the uselessness of endeavoring to rekindle the flame of love from the ashes of a former passion.

He returned to his native country, rich in the gifts of fortune, yet without a tie to bind him to the life which her smile had once brightened. He could not bear to visit the city in which Constance resided, and after landing in New York, he proceeded on a tour through the western and southern states. He had been well acquainted with Mr. Mathews some years before his departure from America, and was induced by him to purchase a plantation adjoining his own. There he had been residing a year when he was introduced to the reader.

Had Maitland met Constance in her former sphere, sought for and caressed by all, he would have shunned the renewal of all intercourse, believing that she would have been best pleased by his apparent neglect; but he had seen her now pale and dejected—far from all who had loved and cherished her in her days of prosperity. He observed that her figure had lost much of the elastic buoyancy which once distinguished it, and there was an expression of subdued sorrow in the countenance that spoke to his heart. Was it for him she sorrowed, or only for the station she had lost? He recalled Constance Beverly to his mind all radiant in beauty, health and happiness, as he had last seen her; and as he stood there alone where she had left him, he unconsciously murmured—

"Since we were doomed to part,
They say that changed thou art.
Oh, can they speak of change for one like thee?
Is that brow pale and worn
Where once there sat such scorn?
Is that step fettered, once so glad and free?"

"Oh, Constance—Constance! never half so dear as now: you must—you will be won to listen to me again."

Mrs. Mathews entered.

Months passed by, and Constance and himself indeed met as strangers. All Maitland's efforts were ineffectual to overstep the line which she had drawn between them. His advances were met with such coldness, that at times, he was almost tempted to doubt that she had ever loved him. Yet he saw that when he entered, her pale cheek flushed, and he had detected a tremor in that small, fair hand when he approached, and praised the drawing on which she was occupied. All these signs convinced him that the past was not a forgotten dream.

One evening Mrs. Mathews left the room a short time—the children also were absent. It was the only time they had been alone since the morning of their first interview.

"Constance," said Maitland, "is this fair?—is it generous, thus to trample on my feelings? Do not look incredulous or surprised—you know I love you still."

"The love that wanes in absence is not such as I can prize," she replied, in a low unflinching voice. "Had we never met again, I had not been thought of but as one with whom it was pleasant to amuse an idle hour."

"By Heaven, this is too much! After all I have suffered, to be thus addressed! Oh, Constance, was it nothing to see my aged relative—the only one I knew in the world, raising his palsied hands to me, and begging me to have pity on his age—his grey hairs, and stay with him so long as life was given him? I struggled as long as I could against his entreaties. I consulted his physicians—they said he might linger for years—could I do less than free you from the ties that bound you? I fondly hoped that your answer would convey to me the assurance of unchanged love, and tell me that time and absence could not dim your affection. Oh, Constance, how different were your words!"

"Yes—they told you that you were also free. Think you that I could have held you by the ties of honor, when I saw that those of affection were already broken? No, sir—cease your endeavors to recal feelings which for my own happiness should be forgotten. Had you loved me as I would be loved, that letter had never been written—your own heart would have taught you to trust in the fidelity of mine."

At that moment, Mrs. Mathews returned, and Constance immediately retired.

"Well, Miss Beverly," said Mrs. Mathews, some weeks afterwards, "what do you think of Col. Maitland? You have known him now quite long enough to form a judgment of his character."

"I think he is a gentleman, and a man of great intelligence," said Constance quietly.

"Ah, everybody can see that; but don't you think him very handsome? For my part I think he is the handsomest man I ever knew, except my poor dear husband. Don't you think Mr. Mathews was finer looking?"

As she spoke, she raised her eyes to a portrait of her husband which hung in the room. Constance could scarcely refrain from laughing, as she looked at the fat jolly Falstaff of a man which the picture represented, and mentally contrasted him with the elegant intellec-

tual Maitland. Without waiting for her answer, Mrs. Mathews went on.

"The Colonel is a fine man, and takes such an interest in all that concerns me and my children. He is their guardian, you know; but that can scarcely account for the deep interest he takes in the children. He was praising their improvement yesterday, and he said you controlled them admirably; but you cannot think how astonished he was when I told him you did not know who wrote the Pleasures of Hope. He said that was very extraordinary for a young lady of your acquirements."

For an instant the brow of Constance was scarlet, and a dimness came over her vision as she listened to the insinuations which Mrs. Mathews desired to throw out, regarding the admiration of Col. Maitland for herself; but she recovered immediately, and only smiled at the close of the speech. She had long seen that little persuasion would be necessary to induce Mrs. Mathews to throw aside the widow's weeds and become the bride of Maitland, but that such persuasion would ever be offered she had every reason to doubt. It was not without pain that Constance heard Mrs. Mathews go on with her revelations; for in the months of almost daily intercourse, since her arrival in the country, she had in vain endeavored to keep her feelings under her own control. In spite of herself, her heart bounded, when she heard that step for which she had been unconsciously listening, and her eye would light up with a welcome she would fain have concealed. She feared that Mrs. Mathews had penetrated the veil she sought to throw over her feelings; and the present confidence was intended to crush in the bud every hope she might have cherished.

"Col. Maitland has not made any propositions to me yet, but I think his daily visits warrant the expectation of his soon doing so, and my duty to my sweet children would not allow me to refuse so unexceptionable an offer. My dear Mr. Mathews would, I know, be pleased to see our union, could he look down from his bliss abode and see what my motives are for marrying a second time."

Constance had no reply to make, and so soon as she could escape, she went to her own room to commune with her own thoughts, but not "to be still;" for what peace could there be for her heart, when she found it so deeply enthralled by a passion which she had made every effort to conquer? Pride had proved but a feeble barrier when opposed to the whisperings of affection. Maitland was daily beside her, offering the delicate flattery of unobtrusive attention to all her wishes, and looking the language which he would not permit his lips to utter: yet, when tempted to yield to the suggestions of her heart, the remembrance that he had once voluntarily resigned her, would cross her mind, chilling her again, and enabling her to support her outward show of calmness and indifference.

That evening Maitland spent at Allingham manor, and poor Constance felt that the small unmeaning eyes of her hostess were fixed on her with a scrutinizing expression whenever he addressed her. Mary, as usual, was hanging around her; and wishing to play the amiable before Maitland, Mrs. Mathews called to the child—

"Come here, Mary; Miss Beverly has entirely won

your affections from me: come, and read to me out of this pretty little book, and let the Colonel hear how well you read."

The child obeyed, and read a short description of a pastoral scene. Maitland complimented her on her improvement, and turned to address Constance.

"But mama," said Mary, "when I read to Miss Beverly, she tells me the meaning of all the words I do not understand. What is meant by ruminating animals?"

"Ruminating animals, my dear—why ruminating animals are—how shall I make you understand what they are? A familiar illustration will do I suppose. Why my child, Sylvia's little baby is a ruminating animal—all little babies are ruminating animals."

"La! ma," said Louisa, "how can you say so? Miss Beverly told me, only yesterday, that cows and sheep were ruminating animals."

"Well, my dear Louisa, are not innocent little babies lambs? I am sure that makes them ruminating animals."

"But I don't think it does, mama, for I am sure——"

"Hold your tongue, you impertinent! Go up stairs directly, and stay there. You shall learn how to believe what I tell you without *dementing* on it."

Louisa walked off in a sullen manner, and Constance endeavored to look as if she had not heard what was said. She glanced at Maitland, and saw that in spite of his habitual self-command, a smile was on his lips.

The heats of summer now prevailed, and for some weeks Mary had appeared languid and dull. She was, at length, seized with a violent and infectious fever. Terrified at the prospect of taking it, her mother seldom entered her apartment, or allowed either of her other children to do so. Constance, assisted by the faithful slave who had nursed the child, watched over her without intermission. Maitland called every day, and regularly came up to the sick room to see his little favorite, in defiance of the remonstrances of the unnatural mother. After a week of intense suffering, she awoke from her delirium, and recognized Constance.

"My dear Miss Beverly, is this you? I have been very ill—I believe I am going to die and leave you; but I am not sorry to live in Heaven with angels, for they will be kind to me as you and Col. Maitland are. Don't you love him, Miss Beverly? I am sure, as good as you are, he loves you."

"Hush—hush, my sweet Mary, and do not talk so wild."

"But I must talk now, for it is the last day I shall be with you to talk. I am going away to see father."

Thus the gentle child conversed with the weeping Constance until near night, when she closed her eyes from exhaustion. Suddenly she started, and exclaimed, "Is he come?"

"Yes, my dear Mary, I am here," said Maitland, as he entered.

"Bend down your ear to my lips," said Mary. She then whispered, "Now I am going away, you will love Miss Beverly as I love her, won't you? She will have nobody but you to love her when poor Mary is gone."

"Yes, my dear little girl," said Maitland, in an agitated tone, "I will love her much better than you do, if she will suffer me to do so."

Constance was supporting the head of the sufferer on

her bosom. Her eyes met those of Maitland, and that tearful glance repaid him for many moments of unhappiness. Claspings the hand that lay on the white coverlid, he exclaimed—

"Sacred be the contract formed over the bed of the dying innocent. May Heaven forsake me, Constance, when I prove untrue to the sacred trust."

The tears of Constance were flowing fast, but the pale face of the child lighted up with an expression of affectionate joy, as she turned her dying eyes on the face of her beloved governess, and murmured—

"I am very happy: kiss me, dear Miss Beverly"—and with the words her spirit passed away.

When Mrs. Mathews was informed of the engagement between Maitland and Miss Beverly, she accused the latter of treachery; said she had warned a serpent in her bosom who had stung her to the heart. In short, acted all the extravagances of a silly, disappointed woman.

Constance could not think of remaining in her house after such language had been used to her, and she accepted an invitation from the lady of a neighboring planter with whom she had formed an intimacy, since her residence in the country, and remained with her until claimed as a happy bride by her early lover.

A few weeks after her marriage, a letter from Mrs. Somers reached her. The following is an extract:

"Well, my dear Constance, for once in my life I practised a successful *ruse*. You will forgive me for entrapping you into living with such an unideal piece of affection as Caroline Mathews, when you know that I was aware of your attachment to Maitland, and was informed of his residence near her. All has turned out as I anticipated, and now accept the heartfelt congratulations of your friend, and her prayers for your future happiness."

THE FAR WEST,

AND ITS NATIVE INHABITANTS.*

The region thus named, has receded from the view of dwellers near the Atlantic, as Will-o'-the-wisp, or the horizon does, before the advancing traveller. Men of thirty five years old can remember, when central Kentucky was the 'Far West.' Then, the shores of the Mississippi became so: then, the country some fifty or a hundred miles towards the interior of Missouri: then, successively, the Osage, and Kansas, and Yellow-stone regions. But now, nothing short of the vast and diversified territories west of the Rocky Mountains, answers to that expressive term. There, stopped by the Pacific ocean, the Far West must perforce cease its flight; or, should it essay a passage yet further, and perch upon the islands in that broadest expanse of waters, it will encounter the 'Far East,' a long prior occupant of them.

* The paper which follows, relates mainly to Washington Irving's late work, "*The Rocky Mountains, or Scenes, Incidents, and Adventures in the Far West*:" digested from the journal of Captain B. L. E. Bonneville, U. S. A., and illustrated from various other sources." 2 vols. 12mo.

Of all entertaining and intelligent explorers of the present "Far West," namely, the Rocky Mountains, and the regions beyond,—commend us to Captain Bonneville, of the United States Army; especially, with Geoffrey Crayon to sketch the history of his travels for him. Having been deeply interested by hearing the Captain recite the incidents and adventures of several years spent by him in a most romantic and spirit-stirring exploration of that region, Mr. Irving (nothing loth, it may be conjectured) took upon him the task of reducing those written and oral narratives to an attractive form. Adding to these, much gathered elsewhere, he produced the two volumes mentioned in our note.

CAPTAIN BONNEVILLE went, with the sanction of the United States' government; but all that it gave him was a poor leave of absence from his military duties, from August, 1831, till October, 1833; the whole enterprise to be at his own cost. With the object of exploring the country, he combined that of trapping beaver and shooting buffalo: and such were the dangers and difficulties in prospect, from the distance and character of the region to be traversed, the jealousy of rival hunting companies (English and American), and the hostility of Savage tribes; that a strong corps, well armed, equipped, and provisioned, was indispensable. Captain B. was so successful in his preparations, as to set out early in May, 1832, from Fort Osage, on the Missouri, with one hundred and ten stout and active men; many of them expert hunters. Instead of pack-horses, usually employed in such journeys, twenty wagons carried the baggage. The advantages of this plan were almost from the first counterbalanced by the necessity it produced, of bridging, or digging roads, over innumerable deep ravines cut through the prairies by winter torrents: and soon after attaining the high, rugged tract which may be regarded as the base of the Rocky Mountains, the dryness of the atmosphere so contracted and loosened the joints of the wheels, while the ground became so impracticable for wagons, that they were necessarily thrown aside. Our adventurers, from near the mouth of the Kansas River, struck off due West; instead of ascending the Missouri, which would have led them more northwardly. Their journeyings, almost entirely over vast plains more or less undulating, though constantly rising towards the west; sometimes sterile, sometimes rich, and generally destitute of tree or shrub; brought them, on the 2d of June, to the Nebraska, or Platte River, far above its junction with the Missouri. On the 11th, they reached the fork of the Nebraska; one of its branches coming from the south-west, near the head waters of the Arkansas, the other from the west, where lay the Rocky Mountains. Up this latter they resolved to go. Still ascending the southern prong however for two days, to find a practicable crossing place, they ferried their goods over it (where it was six hundred yards wide) in extempore boats, made by covering the wagon bodies with buffalo hides, besmeared with a compound of tallow and ashes. Thence they passed, over high-rolling prairies, swarming with buffaloes, to the north fork, nine miles distant. On the 17th, they reached a small but beautiful grove, where they heard, with inexpressible delight, the first notes of singing birds that had greeted them since they left Missouri. 'It was a beautiful sunset, and a sight

of the glowing rays, mantling the tree tops and rustling branches, seemed to gladden every heart.' They pitched their camp in the grove, kindled their fires, partook merrily of their rude fare, and resigned themselves to the sweetest sleep they had enjoyed since their outset upon the prairies. Mounting higher and higher towards the mountains, they began to see the black-tailed deer, a large kind, frequenting mountainous countries. From a commanding peak, Captain Bonneville saw the surrounding plains, as far as his eye could reach, blackened by countless herds of buffalo. Near this place is a natural curiosity called the Chimney. From the top of a conical mound four hundred feet high, rises a shaft or column of nearly petrified clay, with alternate layers of red and white sandstone; one hundred and twenty feet high. It is visible thirty miles off. The scenery grew at every step more wild and striking. Towards the 26th of June, flocks of the *aksakta*, or *bighorn*, occurred. This animal, sometimes called the mountain sheep, frequents cliffs and crags; 'bounding like goats from crag to crag; often trooping along the lofty shelves of the mountains, under the guidance of some venerable patriarch with horns twisted lower than his muzzle; and sometimes peering over the edge of a precipice, so high that they appear scarce bigger than crows.' The bighorn has the short hair and the shape of a deer; but the head and horns of a sheep: and its flesh is excellent food.

By observations taken about this time, Capt. B. ascertained his latitude to be $41^{\circ} 47'$ north; and his longitude $103^{\circ} 57'$ west of Greenwich, or $25^{\circ} 57'$ west of Washington.

Our adventurers were now in the territory ranged over by the Crow Indians: 'one of the most roving, warlike, crafty, and predatory tribes of the mountains; horse-stealers of the first order, and easily provoked to acts of sanguinary violence.' The hunters one day came galloping in, waving their caps, and giving the alarm cry of "Indians! Indians!" Instant preparation was made for battle; the Captain leading on, slowly and cautiously.

"In a little while he beheld the Crow warriors emerging from among the bluffs. There were about sixty of them; fine martial looking fellows, painted and arrayed for war, and mounted on horses decked out with all kinds of wild trappings. They came prancing along in gallant style, with many wild and dextrous evolutions, for none can surpass them in horsemanship; and their bright colors, and flaunting and fantastic embellishments, glaring and sparkling in the morning sunshine, gave them really a striking appearance.

"Their mode of approach, to one not acquainted with the tactics and ceremonies of this rude chivalry of the wilderness, had an air of direct hostility. They came galloping forward in a body as if about to make a furious charge, but, when close at hand, opened to the right and left, and wheeled in wide circles round the travellers, whooping and yelling like maniacs.

"This done, their mock fury sank into a calm, and the chief approaching the captain, who had remained warily drawn up, though informed of the pacific nature of the manœuvre, extended to him the hand of friendship. The pipe of peace was smoked, and now all was good fellowship."

After some further friendly intercourse, the parties separated, and continued their respective marches. The elevation now attained, had become manifest by

"the effect of the dryness and rarefaction of the atmosphere upon his wagons. The wood-work shrunk; the paint boxes of the wheels were continually working out, and it was necessary

to support the spokes by stout props to prevent their falling asunder. The travellers were now entering one of those great steppes of the far west, where the prevalent aridity of the atmosphere renders the country unfit for cultivation. In these regions, there is a fresh sweet growth of grass in the spring, but it is scanty and short, and parches up in the course of the summer, so that there is none for the hunters to set fire to in the autumn. It is a common observation, that 'above the forks of the Platte the grass does not burn.' The great elevation of these plains, and the dryness of the atmosphere, will tend to retain these immense regions in a state of pristine wildness.

"In the course of a day or two more, the travellers entered that wild and broken tract of the Crow country called the Black hills, and here their journey became toilsome in the extreme. Rugged steepes and deep ravines incessantly obstructed their progress, so that a great part of the day was spent in the painful toil of digging through banks, filling up ravines, forcing the wagons up the most forbidding ascents, or swinging them with ropes down the face of dangerous precipices. The shoes of their horses were worn out, and their feet injured by the rugged and stony roads. The travellers were annoyed also by frequent but brief storms, which would come hurrying over the hills, or through the mountain defiles, rage with great fury for a short time, and then pass off, leaving every thing calm and serene again."

We will not trace their route minutely; far less attempt to abridge the interesting account of its varied incidents. Suffice it, to give a faint outline of the movements of Captain Bonneville himself; without regard to those of the various bands or 'brigades' of hunters, trappers, and explorers, detached by him from time to time.

Leaving the Nebraska, or main branch of the Platte, he crossed over to the Sweet-Water, a more southerly prong of that river: and on the 20th of July, caught a near and distinct view of the Rocky Mountains. It was that part of them, called the Wind River Mountains. Passing around the south-eastern extremity of these, he, on the 24th of July, left the Sweet-Water; and in seven hours and a half more, arrived upon a stream running south-westwardly, containing very fine trout. This he knew to be a tributary to the Pacific; and it proved to be a branch of the Colorado of the West, by the Indians called *Seeds-ke-dee*, or *Green River*; falling into the Gulf of California. On this river he remained encamped, hunting, and acquainting himself with the country, its Indian inhabitants and its white visitants, until the 22d of August; when he moved northward, towards Salmon River, a branch of Snake River, which by uniting with Clarke's, forms the Columbia. His baggage was carried in packs, three to a mule, or pack-horse. The route lay along the western, or rather south-western side, of the Wind River Mountains; which were capped with perpetual snows. Indeed, the next year, Captain B. ascended one peak of them, which he supposed the highest in North America. But it is doubtless exceeded by one in the more northwardly part of the Rocky Mountains; recently ascertained by trigonometry and the barometer to be 25,000 feet high: overtopping Chimborazo, and any other known mountain, except the highest of the Himalah chain. With the Wind River Mountains on his right, and varying scenes of knobs, forests, prairies, and an immense lava plain spreading south of Snake River, on his left, Captain B. pursued his difficult and perilous march until, in September, he reached the waters of Salmon river, and the roaming ground (rather than the domain) of the Nez Percés (or Pierced Nose) Indians*.

* Called by the trappers, *Neperey* Indians.

His whole intercourse with this tribe leaves it doubtful whether the reader should most pity their wretched poverty (the consequence of their total want of energy), or admire their docility, and kindness of nature. At the first meeting, they had been hunting, but all their provisions were exhausted, except a few dried salmon; and they were nearly famished. 'Yet, finding the white men equally in want, they offered to share even this meagre pittance; and frequently repeated the offer, with an eagerness that left no doubt of their sincerity.'

On the 28th of September, Captain B. halted, to go into winter quarters. Among the twenty men whom he kept with him (sending out the rest in detachments, to hunt), extreme scarcity prevailed, as the buffalo had been driven away by the Indians. Hunger often had to be appeased with roots, or the flesh of wolves and muskrats. Some Nez Percés families who joined them exhibited a still greater degree of suffering. They had not a morsel of meat or fish; nor other food, 'excepting roots, wild rose buds, the barks of certain plants, and other vegetable productions.' Yet they neither murmured nor complained; and even gave a part of their poor supplies to our travellers. These rude and poor people had a deep infusion of religious principle. They refused to join a hunting party of Captain Bonneville's men, on a day which the Great Spirit had made sacred; even though starvation imminently threatened them. And their honesty, and purity of purpose, were truly extraordinary. They had derived, perhaps from California, perhaps from Canada, some idea of Christian doctrine, which had fixed deeply in their minds, and operated strongly upon their conduct. To these gleams of knowledge and faith, Captain B. added largely by his instructions; which were imbibed with greediness by his docile disciples.

In December, Captain B. was induced by the scarcity of provision, and the hope of successful hunting, to go southward again, as far as Snake River; where, as he heard, deer, beaver, and buffalo all abounded. He remained in that region till July, 1833, trapping many beavers, and killing immense numbers of buffalo; when, breaking up the camp, he returned to the Colorado, near which, in *caches*, or subterranean hiding places, he had concealed his surplus stores, on his first arrival in the country. As his route

"lay through what was considered the most perilous part of all this region of dangers, he took all his measures with military skill, and observed the strictest circumspection. When on the march, a small scouting party was always thrown in the advance, to reconnoitre the whole country through which they were to pass. The encampments were selected with the greatest care, and a continual watch was kept up night and day. The horses were brought in and picketed at night, and at day-break a party was sent out to scour the neighborhood for half a mile round, beating up every grove and thicket that could give shelter to a lurking foe. When all was reported safe, the horses were cast loose and turned out to grass. Were such precautions generally observed by traders and hunters, we should not so often hear of parties being surprised by the Indians.

"Having stated the military arrangements of the captain, we may here mention a mode of defence on the open prairie, which we have heard from a veteran in the Indian trade. When a party of trappers is on a journey with a convoy of goods or peltries, every man has three pack-horses under his care; each horse laden with three packs. Every man is provided with a picket with an iron head, a mallet, and hobbles, or leathern fetters for the horses. The trappers proceed across the prairie in a long line; or sometimes three parallel lines, sufficiently distant from

each other to prevent the packs from interfering. At an alarm, when there is no covert at hand, the line wheels, soon to bring the front to the rear and form a circle. All then dismount, drive their pickets into the ground in the centre, fasten the horses to them, and hobble their fore legs, so that, in case of alarm, they cannot break away. They then unload them, and dispose of their packs as breastworks on the periphery of the circle; each man having nine packs behind which to shelter himself. In this promptly formed fortress, they await the assault of the enemy, and are enabled to see large bands of Indians at defiance."

Captain Bonneville's precautions made his march safe. In the Colorado country, a general meeting took place, not only of all his brigades, but of some rival bands of trappers, connected with the American, and Rocky Mountain Fur Companies; and several weeks were spent in hilarity and convivial enjoyment. His next movement was back to the navigable part of the Bighorn River, a large southern branch of the Yellowstone, itself one of the main prongs of the Missouri; to send homeward the furs he had collected. West of Green River, and southwest from the camp, lay a large salt water lake, called in the map attached to Mr. Irving's book, 'Lake Bonneville.' It is said to be 150 miles long, and 50 wide: and to be situated one mile and three fourths, above the sea. Desirous to ascertain the whole truth concerning this lake, the captain equipped forty men, under the command of his lieutenant, Mr. Walker; with instructions to go, trapping, around its margin, to record in a journal everything worth noting that might present itself, and to make maps of the country. He then set out upon his journey to the Bighorn. Below the American Falls, which are just after that river has passed through the Bighorn mountains (a sort of eastern vanguard to the Rocky mountains), his peltries, and those of some rival trappers who accompanied him, were committed to boats made by stretching buffalo hides over wooden frames; and these were launched upon the stream which was to carry them on its long and winding course to St. Louis. Captain B. then returned, with those of his men who remained, to the Colorado; hunting by the way, and expending much time with extreme toil in a vain attempt to shorten their route by crossing the Wind River mountains, instead of going round their south-eastern end, as before. After struggling with difficulties which almost startled the reader to contemplate; climbing rocks and peaks presenting every variety of ruggedness and every degree of elevation; it was found impossible for men, much less for horses, to proceed; and regaining the eastern side of the chain, they pursued their former, more level route, to the camp and buried stores upon Green river. We omit various movements, around the Wind River mountains, to Bear river (falling into Lake Bonneville); and to the Portneuf, a branch of Snake river, where, in November 1833, the party encamped for the winter. Hence the captain took the bold resolution to visit the lower part of the Columbia, on which stands fort Vancouver, held by the Hudson's Bay Company. He began this perilous journey on Christmas day; with only three men, all on horseback. Their general course was nearly westward, down the southern side of Snake river; through forests, over bleak prairies, and mountains both lofty and rugged. All former hardships and difficulties were trivial, compared with those which attended this journey. In the vain attempt of the pre-

ceding September, to cross Wind River mountains, the reader's credulity is heavily taxed by the narrative of ravines and precipices passed by unshod horses; and in several other parts of the captain's enterprise, one is puzzled to perceive how those poor beasts could subsist, and travel with heavy burthens, upon no food save twigs, and bunches of grass growing out of the snow or found by raking it away. But now, all former marvels of this kind recur, combined; and with increased magnitude. The cliffs and crags up and down which horses and men clambered, amid deep snows and over sheets of ice, make credible whatever is told of mule journeys over the Andes, or even the startling wonders of Captain Riley's Narrative. And the scanty fare upon which they lived and labored, reminds us of knight-errant times, when many days often elapsed, without any food taken by knight or steed. Bread does not appear to have been tasted by Capt. B. during his three years' toils. At length our four travellers reached a village of the lower Nez Percés; by whom they were treated with a kindness even greater than that which they had received the previous winter from their 'cousins,' the Upper Nez Percés.

Some amusing incidents here occurred. The Indian style of naming is well known. As a party of Sacs and Foxes lately at Washington, are said to have bestowed upon a high functionary there, the sobriquet of 'The Little Fox; so the Lower Nez Percés, observing Captain Bonneville's baldness, called him the "Bald Chief;" and they were exceedingly puzzled and curious to know whether he had been scalped in war, or enjoyed a natural exemption from that mischief. Again—they fed him plentifully on roots, their own usual food; but he and his train pined for dried salmon and venison, which they had reason to believe were in secret store. To draw out these, he adopted this plan: Having a trusty plaid, somewhat tarnished by years of hard service, but still richly enough variegated to excite great admiration among his simple hosts, (especially the squaws,) he cut it into numerous strips; which he made into Turkish-fashioned turbans, and other fanciful head-gear. 'These, judiciously distributed among such of the women-kind as seemed of most consequence,' speedily brought 'abundance of dried salmon and deers' hearts.' The next laughable occurrence had a mixture of the provoking. The aged chief of the village had been particularly kind to the captain: and, as they were about to part, took him aside to shew him, both by words and deeds, how much he loved him. He had resolved to give him a fine horse.

"So saying, he made a signal, and forthwith a beautiful young horse, of a brown color, was led, prancing and snorting, to the place. Captain Bonneville was suitably affected by this mark of friendship; but his experience in what is proverbially called 'Indian giving,' made him aware that a parting pledge was necessary on his own part, to prove that this friendship was reciprocated. He accordingly placed a handsome rifle in the hands of the venerable chief; whose benevolent heart was evidently touched and gratified by this outward and visible sign of amity.

"The worthy captain having now, as he thought, balanced this little account of friendship, was about to shift his saddle to this noble gift-horse, when the affectionate patriarch plucked him by the sleeve, and introduced to him a whimpering, whining, leathern-skinned old squaw, that might have passed for an Egyptian mummy, without drying. 'This,' said he, 'is my wife; she is a good wife—I love her very much. She loves the horse—she loves him a great deal—she will cry very much at

losing him—I do not know how I shall comfort her—and that makes my heart very sore."

"What could the worthy captain do, to console the tender-hearted old squaw; and, peradventure, to save the venerable patriarch from a curtain lecture? He bethought himself of a pair of earbobs; it was true, the patriarch's better-half was of an age and appearance that seemed to put personal vanity out of the question: but when is personal vanity extinct? The moment he produced the glittering earbobs, the whimpering and whining of the sempiternal beldame were at an end. She eagerly placed the precious baubles in her ears, and, though as ugly as the Witch of Endor, went off with a sideling gait, and coquetish air, as though she had been a perfect Semiramis.

"The captain had now saddled his newly acquired steed, and his foot was in the stirrup, when the affectionate patriarch again stepped forward, and presented to him a young Pierced-nose, who had a peculiarly sulky look. 'This,' said the venerable chief, 'is my son: he is very good; a great horseman—he always took care of this very fine horse—he brought him up from a colt, and made him what he is. He is very fond of this fine horse—he loves him like a brother—his heart will be very heavy when this fine horse leaves the camp.'

"What could the captain do, to reward the youthful hope of this venerable pair, and comfort him for the loss of his foster-brother, the horse? He bethought him of a hatchet, which might be spared from his slender stores. No sooner did he place the implement in the hands of young hopeful, than his countenance brightened up, and he went off rejoicing in his hatchet, to the full as much as did his respectable mother in her earbobs.

"The captain was now in the saddle, and about to start, when the affectionate old patriarch stepped forward, for the third time, and, while he laid one hand gently on the mane of the horse, held up the rifle in the other. 'This rifle,' said he, 'shall be my great medicine. I will hug it to my heart—I will always love it, for the sake of my good friend, the bald-headed chief. But a rifle, by itself, is dumb—I cannot make it speak. If I had a little powder and ball, I would take it out with me, and would now and then shoot a deer: and when I brought the meat home to my hungry family, I would say—this was killed by the rifle of my friend, the bald-headed chief, to whom I gave that very fine horse.'

"There was no resisting this appeal: the captain, forthwith furnished the coveted supply of powder and ball; but at the same time, put spurs to his very fine gift-horse, and the first trial of his speed was to get out of all further manifestation of friendship, on the part of the affectionate old patriarch and his insinuating family."

Through the remainder of the tribe, our adventurers experienced more solid and disinterested kindness. The journey was pleasant and easy, to Fort Wallah-Wallah, on the Columbia, about a hundred miles from its mouth, and not far below the junction of Clarke's with Snake River: where they arrived on the 4th of March, 1834. It was held by the Hudson's Bay Company: whose superintendent there, with the jealousy characterizing all the competitors for the peltry trade of that region, refused to Captain B. all supplies or facilities for further exploration, or for opening any commerce with the natives. He therefore set out in two days, upon his return: and, after a journey, less toilsome and distressful 'tis true than the outward one, but still abounding in perils and sufferings, he rejoined his main body, on the Portneuf River, about the middle of May.

In a curious plain of white clay, near Bear River, are many mineral springs, variously impregnated. Several of them have the appearance, and even (with a little aid from fancy) the taste, of beer; containing it is said, a strong carbonate of soda. Though there was hourly danger of an attack from the Blackfeet, the men, in passing these springs, resolved to have a sham drunken frolic.

"In a few moments, every spring had its jovial knot of hard drinkers, with tin cup in hand, indulging in a mock carouse; quaffing, pledging, toasting, bandying jokes, singing drinking songs, and uttering peals of laughter, until it seemed as if their imaginations had given potency to the beverage, and cheated them into a fit of intoxication. Indeed, in the excitement of the moment, they were loud and extravagant in their commendations of 'the mountain tap'; elevating it above every beverage produced from hops or malt. It was a singular and fantastic scene; suited to a region where every thing is strange and peculiar:—These groups of trappers, and hunters, and Indians, with their wild costumes, and wilder countenances; their boisterous gaiety, and reckless air; quaffing, and making merry round these sparkling fountains; while beside them lay their weapons, ready to be snatched up for instant service. Painters are fond of representing banditti, at their rude and picturesque carousals; but here were groups, still more rude and picturesque; and it needed but a sudden onset of Blackfeet, and a quick transition from a fantastic revel to a furious *mêlée*, to have rendered this picture of a trapper's life complete. The beer frolic, however, passed off without any untoward circumstance; and, unlike most drinking bouts, left neither headache, nor heartache, behind."

Another hunting season, followed by another journey to a still lower point than before upon the Columbia, in hopes of negotiating a connexion in trade with the natives—which hopes were again foiled by the jealousy and influence of the Hudson's Bay Company—brought the month of November.

Besides the adventures of Captain Bonneville and his immediate companions, passed over thus lightly by us, interesting episodes are formed of the expedition sent to explore the great salt lake (lake Bonneville); and of a party associated with one Captain Wyeth, of Boston, in various enterprises worthy of Yankee boldness, and talent for *contrivance*. The explorers of the salt lake wholly failed in that object. They wandered into California; and there, amongst the Spanish settlers, wasted the time and substance which they ought to have employed in Captain Bonneville's service.

Having wintered on Bear River, he, in April, 1835, removed to the Colorado; and thence to Wind River, which runs from the mountains of that name, eastward, into the Bighorn, a tributary of the Yellowstone. There, in June, a general rendezvous took place, of all his remaining forces; and they set out homeward. On the 22d of August, they reached the frontier settlements.

"Here, according to his own account, his cavalcade might have been taken for a procession of tatterdemalton savages; for the men were ragged almost to nakedness, and had contracted a wildness of aspect during three years of wandering in the wilderness. A few hours in a populous town, however, produced a magical metamorphosis. Hats of the most ample brim and longest nap; coats with buttons that shone like mirrors, and pantaloons of the most liberal plenteude, took place of the well-worn trapper's equipments; and the happy wearers might be seen strolling about in all directions, scattering their silver like sailors just from a cruise."

Everywhere through his two volumes, Mr. Irving has interspersed numberless incidents and descriptions, which, graced by his inimitable manner, render the work deeply engaging. The costumes, equipments, and characters, of the several kinds of trappers, and tribes of Indians; sketches of scenery; geographic and geological descriptions; narratives of hardships, battles, and escapes; anecdotes illustrative and entertaining; keep the blood of any man who has aught of Sinbad's or Robinson Crusoe's roving propensity, in a

constant fermentation; and render him full fain, like Captain Bonneville, to make his "bow to the splendors and gaieties of civilized life, and plunge again amidst the hardships and perils of the wilderness."

All the Indians of the Upper Missouri, and of the Columbia region, hunt and fight on horseback; and seem to be the best riders in the world. A frequent feat is the one described as performed by a Crow warrior, when he and his brethren had driven a band of their enemies, the Blackfeet, into a thicket, whence the aim was to dislodge them. Force having been found ineffectual, the Crow 'Brave' thought to provoke them out. He therefore 'advanced alone, with that martial air and equestrian grace for which the tribe is noted. When within an arrow's flight of the thicket, he loosened his rein, urged his horse to full speed, threw his body on the opposite side, so as to hang by but one leg and present no mark to the foe; in this way, he swept along in front of the thicket, launching his arrows from under the neck of his steed. Then regaining the middle, he wheeled round, and returned whooping and scoffing to his companions, who received him with yells of applause.' The same was done by several others; but the Blackfeet were not to be tempted from their covert.

Two most unwelcome conclusions force themselves upon the mind, in reading this book; both of them, opinions long held by many; but ascribed by many also to the jaundiced vision of a morbid philanthropy. First, that the aborigines of this continent owe most of their vices to contact with Europeans: second, that four-fifths, at least, of our wars with the Indians, are attributable to the perfidy or violence of white men. The first conclusion is demonstrated by the views here presented, of the guileless kindness, and the temperance, of those tribes who have had little or no intercourse with the whites. The second is confirmed by at least three glaring instances of blended treachery and cruelty, practised by men either connected with Captain Bonneville, or engaged in pursuits like his, at the same time. One of these instances was the shooting of a chief, on his advancing, alone, to meet a flag of truce borne by his murderer. Another was the burning alive of several Indian captives, because their countrymen would not restore some stolen horses. One such act might pardonably be deemed, by unlettered savages, justification for a hundred retaliatory atrocities.

Before we part with Mr. Irving, a duty remains to be done, for which no thanks are to be expected. Censures are to be dealt out. But in what writer is it half so important that faults of style should be noted for his correction, as in the most admired, and therefore the most likely to be copied, of all living Americans?—Nowhere, save in the effusions of Mr. Charles Phillips, can a more enormous instance be found of alliteration, that poorest rhetorical artifice,—than in the following phrases, employed in shewing that "a man who bestrides a horse, must be essentially different from a man who cowers in a canoe." The former is "heedless of hardship; daring of danger; prodigal of the present;" &c. How far beneath Mr. Irving is such a jingle! Again; in the two volumes, there are probably a dozen applications of a single pet phrase; and that, drawn from the slang dictionary. It is the word *game*, used thus—"his game look;" "a game warrior;"

"a game bird" (applied to a man); "game feather;" "game qualities;" &c. &c. Again; does Mr. I. design a playful mockery of Sir Piercie Shafton, or is it downright serious affectation, when he twice uses the verb *dominate*, for *overlook*, or *overtop*? One more cavil, and we have done. The book seems to us too minute, and over-embellished. There are too many details of personal adventure; too much recital of unimportant events; too many high-colored delineations of local scenery. A travelling artist would not have charged his portfolio with more landscapes; and when it is considered, how far the pen falls short of the pencil in conveying just images of such scenes to the mind; the indiscreetness of a writer's attempting them so frequently, is manifest. Throughout the work, there is so much circumstantial and apparently fanciful garniture, that a shade of discredit is thrown upon the verity of Captain Bonneville's facts. The reader half suspects that he is reading another "Conquest of Granada;" a tale, 'founded on fact' instead of a true narrative of a plain and sensible man's travels through an interesting country. Divested of these excrescences, yet retaining all becoming ornament, the work might have been of but half its present size, and have had thrice its present number of gratified readers.

THE PILGRIM.

"Wherefore, put on the whole armor of God."—Eph. 6, 13-18.

Arm thee, pilgrim! 'tis no strife
With earth's legions to thee given;
Foes, through every stage of life,
Stand between thy soul and heaven.
See, beneath, behind, before,
Bent the bow, and poised the dart;
Outwardly dost thou explore?
Lo! they garrison thy heart.

Arm thee, pilgrim! but can earth
Furnish weapons to withstand?
Trust not their untemper'd worth,
Lest they crumble in thy hand.
Arm thee! see thy foes arise!
On they come, (and know they're ruth?)
Headed by the sire of lies;
Haste! be girt about with truth.

Arm thee, pilgrim! they advance!
Stay thy foot, and bend thy knee!
Calumny uplifts her lance;
Malice has a shaft for thee:
Narrower now the circle draws;
Hard upon thee now they press!
Take it! for thy sinking cause!
The breast-plate of righteousness.

Baffled oft, but not subdued;
Rising fast, where late they fell;
See the charge again renew'd,
And new allies brought from hell.
Up! behold yon fiery dart,
Wing'd with lightning, on its path;

Quench it! ere it strike thy heart!
Lo! thou hast the shield of faith.

Haste thee! charge the prostrate host!
There was virtue in thy shield!
Seize the moment, ere 'tis lost!
Be God's word thy sword to wield.
Slumber not; the field is thine,
But thy labor just begun;
Seek at heaven's appointed shrine,
Strength to keep what faith has won.

Camden, S. C.

N. N. N.

THE DESERTER:

A Romance of the American Revolution, founded on a well authenticated incident.

(CONCLUDED.)

CHAPTER X.

The toll which stole from thee so many an hour
Is ended,—and the fruit is at thy feet!

Shelley.

Strange as it may appear, the increased obligation under which Colonel Brookville now lay to Champe, only served to redouble his exertions to bring about a marriage between his daughter and Birdsall. It is true that his desertion from his countrymen, and his enlistment in so vile a band as that which Arnold had raised, was enough to disgust him, although he was, as we have said, no real friend to the cause of America. Having been foiled in his former attempts to traduce him, it is not to be supposed that he did not eagerly seize upon the subject offered him by a fact, in itself enough to blast the Virginian's reputation, and degrade him even in the partial, but honorable, mind of Emma. From the moment the news of Champe's desertion reached the villa, no allusion had been made to his rank in life, or the *sin*—viz. misfortune—which had placed him there. There was no occasion for this. His real crime—his perfidy, his treason, were unanswerable arguments.

Soon after his return to the villa, Birdsall received the long expected letter with the black seal; and it became necessary that he should visit England as soon as possible. Consequently every art was essayed by the Colonel to hasten the marriage. The luckless Emma was allowed no peace, morning, noon, or night; and at length, worn out with their importunity, and fully persuaded that Champe—from whom she had not heard since his broken promise, a month before—had indeed lost all that love of honor and principle, which she still believed he had once possessed—she, in a moment of despondency and utter hopelessness, agreed—since her own happiness was gone—to gratify her father.

No opportunity was given to retract the hasty sentence, which, indeed, she had but half uttered. The eager Colonel, himself, named the day; and—every preparation having been made in the interval—it arrived. And dreadful were Emma's feelings when it dawned upon her wakeful eyes.

"Suppose," whispered insidious hope, "he should

yet be worthy of me!"—and a shudder ran through her frame.

Another moment allayed the wild thought. Champe *could not* be worthy of her. He was a deserter, and in open arms against his country! *She had seen it.* There was nothing to be hoped from any explanation he could make. Logic might exhaust itself, and still he would be guilty—so plain, so simple was the evidence of the fact. It had been demonstrated to *herself*; and not alone to witnesses, who might, for sinister purposes, misrepresent the case.

Rising from her bed, ere yet the sun had mounted the cloudless sky, Emma hastily dressed herself, and, without being observed, left the house. It was a mild June morning; the birds were singing their welcome to the day so cheerfully, that it seemed to mock her misery. For the first time in her life, she tried to shut out their blithe carol; and pressing her bonnet closely upon her ears, she quickened her pace.

But there was an object in her path, that would far more powerfully and painfully remind her of happier days. Unusual as it was, at that early hour, a group of men were already abroad; but they were those whom a life of activity and usefulness had taught the value of time, and to whom habit had made watchfulness easy. It was a party of Lee's dragoons, who—after having valiantly served in the arduous duty of reducing the enemy's chain of posts in the South, just as the latter flattered themselves they were masters of that portion of the Union—had obtained leave to visit, for a short period, their native country.

As the maiden passed them, every cap was raised, and many were the looks of surprise with which she was regarded. Each man of the party had before seen her; but never, until that moment, had they beheld the wan countenance and wasted form they now encountered.

With an undefinable and vague feeling, Emma eagerly looked at every face, and ran her eyes hastily over the glittering uniform of each individual.

"If *he* were only there!"—she thought—"aye, and the meanest soldier among them——" And a profound sigh banished the vain and transitory illusion.

She passed on, full of bitter reflection. She was going, for the last time, to visit the graves of the virtuous parents of an unworthy son. There might have been, at least, a weakness—perhaps something injudicious, if not a decided relaxation of maidenly dignity, in the act; but Emma had fallaciously persuaded herself that it was to the virtues of the relatives *alone* that she paid this tribute—for there lay the remains of all the immediate friends of the Deserter—his parents, two brothers, and an only sister, with the latter of whom it had almost unmanned him to part, strong and inflexible as was his mind.

The spot she sought was a little secluded place, surrounded by trees, which cast over it a calm and solemn shade, fitting for the last repose of the virtuous dead. As she passed through the trees, she suddenly started. The slender form of a youth, in the gay uniform of the Legion, leaned against an oak, directly before her; his right arm rested against its huge trunk, and on that reclined his bowed head. Though, in this situation, his face was necessarily concealed, the maiden knew him at once. Buxton's letters to his sister had made a

deep impression upon Emma; and the mutilated right hand of the youth before her plainly enough revealed who he was. She shuddered at the sight, while she deeply admired the magnanimity of the boy, who could thus sink the injury received from the son, in remembrance of the upright character of the parents.

Suddenly raising his head, Buxton started as he beheld her. Saluting her, by raising his cap in the precise manner of his profession, he quietly turned toward the adjacent burial place; but as quickly changing his mind, he turned again, passed her, and hurried away from the spot. Precipitated into overwhelming reflection by this incident, for a short time our heroine found herself unable to proceed; but recollecting that a prolonged absence from the villa might become the subject of remark, she summoned fortitude and went on.

Once more she started. A stranger, in a rich suit of mourning, knelt at the grave of the mother of the Deserter. His clasped hands were raised in prayer, but the words he uttered were inaudible. Directly his voice swelled into a clear, full tone, as he fervently petitioned Heaven to shower its choicest blessings upon her who had planted that grave with flowers! Those tones could not be mistaken by Emma. The same manly voice that had, on two memorable occasions of extreme danger and distress, spoken comfort to her, was now interceding with that Power to whom the strongest on earth must bow, that she "might know danger and distress no more!"

"Now," thought the maiden, after her first wild gust of feeling had partially subsided—for she was still unperceived by Champe—"now the time has come to return at least one of the obligations I owe him. The dragons I met have no doubt been detached to capture him. They have appreciated his character better than I; they know, that deserter as he is, he is not lost to all feeling: and taking advantage of that, they would ensnare him here. Yes! even here—at the grave of his mother! What monsters war doth make of christian men!"

"Fly!" was the first startling exclamation that fell upon the ear of the Deserter. "Fly! John, your motions are watched."

Champe sprang to her side. "Who dare watch me?" he asked with a flashing eye.

"There are a dozen of Lee's dragoons at a short distance, and I passed one this moment in the wood. Why do you not fly? Do you not believe me?"

The manner of her companion suddenly assumed its usual composure. "I never disbelieved a word you uttered, Emma; nor ever will."

"Then why not believe me now?" she asked hurriedly. "Are you insensible to danger? I beseech you fly—you have not one moment to lose."

"I fly not," returned Champe firmly, and smiling at her fears. "The Virginians seldom fly unless it be to lead their enemies into error. But why so anxious for my safety, Emma? From what I have heard since my return, I thought the days for that had passed away."

The words brought overpowering thoughts upon the mind of the maiden. "No matter," she answered in intense feeling. "But go. Do not waste the precious time. Would you die upon a gibbet?"

"I fear not the gibbet," he answered proudly. "If

my country's good bade me die there, her enemies should never see me shudder at the manner of my death."

Emma surveyed the unbending expression of countenance of the inflexible being before her with a wonder she could not control. "I believe you, John Champe," she cried; "from my soul I believe you. Even now is death awaiting upon your every step; and still you linger here, calm and unmoved as though you were in the midst of security. Be wise and fly. Believe me, you have no friends here."

"I know it," he replied, fixing upon her a scrutinizing gaze. "I believed I had one that would ever have been true to me. But I was wrong: I had no right to believe it. Perhaps I have not deserved that her esteem for me should continue."

"Perhaps!" repeated Emma. "Is there then a doubt of it? But it avails nothing to speak of this, now. I am another's! And if I were not——"

"I have heard so," said Champe seriously, but with a strange composure. Then perceiving that her feelings prevented her from speaking farther, he asked kindly—"You said, Emma, if you were not another's—What then?"

"Desertion can never be explained away," returned the maiden, repeating his own sentiment, of which, as well as the occasion on which it was uttered, she had learned from one of Buxton's letters to his sister.

The cheek of Champe flushed; but his emotion was, to all appearance, but momentary. "I said so once," he said, smiling; "but I have changed my opinion, Emma. Patriotism itself may——"

"Talk not of it," interrupted the maiden indignantly. "I like not '*Arnold's sophistry*.' I am one of those who continue to believe his famous letter of defence 'an insult to an injured country.'"

"You are mine, then!" cried the Virginian, folding her in his arms ere she was aware of his intention. "You are mine, Emma. I have sworn, and you have promised it. Neither the oath nor the promise shall be broken. I am no deserter, Emma, except from Arnold's Legion!"

An uncontrollable shriek burst from the wretched maiden, as she tore herself from his embrace. "Tell me not so," she cried wildly. "Have mercy upon me, John, and tell me not so. A few days ago, I would have yielded my life to hear these joyful, joyful words. But now—Oh horror! horror! You have done wrong, John, to deceive me thus; but I have done worse to doubt your rectitude."

"There was a state secret involved," said Champe, affected deeply at her distress.

"I might have known it," returned Emma. "She who occupies yon grave said with her dying breath you were innocent: but I thought trouble had caused her to rave. Yet, until I saw you in British uniform, and you deceived me again, I could not believe you guilty. I knew not why; but at times there came upon me, despite my better judgment, a conviction of the truth of that death-bed prophecy."

"Did she say that?" asked Champe, his countenance beaming with delight, while a manly tear bedewed his eye. "Ah she knew I could not be false to my country. But we will talk of her, and your kindness to her, Emma, hereafter. I cannot dwell upon it now; for

remembrance of her, and gratitude to you, overcomes me. Let us now seek that happiness for which we have so long waited in vain."

"It is too late!" cried the agonized girl. "This very night I am to become Birdsell's bride!"

"So help me Heaven, you shall not," exclaimed her lover solemnly. "They have meanly extorted the promise from you—I am sure of it—and I blame not you. But you have engaged to be mine, as well since as before you were of legal age to act for yourself. If you desire not to recall the promise, after I have given you the clearest proof of my innocence, I swear I yield not up my rights nor you to such a thing as Birdsell. No, nor to mortal man."

"It is too late," repeated Emma in despair.

"It is *not* too late," returned Champe; and he spoke in the same energetic and impressive manner, that had, in days long past, taught Emma to put a firm reliance upon his words. Indeed, it appeared to her when he thus spoke, that he spoke *truth*—incontrovertible, unconquerable truth; that it was impossible he could err; and that, much as his words seemed to promise, he neither boasted, nor overrated his power to make them good. It gave her not only encouragement and hope, but assurance. There was so much of modest firmness, of self-dependence and of manliness in his manner.

"It is yours then, Emma, and yours alone, to decide," he continued, passing an arm around her unresisting form, drawing her towards him, and fondly patting her pale cheek, "whether you will be his, whose duty to his country has compelled him, while his heart smote him for it, to drive the roses from here; or the wife of one who cannot appreciate, and therefore cannot love you as you deserve. It is yours, I say, merely to decide. The means of carrying into effect that decision, if in my favor, may be left to me."

Emma thought of her recent engagement, of the dangers of the bold step she knew her lover could and would take to claim her, of her father's probable anger at her disobedience, and shuddered.

"Look here, girl, look here!" cried the impatient Virginian, drawing a packet of papers from his pocket and scattering its contents on the grass at her feet. "Here," he continued, his manly countenance glowing with patriotic pride while he selected one of the papers and held it for her inspection, "here, in the first place, is Lieutenant Colonel Lee's testimonial that I have never swerved from my duty to my country—this, is Greene's letter of compliment on my services that accompanied his present of a sword and a noble war-horse. Here, is the handwriting of Hamilton, above Washington's own signature! This, with a blue ribbon, is a lieutenant's commission in the Legion, and with it, a paper that secures me the emolument of the office, and, at the same time, releases me from actual service; for his excellency was pleased to recommend me not to appear in arms, lest the chance of war throws me in the way of the gibbet: not an American gibbet, Emma, but a British. This, with a large seal, is a deed from the Legislature of Virginia, for lands—more than enough to satisfy a far more ambitious man. This is a certificate of Congress, granting me a pension for life. I went not into New York, Emma, to join Arnold, but to *seize the detestable traitor!*—to pluck him from his strong hold, and to deliver him to Washington! I went

to *save Andre* from the gallows, and to clear up the character of one of our best generals from aspersions cast upon it by the scheming Clinton. The latter I accomplished; and, but for an accident, similar to that which caused me to disappoint you at Petersburg, I should have taken Arnold from the midst of his friends, and brought him to the American head-quarters. A few hours more of time at that crisis—and my name, Emma, would have resounded through the army—aye, through the thirteen republics, as the avenger of our army's reputation which Arnold has so basely sullied, uncoupled with the odium of desertion!"

Emma forgot her engagement with Birdsell and her father's anger, as she listened with rapture to his glowing recital. But the sudden burst of pleasing intelligence was too much for her. She trembled with emotion, her pale cheek became still paler, and she fell fainting in the arms of her lover. She recovered only to reflect and weep.

The soothing arguments of the Virginian soon restored her to hope. He had not expected this interview with her, but had already resolved upon a course, from which he did not now depart. He advised her, therefore, to pass the day as she had intended, and to expect his interference at the hour appointed for her union with Birdsell.

She consented implicitly to follow his directions; bade him remember that a moment, should he be too late, might seal her doom; forbade him to accompany her then; and, feebly resisting his glowing kiss at parting, darted through the wood and soon arrived at the house.

In the course of the day, Champe's story became known throughout the neighborhood, and old and young alike sought to congratulate him, and listen to a narration of his adventures from his own lips. In due time it reached the villa, and great were the endeavors of Colonel Brookville to keep a knowledge of it from his daughter. In the meantime, Emma, though greatly agitated by alternate hope and fear, resolutely upheld her spirits to meet the approaching crisis.

The appointed and dreaded hour drew near. Emma strained her eyes in the dim twilight to catch a glance of Champe, stealthily moving through the park: but she saw him not. Night wrapt the scene without in impenetrable darkness; she was summoned to perform her engagement with Birdsell; and yet Champe came not! "Will he deceive me *now*?" she inquired of herself; "*Dare* he thus trifle with me? Yes," was the mental answer; "for he has proved he *dare* do anything; but he *will* not—I *know* he *will* not. I have done him injustice heretofore in doubting him: but if an unavoidable accident should *again* prevent him—Mercy, mercy, Heaven!"

Again she was informed that Birdsell and the clergyman awaited her approach, and resolving, if any unforeseen circumstance should detain her lover, boldly to refuse to take the matrimonial vow, when called upon to do so, with a reluctant step, she obeyed the summons.

But Champe had intended she should be called upon to do nothing that could bring upon her the displeasure of her father. He had resolved to rescue her from the engagement that he knew had been forced upon her; but he had determined to do this in such a manner that whatever censure might follow, it should fall upon him

alone. He would not persuade her to elope with him; for that would seem her wilful act; he sought only to obtain her secret concurrence, and then assume in the eyes of her friends the responsibility of taking her from them without her consent. Then, when the shock of displeasure and anger came, he would meet it alone, as he had before met crosses and misfortunes—but cheered by the reflection that he had preserved her happiness from sacrifice. He was confident that the success of the plan he had conceived was insured by its very boldness. It was in character with the spirit of the men who formed Lee's Legion.

As Emma passed through an anti-room, toward a parlor prepared for the performance of the matrimonial rites, she looked through the open windows vainly hoping to penetrate the darkness without, from the brightness of the apartment in which she was. Suddenly she paused. A naked sabre glittered in the light of the room, as it moved steadily past the windows. The footstep of him who carried it, however, was noiseless, as was his form invisible.

The heart of the maiden throbbed with wild ecstasy; but her feelings were not unmingled with apprehension. The powerful assistance of Champe was undoubtedly at hand, as it ever seemed to be in the hours of her severest trials; but there could be as little doubt that he was not alone; that her father's house was guarded, and its unconscious inmates surrounded by armed men, insured to carnage and full of determination. Trusting to the discretion, and the mild and unrevenged, though resolute, disposition of Champe; and, above all, to that power who had guided *him* through so many scenes of extreme peril, and appeared to have ever placed him near *her* when she had most needed assistance, she stifled her feelings and proceeded.

When she entered the parlor the clergyman arose, and her father advanced in order to lead her to the upper end of the room, where the family and two or three guests were assembled—there formally to give her hand to Birdsall. Any interference that could save her now, must, she thought, indeed, be sudden and bold. It did not fail to come—and in time.

A loud voice gave orders to some unseen subordinates, and the frightened menials of the villa rushed through the doors of the parlor. Dragoons with drawn sabres followed close upon them, formed in line across the centre of the apartment, and at the same instant, the trembling Emma was raised in the arms of one, whose encouraging whisper she well knew, and borne from the house.

"Who commands here?" cried the enraged Brookville, after in vain endeavoring to force his way through the line of dragoons that separated him from his daughter.

"I do," answered a voice rendered powerful more through anger than natural strength. "We cover the retreat of Lieutenant Champe, and not a soul leaves this house to-night. But we will speak of this matter directly, Colonel Brookville. In the meantime there is justice to be done. Where is this Birdsall?"

"I will let you know, sir," cried the Colonel furious with rage, "that neither your authority nor that of your lieutenant is acknowledged here. I command you to leave the house."

"Is this the wretch?" rejoined the youthful Buxton,

disregarding the useless anger of the master of the villa, and rudely dragging forth, from the corner of a sofa, where he had slunk, the trembling form of Birdsall. "Where is your boldness now, miscreant? Stand forth and treat an injured *brother* with the same impudence that yesterday marked your conduct to his defenceless *sister*. Swear to me, and in this presence, if you dare, that you *detest* Miss Brookville, as you did then, to Isabel Buxton. Thought you, because her father was in his grave, a Virginian maiden could find no protector? Or thought you if a *nobleman* but condescended to speak, she must be flattered? Away! fool, dastard, away!" And dashing him from him with passionate violence, he continued, "I have solemnly promised Lieutenant Champe I would not do it, or by Heaven I would, even now, cleave you in twain with this good sword, that has already tasted of the proud blood of overbearing England."

"The Colonel frowned angrily upon the cowering Birdsall; but soon turned again toward the intruders upon his domestic privacy. But his commands and arguments were alike unavailing:—as there are none so difficult to convince as those who *will not* be convinced, the dragoons were equally unmoved by his threats, or his appeals to them, in regard to the justice of their proceedings, or their right to interfere with his liberty. They merely replied that they acted upon the responsibility, and by the orders of their lieutenant, and were perfectly indifferent as to consequences. All the satisfaction he could obtain from them was that his guests, his household, and himself, would be suffered to act their pleasure at daybreak the next morning; but not one instant before; and that, until that time, every avenue from the house would be strictly guarded.

This promise was fulfilled. At daybreak, the dragoons started in a body for the south, to rejoin the Legion; and, in a short time, were far beyond the reach of any pursuit in his power to order. He well knew also that it was too late to prevent a marriage between Champe and his daughter, unless the latter had strongly opposed the wishes of the lieutenant; which, upon reflection, he felt very much inclined to doubt.

His judgment did not deceive him. It was already beyond the power of his silly pride to destroy his daughter's happiness. Within the hour that was to have given her to Birdsall, Emma, impressed with a deep sense of the dreadful alternative delay might produce, became the wife of THE DESERTER.

APPENDIX.

By consulting Lee's "Memoirs of the War in the Southern Department of the United States," chapter xxx., it will be found how little we have been indebted to invention for the materials of our story; or rather, that, in the principal incidents, we have not at all departed from historical fact.

It appears by that work, that Washington, after the defection of Arnold, "the moment he reached the army, then under command of Major General Greene, encamped in the vicinity of Tappan, sent for Major Lee, posted with the light troops some distance in

front." Lee repaired at once to head quarters, when the Commander-in-chief requested him to select a suitable person to undertake a highly dangerous enterprise, which he (Washington) had conceived. His confidential agents in New York had informed him that "many of his officers, and especially a Major-general named to him, were connected with Arnold." His plan, therefore, was to engage some person of tried courage, intrepid daring, persevering industry, and acute perception; who, with all these qualities, should possess a patriotism so elevated, that he would, if the case should require it, and, at all events, for a time, sacrifice his private reputation for the good of his country. Champe was at once named by Lee, who at the same time expressed his doubts whether his sergeant-major's keen and high sense of honor would allow him to take the first step in the proposed plan, which was desertion: but after listening to a minute description, not only of the character, but the manners, appearance, place of birth, &c. of Champe, Washington, with his usual penetration, exclaimed, "He is the very man for my purpose," and determined that Lee should use his utmost efforts to induce him to attempt the enterprise. Lee immediately returned to his quarters; and in his *Memoirs* feelingly describes the dialogue that ensued between himself and the ardent but repugnant Champe. From this it appears that the design of Washington, "by getting Arnold, to save Andre," had more weight with the generous Virginian than any other. But even this could not induce him to forego his reputation, and the strong desire he felt for promotion—of which desertion would deprive him. At length, Lee informed him that since he declined the offer of obliging the Commander-in-chief personally, as well as of greatly serving his country at large, he would inform Washington that the proffered honor must be transferred to some other corps, as there was not spirit enough in the Legion to furnish him with a man willing to risk its consequences. "*The esprit du corps*," observes Lee, "could not be resisted: united to his inclination, it subdued his prejudices:" and the noble-minded soldier departed the same night.

How well he executed the arduous duty he had undertaken, may be inferred from the first sentence of a letter from Washington to Lee—Oct. 13th, 1780: "I am very glad," he says, "your letter of this date has given evidence to my conviction of the innocence of the gentleman" (the nameless Major-general) "who was the subject of your inquiry."

The same letter directs Lee to meet the Commander-in-chief the next day, at the Marquis's quarters, when Champe's communications were closely examined by them, "and the distrust heretofore entertained of the accused forever dismissed."

Having thus satisfactorily executed one part of his business, the sergeant set himself to work fully to achieve the rest; and in connection with an agent of Washington's in the city, soon laid a plan for his capture. The agent was a different person from him who had assisted in tracing the authenticity of the aspersions cast upon the Major-general above mentioned; and so deep was the secrecy deemed requisite by Washington, that Champe was ordered not to let either of these two men know that the other was in his confidence.

Unfortunately, Andre's imprudent but high-minded

confession shortened his trial; and ere the sergeant could consummate arrangements for bringing off Arnold, much to the chagrin of the generous soldier, who was himself risking a gibbet in order to save the British officer from the same disgraceful end, Andre was executed. But notwithstanding this unfortunate intervention, Champe was directed to persevere, and still bring off Arnold if possible. This will be seen from the following extract from Washington's letter to Lee, of the 30th October:

"Dear Sir,

"The plan proposed for taking A——d, (the outlines of which are communicated in your letter, which was this moment put into my hands without date,) has every mark of a good one. I therefore agree to the promised rewards; and have such entire confidence in your management of the business, as to give it my fullest approbation, and leave the whole to the guidance of your own judgment, with this express stipulation and pointed injunction, that he (A——d) is to be brought to me alive.

"No circumstance whatever shall obtain my consent to his being put to death. The idea which would accompany such an event, would be, that ruffians had been hired to assassinate him. My aim is to make a public example of him: and this should be strongly impressed upon those who are employed to bring him off. The sergeant must be very circumspect: too much zeal may create suspicion, and too much precipitancy may defeat the project. The most inviolable secrecy must be observed on all hands."

The night for the execution of Champe's plan of seizing Arnold was soon appointed. He and one of Washington's secret agents were to seize and gag the traitor; and placing themselves, each under one of his shoulders, carry him through the most unfrequented streets and alleys to a boat waiting to receive them. If questioned, they were to answer that he was a drunken soldier, whom they were conveying to the guard-house. In the meantime, Lee, having been informed of this, spent the night at Hoboken, with a few of his trusty followers, and provided with three extra horses, one each for Champe, his comrade, and Arnold.

Lee was disappointed; for the day dawned and no boat was descried upon the waters of the Hudson answering the description of that in which Champe was to arrive. "He was chagrined," he says, "at the issue, and apprehended that his faithful sergeant must have been detected in the last scene of his tedious and difficult enterprise." But he was obliged to keep his disappointment to himself; for so strict was the secrecy of the whole affair, that not one of his followers knew why their commander conducted them to Hoboken, or for whose use they led the three extra horses.

Another extract from his "*Memoirs*," will suffice to end this article.

"In a few days, Lee received an anonymous letter from Champe's patron and friend, informing him that on that day previous to the night fixed for the execution of the plot, Arnold had removed his quarters to another part of the town, to superintend the embarkation of troops, preparing (as was rumored) for an expedition to be directed by himself; and that the American Legion, consisting chiefly of deserters, had been transferred from their barracks to one of the transports; it

being apprehended that if left on shore until the expedition was ready, many of them might desert. Thus it happened that John Champe, instead of crossing the Hudson that night, was safely deposited on board one of the fleet of transports, from whence he never departed until the troops under Arnold landed in Virginia! Nor was he able to escape from the British army until after the junction of Lord Cornwallis at Petersburg, when he deserted; and proceeding high up into Virginia, he passed into North Carolina near the Saura towns, and keeping in the friendly districts of that state, safely joined the army soon after it had passed the Congaree in pursuit of Lord Rawdon.

"His appearance excited extreme surprise among his former comrades, which was not a little increased when they saw the cordial reception he met with from Lieutenant Colonel Lee. His whole story soon became known to the corps, which reproduced the love and respect of officer and soldier, heightened by universal admiration of his daring and arduous attempt.

"Champe was introduced to General Greene, who cheerfully complied with the promises made by the Commander-in-chief, as far as in his power; and having provided the sergeant with a good horse, and money for his journey, sent him to General Washington, who munificently anticipated every desire of the sergeant, and presented him with a discharge from further service, lest he might in the vicissitudes of war, fall into the enemy's hands; when, if recognized, he was sure to die on a gibbet.

"When General Washington was called by President Adams to the command of the army, prepared to defend the country from French hostility, he sent to Lieutenant Colonel Lee to inquire for Champe: being determined to bring him into the field at the head of a company of infantry.

"Lee sent to Loudoun county, where Champe settled after his discharge from the army; and learned that the gallant soldier had removed to Kentucky, and had soon after died."

HALLAM'S MIDDLE AGES.*

It is surprising, that this work is not more admired, and more read, than it seems to be. It is surpassed, nay, equalled by no historical production in the English language, since the times of the great British three, of the last century. Indeed, several merits tempt us strongly, to place it above even their works. It is more candid than Hume; more simply and pointedly sententious than Robertson; more clear, and infinitely less pompous, than Gibbon. Nothing can be more striking, than the contrast between Hallam's distinct, straightforward statements, and shrewd, concise, often pungent remarks,—and Gibbon's elaborately swollen and balanced periods, that after thrice reading, leave it still doubtful what fact he tells, or what opinion he expresses. If it had not become vulgar to compare historians to Tacitus (Dr. Ramsay has been called "The Tacitus of America"), we should say, that no where

have we seen the best characteristics of the illustrious Roman half so well displayed, as in the "Middle Ages." The same burning yet well tempered love of liberty; the same hatred of tyranny and injustice; the same vein of sage remark, developing in a single sentence, momentous political truth; the same power of sarcasm, conveyed usually in the very words which carry forward the narrative; the same condensed and forcible brevity of recital. Oftener than in Tacitus, or in Hume, there occur in Hallam passages of eminent rhetorical beauty; much resembling these occasional observations, at once elegant and profound, in which Burke abounds. But they are neither frequent nor long enough, to violate the becoming chastity of historical composition. Far from being excrement ornaments, which lead off the reader's mind from the facts detailed, or suggest a doubt concerning the truth of a story so embellished, they enliven and rivet his attention, by illustrating the subject; and interrupt not, for a moment, the course of the narration. The work takes a wide range. It gives the History of France—Italy—Spain—Germany—the Greek Empire and the Saracens—Ecclesiastical Power—the Feudal System—the English Constitution—and the State of Society in Europe—during the Middle Ages; that is, for about eight or nine centuries. The manner in which it groups and details the multitude of facts comprised in this great outline, is lucid and happy. With equal judgment are the instructive or important selected, and the trivial or useless passed in silence.

But it is above all as the enlightened friend of liberty, that Mr. Hallam deserves the esteem of American readers. Some extracts we propose making, will evince this, and also the Tacitus-like pith and pungency we have ascribed to him. The italics and small capitals are ours.

EXTRACTS.

'A generous disdain of one man's will, is to republicans governments what chastity is to women; a conservative principle, never to be reasoned upon, or subjected to calculations of utility.'

Rienzi's 'character was not unusual among literary politicians; a combination of knowledge, eloquence, and enthusiasm for ideal excellence, with vanity, inexperience of mankind, unsteadiness, and physical timidity.'

'The most deadly hatred, is that which men exasperated by proscription and forfeiture bear to their country.'

On the triumphant return of Cosmo de' Medici, in 1434, from the exile into which the opposite faction of Albizi had driven him, Hallam remarks,—'It is in vain to expect that a victorious faction will scruple to retaliate upon its enemies a still greater measure of injustice than it experienced at their hands. The vanquished have no rights in the eye of their conquerors. The sword of returning exiles, flushed by victory and incensed by suffering, falls successively upon their enemies, upon those whom they suspect of being their enemies, and upon those who may hereafter become such.'

(Policy of employing Foreign Mercenaries.) 'Considered with reference to economy, almost any taxes must be a cheap commutation for personal service. But economy may be regarded too exclusively; and can

*View of the State of Europe during the Middle Ages. By Henry Hallam, Esq. 2 vols. 8vo.

never counterbalance that degradation of national character, which proceeds from intrusting the public defence to foreigners.'

'Historians have in general more indulgence for splendid crimes, than for the weaknesses of virtue.'

'None of Charlemagne's wars can be compared with the Sarsenic history of Charles Martel: but this was a contest for freedom; those for conquest; and fame is more partial to successful aggression than to patriotic resistance.'

In the unswerving probity, strictness of conscience, and benevolence, of Louis IX. (St. Louis), he found all the effects of far-sighted policy. 'But it is the privilege only of virtuous minds, to perceive what wisdom dwells in moderate counsels. No sagacity ever taught a selfish and ambitious sovereign to forego the sweetness of immediate power.'

Hint to Historical Students. Intestine tumults, &c. 'are among the eternal lessons of History: for the unjust encroachments of courts, the intemperate passions of the multitude, the ambition of demagogues, the cruelty of victorious factions, will never cease to have their parallels and their analogies; while the military achievements of distant times afford, in general, no instruction; and can hardly occupy too little of our time in historical studies.' *Note.*

Hint to Statesmen. 'It is difficult to name a limit beyond which taxes will not be borne without impatience, when they appear to be called for by necessity, and faithfully applied: nor is it impracticable for a skilful minister to deceive the people in both these respects. But the sting of taxation is wastefulness. What high spirited man could see without indignation the earnings of his labor, yielded ungrudgingly to the public defence, become the spoil of speculators and parasites? It is this, that mortifies the liberal hand of public spirit; and those statesmen, who deem the security of government to depend not on laws and armies, but on the moral sympathies and prejudices of the people, will vigilantly guard against even the suspicion of prodigality.'

'The very virtues which a state of hostility excites, are not proof against its long continuance; and sink at last into brutal ferocity.'

A vindication of Republics. 'In a superficial review of history, we are sometimes apt to exaggerate the vices of free states, and to lose sight of those inherent in tyrannical power. The bold censoriousness of Republican historians, and the cautious servility of writers under a despotism, conspire to mislead us as to the relative prosperity of nations. Acts of courage and tumultuous excesses in a free state, are blazoned in minute detail, and descend to posterity: the deeds of tyranny are studiously and perpetually suppressed. Even those historians who have no particular motives for concealment, turn away from the monotonous and disgusting crimes of tyrants.'

The very dangerous Precedents arise. [The Pope at first claimed no right to appoint to church benefices. Adrian IV. began, by requesting some bishops to confer the first vacancy on a particular clerk. Recommendations like this (called *Mandata*) became more and more frequent, and were usually followed, through respect for the holy See: even Innocent III. the most ambitious of pontiffs, regarded it only as a courtesy.] 'But,'

says Hallam, 'as we find in the history of all usurping governments, *time changes anomaly into system, and injury into right: examples beget custom, and custom ripens into law; and the doubtful precedent of one generation becomes the fundamental maxim of another.*' So far had this natural progress taken place, that in England, under Henry III., the 'Church seems to have been so richly endowed only as the free pasture of Italian priests; who were placed, by the mandatory letters of Gregory IX. and Innocent IV., in all the best benefices.'

Utility of Party Names. About A. D. 1200, 'the two leading parties which had divided the cities of Lombardy, and whose mutual animosity, having no general subject of contention, required the association of a name to direct as well as invigorate its prejudices, became distinguished by the celebrated appellations of GUELF and GIBELIN.' * * * 'Terms of this description * * * are always acceptable to mankind; and have the peculiar advantage of precluding altogether that spirit of compromise and accommodation, by which it is sometimes endeavored to obstruct their tendency to hate and injure each other.'

'There is in general room enough for skepticism as to the characters of men, who are only known to us through their enemies. History is full of calumnies that can never be effaced. But I really see no ground for thinking charitably of Peter the Cruel.' *Note.*

'The Arabian monarchs of Cordova found in their success and imagined security, a pretext for indolence: while, according to the nature of despotism, the fruits of wisdom or bravery in one generation were lost in the follies and effeminacy of the next.'

'Alvaro de Luna, the favorite of John II. [king of Castile], retained for 35 years an absolute control over his feeble master. The adverse faction naturally ascribed to this powerful minister every criminal intention and all public mischiefs. He was certainly not more scrupulous than the generality of statesmen; and appears to have been rapacious in accumulating wealth. But there was energy and courage about Alvaro de Luna, which distinguished him from the cowardly sycophants who usually rise by the favor of weak princes: and Castile probably would not have been happier, under the administration of his enemies.'

'John II. did not long survive his minister; dying in 1454, after a reign that may be considered as inglorious, compared with any except that of his successor. If the father was not respected, the son fell completely into contempt.'

Of JOHN HUNYADY, the Hungarian patriot, who 'frequently defeated, but unconquered in defeat, stood in the breach for twelve years against the Turkish power,' and to whom the regency was confided during the king's minority,—Hallam says, 'He surrendered to young Ladislaus a trust that he had exercised with perfect fidelity: but his merit was too great to be forgiven; and the court never treated him with cordiality. [Does not this irony rival that of Tacitus, where he says, the father of Agricola was 'studio eloquentie sapientisque notus,isque virtutibus iram Caii Caesaris [Caligulae] meritus?']

We have marked many more specimens, of equal truth, pointedness, and force: but to extract them all, would extend unduly what was designed to be a very short article. From scarcely any other historian, not

(except Burke) from any other writer of any other class, could a larger number of sentences be culled, harmonious in structure, graceful and impressive in phraseology, and rich in sound political philosophy.

REMORSE.

LINES WRITTEN BY MARIAN HORTON,

And set to music by C. E. Horn, as an answer to Beethoven's celebrated "Adelaide."

In grief we met—in tears we part;
Our dream of happiness is o'er;
And wild despair throbs through my heart,
To know that we must meet no more!

No more? Yes, we may meet perchance,
But oh! how changed the scene will be;
Eyes that once fondly met my glance,
Will dart suspicion's glare on me:

The heart that throbb'd at my approach,
With torpid coldness shrinks away:
And every look conveys reproach,
Which speaks affection's fast decay.

Thou canst no more recall the hour,
When sweet confiding hope was thine;
Full soon the charm hath lost its power
Which seem'd to link thy fate with mine.

* * * * *

Yet not unmov'd I mark that cheek
With melancholy gloom o'ercast;
And tears I shed, could they but speak,
Would plead a pardon for the past.

A tear is all I have to give—
Thou wilt not then despise the gift;
Nor let in thy remembrance live
The wrongs that have our hopes bereft.

But why again recall the madd'ning hour?
Why on the mem'ry of our love thus dwell?
Teach me, oh Heav'n, (while yet I have the pow'r,)
'To breathe a first, a last, a fond farewell!

DR. JOHNSON'S IRENE.

The merits of this tragedy are not generally enough known. For the interest of its story, and still more for the frequent beauty and grandeur of its language, it falls not much below Cato. Take a few of its passages, as examples. But first, to make them better understood, see the plot, or argument of the play.

Mahomet, Emperor of the Turks, had recently conquered Greece, after a severe struggle, in which DEMETRIUS and LEONTIUS, two Greek nobles, had fought with distinguished valor for their country. Prisoners now, in Constantinople, though not closely confined—they conspire with Cali, the chief vizier, to overthrow Mahomet; in the hope of thus redeeming Greece. Prisoners also, though still less restrained, are Irene,

the beautiful heroine of the tragedy, whom the Emperor woos to be his sultana; and Aspasia, another noble Grecian lady, beloved by Demetrius. The plot fails; but all the conspirators for whom any reader feels solicitude, escape into Asia; while some of the subordinates, who meditated a double treachery by betraying their comrades, fall victims to Mahomet's wrath. Aspasia escapes with Demetrius. Irene, yielding to the sultan's courtship, is scarcely invested with her imperial state, before, on a false accusation of being engaged in a conspiracy, she is strangled by his order. Now for the extracts.

(Criteria of true Greatness.)

Cali. [Speaking of Leontius, and inquiring into his fitness for the enterprise they were planning.]

'His mien is lofty, his demeanor great;
Nor sprightly folly wantons in his air,
Nor dull serenity becalms his eye.
Such had I trusted once, as soon as seen;
But cautious age suspects the flattering form,
And only credits what experience tells.
Has silence pressed her seal upon his lips?
Does adamant faith invest his heart?
Will he not bend beneath a tyrant's frown?
Will he not melt before ambition's fire?
Will he not soften in a friend's embrace,
Or flow dissolving in a woman's tears?

Demetrius. Sooner the trembling leaves shall find a voice,

And tell the secrets of their conscious walks;
Sooner the breeze shall catch the flying sounds,
And shock the tyrant with a tale of treason.
Your slaughtered multitudes that swell the shore
With monuments of death, attest his courage:
Virtue and liberty engross his soul,
And leave no place for cowardice or fear.'

(Procrastination.)

'To-morrow!
That fatal mistress of the young, the lazy,
The coward and the fool, condemned to loss
A useless life in waiting for to-morrow;
To gaze with longing eyes upon to-morrow,
Till interposing death destroys the prospect.'

(Influence of Beauty.)

'See, Irene comes:
At her approach, each ruder gust of thought
Sinks, like the sighing of a tempest spent:
And gales of softer passion fan my bosom.'

(Ecstasy.)

'The present, past, and future, swim before me,
Lost in a wild perplexity of joy.'

(The true value of Life.)

'Life and death
Are only varied modes of untried being.
Reflect that life, like every other blessing,
Derives its value from its use alone.'

(A struggle of Passion with Conscience.)

'In this dubious twilight of conviction,
The gleams of reason and the clouds of passion,
Irradiate and obscure my breast by turns.'

(Ambition defended.)

'Irene. Ambition is the stamp impressed by Heaven
To mark the noblest minds: with active heat
Informed, they mount the precipices of power,
Grasp at command, and tower in quest of empire;
While vulgar souls compassionate their cares,
Gaze at their height, and tremble at their danger.
Thus meaner spirits with amazement mark
The varying seasons and revolving skies,
And ask what guilty power's rebellious hand
Rolls with eternal toil the ponderous orbs:
While some archangel, nearer to perfection,

In easy state presides o'er all their motions,
Directs the planets with a careless nod,
Conducts the sun, and regulates the spheres.'

(Effect of virtuous Love.)

'Tis love, combined with guilt alone, that melts
The softened soul to cowardice and sloth:
But virtuous passion prompts the great resolve,
And fans the slumbering spark of heavenly fire.'

(To one about to be executed.)

'The fraudulent moments ply their silent wings,
And steal thy life away. Death's horrid angel
Already shakes his bloody sabre o'er thee.'

(War's uproar.)

'The roaring Danube
Rolls half his floods unheard thro' shouting camps!'

(Sound Political Maxim.)

'Extended empire, like expanded gold,
Exchanges solid strength for feeble splendor.'

(A Despot's Wrath.)

'A sudden pause th' imperfect sense suspended,
Like the dread stillness of condensing storms.'

(Nihilum ne crede color.)

'Not always do the fairest flowers diffuse
The richest odors; nor the speckled shells
Conceal the gem.'

THE TRUCE GROUND.

FROM THE DIARY OF AN INVALID.

NO. III.

In travelling, last summer, through the southern country, I passed the well known section of land lying between the Pedee rivers, which Gen. Marion assigned as a temporary *truce ground*, during the revolutionary war. The friends of loyalty possessed unbounded influence between these rivers, and kept the whig inhabitants actively employed in checking their depredations. This induced Marion to enter into a temporary truce, by which it was stipulated, that neither party should be guilty of any aggression for the time limited. Having settled the articles of agreement, he hastened to assist the operations of Greene; but no sooner was he at a distance, than the insurgents broke the treaty, and petitions were presented to Marion, that he would march his brigade into the neighborhood, and reduce the disorderly to submission. I halted for the night at Burch's mills, the spot from which the terror of his avenging sword brought the crowd of deluded fanatics, to solicit with earnestness written protections from his own hand. Standing on a spot which was once the theatre of so much military prowess, my thoughts reverted to the many interesting reminiscences associated with the actors in a scene of deep and fearful interest, now almost swept away by the rapid march of human existence. My sole object in travelling, being the recovery of health, by change of place and diversion of mind, I felt inclined to pause at this point of my journey, and inquire for the ancient landmarks of the southern campaign—the Ebenezers of the mighty interposition and protection of the Divine Being, during the times that tried men's souls.

I made my quest first to the boniface of the little inn where I put up for the night, but I soon found that the fumes of the mug had drowned everything like sober

reflection in the man's mind. To my inquiry, whether his family dwelt in this part of the country during the revolutionary war, he answered, "Not exactly, thank God. I hear you whig rebels blocked out every drop of the creature comfort. Old Erin was my birthplace, bless her, she keeps a can to make the heart merry," and reeling to a chair, he began to troll the old song, "Erin's my country."

But his son, a lad about 14 years old, hearing my question, called out to him, "Father, if the gentleman wants to hear about the old war, I'm sure granny Kate could tell him a tale long enough, if he'd listen."

"Oh! ah! she mought, if he could catch her in the mind," replied the dozing voice of the other.

"Who is granny Kate, my boy?" I asked playfully.

"Ah! she's the old body that lives in the little hut just below here; there's the smoke coming out of her chimney now—jest say Marion to her, and you strike the trail, she'll go on upon it, till she runs through, unless somebody stops her. Daddy says, mammy Kate is dafst, but I'll tell what two gentlemen said, as went down to see her while ago—it seems as how they were old friends of hers; for they named many things as had happened, and set her agwine intirely; and when they'd heard her out, says one to the other, its as correct entirely as a printed book; and much truer, says the other."

"My little man," said I, "here is a trifle if you will show me the way to the old crone's, for I should like to hear her stories myself."

The boy was quite proud of being cicerone on the occasion, and went on without prompting to relate all he knew of the old woman's history.

"Granny lived in a much finer house than this once. Her master, I expect was a kingsman, for they had great doings, but that didn't bar out trouble it seems, for they got it o' both sides entirely."

We reached the door of the cottage, which was opened by a middle aged woman, of pleasing countenance, who recognizing Jamie, invited us politely to enter. With characteristic freedom he opened our business, by saying—

"Maggie, the gentleman has heard of your old mither, and would like to hear her crack of the long war."

"Just walk in, sir—our mother is passing old; but her memory, like a candle in the socket, burns brighter the nigher it is to the end."

We entered softly; for some how or other I felt a sort of awe in approaching a being, whose sympathies, and very existence, seemed to belong to a former race.

"Is that your mother?" approaching an attenuated figure, sitting on a wicker chair, in the deep recess of the fire-place; her form attired in a black gown, and a coif, or rather hood of green silk, shading her head and shoulders. She appeared absorbed in thought, or so intent on the blue knitting which employed her fingers, as to be unconscious of our entrance.

"Your mother is deaf," I said to the matron.

"Ah! no, that has passed away, with her dimness of sight; she hears and sees clear, for a few years past, but yet her thoughts seem to roam back into past times; and unless we rouse her attention, she pays little regard to what is passing around her. Her eyes are almost as tender as a baby's, since her eyesight came

back, and we are obliged to shield them from the light. Step this way, sir, it will please her to go over old times. Mother, this gentleman wants to ask you about the old truce ground—he is travelling that way, and would like to hear what you can tell him about Gen. Marion and his men."

The old woman raised her head, and revealed a visage in which the outlines of deep thought and masculine beauty were still discernible. The sunken eye seemed to kindle at the moment with some sudden recollections, that came athwart the mind, and lighted up her countenance with animation.

"A traveller, Maggie, did you say? Do I dream, or has Constance Norwood's son come at last? Sir, I have kept the papers, as I promised the angel on her dying bed; and many a weary year has my life been spun out, waiting your coming; for God has spared my life to fulfil her last request."

"Madam," I replied, "I am sorry you must be disappointed—I am not the person you suppose me, but only a passing visiter of these regions; and I may say, an enthusiastic admirer of the heroes of our revolution; but pray go on, and tell me who the gentleman is, you expect;" for at the moment the thought struck me, that I had heard the name of Constance Norwood before.

"Who should it be, but the son of my dear lady, whom I nursed at my breast, and dandled on my knee? Sydney Norwood, is his name, and a bright boy he was for the eye to look on, and the heart to love. Woe is me that they sent him back to the old country, to toil in their school, when he drank in learning like water. My dear lady never saw him more—she lived but two years after he was gone; but I heard years ago, that he was come back and settled a great man in New York. Why he has never sent or come for my lady's papers, I can't tell; maybe, he never got Sweeney's letter about it."

"My dear woman," I said, "is it possible that you speak of my deceased friend Sydney Norwood? Yes, it must be the same. I have heard him mention his mother as a southern lady, and dying while he was yet young and abroad. I am sure he never received any intelligence from you respecting her. I was with him frequently, and often heard him regret knowing so little of his own early history."

"Then, sir, it is all over, and I must die with a burden still on my heart."

"Would you have any objection," I said, "as the person nearest concerned is gone, to my looking over these manuscripts in your presence? Perhaps they may contain something important, which it may be necessary to keep no longer concealed."

"Certainly, sir, it will be a great relief to my mind. I hope the fear of God will be before your eyes. Bring the portmanteau, Maggie, and put it before the gentleman. Here are the keys," (drawing out of her pocket a leathern pouch.)

The trunk contained several packets; the private correspondence of the lady with the distinguished officers of the southern army. Besides these, there was a roll inscribed, "a brief memoir of my own life, as it has been connected with the eventful era in which I have lived, dedicated to my son, Sydney Norwood."

"Ah, that is the paper!" exclaimed the old woman. "Shall I break the seal, madam?"

"Do, sir, do—my heart will answer to every word of it."

The memoir was prefaced with a short letter to her son, concluding with these words:

"Feeling that the days of my earthly pilgrimage must be few, and that I must be denied the only blessing I desire in this world, that of embracing my dear and only child, I have solaced my heart, and employed the failing moments, by writing a faithful account of the events of my life, as it has been connected with the interesting and perilous times in which I have lived. Receive it, as the last and most precious memorial of a mother, whose latest breath expires in prayer for the eternal happiness of her beloved son.

CONSTANCE NORWOOD."

My mother was the celebrated Constance Geraldine, the rose of Camden, and the beauty of the south. Envied, admired and courted, with fantastic singularity she disdained all the trappings of splendor and gifts of fortune, profusely scattered in her path, and bestowed her heart and hand on the unaspiring George Marion, the playmate of her childhood, and earliest lover of her youth. Though he was not formed to figure in the ranks of fashion, or bow at the shrine of mammon, my father was fitted to adorn the circle of private life in refined society, or to serve his country with undaunted bravery, had not death's sudden and untimely call summoned him from the bower of love, and the hopes of "thick coming joys," to the awful realities of eternity. Though my existence was then hid in darkness, well can I picture the grief of her, who scarce a bride, was now the widow of the dead. But her widowhood was of short duration: sorrow had sowed the seeds of disease in a constitution naturally delicate; and in three short years, was my infancy deprived of the care of both parents. There existed between my father and his elder brother, Gen. Francis Marion, the most devoted attachment, which was extended in all its warmth to my mother and her helpless babe. He left the pleasing toils of agriculture to watch at her dying pillow, and soothed her departing spirit with the solemn promise of being a father to her orphan child. A faithful dependant of the Marion family was selected as a nurse, by my uncle, who, being at that time a bachelor, thought it best to place me in the family of my maternal relative, Sir John Heywood, then residing in the vicinity of Charleston. His household consisted of himself, his maiden sister Rachel, and an only son, now abroad for the completion of his studies. My arrival was greeted with something like pleasure in the old family residence; the old gentleman, pleased at having a new subject for the exercise of his quaint humor and stale conceits, and my aunt Rachel at the prospect of rearing a young scion, according to her own ideas of female propriety.

The first ten years of my life were passed in so quiet happiness, as scarcely to leave any impression of their flight. Aunt Rachel thought me too young to be put into leading-strings, and Sir John was generally too much absorbed in the musty volumes of the old school, to check my gambols, while the arms and heart of my good nurse, Kate Sweeney, were always open to protect and comfort me. It is not with a feeling of vanity, that I say I possessed, even at that early age, a pene-

tration of mind and a decision of character far beyond my years. The weak and ridiculous points of aunt Rachel's character afforded me infinite amusement, and gave rise to many ingenious tricks of annoyance. Though already rather *passé*, she assumed all the airs of girlhood, and her vanity was flattered by the very persons who elicited, and then ridiculed her folly. She wished to be thought altogether exclusive in her preference of everything British, and her utter abhorrence of American manufacture. This extended to even the smallest articles of comfort or traffic, and was a constant vexation to my *amor patriæ*. I remember one occasion, in which I felt a good deal of exultation, in seeing this spirit of haughty predominance checked in a ludicrous manner. The excellence of various wines was debated at table, and Sir John, having extolled the cup, in his usual classic vein, from the time of Ganymede to the present, my maiden aunt took occasion to express her surprise, that the culture of the grape had hitherto been neglected in England, when it was so evident that in the manufacture of wines, as in everything else, they might excel every other nation. "Only think," she continued, "of the perfection to which the single matter of snuff-making has been carried. Positively, nothing would tempt me to take a pinch of that article, which had not the signature of 'Fintalaton Cushaw, snuff-maker to his sacred majesty.' Have you a box at hand, Colonel?" she said, addressing a British officer next her.

"No ma'am," he replied, with a sarcastic smile, "I have given up the use of it since poor Cushaw was hung."

"Hung!" shrieked aunt Rachel.

"Yes, by one act of disloyalty he lost his office, and his life; he suffered under the game law, poor fellow; he was suspected of shooting deer in Windsor forest."

"To be sure!" exclaimed she, affecting the sublime, "how inflexible is justice in England!"

Sir John was a loyalist, more from habit and affection than principle. The fountains of ancient lore, the Pyrean springs of Oxford and Cambridge, were in old England—a galaxy of ancient authors adorned her literary horizon; his heart throbbed with joy in claiming citizenship with them. The old gentleman would sometimes unbend from his stern mood, and indulge his natural turn for witty conceits and satirical innuendo. These he bestowed lavishly on aunt Rachel, whose *outré* decorations and fantastic manners afforded too good a mark to be missed; but me he encouraged to speak with all the artless freedom of childhood, without censure or rebuke. I often fled from the starched formality of female domination, to the library, where I was always welcomed by a smile from the old antiquary, whose harshest words were, "Have you come again, my blue eyed maid, to spread confusion in the ranks," looking at his books overthrown by my heedless movements. "But I suppose it must be so—your sex have ruled the world, from the time that Juno raised a din about old Jupiter's ears, to the present. But where is that thing compounded of pomatum, starch and loyalty, that you are so soon let off from the attitudes?"

"Puff, do you mean, uncle? He is lying in Mr. Posey's lap, who is fanning aunt Rachel."

"Not the dog, child, but the woman, I alluded to—

Oh tempora! Oh mores! Oh nature! how art thou outraged! when not even a dog can walk in his own *bona fide* person, but is so bedizened and transformed by folly, as to make it doubtful whether he be a canine brute, or an evil spirit. I tell thee, child, if it were not for those blue eyes, and that arch smile, which make it doubtful whether Venus or Minerva presided at thy birth, I would abjure the sex."

These incidents will give you some idea of the peculiarities of my maternal relatives, Sir John and his sister. I was not neglected by my uncle Marion: he frequently called to see me, and to direct my education, which was conducted under the best teachers in the city—so that by the time I had attained my fifteenth year, I was said to have arrived at great proficiency in the accomplishments of the day, to which were added in *set form*, the graces, as practised by my maiden aunt.

A great change was now to come over my future prospects. The disastrous fall of Savannah, was soon followed by the capture of Charleston. This seemed to prepare the way for the subjugation of the whole southern country, and it was only a few bold spirits who dared to think of resistance. Marion was one of them. Joining several other zealous patriots, they travelled northward, beating up for recruits to oppose the enemy. But while our heroes were mourning over the state of things, and some of them gone to petition assistance from the sister states, our city was invested by the British army, and converted into the theatre of fashion and gaiety. The whig officers, nearly all prisoners of war, were sent out of the town, to the prison ships, or to St. Augustine, while the British officers, now masters of the surrounding country, spared no expense in the splendor and luxury of their entertainments. The loyalists, of which there were numbers in the place, joined in these festivities; but the noble feelings of the whig ladies, revolted at this degradation, and even foreign splendor and arrogance were often obliged to cower beneath the frown of indignant beauty. I do not mean to include all the British officers in the charge of presumption; there were some noble exceptions—some gentlemen of feeling and delicacy, who would have spurned the idea of wounding the national pride of even a lady. Among these, several visited at Sir John's; for aunt Rachel literally worshipped whoever wore the trappings of loyalty, and Sir John allowed all to enjoy the hospitalities of his mansion, who did not cross his prejudices or opinions; but he was pre-eminently a man of peace, at war with whatever interrupted the pure stream of Helicon. I was the only discordant string in the general harmony; I did not disguise my sentiments, which were warmly enlisted on the side of my oppressed country, and my earnestness in the cause gained me the title of the *little rebel*. Aunt Rachel endeavored to satirize my fervor, by throwing contempt on the military resources of the rebels; while Sir John, teased with an argument which ran not in his own vein, would exclaim—"Child, child, your head is turned with that phantom—honor. What saith that prince of poets, the ingenious Cowley, addressing this illusion of the brain:

'Nesley nothing, walking shade,

'By what witchcraft wert thou made,

'Empty cause of solid harms!'

And then again, how admirably he changes the metaphor:

'Should I fame's trumpet hear,
'Pd march the muses' Hannibal.' "

And striding in dramatic style, he would disappear behind the curtains of his library.

I said there were some generous and noble sons of Britain engaged in this direful contest; but entering as I did into the warmest feelings of the whig party, I regarded with prejudice, amounting to aversion, every one who espoused the other side. Such was the cold and haughty spirit with which I first met Col. Webster. I had heard of his noble bearing and courage in the field, and thinking of him as one of my country's dreaded foes, I saw him with the flush of resentment on my cheek. I shall never forget the moment, for it was one of complete triumph on his part—the triumph of the calm and generous feelings of our nature, over the proud and vindictive. Instead of the arrogant victor, I beheld a countenance full of benignity and grace, accompanied with a courtesy of manner so sincere, that even my disdain was softened, and I was compelled to regard him, though a British officer, as a gentleman of worth and feeling. That he did not ever afterwards view me as a supercilious and narrow-minded being, is a proof of his amiable and forgiving disposition. Soon after our introduction, I expressed my sentiments without the least reserve, and expected to meet fully as much warmth on the side of loyalty. On the contrary, he spoke with deep sympathy of the evils of war, and lamented that the spirit of discord and hatred should be kindled between kindred nations, whose sons were born to be brethren by blood and friendship; "and while this," he smiling said, (touching the bright steel that hung at his side,) "forbids me to say that my king's rebellious subjects have justice on their side, I sincerely wish them a happy issue out of this disastrous contest."

Not long afterwards, the king's birthday was to be celebrated in Charleston, with great pomp. I suppose the design was to charm the loyalists, and dazzle the whigs, by this pageant. Aunt Rachel was more than a month busily engaged in rearing a triple crown with which to decorate her temples on the occasion. I could not help being amused at her folly, while I despised the spirit she evinced in the affair. Having completed the head-dress, the ultimatum of her wishes was to surmount it with some loyal device. She first applied to Col. Webster to confer the honor, but he, casting a furtive glance at me, declared there were so many rebels among the ladies of Charleston, that he feared not only the crown, but the wearer, would be torn to pieces, if it appeared at the ball. Nothing daunted, she turned to Capt. Dawkins, who after much circumlocution, produced what he called a lion rampant trampling the eagle. She was charmed with the execution, and walked off in triumph, while Col. Webster and myself were nearly choked with laughter at the ridiculous effect. To conceal his diversion from the company, he turned to me and asked, if I was waiting to see the eagle triumphant before I engaged the services of Capt. Dawkins in the same line. In a moment I experienced a complete revolution of feeling, and my cheeks burned with resentment, to be put in comparison with such a compound of folly and presumption, but worst of all, to have the true American eagle so vilified and degraded.

"The eagle and myself," I replied, trying to suppress

a tear, "would both be content to relinquish any honors in your gift, Capt. Dawkins."

"Certainly me'am, certainly I wouldn't wish to——"

He was interrupted by Colonel Webster—"Forgive me, Miss Marion, nothing was farther from my thoughts than offering the slightest injury to your feelings. I would die sooner; but I had imagined that our acquaintance, our friendship, may I say, if it is not too late, would have allowed an innocent jest. But I see that I have offended you, and wounded those sensibilities which though the charm of your sex, are too delicate to be appreciated as they deserve by ours."

Before he was done speaking, I felt the impropriety of my resentment; and, covered with confusion, hid my face in my handkerchief, while tears of unaffected remorse flowed down my cheeks. Capt. Dawkins had retreated at the first flash of my temper I suppose, for when I had gained sufficient courage to look up, I found myself alone with Col. Webster. I was attempting to apologize for my conduct, when he seized my hand, and pressing it to his lips, said, "Let us both forget what has just passed, or remember it only as the time when a mutual fault and mutual forgiveness cemented the bonds of a friendship as enduring as life."

I could only reply, "Your generosity is heaping coals of fire on my head; I had much rather you should resent, even defy my unpardonable petulance."

"Who could fail to admire that ardor of disposition that knows no cold medium? and how happy must he be, who wins the first place in such a heart, too proud to stoop, too noble to disguise—too true even to deceive, and may I not add, too generous not to forgive?"

"Add whatever is necessary to complete the climax, and make me perfect, however foreign to the truth."

"Then let me utter what my heart has long confessed, that there is an irresistible charm around you, and that by those bright pearls which strive vainly to dim the sweet azure of your eyes, I do confess its power over this heart of mine."

"Who would ever suspect Col. Webster of speaking nonsense to a girl of sixteen, and she too a rebel, and the niece of the arch-rebel, Marion?" I said, endeavoring to turn what he had said into jest.

"My dear Miss Marion, the heart seeks not its conquests in the battle field, but in the bower of love. However, you speak truly; it is nonsense for a soldier, an adventurer whose life hangs on the fortunes of war, to aspire to the smiles of beauty, or the return of affection. Accident has betrayed me into the confession of a passion which I have vainly striven to smother in my own bosom, until a more propitious hour should arrive—a time when even Constance Marion might hear with honor the fervent expressions of my love."

"The time will come," I replied, "when Col. Webster will find what he so richly deserves, a heart as warm and true as his own, which will respond to those feelings which it is impossible I ever can——"

Here I was relieved from the embarrassment of finishing the sentence, by the fortunate return of aunt Rachel with the tiara on her head. I hoped to escape observation, and retreated behind her, not without her remarking as I passed, that my cheeks were this evening what she should call "vulgarily red." I made no reply, or even looked up, until I reached my chamber, where I threw myself down, heartily vexed with my-

self for having forced Col. Webster to the declaration of a passion in which I could feel no interest, except that of being the cause of unhappiness to a mind so noble and disinterested. I had never thought of love as associated with Col. Webster, though his society afforded a feast of the highest intellectual entertainment, which fascinated my mental taste, yet it moved not the spell which, long ere I saw him, had been spun around my youthful heart and fancy.

The grand birthnight ball passed, and none of the whig ladies attended. I heard, through my aunt's gossip, that Col. Webster, though the "observed of all observers," was not in his element, and retired early. From this time his calls were less frequent, and his manner towards me reserved, and almost cold.

I have dwelt thus long on the conduct of Col. Webster towards me, to contrast it with that of another person, who was destined to be the persecutor and bane of my life. This was Thomas Heyward, the only son of Sir John—who being sated with the pleasures of foreign courts, returned to America; and obtaining a commission in the British army, sought excitement in the stirring scenes of a camp. His conversation was brilliant and entertaining, though interlarded with too much of the court slang; but making due allowance for the fashionable extravagance of the continent, the gallantry of his manners might pass for the height of *bon ton*. His knowledge of the world, and insight into character, amused me; and attributing the freedom of his deportment to his having mixed much with the world, I gave him credit for that artlessness and sincerity in his intentions, which experience had not yet taught me to suspect. I pitied him too, for it was evident his society was the aversion of both Sir John and aunt Rachel—so that I was his only refuge in the family, and regarded him, perhaps on that account, with a more favorable eye. While awaiting his commission, he mixed in the gaieties of the city, and was the *beau ideal* of the loyalist ladies. He affected perfect indifference towards the flattering tokens with which his presence was greeted in the halls of beauty and festivity; and declared, on returning from these gay resorts, that simplicity was now his *beau ideal* of all that was lovely in woman; and this he would say in a way to make me suppose he was contrasting my manners with the heartless beings, whose life was spent in weaving attractions for the other sex. I remember the first time I believed Heyward in earnest in the flattering expressions he used towards me. We were looking at some prints, in which love and pleasure are represented under the same figure.

"I once wooed them as the same," he said, "but now I feel the deception. Do you know why, Constance?"

"No, I cannot imagine."

His glance was directed as if to search my inmost soul; even that impassioned look did not reveal to me the secret, until pressing my hand, he exclaimed:

"I had not then seen love and innocence combined in my own dear cousin."

"Oh! hush, Heyward," I replied, "I have never listened to the voice of flattery, and never will," tearing away and running up stairs.

I felt a chill of horror come over me, at the idea of being loved by him, that almost petrified me. It was an undefinable feeling, which seemed to forbode evil. I

never met Heyward afterwards without shrinking. From this time he practised less freedom, but more assiduity, to make himself agreeable. I tried to conduct myself so as to keep up the appearance of friendship, while I kept as little of Heyward's company as possible in the position I then occupied. Kate Sweeney was my only confidential friend; to her I communicated the disagreeable circumstances in which I was placed—obliged to bear the attentions of a man whose principles and manners I began to detest. She prudently advised me not to irritate the passions of one who, she believed, would revenge, if it were possible, every slight offered him. She then told me that Sweeney had heard from Gen. Marion, who had joined the northern army coming to the assistance of their southern brethren, and that they were marching to the defence of Georgetown.

"This is too good news to be true," I exclaimed. "My uncle Marion, from whom I have not heard for six months, coming with an army to deliver me from a thralldom worse than death! I am transported, Kate, at the very thought. I will seek his protection, even in the embattled field."

"Not so fast, my little mistress; he'll do his best—but God only knows, whether our little handful of men can prevail against these dare devils, helped on as they are by the tories. Bless you, child, Sweeney was off as soon as he got wind of it. I think as how the General has work for him; but you know he's no blab-tongue—so I never says a word, because I know he's doing his best for the General and the country, for a poor man as he is. He'll likely be home in a day or two, and then I'll step round and bring you down to see him."

"Mammy, a thought has struck me, that under Sweeney's protection, I might reach my uncle's quarters. I do not believe the soldiery would molest me; indeed nothing could terrify me more than the thought of being in Heyward's power."

"God send you, my sweet mistress, speedy help; but don't be too rash: your uncle an't ignorant of the snare set for you, and he'll consider of the matter, and I'm pretty sure, send some word by Sweeney. He has enough friends in the country to take care of you and keep you out of harm's way, if he does but speak the word, and so Sweeney said when I was a grieving over your situation."

"Well, mammy, your words have both reason and comfort; would that I could listen to them longer—but the evening shadows warn me to my prison again."

"Not with that tear in your eye, sweet one; I will go with you, if you will dash away that drop, that almost makes one come into my own, and think only of the pleasure in store for you, when you have the free country to bound over, and all the General's men to do you reverence. I'll tell you there's one of them an't forgot the blue eyes that shone on him that evening he met you and Miss Edith stroaming out on the sands. Ah! I see that tell-tale blush; so you remember it too, do you?"

"Ah! mammy!" I replied with emotion, "it was only past happiness returning for a moment that brightened my cheek." At the instant, I was carried back to other days, when hope scattered her roses in my path. "But, as you say, I will think of the future, and hope

it may be as bright as your love for me would picture it."

A fortnight elapsed, and still Sweeney did not return. I began to fear that in some fatal encounter he had fallen. I felt lonely and desolate, and the wantonness of my soul was painted on my countenance. Col. Webster came—he had not called for sometime. He asked for me; and though I was too unhappy to enjoy society, I could not slight a friend such as he was, so I constrained my feelings and went down. After a few minutes' conversation, he came up to me, and inquired if I had been really ill, that the bloom had faded from my cheeks.

"I should say," he continued, "that your looks mock the happiness that report says you are shortly to realize, in an union with Lieut. Heyward."

"Good heavens!" I exclaimed, trembling at the idea, "could you believe it possible, from his knowledge of my character? It is only as a victim that I can ever stand at the altar with Heyward."

"I see, Miss Marion, that this is a painful subject. God forbid that I should ever add to anything that distresses you; on the contrary, what is there that I would not attempt to relieve you from any embarrassment or cause of uneasiness? Hesitate not to tell me, in any way I can aid your wishes."

"There is one wish, in the execution of which your goodness might possibly assist me."

"Speak! only speak, and it shall be done," he said, with great warmth.

"I hear that Gen. Marion is approaching Georgetown; could I procure safe conduct to his quarters, my only wish on earth would be gratified. I see your astonishment, but think not that I resolve rashly. There, and there alone, can I look for repose and happiness."

"Have you any attendants, in whose fidelity you can trust, in the expedition?"

"Ah! yes, my foster parents, Sweeney and his wife, who love me as their own souls."

"Then at such time as you may appoint, a sufficient escort from my own troop, shall conduct you safely into the American lines. In the meantime I will use every effort to ascertain the exact position of Marion."

"Thank you," I replied, "your kindness surpasses words."

He made no answer, but pressing my hand to his lips, departed. With a lighter heart than usual I walked down to my nurse, Kate Sweeney's. She met me with a smile, telling me Sweeney had come, and brought me a letter from the General.

"A letter! where is he?"

"Just making himself decent like, to see you; he's had rowdy work, poor soul, dodging through the swamps to keep out the way of the enemy; not for that he is afraid of one of the insolent rogues, when he's free, as you may say, to hold his own; but you know he's business on hand that requires him to keep clear of interruption." Sweeney now came with the letter in his hand. I pressed it to my bosom, and then opening it, read its contents.

"My dearest Constance, I hear by John Sweeney of the painful circumstances in which you are placed. Nothing but the city's being invested by the enemy, prevents my hastening to your relief. I have considered the matter, and think it best that you should leave

Charleston and come to me at my quarters, near Georgetown. I confide you to the care and safe conduct of Sweeney, who understands, better than any one else, eluding the enemy. He and Kate will accompany you to our lines, where I will await you. I rejoice to hear that you spurned a man who is notorious for his gallantry; you will soon be freed from his presence, and the embarrassing situation in which you are placed. I am retreating towards the Pedee, where we hope to lie covertly secure from the enemy, and ready to seize any advantage that may be in our reach. Fear not to trust yourself to the courtesies of my brigade; there is not a man in it that would treat a lady with rudeness. I have many warm friends between the Pedee rivers, who will do you every hospitality until we see better times. I wish you to observe secrecy in your movements, until you are out of Heyward's vicinity: I have no confidence in a man of his principles."

I considered a moment, whether I should accept Col. Webster's offer, or abide by my uncle's directions, and give myself up entirely to Sweeney's guidance. I appealed to him to tell me sincerely, whether he thought I might venture to undertake the expedition with no defence but such as he could render me.

He answered, "You know I am not a man of many words; but, God willing, I'll see you safe into your uncle's arms. I've laid my plan,—we must get the pass of the British officer Webster; he'll do anything for you, Miss Constance; for his very eye dances at the sight of you. But my pretty bird, you must cover up that snowy face, that the blood seems to sparkle through, and dye them glistening brown curls, so as to look more like a blackamoor than a lady born as you are, for I tell you, my queen, beauty is a dangerous thing to fall among these English dogs."

"Would to Heaven, foster father, I had been gifted with something less annoying—less fatal to my happiness."

"Don't discomfort yourself, child; I can manage it very well. Kate must take it upon her to play old Molly Druggot, the doctress, who is free to put her foot where she pleases; for the folks all believe she carries a God-send with her; and you, I ask pardon, must for the time go for her daughter,—both travelling to the help of the sick in Georgetown hospital. But as Molly and her gal Peg are both smartly colored with mulatta blood, you must "take part of the same," as the blessed scripture says, and I think I have the thing that will do it, having been driven to these shifts before this day."

"And you, Sweeney, what will you do to escape detection? I shall fear most for you, as you must be well known in these parts."

"La, an't I tricked 'em before to-day, I reckon? Why I can put on the devil's cloak, and not be hurt by it, if there's a need be? And why not pass for a real red coat? It an't the first time I've slipped in and out of it as slick as an eel in its skin. Kate, show Miss Constance the real thing there, none the worse for coming off the back of a deserter. And now let's eat too, and fix by to-morrow evening, for remember we are night strollers. I've three as nice footed tackers as ever trod turf. Kate and I must both swing a wallet of necessities on our beasts, not for that we shall want much, but you must keep up the state to which you was born, Miss Constance, its not fitting for the like of

you to stint yourself. Let's see—first of all, get the permit of the Colonel, for you ken this place is a kind of devil's hole; none can get out or in without passing through the fire. You jest signify, my mistress, as how you wish to come to the speech of him, and I'll underwrite you; he's sure as death; but wait here for him, for let but that glossy black-hearted foreigner get wind that you have any private talk with any gentleman but him, and Beelzebub can't hold him. Here's the bit paper, but steady that little white hand, or I am afraid the Colonel can't read your chicken flutters."

"I will try, Sweeney," I said, feeling the blush of wounded pride suffuse my cheeks, as I thought of being about to solicit a clandestine interview with Col. Webster. I transcribed a few lines, and Sweeney set off for the British quarters, while I turned my steps towards Sir John's, to make arrangements for my journey. What was my horror to see Heyward reclining on the balcony, and watching me as I advanced. It was impossible to pass without encountering him; so I endeavored to assume a careless air as I entered the piazza. As I was passing, he caught my hand, exclaiming, "How now, little Zephyr, did you think to flit by me thus, when you know my soul lives only in the beam of those bright eyes? I cannot endure this coquetry longer, or allow you to waive my suit, when every day increases the intensity of my passion."

"Heyward," I replied, with indignant feelings, "no more persecute me with this language, or I shall believe you mean to offend me. I can never listen to a tale of love from you, and I esteem it an ungenerous thing to press the matter farther, when you know it is impossible I can ever think of you otherwise than as a friend and relation."

"Remember, Constance Marion," he said, "that you are the first woman to whom I ever proffered my hand; and, by Heaven, you shall rue the hour you rejected it, if a thousand devils were to stand between me and the accomplishment of my wishes."

I was near sinking on the floor while he spoke. I saw the fell demon in his eye as he rushed by me out of the house. When he was gone, I crept softly into my own apartment, and with trembling hands arranged my apparel in a portable form. I could not trust myself to see poor Sir John, but commending him to the protection of Heaven, left the portals of a mansion where I had known the first throb of delight, and felt the first pang of sorrow. I reached Sweeney's humble abode, and had time to compose my spirits, before Col. Webster's arrival. He met me with emotion, and seemed deeply concerned at the resolution I had taken to commit myself to Sweeney's protection alone.

"My passport," he said, "will secure your party from any interruption from our regular troops; would to God it could shield you from all danger of insult and impertinence from the hordes of lawless marauders. You know how joyfully I would provide you an escort, had not you preferred the plan laid by Marion. My only hope is in the unrivalled tact of your faithful friend Sweeney, with whom I wish to have a few words in private."

He retired a few moments with Sweeney, and then returned with a more cheerful countenance. Day was near dying away before he departed; when he did so, it was with every expression of hope that no evil might

befall me in this momentous undertaking, and that we might again meet in happier times; but this was said with a deeper cadence of the voice.

We immediately set about assuming our different disguises. After I was painted and habited, Sweeney declared he should have no misgivings, unless he caught a glimpse of my slender foot or hand. About dusk we started, and found no difficulty in passing the sentinels around the city. Sweeney being well practised in giving the countersign, no inquiry was made which his ingenuity could not answer. We passed all the foraging parties of the enemy without molestation; and Sweeney, thinking we had gained a secure resting place in the dark morasses of the Santee, called a halt, that we might refresh ourselves and horses. He struck a light, and we were in the act of discussing our wallet of provisions, when my guide sprang to his feet, and intently listened to a distant noise, which his practised ear soon ascertained to be the tramp of horses. His first action was to blow out the light; the next, to put our horses in motion.

"Those," he said, "must be the videttes returning to camp, or that devil Butler."

"Not the marauder, I trust in Heaven!" I exclaimed.

"Never fear, lady; I got that will make him move backwards faster than he ever did forwards before. Sweeney don't travel without his pass neither."

"God preserve us! what can you do, dear foster father, against such a gang of banditti?"

"Never flinch, dear lady; run your beast up between Kate's and mine, and say nothing, for I hear 'em coming right ahead."

They quickened their pace on perceiving us, and a rough voice called out, "Who goes there?"

"A servant of the king's, on duty bound," was the answer.

"By what warrant do you prove it? for I swear no cursed rebel shall escape the sword of Tom Butler."

"And Tom Butler is the very man I want," was the ready answer.

"Why, fool, what can you want with him? You seem to be in no case to fight with him, or for him."

"Why," rejoined Sweeney, "it's a long story, which as time don't wait, I'll try to make short. You see as how we English folks has a great notion of being comfortable."

"And what's that to the purpose?" rejoined the impatient ruffian.

"A great deal: it's the reason I'm fetching Molly Drugget and her gal Peg to nurse the men in the hospital."

"And who gave you permission to do this?"

"Who, but my superior officer, Colonel Webster? Here's his pass, if you want to see it."

"It may all be a lie, for what I know. Strike a light there, sergeant. Let me see the paper."

"Well, here it is; but what's the use of cogitating on what no consarns you, man; when here's the raal scrip under the hand of Cornwallis, which he sent you by the safest hand he could hit on."

He fumbled in his breeches pocket, and presented Butler with a sealed paper, purporting to be from the British General, and warning Butler of the rapid movement of three detachments of the American army with the intention of surrounding him, and warning

him of the only safe quarter of retreat. A panic seemed to seize the bandit, when he heard that Marion was one of the pursuers. He only halted long enough to order a counter march, and wheeling his troop around, the whole gang soon were beyond the fear of molestation.

When we were quite clear of them, Sweeney roared out in a hearty fit of laughter, to see how completely the deception had succeeded; the whole affair being a fabrication of his own, executed by the same deserter whose uniform served his purpose.

The next day we travelled through by-ways, but still were often obliged to resort to Webster's passport for protection, so completely was the country infested with the friends and allies of the enemy. Night found us still plodding our weary way, our only beacon the twinkling stars above, and the dashing of the river, whose course we were following. Sweeney kept his eye fixed on the unerring lights above; and calculating time by the progress of these silent travellers in the heavens, guessed the hour to be midnight. His speculations were interrupted by the sound of a distant bugle.

"Hush!" exclaimed he; rein up your beasts a spell. I think, if my ear be true, that is McDonald's note."

"What, Sweeney, another ruffian? I tremble at every sound."

"Tremble, indeed! I'm thinking it's the sweetest sound as ever come over my ear yet; and I'm no way surprised neither. It's jest what I looked for, as soon as I got word to the General that we was on the way. As sure as my mammy's name was Grace, its jest Sergeant McDonald coming to marshal us all to head-quarters. So you see, Miss, we an't folks of small account neither. And tho' the Sergeant's a rampagious sort of fellow, he an't guine to run his head agin a post, not he; he's as true steel as ever bent, and that's why the General sent him. The British run from him like Lucifer, because they think he smells of the brimstone. Listen, he's tooting again, and making right up to us."

In a few moments the party came up with us, and McDonald demanded who we were.

"Jest the stragglers, honey, you are looking after, I guess," replied the lively voice of Sweeney, "for you are nobody if you an't McDonald, come to squire us on to head-quarters."

"Exactly as you say; the General was rather uneasy when he heard Butler was prowling in these parts; and he said to me, 'McDonald,' says he, 'there's no man in my brigade can cope with that marauder like you.'"

"You a little more than hit it off, Mac," replied Sweeney, with suppressed humor; "something like it, I dare say. But go on."

"Take jest such men as you choose from the troop, and scour the road to Charleston, until you overhaul John Sweeney, who has my niece, Miss Marion, under his care, and conduct them safe to my quarters."

"Not them, Mac; the General knowed I was up to conducting myself, and you too, if there was any occasion. Don't stretch your commission, man; it was the lady the General had in mind."

"I'm an officer under commission, remember that, and speak by authority. 'I charge you,' says he, 'that no evil befall her while under your protection.' 'I swear, General,' says I, 'that by every saint in the calendar, and that's not a few, she shall be the jewel of

my eye and worship of my soul, until I hand her safe to your presence.'"

"Well, that's another thumper, by your leave, good Mac; howsomever, go on to the end," muttered Sweeney.

"As I was saying, with the General's favor I broke ground, and kept our steeds up to their mettle the whole way; for who dare say, McDonald stay your course, unless I've a mind to it? But, honored lady," he said, addressing me, "you have but to command, and all we," pointing to his troop, "obey. Pardon the rude manner of a soldier, while I greet you in the name of my commander, and offer you the service of my hands and devotion of my heart."

I thanked the rough soldier for his kind intentions, and told him my only desire was to lose no time in reaching the place of our destination.

About day-light we halted to renew our strength by rest and taking some refreshment, from which I had abstained while beset by dangers. I observed the men to eye me with surprise and curiosity. Doubtless the singularity of my appearance struck them as something incomprehensible. Sweeney soon took an opportunity to explain all, but in so low a voice as to escape my ear, and afterwards they preserved the most respectful silence.

At mid-day we came in view of the American lines. I shall ever retain a lively impression of the effect on my feelings. My heart bounded with joy when I beheld the star-spangled banner waving above the camp, where every heart beat in unison for country and home; and I forgot my own petty cares, when I thought that the weal or woe of a great nation hung on one single movement of this army. Marion met me as we entered the American lines, and clasping me to his bosom, assured me of his love and protection.

The army was soon in progress towards its rendezvous between the Pedee rivers. My uncle obtained me very agreeable quarters every night among the whig inhabitants, who rallied around his standard, while the loyalists fled at the terror of his name; so that our march was without interruption until we reached Snow's Island, where Marion took up his quarters. This was one of the most impervious fastnesses imaginable; surrounded by morasses and running streams on every side; the only accessible point of approach lying concealed from common view. We had to wind our way through a canopy of evergreens, from whose leafy arms hung a drapery of mossy fringe, decorating and shielding our sylvan retreat. Gen. Marion selected an eminence on this island as the spot of encampment. Tents were soon erected, and lights struck, in the deep green solitudes, which seemed hitherto to have been the fairyland of a poet's dream. In its labyrinths I enjoyed delicious repose, and felt a companionship with its secret haunts, which told me that nature has a voice. In every "leafy bough and bursting rill," she replies to the sympathy of the human heart.

I had quite forgotten I was in the camp of Mars, when my uncle came to tell me of the arrangements he had made for my accommodation. I saw satisfaction and complacency beam on his brow, as he began:

"Dear Constance, I have not told you yet, where your quarters are to be during this campaign."

"No, uncle," I replied, "and yours there are so

romantic, that I think I am spell-bound. But, to speak seriously—who has courage to harbor a rebel and run-away?"

"Who would you guess? I have been silent, until I could give you the agreeable surprise."

"How, uncle, can I imagine the person, in a land of strangers?"

"Do you call Edith Norwood, your old school-mate, a stranger?"

"My sweet Edith! Ah, uncle, would you mock my heart's early affection? You know her father was obliged to leave the country, because he espoused the cause of liberty too warmly."

"I know he left the hot-bed of toriyism: but what if he settled peaceably in the *truce ground*? and what if Edith should meet you at the Black-river ford to-morrow, and conduct you to her residence, only a few miles distant, would you not think me as great a wizard as the British do?"

I could scarcely reply. Joy and surprise held me for a moment speechless. Should I meet again the friend of my heart, and taste again that communion of soul, which my lonely spirit had pined for so long! The thought was transporting—I lived on it until the hour of my departure arrived.

I was accompanied by my uncle, my old attendants, John and Kate Sweeney, and Lieut. Stuart, whom Marion introduced to me as my protector to Col. Norwood's residence, it being out of his power to proceed farther than the ford.

When I first encountered the glance of the stranger's eye, I almost shrunk from it, such was the awe inspired by his presence. And it was not until I entered into conversation with him, that I found united with this power and decision of mind, all the gentle kindlings of the heart. His figure was tall and athletic; the keen gray eye and high forehead, marked the daring of a soul fearless in danger and untiring in effort.

The taciturnity of the General, left the conversation chiefly to Lieut. Stuart and myself; and I found that he could lay aside the stern warrior, and unbend his mind to all the grace and elegance of polished society. As all the ceremonials of fixed life were out of the question in the circumstances in which we were placed, making our way through the impediments of the wild wood, we soon improved our introduction into the openness and pleasure of unrestrained intercourse. He gave me a history of the war waged on the unsuspecting inhabitants of the frontier, by the marauders under British colors, which had induced General Marion to enter into a truce for a limited time.

"And my dear Edith lives in this truce ground, I think my uncle said."

"Yes," he replied with pleasure beaming in his eyes, "Col. Norwood's family, I hope, are now secure from all danger; but they have suffered severely from the ravages of this barbarous warfare. It was in defending their persons and property from brutal violence, that I first saw the lovely daughter of Col. Norwood."

"So then you are personally acquainted with Edith," I said, looking archly towards him; for I imagined there was something like pathos in the tones of his voice as he spoke of her.

"I have seen Miss Norwood in the most interesting of all situations—in adversity and tears; and again I

have known her in prosperity and joy. I cannot say in which she was most lovely."

"Oh, in both," I replied with warmth; "her charms are surpassing: in which declaration, I think I can perceive with a woman's penetration, you will agree."

The conscious glow passed over his cheek, and lent a momentary smile to his countenance, as he answered, "Certainly, I will not refuse to confess, Miss Marion, if you will be priestess."

"That I will," I said, "and promise to give you hearty absolution for the sin in question."

My uncle broke on our discourse, by calling out that he perceived Col. Norwood had reached the ford before us. We quickened our pace, and looked forward to the spot, which now began to appear through the spreading growth that overhung the river. Could that tall and graceful figure, whose plumes floated on the breeze, while with fearless skill she reined in the fiery spirit of the steed on which she was mounted, be Edith, my little playmate, who used to bound over the sands or hedges to pluck a favorite flower or gather shells on the beach, at the risk of frock or bonnet? The question was not answered satisfactorily until we embraced each other, when I found the same soul, warm and true, inspiring a more mature and perfect beauty.—After our mutual salutations were over, she greeted my uncle most cordially, and then turned to speak to Lieut. Stuart. I thought her color brightened, as their eyes met; but in a moment she regained her self-possession, and gaily inquired of Gen. Marion, whether his treaty with the insurgents forbade his acting the squire of dames within the prescribed limits. My uncle replied in his dry vein of humor, that he had made no treaty yet with duty, which told him that he must not purchase even Miss Norwood's smile at so great an expense. Edith's look of pleasure showed that she accorded with the sentiment; and with hearty wishes on both sides, we parted with my uncle, who returned to his quarters.

A few hours' ride brought us to the residence of Col. Norwood. It was a sweet sequestered spot, crowning a gentle eminence on the Pedee. Its embellishments were only such as suited the simplicity of rural life, assisting, but not deforming nature. I was welcomed by all with heart and tongue, and felt that I was giving as well as receiving pleasure by coming into this happy family.

We had poured out our thoughts in gushing flow on various subjects, and yet the one name nearest my heart had not been mentioned. At length Edith said, with something like mortification, "Constance, have you forgotten Sydney? I am sure you have, or you would at least have missed him from our little circle."

I endeavored to make some excuse; but the truth was, that I feared betraying more interest than I wished any one to discover. I suppose my blushes emboldened Edith to go on, for she wound up by saying, "Well, I will tell you, my lady, if he has faded from your memory, you have not from his. By the way, I expect him in a few days from Charleston, where he has gone to gain intelligence of the movements of the enemy."

It had been two years since Norwood and myself had met, and yet I felt a sort of consciousness when he was named, as if he were present and reading my

heart. That full blue eye, which seemed but the portal of a noble soul, that high forehead, shaded with clustering ringlets, that arched lip, now curled in disdain, now melting into an ineffable smile, that form of slight but graceful proportions, still lived in the fond record of youthful memory; but they were like the sacred relics which the heart of the devotee cherishes too much to suffer them to be gazed on by others.

I had told Edith of young Heyward, his character for gallantry, and the horror and dislike I felt at being the object of his admiration or love, and my joy at escaping from his presence; but I had never spoken to her of Col. Webster. I felt a sort of self-reproach when I thought of him, as if I had requited his kindness with ingratitude; and when Edith inquired about him, as an exception to the generality of the British officers for generosity and honorable feeling, I spoke of him only as a casual acquaintance, in whom I felt no particular interest, and dismissed the subject as soon as possible.

(To be concluded in our next.)

AN ADDRESS ON THE UTILITY OF ASTRONOMY:

Delivered before the "Young Men's Society" of Lynchburg, Sep. 26, 1837, by Professor Landon C. Garland, of Randolph Macon College; and published by request of said Society in the Southern Literary Messenger.

GENTLEMEN,

Had I not in my judgment fully approved the method by which you hope to excite a deeper literary interest among yourselves as well as others; and had I not felt it to be my duty to contribute, when called upon, even in my humble measure, towards the attainment of so worthy and important an object, I could not have obtained my own consent to occupy a place, for which I am conscious I possess but little fitness. But how I may best discharge this duty, I have been at some loss to decide. Among those subjects, to which from choice or profession, my mind has been particularly turned, I have found it difficult to select one, which will admit of being clearly presented in a popular form and within the compass of a single hour. Believing, however, that an interest in the sciences generally, is to be excited and maintained only by pointing out their applicability to the common affairs of life, I have ventured on this occasion, to press upon your attention the claims of one branch of physical science, which in this country has not been duly appreciated.

The chemist unfolds the wonderful properties of steam, and exhibits its almost creative energies as a prime-mover of machinery. With those beautiful laws, which control the combination of substances, both simple and compound, he connects the application of the substances themselves to a thousand useful purposes both in medicine and the arts. The geologist interests us with the structure of our globe and the fossil contents of its strata, which like the medals and inscriptions of an ancient empire, are supposed to point out those tremendous convulsions by which whole continents have been at successive periods up-heaved from the bosom of the ocean, and others buried beneath its waves. He regards them, indeed, as historical records of the changes to which the earth has been subjected in assuming its present physiological character, which, notwithstanding the obsolescence of the language, he considers as unequivocal and satisfactory. The mineralogist unfolds the hidden riches of the crust of the earth—examines its materials—their respective localities—and shows their various applications to the useful

and ornamental arts. The theoretical mechanician, by giving verbal expression to his analytical formulas, has in many instances furnished the practical mechanic with his most useful and comprehensive rules. Thus, by pointing out the available resources of these branches of science, considerable importance has been attached to their acquisition, and the learning of books has been duly respected and prized. But the epithet of *stargazer*, is still somewhat sneeringly applied to one, who, upon any subject, entertains fanciful and extravagant notions; as though astronomy were of no real worth, and had contributed but little to the progress of civilization and to the comforts and refinements of life. One would have thought that its assiduous cultivation by such men as Newton, Halley, Delambre, Lagrange and Laplace, might have rescued it from a contempt like this; for what department of science can boast of names such as these? The truth is, astronomy is not only the queen of sciences, but in the stricter sense of the word, is the only perfect one. In other sciences, it is probable that succeeding ages will continue, as they have hitherto done, to modify, if not wholly to change the expression of laws now considered general and well established. Important revolutions are likely to take place in the sentiments of the learned relative to many of the present received laws of chymistry, optics, geology and other departments of science; while, on not a few points, even involving the elementary principles of these subjects, there exists much diversity of opinion. The atomic theory cannot yet be considered as uncontestedly established. Chymists are not agreed as to the nature of caloric—and of chymical attraction. As to the constitution of some of the acids, as well as the existence and relation of the sulpho and chloro salts, there are many questions undecided; and an obscurity still rests upon several important processes, as upon that of combustion as far as the production of light and heat is concerned, and upon all the cases of disposing affinity. Even the best established laws of chymistry cannot conduct us to results, on which we can rely without subjecting them to the *experimentum crucis*. In physical optics, "the representation of all the series of polarized tints and the colors of natural bodies by a certain universal scale—the Cartesian law of refraction when applied to the extraordinary ray in crystallized media—together with innumerable other laws, simple, natural, and resting on extensive inductions, have all been either overset, extended, or materially modified by the progress of the science." (J. F. W. Herschel.) Though the discussion has been carried on with renewed interest of late, it is yet difficult to decide between the rival claims of the theory of *undulation* and of *emission*. In *crystallography*, we know not what modifications may take place, when the facts of *dimorphism* and *pleiomorphism* shall have been collected and classified, and the laws they follow discovered. Geology, in many of its most important features, is still more unsettled; and the cultivators of a science can scarcely be more at issue than geologists have been, or even than several very distinguished ones now are. This can be hardly otherwise, since but a small portion of the earth has been examined, and that to a depth not bearing to its whole diameter a proportion greater than that of the thickness of a coat of varnish to the diameter of an eighteen inch globe.

But how different is it in physical astronomy! Here our first conclusion is our last. Here particulars have been completely subjected to generals, effects to causes. The united wisdom and experience of succeeding generations will add nothing to its theory. The only remaining work for future astronomers, is to determine with the extreme of accuracy the consequences of its rules, by the profoundest combinations of mathematics; and the magnitude of its data by the minutest scrupulousness of observation. And in this last respect, but little may be hoped for, unless instruments can be constructed and adjusted with a nicety which seems almost incompatible with the productions of the most

consummate skill. All the phenomena of this science depend upon a *single law*, which may be deduced from the simplest among them and by the rudest observation; and which has been put repeatedly to the severest trial, by a series of discoveries unparalleled in number and delicacy:—such as the precession of the equinoxes; the nutation of the earth's axis; the aberration of light; the oscillations both of the ocean and the atmosphere—and those variations in the elements of the planetary motions and orbits, termed *secular*, requiring in some cases the lapse of ages for their development. In all these instances we have not only seen every anomaly disappear, but each become a striking confirmation of the law it seemed likely to subvert. Nay, farther, this law itself has been our most efficient instrument of discovery. Many variations in the planetary motions, so delicate and refined as to elude the nicest observation, have been brought to light, by being first deduced as mathematical consequences from the general law. Such instances as these are among the triumphs of science; and we cannot put from us the consideration of them in an essay on the importance of astronomy. To do so, were to reject the noblest use of the sublimest of sciences.

I would here remark, that it is only by viewing astronomy in this light of stability and perfection, that we are prepared to appreciate its value as a branch of education. Since it is the object of education, as the word itself implies, to unfold the powers of the mind, and to prepare them to take deep root in any soil selected for their growth; it is of great consequence to introduce into a course of instruction such subjects, as by the nature of their principles and the rigor of their demonstrations, are best adapted to this purpose. Unquestionably, the study of morals and the principles of human action, is at once the most important and dignified; but we should err greatly in supposing that one can acquire a really philosophical and well balanced mind, without the cultivation of the physical sciences. It is conceded, that they draw most largely upon our powers of attention, abstraction and combination. It is said of the great founder of the Pythagorean school, that he would receive no pupil who had not attended to mathematics. He placed an inscription over his door—*Ουδεις αμαχητος εστιν*—("Let no one unskilled in geometry enter here.") And this sentiment of the philosopher has been confirmed by the experience of all succeeding ages: that those studies requiring difficult and refined applications of the mathematics are among those best adapted to the expansion of the intellectual powers:—and at the head of them all, "as the most difficult and the best perfected, as embracing a class of phenomena the most various and complicated, and as presenting a generalization the most complete, and a final result the most simple, sure, and imposing," stands physical astronomy.

Furthermore, man has been constituted a speculative being. Study is one of the wants of his humanity. He contemplates the world and the objects around him, not with a passive and indifferent gaze, as a set of phenomena in which he has no interest; but as a system which evidently has been contrived for his comfort and happiness, and for the exercise of his intellectual powers. It is for this reason, that I regard the *pleasure* which science brings to the mind, as a proper and sufficient motive for its cultivation. And when we have experienced a curiosity intense and devouring, leading us to penetrate into the recondite and beautiful relations of the physical world, we can never hear without a feeling of humiliation, the question—"to what profit is all this?" Is it not enough, that the Maker of the Universe has created all things in wisdom and in goodness—has endowed us with faculties capable of tracing in some measure the operations of his skillful hand—and has so constituted us, that such researches bring to us emotions which are among the most pleasurable our existence furnishes? Shall he have made the sun to rule by day—the moon by night;—shall he have drawn out the

"hosts of heaven," and regulated their rapid, yet calm and harmonious motions, by laws the most beautiful and simple, and evidently the mere extension of those which are in daily operation around us; and we be not allowed to investigate these things, because they do not directly place shillings and pence in our pockets? This were not only to extinguish a source of the highest pleasure, but to bury some of the richest talents committed to our care; and to yield up some of the most ennobling impulses of our nature to motives of the most sordid selfishness. I repeat it, that on this fair and elevated ground we might take our stand and vindicate the cultivation of astronomy, though it had not one useful application.

But a very eminent modern writer has justly remarked—"that in every department of natural science, the speculations of the philosopher, however remote they may for a time lead him from beaten tracks and every day uses, being grounded in the realities of nature, have all, of necessity, a practical application—nay more, such applications form the very criterions of their truth."

I cannot possibly in the time devoted to this essay, touch upon more than three or four of the many important results derived from astronomical science; and even these but hastily and imperfectly. In doing this, I shall be compelled to employed scientific terms to an extent greater than I wished. As far however as may be, I shall endeavor so to express myself, as to render my remarks intelligible to all who retain only so much of knowledge upon this subject as any elementary treatise will furnish.

In the first place, it ought not to be regarded as a small thing, that the cultivation of astronomy has removed the apprehensions and fears which so frequently seized upon the public mind on the occasion of any remarkable phenomenon among the celestial bodies. We have read of whole armies being panic-struck by an eclipse of the sun or moon. A delay in evacuating the island of Sicily on account of an eclipse of the moon, was the occasion of the death of the Athenian general, Nicias, and the destruction of his whole army; a loss so ruinous to his country, that it may be stated as the catastrophe which led to its subversion.

Alexander the Great, before the battle of Arbela, was so terrified at an eclipse of the moon, as to order sacrifices to the sun, moon and earth, as the deities which produced these phenomena. In 1686, the astronomers of all Europe agreed in announcing a conjunction of the whole planetary system, which they supposed would be accompanied by the most terrible ravages, and perhaps by the destruction of the world. On the occasion of the furious wind and remarkable heat of Oct. 30th, 1736, it was announced in the public gazettes that the sun had retrograded through several signs; and it actually became necessary for the scientific to undeceive the public mind. It was universally agreed at the close of 1768 that saturn was lost: and 1773 and 1788 were each spoken of and published as the end of the world. (See *Astronomie par Lalande*.) The comets especially have been looked upon as objects of terror by all people. They have been supposed to be ominous, and to shake from their fiery train wars, pestilence and famine. Pope Callixtus II exorcised a comet and the Turks in the same bull. (*Delambre*.) They were thought to make their appearance at the birth or death of distinguished men. Justin relates, that at the birth of Mithridates, there appeared a comet surpassing the sun in brilliancy and occupying one quarter of the heavens. One, scarcely less remarkable, is said to have appeared at the death of Julius Cæsar, and another at the birth of Mahomet. And perhaps the fears of some who now hear me, were but a year or two since excited by an expected collision between our globe and the comet of Dr. Halley. These days of superstition have either passed or are passing rapidly away. All the phenomena relating to eclipses are thoroughly understood and are susceptible of being precisely pre-

dicted. If some obscurity still rests over the nature of comets and their trains, yet we know that they constitute one family with the planets. They all move in elliptic orbits; for as to parabolic orbits, we may always substitute elliptic ones more or less elongated, which will satisfy observations equally as well. Much less has any orbit been proved to be hyperbolic. This bids all of them to our system as component parts, and subjects them to the same dynamical laws which govern all the rest. On account indeed, of the great eccentricity of their orbits, and the smallness of that portion of each which is visible to us, we cannot calculate their periodical times with the same precision as in the case of the planets; still the returns of several have been determined with sufficient accuracy to warrant the assertion, that if our data could be obtained more precisely, their periods might in all cases be truly estimated. In regard to a collision between one of these bodies and the earth, it may be shown to be impossible, so far as the 117 comets whose orbits have been calculated, are concerned. If the perihelion distance exceeds the distance of the earth from the sun, the orbit of the comet, though in the plane of the ecliptic, must include that of the earth; so that in this case there cannot possibly be a collision. If the perihelion distance be less than the distance of the earth from the sun, and the orbit still in the plane of the ecliptic, there will be two intersections, and consequently two chances of encounter; but this case is not to be found in nature. All of the known orbits are inclined to the ecliptic, and generally at a very considerable angle; in such a manner, that when the radius vector is equal to that of the earth, its latitude is so great, that the comet will pass at a considerable distance either above or below the earth. But are we not in danger of being enveloped by one of those vast luminous appendages extending so many millions of miles? Not at all. The tail is always upon the prolongation of the radius vector, so that to envelop the earth, it is necessary for the comet to be at the same time in its inferior conjunction and at one of its nodes; conditions difficult to be united, if not wholly incompatible. Neither have we any thing to fear from the perturbing force of such comets as approach the nearest to us. The nearest of all was that of 1770, which approached within 800,000 leagues; but Dusejour has shown that the effects would be inconsiderable at the distance of 13,000 leagues. And we do certainly know that our astronomical tables have needed no corrections on account of the attraction of comets; a sufficient proof of the smallness of their nucleus and the extreme tenuity of the matter composing their trains. If additional evidence of this fact were required, it is furnished by the comet of 1770; which actually became entangled among the satellites of Jupiter, and yet produced no perceptible derangement in their motions. (*See Astronomie par Delambre, T. III. Ch. 20.*)

Furthermore, chymistry and its kindred sciences have been very justly considered important, by reason of the erroneous impressions they have served to remove relative to the constitution of the material world; nor has astronomy been less serviceable in this respect. The stars are no longer believed to preside over the destinies of men. We consider it of no great consequence now-a-days under what aspect of the planets a man be born; and the points of the horoscope are mere objects of curiosity. The sun, planets, and assemblage of fixed stars are no longer linked severally to transparent shells, by the revolution of which they are carried about us in twenty-four hours. The earth is no longer the centre of the universe, essentially endowed with immobility and extending indefinitely beneath and around us: but takes its place as an inconsiderable satellite to the sun, and by a double motion, the one on its axis, and the other in its orbit, gives rise to the succession of day and night, and the recurrence of the seasons. We no longer stand in need of *vertices* to explain the celestial motions, but are perfectly assured that the falling of a leaf, and the running of a

brook, are only familiar and particular instances of a great law extending throughout the universe, and controlling alike the mote which glitters in the sun-beam and the planet which sweeps its ample rounds through the regions of space.

In the second place, astronomy furnishes us with our measure of time. We have no adequate means of measuring time but by motion; and motion for this purpose must be perfectly uniform. If the force of gravitation is always the same at the same place—which is not only very probable but susceptible of experimental proof—it can be mathematically demonstrated, that the oscillations of a cycloidal pendulum, as well as those of a pendulum vibrating in extremely small circular arcs, are isochronous. Such a pendulum therefore might furnish us a unit of time: yet it would be an objectionable one in several respects. In the first place, there is nothing requiring us to adopt a pendulum of one length rather than another; the unit of time then would be different at different places, unless mankind agreed universally to adopt one of the same length. In the second place, should they thus agree, to say nothing of the practical difficulty of making two pendulums of precisely the same length, these pendulums will not vibrate equally when suspended at different points upon the earth's surface. In the third place, the oscillation of a pendulum, is a portion of time too small to serve as a unit. While then the pendulum in the present improved state of its application to clocks, is of very essential service in dividing time into minute portions, for the reasons just stated it cannot afford a convenient standard of time.

Writers on physical astronomy have proved that among the ever varying elements of the solar system, the period of the earth's rotation on its axis is immutable. Many causes indeed might be conceived to affect the truth of this statement: such as the descent of rivers—the ascent of vapors—the projected matter of volcanoes—the constant friction of the trade winds—and the action of the sun, moon and planets, which is known to be quite considerable in modifying its motion in its orbit. But not one of these singly, nor all combined, can produce any perceptible effect upon either the period or the axis of rotation. By this uniform rotation then, we are furnished with as perfect a standard of time as we could wish. Yet its practical application is encumbered with some difficulties. If the stars were absolutely fixed, the successive returns of any one of them to the meridian of a place, would mark the period of that rotation, and the sidereal days would all be equal among themselves. But there are deranging causes, variable in their effects, both as to degree and direction, which render the transits of all the stars unequal, when compared, the one with another. These inequalities are indeed extremely small, and altogether imperceptible in the course of a few days. But still they exist, and become perceptible in their accumulations. If, however, we define a sidereal day to be the time of the earth's rotation, although it is not equal precisely to the interval between the transits of a star, yet it is a quantity which may be calculated from that interval, and therefore available as a unit of time. But our daily occupations and our seasons of labor and of rest being regulated by the motion of the sun, it is very desirable to adopt its transits as our measure of time, instead of those of a fixed star. For if we were to reckon the day as commencing at the arrival of any star on the meridian, in the course of a year this arrival would happen when the sun would be at all possible angular distances from the same meridian, and consequently our days so reckoned would be commencing at different parts of the *working day*, which is naturally determined by the sun. Hence mankind have universally agreed to make use of the motion of the sun as a standard of time; the returns of which to the same meridian and equinox, constitute the day and the year. But the solar days are not equal among themselves, for two reasons: the first is, because the proper motion of the sun is unequal, owing to the eccentricity of its orbit;

the second is, because its proper motion is not in the plane of the apparent revolution of the heavens, owing to the obliquity of the ecliptic.

To make the inequality of the proper motion arising from the eccentricity of the orbit disappear, we imagine a second sun to move uniformly in the ecliptic, and to arrive at the extremity of the major axis, at the same instant with the true sun. To make the inequality arising from the obliquity of the ecliptic disappear, we imagine a third sun to move uniformly in the equator, so as to pass the equinoxes at the same moment with the second sun. The interval between the transits of the third sun constitutes the *mean solar day*; that between any two consecutive transits of the true sun, the *true solar day*; and the difference between these days is the *equation of time*. It is to the motion of this third sun, or to mean time, we adjust our clocks and watches; and we obtain it always from the true time by applying the equation of time, which is beforehand accurately calculated for every day and hour of the year. In these remarks, we have supposed the position of the equinoxes and the obliquity of the ecliptic to be constant. They both however are variable; and it is important to ascertain the effect which their variations will have on the length of the mean day. This has been done by Laplace, who has proved that its length will be altered only a few seconds in the course of many millions of years. (*Mécanique Céleste*. B. V. Ch. 1.)

The return of the second sun to the vernal equinox determines the *tropical year*. I ought properly to say something here relative to the determination of the length of the year, and to the several revisions which have been had of the calendar. I have already, however, unduly extended my remarks upon this branch of our subject, and must pass on to others.

In the third place: although the appearances both on land and sea, and particularly the changes in the zenith distances of the stars, which are so very observable in travelling towards either pole, did at an early period suggest the idea of the earth's surface being in some manner curved; yet the notions entertained were generally fanciful and incorrect; as that of Aristotle's, for instance, who supposed the curvature to extend but in one direction, or in other words, that the earth was shaped like a drum. Further observation soon, indeed, corrected this, and other equally absurd notions, and induced the scientific of those early ages to settle down in the opinion that its shape was a perfect sphere. Under this supposition, we find Anaximander, Eratosthenes and Posidonius, making rude attempts at its measurement and the location of places upon its surface. It was not, however, until astronomy had attained a greater degree of perfection, that the true figure and size of the earth became known. Modern astronomy furnishes four methods by which this important problem may be solved.

The first is, by the actual measurement of arcs of meridians and of parallels on different parts of its surface. The principle on which this method is founded, is extremely simple. The difference between the zenith distances of the same star observed at any two places on the same meridian, is the celestial arc which measures the distance between the zeniths of these places; and the distance between the places themselves is the length of the corresponding terrestrial arc; and as this celestial arc is to 360 degrees, so is the length of the terrestrial arc to the whole circumference of the earth. Thus, on the day of the summer solstice, Eratosthenes observed at Syene, that the sun shone perpendicular into a well, and that the tallest objects had no shadow. The sun, therefore, was in the zenith of that place. On the same day the sun was observed at Alexandria to be $7^{\circ} 12'$ to the south of the zenith, and consequently this was the difference between the zeniths of the two places. Then as $7^{\circ} 12' : 360^{\circ} :: 5000$ stadia (the measured distance between Alexandria and Syene) : 250,000 stadia nearly,—the circumference of the earth. This method as applied by Eratosthenes was very de-

fective. The zenith distance of the sun at Alexandria, was observed with a very imperfect instrument; no allowance was made for atmospheric refraction—for the parallax and semi-diameter of the sun—and the distance between Alexandria and Syene was rudely measured along the surface of the earth. But modern science has brought this method to a great degree of perfection, and as conducted in England by Colonel Mudge, in France by Delambre and Mechain, in Peru by Bouguer and La Condamine, and in Lapland by Clairaut and Maupertuis, is one of the proudest monuments of the scientific character of the age. The lengths of a degree of the meridian, when thus measured under different latitudes are found to be unequal. They increase from the equator to the pole, and very nearly in the ratio of the squares of the sines of latitude. These data being ascertained, it is a simple mathematical problem to determine the solid of revolution which is best adapted to them. We thus find the earth to be an elliptic spheroid, whose equatorial radius is equal to 3962.6 miles, and polar radius to 3949.7 miles; its compression being represented by the fraction $1-300$ nearly.

The second method is, by observing the intensity of gravitation at different points on the earth's surface; which is done very accurately by means of the seconds pendulum. The length of a pendulum vibrating seconds is found to increase from the equator to the poles in the ratio of the squares of the sines of latitude. Instead then of the measured length of a degree on different parts of a meridian, as in the former case, we may employ the lengths of a pendulum which vibrates seconds at these same points; since they increase according to the same law. And this method indeed is to be preferred somewhat to the former one, because it is easier of application, and the irregularities of the earth, affect the observations in a much less sensible manner.

The third method is, by observing the inequalities in the motion of the moon, which result from the want of perfect sphericity in the earth, and comparing the values derived from observation, with those which result from theory, on the supposition that the earth is an elliptic spheroid, which exerts upon the moon an action modified by its figure. Pontécoulant considers this as the most wonderful result of the application of analysis to the law of universal attraction, and as meriting a very important place in the history of the progress of the human mind. Laplace first conceived the idea, and in his immortal work, the *Mécanique Céleste*, has developed it in all its details. Employing the observations of Burg, he finds the compression of the earth equal to $1-304$; which, considering the difficulties encumbering every other method, is to be relied on as the most correct determination.

The fourth and last method is, by the nutation of the earth's axis, and the precession of the equinoxes. This does not determine the ellipticity of the earth precisely, but defines limits within which its value must of necessity lie. These limits are $1-279$ and $1-578$. (*See Théorie Analytique du Système du Monde, par Pontécoulant. T. II, p. 475.*)

In the fourth place: how may we ascertain our true position on this globe of ours? In principle just as we should ascertain the position of any point upon that floor. By measurement we should obtain its perpendicular distance from two adjacent walls. This would perfectly define the point, so that we could locate it accurately upon a plot of the floor, were it required. So it is with regard to places upon the surface of the earth. We refer them to two fixed circles at right angles to each other; the one, any assumed meridian, and the other, the equinoctial line. The only difference is, that instead of measuring, as in the instance of a point on the floor, in a straight line, and reckoning in feet and inches; we measure along circles, and reckon in degrees, minutes and seconds. The distance of a place from the equinoctial line we call *latitude*, and its distance from the assumed meridian we call *longitude*. I can here but

briefly allude to some of the simplest methods of finding these two elements; and shall confine myself entirely to the principles upon which they are based. During the apparent revolution of the heavens, there are two points which have no motion. These are called *poles of the heavens*, and the one which is visible to us is the north pole. Upon any clear night the stars near this pole may be seen to describe circles whose circumferences are greater in proportion to their distances from it; and all, whose distances are less than the altitude of the pole above the horizon, will never set. Such are called *circumpolar stars*. It may be readily proved that the latitude of any place is equal to the altitude of the pole above the horizon of that place. If then the pole were a point visibly marked out in the heavens, we should only have to take its altitude with a suitable instrument and apply the correction for refraction, nutation, &c. to obtain the latitude of a place. But the pole is not thus visibly marked, though there is a star of the second magnitude very near to it. It however will add but little to the difficulty of the problem, to observe the greatest and least altitudes of a circumpolar star: the mean between which will be evidently the altitude of the pole, or which is the same thing, the latitude of the place. Again, the distance from the zenith to the equator (which is the latitude,) is equal to 90° minus the altitude of the plane of the equator above the horizon. But the meridian altitude of the sun, plus or minus its declination, according as it is south or north, is equal to the altitude of the equator. This then is another very ready method of observing the latitude of a place; and is by no means confined to the sun. Any planet or fixed star will serve our purpose as well. Other methods, as by the altitudes of any two fixed stars—by two altitudes of the same star—by the hour angle and azimuth of the sun, while they are simple enough in practice, are too complicated to explain in a popular way.

The problem of finding the longitude of a place is not quite so easily resolved, although several methods have been devised for this purpose. They all, however, are based upon a common principle, to explain which, we must first draw a distinction between *absolute* and *local* time. *Absolute* time is reckoned from some epoch common to the whole earth, as for instance, the arrival of the sun at the equinox; while *local* time is reckoned from some epoch peculiar to a place, such for example, as the arrival of the sun to the meridian of a place, and is different for different places. Every well adjusted clock shows *local mean* time, and without alteration, would not answer for any other place under a different meridian. A watch, for example, adjusted to the mean time of Lynchburg, would not answer for Richmond or Nashville. Now, in what does this difference between the local times of any two places, consist? In nothing more than the lapse of time which the sun requires to pass from the meridian of the one place to that of the other; and since it passes over 360° in 24 hours, it will pass over 15° in one hour, and so on proportionally for shorter intervals of time. So that if we knew the difference of the local times of any two places, we should know their difference of longitude, by simply converting the difference of their times into degrees, minutes and seconds, on the principle above explained. If a watch then, perfectly regular in its motion, were adjusted to Lynchburg time, and being transported to Richmond, were placed by the side of one equally regular and adjusted to the time of that place, a simple comparison of their faces would give us the difference of the longitudes of the two places. But watches and clocks cannot be made to run with perfect regularity. Much indeed has been done to bring them to a considerable degree of perfection, and for the space of a few hours their irregularity may be rendered quite imperceptible. To have the full advantage, however, of a time-piece, it must be stationary and its rate of going tested frequently by delicate observations. This is incompatible with its removal from place to place, as above spoken of;—but this difficulty may be thus obviated. Suppose, that on

the night of the 28th it is agreed to explode a sky-rocket in the neighborhood of Cumberland Court House, and that it may be seen from both this place and Richmond. On the appointed night, two observers, the one in Lynchburg and the other in Richmond, take their stations at clocks nicely adjusted to the local times of the two places, and keep a look out for the expected explosion. On account of the great velocity of light, they will both see it at the same instant of absolute time; and each notes down the moment of its occurrence as indicated by his clock. By comparing these moments with each other, the difference of longitude in time is at once determined. Now in place of the sky-rocket, substitute an eclipse of one of Jupiter's satellites, or an immersion of one of them into the shadow of its primary, or the beginning or ending of an eclipse of the moon, or the true conjunction of the sun and moon in an eclipse of the sun, and you will have the principle of several valuable and practical methods of finding the longitude.

But the phenomena just spoken of, occur but occasionally, and require a telescope of moderate power. And considering how frequently the longitude is required at sea, it is highly desirable to devise a method which may be employed daily if circumstances demand. Such a method we have in *lunar distances*, first hinted at by Werner, and applied by Frisius; and afterwards perfected by Halley, La Caille and Maskelyne. The principle of this method is simple, though its application is laborious. If the face of a clock were visibly traced out in the heavens in characters so legible that all the world could read them, (See Herschel,) and were nicely adjusted to Greenwich mean time; from the remarks which I have made it is obvious, that by the comparison of the local time of any place with that indicated by this celestial clock, we should at once obtain the difference of longitude between Greenwich and that place. Such a clock we have, unlike indeed our artificial ones in its construction, yet free from their errors and derangements, and therefore greatly to be preferred, although a little more difficult to be interpreted. The apparent concave sphere is the dial-plate—the fixed stars are the figures engraven upon its face—and the moon is the moveable index, which points out by its position among the stars the local time of that place to which this celestial clock is set. It is adjusted to Greenwich time in the following manner. The lunar tables have been brought to such a degree of perfection by the analytical researches of Laplace and the numerical calculations of Delambre, that we may ascertain years before hand and for any given moment the precise angular distance of the moon from any fixed star. These calculations are made for very short intervals of time and for the meridian of Greenwich and inserted in the nautical almanac. Then if at any place, as at this for instance, by means of a suitable instrument, we observe the distance of the moon from any noted fixed star near to and in the direction of its path, together with the altitudes of the moon and star, we have the data necessary for calculating the precise hour of the observation and the true distance corresponding to that hour. Opposite this true distance in the nautical almanac, the corresponding Greenwich time is tabulated. The difference of these times, is the difference of longitude, as in the former methods. It may be well to remark here, that though the details of this method are numerous and tedious, its accuracy in the hands of skilful observers, has been abundantly tested—especially in the voyages of Maskelyne and Rossel. These are the most important methods of calculating the position of places on the earth. And of what immense advantage are they to the interests of mankind! Without them, each one's knowledge of the earth would have been limited to his own narrow observations and the vague and uncertain information of itinerants. Maps and charts, and a science of geography, would have been unknown. No whitening sail would have been seen upon that vast expanse of waters which

separates our continents: and no country could have had any other commerce than such as might be carried on along its winding shores and its inland streams.

In the fifth place: the interests of every commercial people, require that all measures of length, weight and capacity in use among them be uniform. They cannot be so rendered unless proper units be assumed, by comparison with which all others may from time to time be tested, and if erroneous, corrected. New measures are not generally taken immediately from these assumed units, but from others which have been so taken; and as it is extremely difficult, if not impossible to cut two rods of precisely the same length, after a while, errors of a considerable magnitude arise: as one may convince himself by referring to a Report made to the U. S. Senate in 1821, on "Weights and Measures," by J. Q. Adams; or to one more recently made in accordance with a resolution of Congress by F. S. Hassler. For example, the Winchester bushel was made, by an act of Congress, the standard dry measure of capacity, and ordered to be used in all the custom houses throughout the Union. But in Hassler's "Report," we find the bushel measure at Newburn, N. C., containing 87 lbs. 8 oz. of distilled water at 40° of Fahrenheit, while that at Washington, N. C. contained only 73 lbs. 12 oz. Here we have a difference of 14 lbs. 12 oz. between these two measures purporting to be the same. Again, the capacity of the bushel at Bath, Me., is recorded as being 1925 cubic inches—that at Norfolk, Va., 2325½ cubic inches—and that at Plymouth, Mass., 2359 cubic inches. Between the two former, there is a difference of 300½ cubic inches; and between the first and third, a difference of no less than 434 cubic inches. These reports show similar diversities among the measures of length and weight. With a view to correct these errors, proceedings were instituted by Congress in 1831, under the personal supervision of Mr. Hassler, by whom the necessary units were procured and laid up in the Department of State, and correct copies distributed to the various custom houses. The units of measure to be employed in this adjustment, were declared by an act of Congress to be as follows: viz: the troy pound, made by Capt. Kater, in 1824, for the U. S. Mint, and as the special request of Mr. Gallatin, was adopted as the unit of weights. This pound is subdivided into 5760 grains, and the pound avoirdupois made to consist of 7000 such grains. The bushel was made the unit of dry measure, and contains 77.6274 lbs. avoirdupois of distilled water at 40° Fahrenheit. The gallon was made the unit of liquid measure, and contains 8.33888 lbs. avoirdupois of distilled water at the same temperature. A copy of the yard laid up in the Exchequer of England, and made by Thomas Jones of London at the request of our State Department, was made the unit of length.

It is evident that all our measures of length, weight and capacity are referred to these particular units, and by comparison with them, are to be corrected. But these units are liable to be lost by fire, by foreign invasion, or by some other accident. And if not so; yet by use and by corrosion, the metals of which they are composed may perceptibly wear away. How important then is it to fix some standard of measures, which will be independent of moral revolutions, so that it may be consulted centuries hence with the same results we obtain now; and to which the units above spoken of may themselves be referred for correction if erroneous, or for restoration if lost. In not containing a provision of this sort, the act of Congress on "Weights and Measures" is manifestly defective. The governments of England and France have paid very special attention to this point. The former has adopted as a standard, the length of a pendulum vibrating seconds on the parallel of London in the vacuum of an air-pump and at 60° of F. The latter the one-10,000,000th part of the quadrant of a meridian. These are the only standards as yet known; and their accuracy depends upon the improved state of astronomy and the arts. This beautiful appli-

cation of the pendulum, depends upon two principles immediately deduced from the law of gravitation. The first is, that the vibrations of a pendulum are isochronal, provided the arcs of vibration be extremely small. The second is, that the same pendulum will perform an equal number of vibrations in equal portions of time, provided its length remains unaltered. The immediate deduction from the last mentioned property is, that the length of a pendulum made to vibrate seconds at any place is an invariable quantity. Now by an act of Parliament, the yard is declared to be made up of 36 equal parts, the length of each of these being such, that 39 of them and 134-1000 of a part shall constitute the length of a seconds pendulum vibrating under the circumstances above mentioned. Should every measuring rod in the kingdom, together with all measures of weight and capacity, be destroyed, how easy would be the task to restore them. For this purpose, we have only on the prescribed latitude, in the vacuum of an air pump and at 60° F., to so adjust the length of a pendulum, that it shall perform 86,164 oscillations during the revolution of a fixed star. Then if the length of this pendulum be divided into 39,134 equal parts, thirty six of these will be the yard. Having thus restored the unit of linear measures, those of weight and capacity follow of course, since by the act of Parliament above referred to, they are made to depend upon linear measurement. It may be well just here to remark, that the mutual convertibility of the points of suspension and oscillation in the compound pendulum, as practically applied by Capt. Kater, enables us to measure the length of the seconds pendulum with extreme accuracy. The standard above explained is not without its objections. One far more elegant and scientific, though not so readily applied, is that employed by the French. The 1-10,000,000th part of the quadrant of a meridian they assumed to be the *metre*—their unit of linear measure. In order to recover it at any time, it is only necessary to measure the quadrant of the meridian with a rod of any arbitrary and unknown length. Suppose the length of the meridian proves to be 8,000,000 of this arbitrary rod. This rod then is to the *metre* as 10,000,000 to 8,000,000, or as 10 to 8. In other words, if this rod be divided into 10 equal parts, 8 of them will be the length of the *metre*. Doubtless an error will occur in measuring the quadrant of the meridian: but only the 1-10,000,000th part of this can effect the *metre*. (For fuller details see *Basis du Systeme Metrique*.)

In the sixth place: the application of astronomical science to the determination of chronological dates, is one in which the learned have always been deeply interested. To such a degree of perfection have the solar and lunar tables been brought, that the state of the heavens at any former period may be ascertained with great precision. Any well attested observation, therefore, made by ancient astronomers, enables us to ascertain the time at which the observation was made. I must limit myself to two or three illustrations.

In an ancient volume, which escaped the general conflagration of the Chinese books by order of the emperor Tsin-chi-hoang, 246 years before the Christian era, there is recorded an observation of Tcheou-Koung: by which he ascertained that at the city of Loyang, a gnomon of 8 Chinese feet east, on the day of summer solstice, a shadow of 1.5 feet: and on the day of winter solstice a shadow of 13 feet. These measured lengths of the shadows at the two solstices, enable us to deduce the extreme distances of the sun from the zenith of Loyang. Indeed, in each case the zenith distance is nothing more than the angle which the solar rays made with the axis of the gnomon, the tangent of which in the first, is expressed by 1.5-8, and in the second by 13-8. After making the necessary corrections for the semi-diameter of the sun, parallax and refraction, we find the zenith distance at the summer solstice to be 10° 53' 7.51"; and the zenith distance at the winter solstice to be 58° 41' 13.81". The half sum of these distances, viz: 34° 47' 10.66", is the latitude of Loyang;—the half dif-

ference, viz: $23^{\circ} 54' 3''.15$, is the obliquity of the ecliptic at the time of observation. But this obliquity is a variable quantity, whose law of variation is well known, and by which we can determine what the obliquity was at any given time past, or at what time the obliquity was of a given value. The time corresponding to its value as deduced from the above observation, is 1100 years B. C. This determination is altogether accurate, provided the observation of the Chinese philosopher be so. This, however, can be tested; and as follows. Geographers agree that the place formerly called Loyang, is now called Hou-an-fou. Three observations on the latitude of this place, performed by Father Gaubie, a learned missionary to China, give for its value $34^{\circ} 47' 13''$; which differs but $2''$ from the result of Tchou-Koung. (See *Biot or Freret*.)

The next example I will introduce in the words of Bailey as quoted by Brayley. "There is probably no fact in ancient history, that has given rise to so much interest as the solar eclipse, mentioned by Herodotus, and which, owing to a singular coincidence, put an end to a furious war that raged between Cyaxares, king of Media, and Alyattes, king of Lydia. According to the account given by that historian, the contest had continued five years: in the sixth, there was a sort of nocturnal combat. For, after an equal fortune on both sides, and whilst the two armies were engaging, the day suddenly became night. The Lydians and the Medes, seeing that the night had thus taken the place of the day, desisted from the combat, and both parties became desirous of making peace. The fact is here very clearly related; but, unfortunately, there is nothing, either in the statement itself, or in the contiguous passages to determine, with any degree of accuracy, the time wherein this singular phenomenon took place. And this is the more to be regretted, because the dates of several other events, might be determined if the era of this eclipse were correctly known."

From other sources we know that this eclipse must have occurred between the years 580 and 650 B. C. It is only necessary then to calculate all the solar eclipses visible in Asia Minor during this interval of 70 years: a labor which has been performed with ability by Bailey. And in all this time, he found only one eclipse which fulfilled the conditions required. This happened on Sept. 30th, 610 B. C. It was total, to part of Asia Minor, Armenia and Media; "and the path of the moon's umbra lay in the very track in which the two hostile armies probably met. For it passed over the mouth of the Halys, just at the point at which Cræsus, the immediate successor of Alyattes, crossed that river in order to attack the Median empire."

The last illustration, I shall give, under this head of our subject, is the detection of an error of upwards of four years in the vulgar era of our Saviour's birth—an era which owes its origin to Dionysius Exiguus, a Roman abbot.

Josephus records an eclipse of the moon as happening during the last illness of Herod. This eclipse by computation, must have occurred on March 13th, 4710 of the Julian period. Our Saviour was born at that time; for Herod sought the life of the young child. The latest time, therefore, at which we can fix the era of his birth, is about the end of the year 4708 of the Julian period; whereas our vulgar era places it in the year 4713—at least four years too late.

These instances will serve to show, in what manner history owes its best established dates to astronomy.

In the sixth and last place: passing by many very interesting relations which astronomy bears to other sciences, I will conclude this lecture with a few remarks upon the vast conceptions of the power of God, which this science above all others impresses upon the mind—to say nothing of his wisdom and goodness which we find everywhere displayed in the laws which he has chosen for the government of all those various motions which we observe in the universe. It is too frequently supposed that the estimates of astronomers relative to

the magnitudes and distances of the heavenly bodies, are fanciful and false. This, however, is a mistake. By measuring the height of the building we now occupy, and by taking the angles at its summit and base between a vertical line, and an imaginary one drawn to any distant point, as for example to the top of the Peaks of Otter, every schoolboy knows that the distance of that point from us becomes known. Such precisely is the solution of the problem for finding the distance of the earth from the sun. And I venture to assert, that a mechanic could not by means of a foot rule, ascertain the length of this floor, without making a proportionable error greater than that which enters into our estimated distance from the sun. For, if in applying the rule successively along the floor about 50 times, he should make an error of only the one fiftieth of an inch, this will allow an error of 3,200 miles in an equally accurate measurement of the distance of the earth from the sun—an error so great, that it is excluded by the perfection of modern astronomical instruments. This distance is thus found to be about 96,000,000 of miles: and its diameter, which is readily deduced from its distance, such that if its centre coincided with that of the earth, its radius would extend to nearly double the distance of the moon from us, although the distance of this satellite is not less than 237,000 miles. Far as the earth seems to be from the sun, yet it is near compared with the distance of the planet Uranus. At this point our progress is stayed—a point, seen from which, our own sun is reduced to a mere speck. Beyond this utmost verge of our own system, and between it and the nearest star, "there is a great gulf fixed," which it is impossible for calculation to pass. Forsaking the infinitesimal dimensions of our own globe, we eagerly seize upon the diameter of our orbit as the base of a triangle whose apex shall extend to the stars. But sublime as the assumption is, it proves ineffectual: for our orbit itself, whose diameter is 192,000,000 of miles, dwindles to a mere point compared with the distance of the nearest fixed star. But there is abundant reason to believe that the fixed stars are of the same nature with our sun, and made to fulfil similar offices of shedding light and heat to attendant planets; and from what we know of our own system, we cannot put from us the conclusion that all of the others are contrived for the abode of animated and rational creatures. How magnificent is the scale of creation here presented to us! Where shall we find a parallel? Whether we consider the number—the magnitude—the distances of the heavenly bodies—or the ends they probably subserve, we are at once elevated to conceptions by far too vast for the grasp of a finite mind. Here is an exhibition which overwhelms us with the omnipotence of Him who spake, and it was done! I cannot forbear to add, that the use made of such contemplations by the eloquent Psalmist, was no less philosophical than devout. Feeling the full force of the argument of the existence and the power of God drawn from the grandeur of the universe, he exclaims—"The Heavens declare the glory of God, and the firmament sheweth his handy work. Day unto day uttereth speech, and night unto night sheweth knowledge. There is no speech nor language where their voice is not heard." That many very eminent cultivators of this science have been infidels, and some of them atheists, I am ready to admit. But this is only another confirmation of the well established truth: that without the light of Revelation and those corresponding affections of heart which it is intended to produce, man sees not God in the works of his power. The whole history of our species abundantly confirms this remark. To take but one instance, and that a very familiar one: in what age or portion of the world, was there ever exhibited a development of mental energy, surpassing that which adorned the republic of Greece? It was the country of a line of heroes from Codrus to Philipem. There, the sculptured marble and the painted canvass were well nigh made to breathe. There flowed the majestic numbers of a Homer, and the exquisitely po-

lished measures of a Sophocles. There the spirit was either soothed by the melting tones from the lyre of an Orpheus, or aroused by the all-kindling and irresistible eloquence of a Demosthenes. And yet, in this land of philosophy, and patriotism, and eloquence and song—in the midst of Athens, that metropolitan city of all that was refined and elegant, we find an altar to the "Unknown God." So likewise it is with individuals. However refined and learned a man may be—however vast his intellect—however extensively and accurately he may acquaint himself with nature and her manifold operations; yet, if his heart be not prepared by a process of a different character, to look through all these things up to nature's God, he will invariably stop at the laws of these operations, and setting them up as gods, will bow down himself unto them and worship them. It is not right to charge this or any other branch of science with the infidelity of its votaries. They are such, not because of philosophy, but in spite of philosophy and revelation too. Let but the religious affections be properly cultivated—let Christ but lay the hand of his healing power upon the human heart, then will the understanding be prepared to see in all things the finger of God, and to praise him not only in the "firmament of his power," but in the "tints and texture of every petal that drinks the dew, and in the wings and antennæ of every gnat that hums in the evening air:" or as the inimitable Shakspeare has it, to

Find tongues in trees, books in the running brooks,
Sermons in stones, and good in everything.

SOMETHING ON SONNETS.

"Scorn not the Sonnet! Critic, you have frown'd
Mindless of its just honors: with this key,
Shakspeare unlocked his heart: the melody
Of this small lute gave ease to Petrarch's wound:
A thousand times this pipe did Tasso sound:
Camdens soothed with it an exile's grief
The Sonnet glittered, a gay myrtle leaf,
Amid the cypress with which Dante crowned
His visionary brow: a glow-worm lamp,
It cheered mild Spenser, called from Faery-land
To struggle through dark ways: and, when a damp
Fell round the path of Milton, in his hand
The thing became a trumpet, whence he blew
Soul-animating strains—alas, too few!"

Wordsworth.

A most admirable review of the poetry of William Wordsworth, in the first pages of the December Messenger, contains some reflections upon the Sonnet, which have set me upon the whim-wham of weaving a chaplet of those delightful poems for the pages of the February number. I do not mean to prove, or disprove anything in this undertaking, more than to prove my own love of that species of verse, and to disprove, if I can, the validity of the arguments which critics are too much in the habit of using, while attempting to decry it. The remark, for instance, of the Wordsworth critic in the Messenger, in relation to Milton, that his sonnets "have been nobly redeemed from oblivion by a few happy ideas, grand thoughts, and eminently poetical lines: but—not wrought with the fine polish and artist-like finish which become the Sonnet;"—is one to which I must begin this (anything but critical) article, with taking a decided exception. And I shall transcribe one of the great poet's Sonnets to bear me out.

"ON MY BLINDNESS.

"When I consider how my light is spent
Ere half my days, in this dark world and wide,
And that one talent, which is death to hide,
Lodged with me, useless, though my soul were bent
To serve therewith my Maker, and present
My true account, lest he, returning, chide:
'Doth God exact day-labor, light denied?'
I fondly ask. But patience, to prevent
That murmur, soon replies,—'God does not need
Either man's work, or his own gifts: who best
Bear his mild yoke,—they serve him best. His state
Is kingly; thousands at his bidding speed
And post o'er land and ocean, without rest.
They also serve, who only stand and wait.'"

Nor can I quite agree with the critic when he describes the merits of Shakspeare's sonnets as "independent, if not in despite, of their form." I had occasion to turn over Steevens the other day to find some clue to one of Shakspeare's disputed passages, while preparing an article upon the Text of Shakspeare for the Messenger, and I remember to have met, among the notes of that critic, this same idea, in a more extended form: and I could not help turning to the following, as pregnant proofs of the invalidity of the criticism. He is addressing an imaginary mistress, the eidolon of nearly all his sonnetizing.

"Oh how much more doth beauty beauteous seem,
By that sweet ornament which truth doth give!
The rose looks fair, but fairer we it deem,
For that sweet odor which doth in it live.
The canker-blooms have full as deep a dye
As the perfumed tincture of the roses,—
Hang on such thorns,—and play as wantonly
When summer's breath their masked bud discloses:
But, (for their virtue only is their show,)
They live unwood'd, and unrespected fade,—
Die to themselves. Sweet roses do not so:
Of their sweet deaths are sweetest odors made:
And so of you, beauteous and lovely youth,
When that shall fade, my verse distills your truth."

But if that be all a Sonnet should be, what degree of worth shall this be measured by, that follows?

"When to the sessions of sweet silent thought
I summon up remembrance of things past,
I sigh for lack of many a thing I sought,
And with old woes new wail my dear time's waste.
Then can I drown an eye, unused to flow,
For precious friends hid in death's dateless night,
And weep afresh love's long-since-cancelled woe,
And moan the expense of many a vanish'd sight.
Then can I grieve at grievances foregone,
And heavily from woe to woe tell o'er
The sad account of fore-bemoaned moan,
Which I now pay, as if not paid before.
But if, the while, I think on thee, my friend,
All losses are restored, all sorrows end."

I have in my possession a beautiful edition of "Specimens of English Sonnets," dedicated to Mr. Wordsworth, in the notes of the editor of which, the Rev. Mr. Dyce, I observe the Sonnets of Wordsworth clas-

sified as "in power and poetic feeling, superior to all similar compositions in the language, *save those of Shakespeare and Milton*." Of Milton's, the same editor remarks, that "in easy majesty, and severe beauty, they are unequalled by any other compositions of the kind:" and of Shakespeare's, he says: "they contain such a quantity of profound thought as must astonish every reflecting reader; they are adorned by splendid and delicate imagery; they are sublime, pathetic, tender, or sweetly playful; while they delight the ear by their fluency, and their varied harmonies of rhythm." Wordsworth himself says of the Sonnet,

"—With this key
Shakespeare unlocked his heart:"

And, again, that,

"—when a damp
Fell round the path of *Milton*, in his hand
The thing became a trumpet, whence he blew
Soul-animating strains,—alas! too few!"

But all this is apart from the main object of this paper. I have only indulged in this seeming controversial strain, by way of claiming for those two noble poets that justice in comparison, which the otherwise very discriminating critic of the Messenger is willing to allow them, by themselves considered. With every word he says of the Sonnet, *per se*, the writer I have mentioned will find me fully and deeply sympathizing;—and as to Wordsworth's sonnets, he has but deepened the admiration I have always felt while poring over those richest gems of modern poetry. He has copied many of the best of these in his sparkling article. Yet there is one, he omits, but which, from its very resemblance to those of his two illustrious exemplars in Sonnet-writing, has ever been supreme upon my list of favorites. I mean that which he addressed "To the Lady Beaumont."

"Lady! the songs of spring were in the grove
While I was shaping beds for winter flowers:
While I was planting green unfading bowers,
And shrubs to hang upon the warm alcove,
And sheltering wall; and still, as fancy wove
The dream, to time and nature's blended powers
I gave this paradise for winter-hours
A labyrinth, Lady! which your feet shall rove.
Yes! when the sun of life more feebly shines,
Becoming thoughts, I trust, of solemn gloom,
Or of high gladness, you shall hither bring:
And these perennial bowers, and murmuring pines,
Be gracious as the music and the bloom,
And all the mighty ravishment of spring!"

The Lord Surrey first introduced the Sonnet into the English language, about the middle of the sixteenth century. He published his "Songes and Sonnettes" in the year 1557. But it is the most ancient form of Italian poetry: and at a still earlier period was in use by the Provençals. In Italy it was first cultivated by the poet Fra Guittone, and was nearly a century in attaining the perfection, (for so it must be considered,) to which Petrarch elevated it. In France, the Sonnet has never gained a worthy celebrity, being, in that country, a mere vehicle for that sportive kind of verse which we call *crambo*,—(or something like it,)—a de-

secration, indeed! In Germany, it has been cultivated to some extent, but the language of that country is ill-adapted to its rules. In Spain, as in Italy, it has been more successful, although, in both those countries, there have been poets who have done that beautiful form of verse no honor. The same may be said of many of the writers in the Anglo-Saxon tongue, both in England and at home, who have essayed

"To bend the iron bow of *Cœur de Lion*,
And wield the club of *Hercules*."

These "climbers upon Richmond, fancying it *Parnassus*," to borrow a quaint conceit of Charles Lamb, (dear Elia!) look at the Sonnet, and, finding it mathematically described in the books, as consisting of so many lines, and so many parts, and so many syllables, and so many rhymes, take comfort to themselves that they know their Cocker, and can count their fingers and thumbs, and form capital letters, in round Italian hand; and so they settle themselves to write Sonnets: and—"*hinc illæ lachrymæ*!"

Lieber very tersely defines the Sonnet thus: (after describing the proper construction of the lines, &c. according to the rules, q. v.) "it generally contains one principal idea, pursued through the various antitheses of the different strophes, and adorned with the charm of rhyme."

Montgomery (the elder) in his beautiful Lecture on "The Form of Poetry," says, "There is not a popular one in the English language: there are hundreds in the Italian." This is true, yet deceptive. It is true, just as it is to say that poetry is popular in Italy, but not in England; and if it applies to the Sonnet more than to any other verse, it is only because that, in Italy, there is no verse so commonly in vogue. Yet the English Sonnet is as popular, perhaps, as any other form of English poetry, if we except the Ballad; and the preference given to that form arises more from the story of which it is usually the vehicle, than from the verse itself. The native language of the Italian is Music—Poetry, and he

"Lisps in numbers, and the numbers come."

Yet even our rigid critic, just quoted, agrees that there are some specimens extant, which "have redeemed the English language from the opprobrium of not admitting the legitimate Sonnet, in its severest, as well as its most elegant construction." And here is one in proof, by Wordsworth, which the critic of the Messenger and myself have both as yet left unquoted. It is the Answer of the Men of Tyrol to the French foe, who has demanded the surrender of their Alpine homes.

"This land we, from our fathers, had in trust,—
And to our children will transmit,—or die!
This is our maxim: *this* our piety!
And God and Nature say that it is just!
That which we *would* perform in arms, we must!
We read the dictate in the infant's eye,—
In the wife's smile,—and in the placid sky,
And at our feet, amid the silent dust
Of them that were before us. *Sing aloud*
Old Songs,—the precious music of the heart!
Give, herds and flocks! your voices to the wind,

While we go forth, a self-devoted crowd,
With weapons in the fearless hand, to assert
Our virtue, and to vindicate mankind."

This is beyond, above, and out of all reach of comparison or of criticism. It is *THE SONNET, per excellence*. Yet, reader, stay one moment longer for this jewel of John Leyden's: and those of you who do not remember who John Leyden is, read Lockhart's *Life of Walter Scott*.

"ON THE SABBATH MORNING.

"With silent awe I hail the sacred morn,
That slowly wakes while all the fields are still!
A soothing calm on every breeze is borne;
A graver murmur gurgles from the rill;
And echo answers softer from the hill;
And softer sings the linnet from the thorn;
The skylark warbles in a tone less shrill.
Hail, light serene! hail, sacred Sabbath morn!
The rooks float silent by, in airy drove;
The sun a placid yellow lustre throws;
The gales, that lately sighed along the grove,
Have hushed their downy wings in dead repose;
The hovering rack of clouds forgets to move.—
So smiled the day when the first morn arose!"

Who says that this is not a genuine Sonnet?
But I have detained my patient (perhaps I should
say my sleepy) reader, too long, and must even now
let go his button; but this I will not do without again
repeating the *refrain* of my droning song about Son-
nets in his ear:

"Scorn not the Sonnet!"

J. F. O.

SPECIMEN OF CAUSTICITY.

In an old *Edinburg Review* (No. 31), is an article in reply to an abusive pamphlet written against the *Review* by some tutor or Fellow in the University of Oxford. Judging merely by the article itself, without seeing aught on the other side of the controversy, it is one of the most overwhelming in power of ridicule, satire, and argument, that the annals of controversy afford. The following is among the strongest concentrations of bitterness:

"This Oxford gentleman is always burning candles by daylight; proving what no human being ever called in question, and making the most pompous display of the most trite and insignificant truths. In p. 106, is a long dissertation to shew, that *some general Literature* is useful in all professions. In p. 126, he praises Locke and Milton; and soon after informs us, that Adam Smith is a writer of merit. In p. 127, he proves that composition is useful. He then demonstrates, that a man's abilities depend a good deal upon what nature has made him, and a good deal also upon how he has been taught. He convinces us, moreover, that not the wealth only, of nations, is to be attended to, but their happiness; and makes it quite clear to the most skeptical mind, that all human institutions are liable to error. And all this is not done carelessly, or despatched in a

few words, as a man gets rid of a commonplace which is a necessary passport to an important truth: but our tutor gets warm, and cackling; and when he has laid his little truism, makes such an intolerable riot, that we might suppose he had produced a diamond instead of an egg." (p. 181.)

SHAKSPEARE AND THE CRITICS.

The bard of every age and clime,
Of genius fruitful, and of soul sublime,
Who, from the flowing mint of fancy, pours
No spurious metal, fused from common ores,
But gold, to matchless purity refined,
And stamped with all the god-head in his mind;
He whom I feel, but want the power to paint.
Gifford's Juvenal.

'Tis hard to say if greater want of skill
Appear in writing or in judging ill;
But, of the two, less dangerous is the offence
To tire our patience, than mislead our sense.
Some few in that, but numbers err in this,
Ten censure wrong for one who writes amiss.

Essay on Criticism.

The Grecian drama, until the days of Shakspeare, surpassed in dignity and excellence that of any other people, ancient or modern. And it owed this supremacy to its inherent strength and vigor, borrowing no meretricious graces from abroad, but gradually developing its innate energy and resources. The tragic Muse of Greece, like its own infant Hercules, soon seized upon the snakes; and in the darker, and wilder, and more terrific explosions of passion, in the drama of the better days of that gifted people, she is yet unimitated, perhaps inimitable. When the Grecian arts and sciences were led in captivity to Rome, they failed to impart to the conqueror their *creative* spirit; and the lyre of the Muses, like the harp of the Children of Captivity, seemed to have lost its powers. The efforts of the Roman dramatists appear to have been confined to a servile copy of Grecian models; and with them, superlative excellence consisted in the perfection of that copy. So, among the European nations of the continent, their dramatic genius has been fettered by learned and critical rules deduced from writings of the master-spirits of the Grecian stage. But neither nations nor individuals can attain excellence in this department of literature by the imitation of ancient models. Bursting through their fetters, such writers display occasional beauties, but the general character of their productions scarcely transcends mediocrity. Addison, in his *Cato*, bowed to the rigor of this rule, and although in many passages he is touchingly eloquent, and always chaste, yet the tragedy, as a whole, is cold and formal. But the divine Shakspeare, in the true spirit of Anglo-Saxon freedom, surrendering himself to the glowing inspirations of the Muse, and "of imagination all compact," soars at once to sublimity, and wins for himself, his language, his country and his age, imperishable renown.

The English, like the Grecian drama, attained its highest perfection by the development of its own plentiful and inexhaustible resources. Original in its inception, and essentially national in its character, it steadily progressed in its own peculiar path, until, in

the days of Shakspeare, it had attained supreme excellence. The soaring genius of the English dramatists could not be confined within the *triangle of the unities*. By a bold disregard of the unities of time and place, and by a happy and judicious admixture of tragic and comic scenery, they have given scope to their genius and range to their fancy; but, by the use of this license an extraordinary degree of taste and judgment was required to maintain a just proportion, and to preserve the proprieties of the drama. The study of ancient models was pursued to give extent and scope to genius, and to chasten and control the powers of invention. The productions of the Grecian drama, far from being considered inimitable, constituted the salient point, whence the untamed and soaring spirits of the English have soared beyond all Greek, beyond all Roman fame!

Shakspeare is at once the founder, and the great master of the English drama. He is the pride of the English nation: he is the "Genius of the British Isles." He was the light of his age. The sublime outpourings of his genius felt for a season the chilling influence of ignorance and bigotry: but as the returning rays of genial truth fell upon the frozen fountains of dramatic eloquence, they were unsealed, and gushed forth,

"Like to the Pontic sea,
Whose icy current and compulsive course
Ne'er feels retiring ebb, but keeps due on
To the Propontick and the Hellespont."

Shakspeare cannot be translated into any foreign tongue; in the attempt, even the hardy genius of Voltaire is rebuked in his presence, and pales before him. His indomitable spirit refuses to submit to any foreign yoke; it is in the broad and manly freedom of the Anglo-Saxon alone that his ardent and impetuous genius delights to range in illimitable sweep, and unmeasured compass. He has no equal—no imitator. He is alone in his glory. Like the CHILIAN CONDOR, he "*floats in the solitude of the higher heavens!*"

Modern writers are content to admire, to study, to illustrate—but never to imitate. Some however have presumed to criticise;—*Quos Ego*.

Is it not strange, that public opinion, bowing to the dogmatism of Johnson and to the cynical moroseness of Pope, should have permitted the character of Shakspeare and his dramatic writings to be traduced and misrepresented? It is not for us, at this enlightened day, to quote from the multitude of passages in the dramatic works of Shakspeare, to refute the charge of his being unlettered and unfamiliar with the classics. It reposes upon the naked authority of the "*author of Irene*." It is true that Ben Jonson has said or sung, that Shakspeare had "small Latin and less Greek;" but in that pedantic age, this is no light admission. I appeal from the impressions and fancies of men to the productions of the poet, which are rife with all the spirit of classical beauty. Among his more finished dramas there is scarcely an animated scene, which does not carry with it internal and conclusive evidence of a mind deeply imbued with the purest inspiration of the classics. How laboriously he may have investigated the intricacies of the Greek or Latin tongues is immaterial; but throughout his productions, miscellaneous and dramatic, his thoughts are robed in a classic drapery, and reflected in classic imagery, inimitably chaste and appropriate.

He has been censured as an erratic genius, whose unconnected and incoherent productions were formed without system or order. Be it remembered that these charges are preferred by those secondary geniuses and imitative formalists, who would build the modern drama on the model of the ancients. Worshipers of the olden time, such men bow down with reverence before the "scarf of the shrivelled mummy." Shakspeare's was a *creative* genius—his censors were *imitators*. It was impossible that a man like Alexander Pope should appreciate the loftier beauties of this transcendent *Poet* and *High Priest of Nature*. The characteristic of Pope's mind was neatness and polish. In the minor beauties of composition, in the department of order, euphony and elegance, he was an adept. Smooth, placid, and refined, his measure was music, and his style was grace and beauty. But he could never lift his frittered mind to the awful sublimity of the great dramatist, when like the Pythoness, he warmed with celestial fire, and shook with the pregnant inspiration of the Deity. The march of Johnson's style was stately and measured, but his turgid and pompous mind moved too heavily to overtake the electric nimbleness of Shakspeare's outpourings of genius; and, like Pope, the operations of his intellect were restricted within a prescribed circle of order. Hence, when this erratic genius wheeled along the paths of literary space, they mistook the eccentricity of his movement for confusion; and unhesitatingly censured what they could not appreciate or comprehend. It was impossible that the cold skepticism of Hume's mind could be warmed and expanded into admiration by this bright luminary; for Hume's was a mind as insensible as the nether mill-stone to all the finer emotions of our nature. An outcast from grace—not even the celestial fires of inspiration could animate the frozen viper. Neither could the infamous depravity and prostitution of Voltaire's intellect catch the enthusiasm of this *divine* writer; and having miserably failed to translate, he seemed to envy and to hate him.

The most thrilling—the sublimest passages of Shakspeare spring from the operations of conscience; and this poet's great wand of power, is the mystical relation between the Deity and man. To such a voice these wretches were as deaf as the adder. They had labored to erase the image of God from their souls, and there was no longer left with them even a taste for anything pure, chaste, beautiful or holy; for the spirit had gone forth from the sanctuary, and the shrine was desecrated. Their hearts were corrupted in their most intimate recesses, and every current of moral feeling flowing therein, had either stagnated into insensibility, or was poisoned unto bitterness. We are angered at these men; but it is with a holy indignation. "*Iracundini*," says the Apostle, "*Iracundini—sed nolite peccare*." But the pious, the patriotic, the kindred spirit of Milton could, even in the gloom of national degradation, in the storm of civil strife, and amid the mists of religious intolerance and fanaticism, appreciate and proclaim the beauties of this "child of fancy:"

"Our sweetest Shakspeare, fancy's child,
Warbles his native woodnotes wild."

It was by a just appreciation of the merits of Shakspeare, and by a study of his works that Milton acquired that originality of expression and boldness of thought,

which has enabled him to scale the walls of heaven. The flaming sword of the cherubim prevailed not against his genius. He trod the path to Paradise, and threw around the stupendous truths of revelation all the witchery and all the sublimity of the epic.

It is no part of our intention to point out the excellences of Shakespeare; yet there is one reflection we may be allowed to make. It is upon the striking *individuality* of his characters. In this respect he vastly excels Sir Walter Scott, who, next to Shakespeare, is the most graphic delineator of character Britain has ever produced. Scott is deficient in this distinctive portraiture of personages of the same species or class. In Scott it is always the same character with a shade of difference: in Shakespeare, they resemble in the main, but are as distinct and separate as the opposite sexes. Lovel in the Antiquary, and Harry Bertram in Guy Mannering differ only in name and circumstance—they want *individuality*. So, with Norna of Fitful-Head and Meg Merrilies, the gipsy-woman—Dandie Dinmont and Bailie Nicol Jarvie—Ravenscroft and Redgauntlet. Flora McIvor and Rose Bradwardine contrast with each other in Waverley, as do Rebecca, the Jewess, and Rowena, the Saxon, in Ivanhoe. But in Shakespeare every character is a new and distinct creation, though of the same order. Richard of Gloster, Hamlet the King, and Macbeth are all “bloody and remorseless,” yet how different! The fair Juliet and the gentle Desdemona, how lovely, yet distinct! He has sketched two deliberate villains, Richard and Iago; but they are painted with the pencil of a master, who knew every spring of the human heart. Besides the *individuality*, Shakespeare is remarkable for the *intensity* of his characters. They are developed at every point, and fulfil their whole destiny. In this point of view compare Iago with Rashleigh Osbaldistone—Shylock with Trapbois, and the monster Caliban with Elshender, the recluse. The gross deformity of “Cannie Elshie” shocks the imagination; but every one feels that if monsters were, Caliban would be a veritable monster. The same distinction exists between the White-maid of Avenel in the Monastery, and Ariel in the “Tempest,” who does his “spriting so gently” as to make us regret that he is but a shadow. Let us tear ourselves away from the admiration of those powers, which, at one moment chill our blood with horror, and at another,

“Make a swan-like end,
Fading in music!”

Shakespeare has been heavily censured for the gross indelicacy of his language. Yet it is a subject of grave inquiry whether by that coarseness, which is so harshly condemned by the present generation, he offended the moral sense of the people of the age of Elizabeth. The standard of decency and propriety of language varies with the outline of territory, as well as with the refinement and corruption of a people. What might have been approved in the presence-chamber of the Virgin Queen, and repeated by her maids of honor, would, in our days of artificial refinement and delicacy, transuse a glowing blush over the cheek of beauty. These things are conventional. And it will be readily perceived by a comparison of Shakespeare's writings with those of his contemporaries, that he has not transcended the mode of his day. Nay, it may well be questioned

whether the prudish delicacy of our day is not rather an evidence of corrupt imaginings than of superior virtue. At all events there was less refinement in the age of Elizabeth. And what right has the exquisite refinement of the 19th century to erect as a standard of propriety its code of morals, by which to judge of those of the 17th century? The age which succeeds us may, with equal justice, erect its wiser standard, and condemn in us the surpassing virtue, which would shrink from the utterance of many passages of that divine revelation, which has been promulged for our moral improvement, and which contains every lesson of morality and every rule of action. But if the ravening appetite of criticism must have food, surely the corruption of the age will furnish abundance, without assailing the common privilege of the poet. Excessive vigilance argues conscious weakness. The dragon was sleepless in the gateway because the Hesperian fruit was always in danger. Our first parents in the garden of bliss were not touched with shame and fear until they had lost their innocence. But it was only in the comic scenes that this coarseness of expression was expected by his auditory, or was used by Shakespeare. In the graver passages of the drama, when it was the poet's will “to hold as ‘twere the mirror up to nature,” there can be nothing more sublimely chaste than his conceptions of character. Radiant with celestial innocence and beauty, his female characters approach angelic excellence. Whether it be the grave Portia, the injured Cordelia, the fanciful Rosalind, the beauteous Imogen, the sorrowful Ophelia, the tender Juliet, or the gentle Desdemona,—each is the very incarnation of purity. Perhaps it never was before given to mortal so clearly to conceive the angelic purity of the female character; certainly no dramatist of any age has been able to display at a single touch, as it were, by the inflection of a single ray of light, the conscious purity of female virtue. For an example, let us turn to the 2nd scene of the 4th act of the “Moor of Venice.” The explosion of Othello's jealousy had taken place, in which he called Desdemona that “cunning whore of Venice.” Stricken to the earth, and as if sensible that the life of the body could not survive the imputation of departed virtue, she prays Emilia to “lay on her bed her wedding sheets.” Emilia, in the presence of Desdemona informs Iago, that Othello had “so bewhored her as true hearts cannot bear.” What is the thought of that pure and innocent being in that hour of affliction?

Des. Am I that name, Iago?

Iago. What name, fair lady?

Des. Such as, she says, my lord did say I was.

That epithet was blasphemy upon her virtue—and her pure spirit could not breathe, neither could her chaste lips syllable the unhallowed word.

Where is there to be found a more touching tribute to virgin purity than at the burial of the hapless Ophelia?

Laertes. Lay her i' the earth;
And from her fair and unpolluted flesh
May violets spring! I tell thee, churlish priest,
A ministering angel shall my sister be
When thou liest howling!

We have already declared that it was no part of our design to speak of the beauties of Shakespeare; it was simply our intention to have protested against the great

injustice done to the character of Shakspeare's writings by commentators and critics, who, without the soul to appreciate his beauties, have exaggerated his faults; and to complain of the pertinacity with which the readers of Shakspeare vex the public ear with proposed corrections of his text. To discover an error in the text of Shakspeare, to proclaim it to the world, and to suggest an emendation, seem to flatter the hypercritic with a portion of the poet's immortality. These corrections, for the most part, are trifling in themselves and annoying to the public. Many of them would be rendered unnecessary if these critics would supply themselves with approved editions of the author. The truth is, that most of the obscurities in the text of this writer have been occasioned by this *letter of innovation* among readers. Instead of being engaged in the contemplation of the sublime beauties of the drama—instead of being wrapt in the whirl and eddy of the passions, or observing their masterly and fearful development; these "Pucks of commentators" are employed in critical observations of words and phrases, almost beneath the notice of the petty scavengers of literature. We apply these remarks generally. But we must also be permitted to examine impartially certain proposed readings of Shakspeare in former numbers of the Messenger; and although the game may be scarcely worth the candle, pause and reflect, before we approve or adopt them.

In the August number of the Messenger there is a passage cited from Macbeth, the reading of which is censured upon the *reported* authority of Macready. With due deference to the histrionic fame of Macready (if his *reputed* be his *real* diction), we cannot surrender the established reading except upon sounder reasoning than that contained in the article in the Messenger, or upon higher authority than that of the tragedian himself. Our first reason is, that we are unwilling to change, upon every frivolous suggestion, a reading which has stood the test of two centuries, and has escaped the censure of more than six generations of the children of men, as well as the mordacious teeth of the whole swarm of critics that have preyed upon the text of Shakspeare as if it had been the land of Egypt. Moreover, we are decidedly of opinion that a reading which has pleased a Garrick and a Kemble, may be tolerated by Macready. The passage is from the 5th act, 5th scene.

Macbeth Wherefore was that cry?

Servant The Queen is dead, my lord.

Macbeth She should have died *hereafter* :

There would have been a time for such a word.

To-morrow, and to-morrow, and to-morrow

Creeps in this petty space from day to day,

To the last syllable of recorded time;

And all our *yesterdays* have lighted fools

The way to dusty death!

Read, says your correspondent, *meo periculo*, and, we suppose, by virtue of the conjoint authority of Macready and himself,

"She should have died *hereafter* :

There would have been a time for such a word

To-morrow! *Aye*, to-morrow, and to-morrow," &c.

Let it be borne in mind that the plot rapidly approaches the catastrophe, and that the poet, glowing with his theme, dallies not by the wayside, but hurries

to a conclusion. Had he inclination or leisure to check the whirl of passion to specify the precise time at which such intelligence would have been less painful? No, he merely intended to show the tendency of the human mind to postpone the hour of pain or retribution, and says,

"She should have died *hereafter* :

There would have been a time for such a word."

And in an instant, struck with the folly of desiring to postpone that which is inevitable, he very naturally and very appropriately continues :

"To-morrow, and to-morrow—and to-morrow,
Creeps in this petty space from day to day
To the last syllable of recorded time;
And all our *yesterdays* have lighted fools
The way to dusty death!"

In plain prose, Macbeth, distressed by the desertion of his friends, alarmed for the issue of the approaching contest upon which depended his throne and existence, when he hears the cry of the woman occasioned by the death of his queen, very naturally wishes, that this blow might have been withheld until *another time*, when, being less oppressed, he might have borne it with more fortitude. But recovering his self-possession, he says in substance: thus it is, that we are always disposed to consider *anytime* more appropriate than the *present* for affliction, and we look forward to *to-morrow*, though experience teaches us that "all our *yesterdays* have lighted fools the way to dusty death." To our understanding no correction is required, and the text of Shakspeare is far more intelligible and natural than the fastidious commentary of the critic, or the supposed reading of the tragedian. In the November number the reading of Shakspeare, Garrick, and Kemble, the reading of two centuries is fully sustained in opposition to the reading of the critic and the tragedian by the note of Johnson, as quoted on page 674, of that number of the Messenger. It will be remembered that this note of Johnson was written in support and explanation of the text of Shakspeare, long before the suggestion of this new reading. The note is in these words: "Her death should have been deferred to some more peaceful time. There would have been a more convenient time for such intelligence. Such is the condition of human life, that we always think to-morrow will be more seasonable than to-day; but to-morrow, and to-morrow steal over us unenjoyed, and we still linger in the same expectation to the moment appointed for our end. All those days, which have thus passed away, have sent multitudes of fools to their graves, who were engrossed by the same dream of future felicity, and when life was departing from them, were, like me, reckoning on to-morrow." Upon the plain signification of this note we are well content to repose. With this explanation Johnson was satisfied with the text of the poet, and Johnson was a critic too. Let him be the arbiter between Shakspeare and the modern critic. We will adhere to the text.

The difference between the amendment proposed and the established reading in the Comedy of Errors is too unimportant to occupy our attention; and the emendation, if adopted, would neither improve the text, nor immortalize the critic. We prefer "*falling* to "*falling*,"

the text to the amendment—the bard to his reviewer. The lines are from the 2nd scene of the 1st act.

"I to the world am like a drop of water,
That in the ocean seeks another drop;
Who, *failing* there to find his fellow forth,
Unseen, *inquisitive*, confounds himself."

If we adopt the word *failing*, we reduce the poet to the absurdity of making the drop of water *inquisitive* for his fellow in the *fourth* line after having *failed* to find him in the *third*; for it will be observed that the poet makes him *inquisitive* to the last, until he "confounds himself;" but the proposed amendment throws him into *flat despair* at the conclusion of the third line.

From comedy let us return to tragedy. A correspondent in the October number of the Messenger proposes an amendment to the text of Shakspeare in the 7th scene of the 4th act of Hamlet.

King. Laertes, was your father dear to you?

Or are you like the painting of a sorrow,
A face without a heart?

Laertes. Why ask you this?

King. Not that I think you did not love your father,
But that I know love is *begun* by time,
And that I see in passages of proof,
Time qualifies the spark and fire of it.
There lives within the very flame of love
A kind of wick or snuff that will abate it;
And nothing is at a like goodness still,
For goodness, growing to a *pleurisy*,
Dies in his own too much.

It is proposed to substitute for the word *begun* in this passage the word *beguile*; and this forsooth, because in sundry lines of other plays of Shakspeare the word *beguile* is used in the sense of *amuse*, *deceive*, &c. The note on this verse in the Chiswick edition of these plays is decisive of this question; and this is decidedly the best edition of Shakspeare extant. The note is in these words: "But that I know love is *begun* by time," &c. "As love is *begun* by time, and has its gradual increase, so time qualifies and abates it." It is apparent that the poet designed to speak of the *origin*, *progress*, and *decline* of love, and to say that as love *begins* in time, so time *abates* it, and in the course of time it *perishes*. The good sense of the reader will perceive at a glance, that to adopt the word *beguile* as proposed, would be to render that obscure upon the suggestion of the critic, which is now perfectly clear. Not even the authority of Mr. Macready could so far *beguile* us, as to induce the adoption of this amended reading.

J. F. O. in the December number of the Messenger, after approving of the preceding amendments, which we have marked with such decided reprobation, proceeds to "criticise a little on his own hook." He commences with the two concluding lines of the last quotation from Hamlet:

"For goodness, growing to a *pleurisy*
Dies in his own too-much."

For *pleurisy* he proposes to substitute *plurisy*. And here, at length, we agree with the critic, not because of any merit in the criticism, but because in the approved editions, *plurisy* is the established reading. He says he thus marked the margin of his old Steevens a few years ago: "Quere, *plurisy*—from *plus—pluris*?" He

might have found this emendation, or rather this established reading, not only in his Steevens' edition a few years ago; but also in Webster's Dictionary many years ago. And in the Chiswick edition, published in 1825, he may have seen the following note: "*Plurisy* is *superabundance*; our ancestors used the word in this sense, as if it came from *plus—pluris*, and not from (*ryspe*) pleura. The disease was formerly thought to proceed from too much blood flowing to the part affected:

"In a word,
The *plurisy* of goodness is thy ill."—Massinger.

We confess that we are prone to judge impatiently these verbal criticisms upon this gifted child of nature, and consequently may have done less than justice to the preceding suggestions of the correspondents of the Messenger. We prefer surrendering ourselves up to the inspirations of this divine poet, who, at one moment involves us in the whirl and tempest of the passions, and at another breathes to the lascivious pleasings of a lute. In sweetness and tenderness, vigor and sublimity of style he is unequalled. He transcends the form and figure of speech permitted to less gifted men; but he sanctifies his errors. In the imagery of his thought there is a characteristic excellence. Though there was no English style in his day, he has created one, and it will perish with his writings. In conclusion we would recommend to your correspondents, who profess a warm admiration of Shakspeare, to withdraw their attention from mere verbal emendations, and occupy a field worthy of their talents. There is yet a book to be written, the spirit of which every admirer of Shakspeare feels in advance, but whose execution is reserved for some master-workman, upon the transcendent excellence of this sublime dramatist. Such a book would attract attention not only to the *individuality* and *intensity* of his characters, but also to their *truth*, *keeping*, and *correspondence* with all the relations and circumstances in which they live, move, and have their being. The surpassing splendor of his *supernatural machinery*, (the wondrous progeny of his own creative imagination,) whether the fairies flutter in a moonlight scene, or repose in the bell of a cowslip,—or whether the blasted heath trodden by the wierd sisters is lit up with frequent lightning, disclosing the infernal caldron, around which they mutter their hellish incantations—all this is a theme worthy of the pen of the most gifted among us.

The inimitable fidelity with which he depicts the operations of madness, from the ravings of a mind in ruins in the person of Lear, to the melancholy wailing of the sweet Ophelia; all the wonderful creations of this child of nature in the Merchant of Venice, Macbeth, Romeo and Juliet, Lear, Hamlet, Othello, and The Tempest, furnish gratifying evidence to man of the loftiness of the human intellect, and place this unrivalled author upon an eminence, around which the aspirations of the human mind may be poured forth in all future ages. To contemplate, to study, to unfold the beauties of this "bard of every age and clime," is fit employment for the man of taste; "but these verbal criticisms," says Steevens, "only betray the ambition of each little Hercules to set up pillars ascertaining how far he had travelled through the dreary wilds of black letter." In fine, these verbal commentators, says a judicious writer, "attach themselves to the mighty body of Shakspeare,

like barnacles to the hull of a proud man-of-war, and are prepared to plough with him the vast ocean of time; and thus by the only means in their power endeavor to snatch themselves from that oblivion to which nature has devoted them." We make no unkind application of these quotations to the clever correspondents of the *Messenger*. They have only to translate their comments from the phraseology to the beauties and to the spirit of the drama, to become public benefactors. For our own part, the testimony said to be necessary to convict a cardinal, would scarcely induce us to disturb the time-honored remains of the *SWEET SWAN OF AVON*!

Independent of all creeds, we like the fervent piety which follows the beloved object beyond the grave, and holds communion with the departed spirit; and thus, in breathing a ritual over the departed spirit of the *GREAT DRAMATIST*, we unite with the pious catholic in the touching aspiration, "*REQUIESCAT IN PACE!*"

ATTICUS.

Frederick, Md. Dec. 30, 1837.

A FAREWELL TO MARY.

Here's a sad farewell to the lovely guest

Who has cheered our loneliest hours—

Who with sweetest of smiles our board has blessed,
And has strewed our threshold with flowers.

Oh! that maiden around my heart has twined;

For she's gay, and she's gentle, and artless,
And prefers the shade with a friend who is kind,
To the glare of a world that is heartless.

And though rapt, I could gaze on an angel's face,

With celestial intelligence gleaming;

Yet something far sweeter I think I can trace
In a woman's with tenderness beaming.

And what should I care for a sparkling e'e,

Who grow every day older and older?

And what are sweet dimples and kisses to me,
Whose bosom is colder and colder?

But I love the heart that's attuned to play

Every note or of joy or of sorrow;

That can merrily laugh with the joyous to-day,
And weep with the wretched to-morrow.

Then here's a farewell to the lovely guest,

Who has cheered our loneliest hours—

Who with sweetest of smiles our board has blest,
And has strewed our pathway with flowers.

Yet let us not still too selfishly grieve,

Nor let her young spirit be saddened,

Since the home of her friends the fair maiden will leave,
That a mother's fond heart may be gladdened.

But rather we'll mingle a smile with a tear;

What union can ever be sweeter,

Than a tear of regret for a maiden so dear,
And a smile for the joys that will greet her?

Then a last farewell to the lovely guest

Who has cheered our loneliest hours—

Who with sweetest of smiles our halls has blessed,
And has strewed our threshold with flowers.

Richmond, Va.

THE LYCEUM—NO. VI.

ADVICES TO SUNDRY KINDS OF PEOPLE.

BY GULLIVER THE YOUNGER.

CHAPTER III.

RULES FOR CONVERSATION.

Always begin with the weather. Settle, distinctly, in the first place, what sort of weather it is *now*: whether wet or dry, cool or warm, hot or cold, clear or cloudy, bad, or pleasant. In the next place, determine how it has been for the last few days, or weeks: and lastly, decide what it probably will be, for at least two days to come. Then, if you are a countryman, or take an interest in country matters, pass to the crops; and consider how they will fare from the weather, past, present, and future: whether they will be short, or plentiful; and what prices they will bring. If you are a town lady or gentleman, or take no interest in Clodpole or his concerns, treat of the weather as affecting the roads and streets; as cutting off visits, preventing parties of pleasure, and sinking the spirits: and wind up with concluding, that if you had the regulation of the skies, you could manage them a great deal better.

By this time, you will be fairly afloat on the stream of talk. Subjects now rise up fast and thick before you. The dress of this lady or that gentleman—the prices and beauty of furniture—the courtships going on among your acquaintance—the marriages that will, or that will not take place—in short, those hundreds of nameless nothings that make up the charming dish called *little-tattle*—will enable you to kill hours on hours of the great enemy, Time, every day, for years: until at length, as some body has somewhere said, Time turns the tables, and kills you. But meanwhile, you will have the comfort of being revenged upon him beforehand; and of selling him your life as dear as possible.

But let your main theme of discourse be the characters, especially the faults, of your neighbors and friends. Morose and squeamish people blame this practice; nicknaming it *scandal*. But they do not consider its uses. What is the surest way to root out vice and folly from the world? Why, to hold them up to view, and thus warn both old and young against them; 'as the Spartans used to shew drunkards to their boys, in order to make them hate drunkenness. Let mothers, aunts, and sisters then, eye and fathers too, be diligent in exposing to the view of youth, all the slips, foibles, and vices of the neighborhood. Let these be the standing theme around every tea-table, and fireside. A pupil so warned, will never be guilty of them. And you, who thus hold up evil-doers to justice, will be no less honored than the beadle or hangman is, who uses the lash or noose for the public good. You will be a moral scavenger to society; and will stand as high for your services, as that functionary does, who cleans away impurities from the streets. Besides—how largely will such conversations add to that important science,—the knowledge of human character!—You need not be particular about the truth of the stories you tell, or of the facts you comment upon: because, although false,

they serve your end, of exciting abhorrence in the young mind, as well as if they were true. You know, the moral of a story in Esop is none the less wholesome for the story's being a fable.

If, therefore, Miss Flirt has coquetted with Mr. Dash; or Mr. Tipple, (being a member of the temperance society), mixes too much brandy with his wine; or Mr. Skinfint has overreached an honest neighbor in a bargain; or Mr. Thresher corrects his wife with a larger rod than the law allows; or Mrs. Rawhide is too severe towards her servants; or there be undovelike and unconjugal jars between Mr. and Mrs. Turtledove; or Mr. Afterday wears false hair; or Miss Tabitha Evergreen paints; or Mrs. Henpeck bears it with too high a hand over her dutiful and obedient spouse;—or if you, or any body else, suspect any of these things;—let your social circle ring with them. Turn them over, and examine them in every point of view. Discuss their probabilities, their causes, their effects, consequences, and incidents; their degrees of blame-worthiness, and their likelihood of continuance. Conclude with a doubt whether, after all, strong and clear as the proof seems, the scandalous story is not false: but protesting at the same time how much you are shocked if it is true; and lamenting the apparent force of the evidence.—I might sum up all my advice on this head, by bidding you copy the conversation of some ladies and gentlemen who met together at a picnic, in the time of Queen Anne, a hundred and twenty-five years ago; as mentioned by a certain poet of that day:

'In various talk the instructive hours they pass'd:
Who gave the ball, or paid the visit last;
One speaks the glory of the British queen,
And one describes a charming Indian screen;
A third interprets motions, looks, and eyes;
At every word, a reputation dies.
Snuff, and the fan, supply each pause of chat,
With singing, laughing, ogling, and all that.'

In talking upon debatable subjects, always bring on a dispute, or argument (as it is called), if you can. It is a great whether of the wits; strengthens the lungs by exercise; and gives you the best opportunity for shewing off your learning, subtlety, and eloquence.

In disputing, or argument, there are several important rules; all growing out of one leading principle—namely, that 'the object of argument is not *truth*, but *victory*.' Make this maxim your polar star; and you will see the needfulness of the following rules.—Never concede any point to your adversary, if it will aid him in the least. Though half of what he says be self-evident, yet either deny it, or (if that exceeds all power of face) pass it by unnoticed, or treat it as if immaterial. Many people, by weakly yielding all points which they see to be against them, are defeated in half their disputes: whereas, by keeping possession of those points, they might at once enlarge their own foothold, and lessen that of their adversary—thus greatly increasing their chances of victory; as, in war, it is half the battle to get a stand in the enemy's camp.

Make long speeches: as long, as if you were in Congress. It answers four useful ends. It shows you off; improves your style; strengthens your lungs; and ensures the defeat of your adversary, by either

consuming all the time that he and you can spend together, or confounding him by the noisiness and number of the things you say, so that he cannot possibly remember what he has to answer. But if he wish to make speeches also, do not let him. Cry out against it, as a monstrous unfairness. Interrupt him, at every sentence.—Indeed, it is a capital manoeuvre to interrupt him often, though he shew no wish to speechify. If he pauses at a period, or even at a semicolon, to take breath or to spit,—especially if he is modest, or has a weaker voice than yours,—cut in upon him without scruple. You may thus hinder him from unfolding half an idea; much less half his argument. He will be reduced to a mere interjection now and then, if not to an inglorious silence; and your victory will be no less complete than easy. By this means, you may vanquish one who otherwise would overmatch you entirely. It is the simple aling and stone, with which a stripling may conquer a Goliath in debate: or rather, it resembles a dexterity at cards, (much practised by certain itinerant, sporting gentlemen), by which a weak-handed player may win the game from one, whose hand is full of trumps.—Some old-maidish people maintain, that each speaker should be allowed a pause of half a minute, to consider what more he has to say. But the Shawanee Indians have that practice among them: and I presume, nobody would have us copy savages.

Of all subjects for disputation, you cannot fail to see that *party politics* is the best. Opinions are most apt to differ about it; and, owing to the opposite sides from which our newspapers accustom us to view every question, that difference is the most fixed and irreconcilable. Hence, disputants on that subject may stand justified, to themselves, in the most unsparing bitterness towards each other; and in most unscrupulously taking every advantage. Hence also these disputes have the peculiar recommendation of never coming to an end: there being no instance of either party's convincing his antagonist; so that the theme is inexhaustible.

There is one very pleasant sort of conversation, practised sometimes by country gentlemen, though oftener by elderly, unmarried ladies: it is, where three, four, or even more, talk all at once; producing an effect like that agreeable musical entertainment, called "a Dutch concert," wherein all the company sing together, but each a different song.

If you have no wit, but would fain pass for having it, be what is sometimes termed a *runner of rigs*: in other words, a professor of ridicule. Be constantly on the watch for odd ways in your acquaintance, or odd incidents in their lives, or peculiar circumstances in their condition; no matter, if they be misfortunes: and turn these into subjects of laughter. Though none such exist in the person you single out, still you may feign to see or know them, and raise a laugh against him as effectually, as if the oddity were there sure enough. A notable and successful branch of this art, is the practice of teasing bashful young women or young men about their love affairs, or about anything else, concerning which you perceive them to be sensitive. I have known girls thus made to blush and wriggle, until the very sight of their tormentor would throw them into agonies: and his triumph would be completed by their falling into awkwardnesses, which would last them through life.—In all these cases, the

wit consists in the frequency and heartiness of your laugh. Repeat it, therefore, till be you laugh at is tired, and every calm looker on, also. But, as 'gentle dulness ever loved a joke,' people of your own calibre will join you; and perhaps others, through sympathy: until at length every body, seeing you and your set always giggling at something, will believe you a marvellous wag: so that, whenever your lips open, all other mouths will be fixed to laugh. This is the cheapest way in the world, of becoming a wit. By such means, one with scarcely a thimbleful of brains may keep the mastery over a person having ten times as much sense.

There are other rules that ought to be given: such as rules for browbeating—for quizzing—for the display of learning—for raising blushes in a modest face—&c. &c. But my paper is so nearly out, that I have only room to mention them thus briefly; and to lay down one maxim, which gives the clew to them all, as it is the end for which they all should be practised upon: namely,—'Converse, not to please, instruct, or learn; but to divert yourself, and display your own consequence.'

THE DEAN OF BADAJOS.*

'Dear Rogers, at your hint I have been fain
To verify this pithy tale of Spain,
Perhaps the growth of a more Southern shore,
Transplanted thither by invading moor;
Which, being grafted where it has taken root,
Hath changed the form and color of the fruit.
Yet stringing rhymes upon a tale which flows
So neatly and so naturally in prose,
May seem to some (and some who know what's what)
Akin to tying bladders to a cat:
Since—wind and wings to boot—when all is done,
She cannot fly so well as she can run;
But you (I find) are backed by La Fontaine;
He in a preface says, "that stories gain
By being versed," and—what might make me bold,
And them, whose stories, like my own, are old—
"That stories gain by being often told."
His word and yours should justify my deed;
But, as few now his pleasant pages read,
Yew warranty must keep my bark afloat;
And victualled for short venture is the boat.

* In the poetical department we have heretofore confined ourselves to original matter. We insert this selection at the suggestion of a gentleman whose classical attainments and good taste, are a sufficient guarantee, that it will not be an unacceptable treat to our readers. It is a spirited and easy poetical version of a popular Spanish tale, which through the medium of a translation furnished by Richard Cumberland, has long been known to readers of the British classics.

The Dean of Badajos, has an anxious desire to perfect himself in magic. With this object in view he visits Toledo in order to become a pupil of Torribio, a famed sorcerer. Torribio at first refuses his request, on account of having been so ungratefully requited by former pupils. The Dean after declaiming against their ingratitude, and affirming his own generosity, by his pressing entreaties, obtains his consent to become his pupil. By his art Torribio throws him into a deep sleep, in which in the course of one hour, the succeeding events of his life are pictured to his eye, and he rises by successive steps from a Dean to the Pope, and by various pretences defers the reward he had promised Torribio, until at last he is about to banish him, when the spell is removed, his ingratitude demonstrated, and he returns home humbled and abashed. Independent of its humor, the moral is a good one.—[Ed. Mew.

'The Dean of Badajos was (report hath said)
A scholar and a ripe one, and well read
In all the arts and sciences which rank a
Man highest in the schools of Salamanca,
Coimbra or Alcalá; nor was to seek
In Law or Logic, Latin or in Greek:
In schoolmen versed, in poets, epic, tragic,
And comic—he knew everything but Magic.
To lack such knowledge was a source of pain,
For none (he deemed) could show that secret vein,
Of all the learned men that lived in Spain.
At last, and when least hoped, within his reach,
He heard of one that could the science teach,
Who at Toledo lived, of little fame;
And Don Torribio was his style and name,

'Scarce of his name assured and his abode,
The Dean was on his mule and on his road.
He lighting at Toledo, to a lone
Moor dwelling by his muleteer was shown;
And, as if all was moulded on one plan,
Such as his modest mansion found the man;
To whom, due congees made, he thus began:—
"I am the Dean of Badajos. Is none
In Seville, the Castiles, or Aragon,
Nay—not from Cadiz to the Pyrenees,
(Whatever are his honors, or degrees)
But calls me Master; yet were I by thee
Called scholar, it a higher praise would be:—
Instruct me but in Magic, I entreat,
And bind me to thy service, hands and feet."

'Although he piqued himself, as he might well,
On keeping the best company in hell,
Torribio dealt not (as my story teaches)
In candied courtesies and flowery speeches;
But bluntly said, "he had met such ill return
From all that had repaired to him to learn,
It was his firm resolve, that never more
Would he reveal his prostituted lore."
—"And has the great Torribio been repaid
In such base coin?" the dean of Badajos said,
And—as if such a thought had fired his blood—
Foamed forth so loud, so long and large a flood
Of saws and sentences against the crime
Of foul ingratitude, in prose and rhyme,
All on a foam with honest hate and scorn,
That by the furious torrent overborne,
The sage confessed, "he could no more repel
The advances of a man who spoke so well:
He would instruct him; he would be his host;"
And from his window cried—"Jacinta, roast
A brace of partridges;" (this window looked
Upon the kitchen where Jacinta cooked;
His cook and faithful housekeeper was she.)
Adding, "the dean of Badajos sups with me."
Next touched his pupil's brow, and said, (let not
The words by thee, good reader, be forgot.)
"Ortobolan, Pistraster, Ormagriouf;"
Then of his zeal and art gave present proof;
Opened his books; and with his pupil fell
To work on sign and sigil, spirk and spell.

'Master and scholar like time had read,
Before a knock, strange voice, and heavy tread
Were heard; and lo! Jacinta, and with her
A squat, square man, that seemed a messenger.
Breathless he was, and fiery hot with haste,
Splashed to the eyes, and booted to the waist.
This courier was postillon to my lord
Bishop of Badajos; and he brought word,
"The bishop!"—(who had for a long time been
Ailing, and who was uncle to the Dean)---
"Had had an apoplectic stroke and lay
Upon his death-bed when he came away."
The dean, intent upon his long-sought art,
Cursed messenger and uncle—but apart---
And gravely bade the man return; "he would
Follow (he added) with what haste he could;"
But hardly was he gone before the twain,
Wizard and Dean, were at their work again.

'Vainly, for lo! new messengers! but more Worth hearing were the tidings which they bore. This new arrival was a deputation, Sent by the Chapter, who, in convocation, Since the dean's uncle, their right reverend lord, The bishop, had been called to his reward, Had chosen him---as fittest found---to keep And feed and fold his houseless, hungry sheep. Upon this hint Torribio spake; he paid The bishop a brief compliment, and said, "He upon this occasion might fulfil His promises; nor did he doubt his will. He had not yet informed him he had a son, Who, wanting not in mother wit, had none For the dark sciences: whom he had ceased To press upon this point, and made a priest: Nor better count his beads, nor said his *crede*, In all the many churches of Toledo. Then, since his pupil could not be at once A bishop and a dean, and *must* renounce The lesser dignity, he would outrun His wishes if he gave it to his son."

'Embarrassed was the dean; but cleared his eye And cloudy forehead, and thus made reply: "It grieves me---grieves me greatly to refuse The first small boon for which Torribio sues; But a rich cousin, by my kin well seen, One that is only fit to be a dean, And who has promised I shall be his heir. Looks to my deanery; and, should I dare Withhold the prize for which he hopes, I should Anger each man and woman of my blood. But a poor deanery in Extremadura Ill fits *his* son, to whom I would assure A more fitting and more profitable boon!-- And surely this could compass late or soon:-- Sooner or later, some new prize must fall; And, since I must obey my clergy's call, Follow me, I beseech, and you shall be Friend, counsellor, and all in all to me: Leave not, dear master, ('tis my prayer) half done The work you have so happily begun; And reckon on *his* gratitude, who knows The measure of the mighty debt he owes."

'After some pause, Torribio gave consent, And with him to his *see* of Badajoz went; Where, as if he had filled the high vicar's stall, He was to the new bishop all in all: Nay---by his conduct earned, and tongue and pen, Golden opinions of all sorts of men.

'Beneath the guidance of so good a master, The bishop, if more cautiously, moved faster In magic, (for more steady was his pace) Than when he first began to run that race; Learned studies with his duty to combine; And shaped himself within so just a line That throughout Spain, in country, town, and court, Fame of his worth and wisdom made report. When lo! into his lap---unlooked for---fell a New plum, the archbishopric of Compostella. I should want words to tell, how at their low Men---priests and people---mourned in Badajoz: Whose Canons (their last tokens of respect) Besought their parting prelate to select One from among his many friends, to be His successor in that afflicted *see*.

'The occasion was not by Torribio lost; Who for his son again besought the post; And was again refused the vacant place: But that with all imaginable grace: "The archbishop felt such sorrow, felt such shame, At so postponing his preceptor's claim: But could he a yet older claim withstand? That of Don Ferdinand de Lara, grand Constable of Castile: for service done, He sought the windfall for a natural son.

Bound to this Lord" (though visible relation Was none between them) "by old obligation, He paid a debt; and hence might be inferred How well with all he kept his plighted ward." This fact, however it might make him grieve, Torribio had the goodness to believe; At his rare fortune that had gained the good, Which he had lost, rejoiced as best he could; And, as before at Badajoz, went to dwell at His *see* of Compostella with the prelate.

'So little there those two were to remain, That the remove was hardly worth their pain. Soon the archbishop to a better home Was summoned by a chamberlain from Rome, With scarlet hat and brief; "the holy father" (That brief declared in full) "desired to gather Wisdom and knowledge from his mouth, whose name Was noised through Christendom by clamorous fame; And left him power again to appoint---that lesser Might be his church's sorrow---his successor."

'Torribio was not with his reverend chief When the pope's chamberlain brought hat and brief. He to Toledo for some days had gone, It chanced, upon a visit to his son; Who (for his course had been more slow than sure) Was living there upon a paltry cure: But, being now returned, was spared the pain Of suing for the vacant *see* in vain: Him the arch-prelate went to meet; he prest With open arms Torribio to his breast; And cried; "you have heard good news; now hear the best! Now have I two to tell instead of one; I have been made a cardinal, and your son A cardinal as well shall briefly be; Or I have no credit with the holy *see*. I had predestined him my vacant throne: But mark *his* evil fortune, nay, *my* own; My mother, left at Badajoz, when we Were called to Compostella, wrote to me, While you, dear sir, were to Toledo gone, Unless my mitre was bestowed on Don Pablos de Salazar, her ancient friend And her confessor, it would be her end. And such, I well believe, would be the case. Now put yourself, dear master, in my place: Say; would you kill your mother?" and he sighed.---Not of a kind to counsel matricide, Torribio was, in truth, or in appearance, Content, nor cursed the beldam's interference. But---would you sift the story---she whose will The pious son pretended to fulfil, This earnest advocate was old, and fat, And foolish, seeing but her maid and cat; And, as on all sides it was said, (Heaven bless her!) Knew not the very name of her confessor. Was it not rather at the instigation Of a Gallician lady, a relation Of this Don Pablos, it was brought about, A hospitable widow and devout? Thus much is sure; the prelate used to vaunt This pious woman's wine of Alicante; Called her unfailing flask "the widow's cruse," And often blest her oiled and ragous.

'However this might be, in friendly sort Master and pupil sought the papal court: Wherein as well the cardinal was seen, As everywhere he heretofore had been; As popular with priest as pope, a vote, a Word from his lips sufficed to rule the *rota*. While thus acknowledged, pope and priesthood's guide, Yea, in his height of fame the pontiff died. And lo! unanimous the conclave were In calling him to fill St. Peter's chair.

'The holy father solemnly proclaimed--- A private audience Don Torribio claimed; And wept for pleasure while he kissed *his* feet, Who filled so worthily the sacred seat.

'He then to faithful services referred,
And to the pope recalled his plighted word;
Scarcely hinted at the hat he had laid down;
When he exchanged it for the triple crown:
But limited his suit to one short prayer;
Would he now make his helpless son his care?
He would be well contented with possessing
The means of life, if sweetened with his blessing.
He on his part renounced each brighter vision;
And sought but for his needs such small provision
As might supply (enough would be a feast)
The wants of a philosopher and priest.

'Meanwhile to him, that deem'd he'd gain'd his scope,
And knew enough of magic for a pope,
And now could ill frequent the sabbath revels
Of witches with hobgoblins, ghosts, and devils,
His friend Torribio had become a thorn
In the flesh, a thing no longer to be borne:
The holy father took his line, and stout
In the resolve forthwith to pluck it out,
Eyed the magician with a mien severe,
And to his supplicant cried, "I grieve to hear,
You under false pretences of appliance
To hidden studies and mysterious science,
Dabble with spell, and deal with demon; crimes
The Christian church hath punished in all times.
It would much irk me to pronounce your doom:
But, if you four days hence are found in Rome,
Beware the secular arm, lest you expire,
As well your sins deserve, in penal fire."

'He ended frowning; but, unmoved in look,
Torribio heard the threat; and simply spoke
Anew the three mysterious words reversed,
(Words not to be forgot) by him rehearsed:
When he received the dean beneath his roof;
Ortelius, Pistranger, Ormagrius:
And called aloud (as he whilere had done)
From the open window, "You need dress but one
Partridge, Jacintha; for my friend, the Dean,
Does not sup with me." Then vanished clean
The scholar's vision: on the clock he cast
His eyes, and saw but one short hour had past,
Since, with intent to study magic lore,
He had first darkened Don Torribio's door:
An hour which seemed to fill his every wish up:
That made him from a simple dean a bishop;
Bishop, archbishop, cardinal, and pope:
Yet all was but a bubble blown from soap:
He in that hour had stirred not from his stool:
And that short hour had stamped him knave and fool.'

SELECTIONS.

[We fortunately possess three or four old volumes of *Blackwood's Magazine*, containing many things worthy to be snatched from the oblivion that usually attends the productions of periodical literature. Some of these we intend to select, for the Messenger.

The following dialogue, published in 1818, must strike every reader, as happily characteristic of the persons who carry it on. Shakspeare's natural and simple explanations of his own intellectual processes, Bacon's more profound philosophizings, and the exquisite though exaggerated flatteries of the Queen by both of them; are word for word such as might be expected from the real Shakspeare and Bacon, could some actual colloquy of theirs be handed down to us. There is, however, an anachronism in making Bacon Lord Chancellor in Queen Elizabeth's time. He was not even Lord Keeper until 1617; nor Lord Chancellor

till 1620; 15 or 16 years after her death.—And the worthy chaplain errs (perhaps intentionally, to flatter his master) when he connects with Lord B.'s name a tradition respecting the arch at Cambridge, which properly belongs to the Friar Roger Bacon.—*Ed. Mess.*]

DIALOGUE BETWEEN LORD BACON AND SHAKSPEARE.

Lord Bacon (in his study.) Now, my pen, rest awhile. The air of this dark and thought-stirring chamber must not be breathed for too long at a time, lest my wits grow sluggish by reason of too much poring. I will go forth and walk. But first let me restore to their shelves these wormwood schoolmen. Come gray-beard Aristotle, mount thou first, and tell the spiders not to be astonished if their holes are darkened, for a seraphic doctor is about to follow. Scotus and Ramus, why these dog's-ears? It was once a different sort. And now, as I lift each book, methinks its cumbrous leaves club all their syllogisms, and conspire to weigh down that feeble arm, which has just been employed in transcribing the *Novum Organum*. Alas! that folly and falsehood should be so hard to grapple with—but he that hopes to make mankind the wiser for his labors must not be soon tired. My single brain is matched against the errors of thousands; and yet every time I return to reflect upon the laws of nature, she meets my thoughts with a more palpable sanction, and a voice seems to whisper from the midst of her machinery, that I have not inquired in vain.—Ho! who waits in the ante-chamber there? Does any one desire an audience?

Page. The Queen has sent unto your Lordship, Mr. William Shakspeare, the player.

Bacon. Indeed!—I have wished to see that man. Show him in. Report says her Majesty has lately tasked him to write a play upon a subject chosen by herself. Good-morrow, Mr. Shakspeare.

Shakspeare. Save your Lordship! Here is an epistle from her Majesty.

Bacon (Reads.) "The Queen desires, that as Mr. Shakspeare would fain have some savor of the Queen's own poor vein of poesy, he may be shown the book of sonnets, written by herself, and now in the keeping of my Lord Chancellor, who indeed may well keep what he hath so much flattered; although she does not command him to hide it altogether from the knowing and judicious."

Shakspeare. How gracious is her Majesty! Sure the pen, for which she exchanges her sceptre, cannot choose but drop golden thoughts.

Bacon. You say well, Mr. Shakspeare. But let us sit down, and discourse awhile. The sonnets will catch no harm by our delay, for true poesy, they say, hath a bloom which time cannot blight.

Shakspeare. True, my Lord. Near to Castalia there bubbles also a fountain of petrifying water, wherein the muses are wont to dip whatever poesies have met the approval of Apollo; so that the stender foliage, which originally sprung forth in the cherishing brain of a true poet, becomes hardened in all its leaves, and glitters as if it were carved out of rubies and emeralds. The elements have afterwards no power over it.

Bacon. Such will be the fortune of your own productions.

Shakspeare. Ah, my Lord! Do not encourage me to hope so. I am but a poor unlettered man, who seizes whatever rude conceits his own natural vein supplies him with, upon the enforcement of haste and necessity; and therefore I fear that such as are of deeper studies than myself, will find many flaws in my handiwork to laugh at both now and hereafter.

Bacon. He that can make the multitude laugh and weep as you do, Mr. Shakspeare, need not fear scholars. A head naturally fertile and forgetive is worth many libraries, inasmuch as a tree is more valuable than a

basket of fruit, or a good hawk better than a bagful of game, or the little purse which a fairy gave to Fortunatus more inexhaustible than all the coffers in the treasury. More scholarship might have sharpened your judgment, but the particulars whereof a character is composed are better assembled by force of imagination than of judgment, which, although it perceive coherences, cannot summon up materials, nor melt them into a compound, with that felicity which belongs to imagination alone.

Shakespeare. My Lord, thus far I know, that the first glimpse and conception of a character in my mind, is always engendered by chance and accident. We shall suppose, for instance, that I, sitting in a tap-room, or standing in a tennis-court. The behavior of some one fixes my attention. I note his dress, the sound of his voice, the turn of his countenance, the drinks he calls for, his questions and retorts, the fashion of his person, and, in brief, the whole outgoings and incomings of the man. These grounds of speculation being cherished and revolved in my fancy, it becomes straightway possessed with a swarm of conclusions and beliefs concerning the individual. In walking home, I picture out to myself what would be fitting for him to say or do, upon any given occasion, and these fantasies being recalled, at some after period, when I am writing a play, shape themselves into divers mannikins, who are not long of being nursed into life. Thus comes forth Shallow, and Slender, and Mercutio, and Sir Andrew Aguecheek.

Bacon. These are characters who may be found alive in the streets. But how frame you such interlocutors as Brutus and Coriolanus?

Shakespeare. By searching histories, in the first place, my Lord, for the germ. The filling up afterwards comes rather from feeling than observation. I turn myself into a Brutus or a Coriolanus for the time; and can, at least in fancy, partake sufficiently of the nobleness of their nature, to put proper words in their mouths. Observation will not supply the poet with every thing. He must have a stock of exalted sentiments in his own mind.

Bacon. In truth, Mr. Shakespeare, you have observed the world so well, and so widely, that I can scarce believe you ever shut your eyes. I too, although much engrossed with other studies, am, in part, an observer of mankind. Their dispositions, and the causes of their good or bad fortune, cannot well be overlooked even by the most devoted questioner of physical nature. But note the difference of habitudes. No sooner have I observed and got hold of particulars, than they are taken up by my judgment to be commented upon, and resolved into general laws. Your imagination keeps them to make pictures of. My judgment, if she find them to be comprehended under something already known by her, lets them drop, and forgets them; for which reason a certain book of essays, which I am writing, will be small in bulk, but I trust not light in substance. Thus do men severally follow their inborn dispositions.

Shakespeare. Every word of your Lordship's will be an adage to after times. For my part, I know my own place, and aspire not after the abstruser studies; although I can give wisdom a welcome when she comes in my way. But the inborn dispositions, as your Lordship has said, must not be warped from their natural bent, otherwise nothing but sterility will remain behind. A leg cannot be changed into an arm. Among stageplayers, our first object is to exercise a new candidate, until we discover where his vein lies.

Bacon. Do not those who enact what you write fail sometimes in rendering your true meaning?

Shakespeare. Grievously, alas! and yet methinks they often play well too. In writing, however, I strive to make the character appear with sufficient clearness in the dialogue, so that it may not lie altogether at the discretion of looks and gestures.

Bacon. In what esteem hold you the man who enacts Falstaff? Plays he not well?

Shakespeare. Indifferently, my Lord. He lacks the eye of a true jester, and does not speak the wit as if it were his own. Nevertheless, my shafts do not seem entirely blunted by his shooting them, since they are so eagerly waited for by the spectators. As for pregnancy in himself, he has none.

Bacon. Yet, by giving voice and utterance to your thoughts, he has pleased the Queen to a degree seldom known before. At each time of his reappearance, her majesty seemed to rejoice as if it had been the coming of a bridegroom, and the ladies of her court failed not to clap their hands. When they saw him fall down in battle at Shrewsbury, they cried out, "Alas! for our sport is ended!" but when he rose again, alive and well, the Queen began to laugh more than ever, and said she would know Falstaff better next time; and asked Essex, who stood behind her chair, if he had any such devices for saving himself at need. After the curtain fell, Essex brought Sir John a purse of angels, which the Queen said he would require, as Mrs. Quickly had now pawned all her plate, and could no longer support him in his debaucheries.

Shakespeare. Does your lordship sometimes honor these scenic pastimes with your presence?

Bacon. To say the truth, I have more frequently read your plays than seen them acted. Look round this narrow closet, Mr. Shakespeare. Behold these rows of books, in which are marshalled various samples of men's wisdom and folly. Here is the theatre which I love most to visit, although it be not always for sport or relaxation. This table is a stage, upon which these grave doctors sometimes descend to play their pranks, until I grow weary, and cut short their logic by flapping their leaves together. These pens are what once served them for swords and daggers; and this wax is like the human understanding, which they have run into a mould, and stamped with the head of Aristotle.

Shakespeare. Touching that matter I have the advantage of your Lordship. I care not whose head they stamp it with, or what doctrines and opinions are current; for, so long as men are born with the same passions and dispositions, the world will furnish the same handles to the tragedian. Therefore, while my Lord Verulam is vexing his brain with subtle questions, William Shakespeare lives with little thought, except it be to gather fresh fuel for his fancy. To the poet who has a ready-going pen, there needs not much painful preparative, since his best impressions are often got in the midst of idleness and sport.

Bacon. I am told that you do not invent the plots of your own plays, but generally borrow them from some common book of stories, such as Boccaccio's Decameron, or Cynthio's Novels. That practice must save a great expenditure of thought and contrivance.

Shakespeare. It does, my Lord. I lack patience to invent the whole from the foundation.

Bacon. If I guess aright, there is nothing so hard and troublesome as the invention of coherent incidents; and yet, methinks, after it is accomplished, it does not show so high a strain of wit as that which paints separate characters and objects well. Dexterity would achieve the making of a plot better than genius, which delights not so much in tracing a curious connexion among events, as in adorning a phantasy with bright colors, and eking it out with suitable appendages. Homer's plot hangs but ill together. It is indeed no better than a string of popular fables and superstitions, caught up from among the Greeks; and I believe that they who, in the time of Pisistratus, collected his poem, did more than himself to digest its particulars. His praise must therefore be found in this, that he reconceived, amplified, and set forth, what was but dimly and poorly conceived by common men.

Shakespeare. My knowledge of the tongues is but small, on which account I have read ancient authors mostly at second hand. I remember, when I first came to London, and began to be a hanger-on at the theatres, a great desire grew in me for more learning than had

fallen to my share at Stratford; but sickness and impatience, and the bewilderment caused by new objects, dispersed that wish into empty air. Ah, my Lord, you cannot conceive what a strange thing it was for so impressive a rustic, to find himself turned loose in the midst of Babel. My faculties wrought to such a degree, that I was in a dream all day long. My bent was not then toward comedy, for most objects seemed noble, and of much consideration. The music at the theatre ravished my young heart; and amidst the goodly company of spectators, I beheld, afar off, with dazzled sight, beauties who seemed to outparagon Cleopatra of Egypt. Some of these primitive fooleries were afterwards woven into Romeo and Juliet.

Bacon. Your Julius Cæsar and your Richard the Third please me better. From my youth upward I have had a brain politic and discriminative, and less prone to marvelling and dreaming than to scrutiny. Some part of my juvenile time was spent at the court of France, with our ambassador, Sir Amias Paulet; and, to speak the truth, although I was surrounded by many dames of high birth and rare beauty, I carried oftener Machiavelli in my pocket than a book of madrigals, and heeded not although these wantons made sport of my grave and scholarlike demeanor. When they would draw me forth to an encounter of their wit, I paid them off with flatteries, till they forgot their aim in thinking of themselves. Michael Angelo said of painting, that she was jealous, and required the whole man, undivided. I was aware how much more truly the same thing might be said of philosophy, and therefore cared not how much the ruddy complexion of my youth was sullied over the midnight lamp, or my outward comeliness sacrificed to my inward advancement.

Shakspeare. The student's brain is fed at the expense of his body; and I suspect that human nature is like a Frenchman's lace;—there is not enough of it to be pulled out both at the neck and the sleeves.

Bacon. What you observe is in part true. Yet if we look back upon ancient times, we shall find exceptions. Plato's body was as large and beautiful as that of any unthinking Greek; and so also was the body of Pythagoras, whom men had almost deified for his conjunct perfection of mind and person. To mention Alcibiades, Epaminondas, Cæsar, and others, would be unseasonable; since, although these men had ability enough for the great advancement of their own or their country's fortunes, the same portion might have gone but a small way toward the extension of knowledge in general. But here we touch upon the distinction between understanding and those energies which are necessary for the conduct of affairs.

Shakspeare. Speaking of bodily habitudes, is it true that your lordship swoons whenever the moon is eclipsed, even though unaware of what is then passing in the heavens?

Bacon. No more true, than that the moon eclipses whenever I swoon.

Shakspeare. I had it from your chaplain, my lord.

Bacon. My chaplain is a worthy man; he has so great a veneration for me, that he wishes to find marvels in the common accidents of my life.

Shakspeare. The same chaplain also told me, that a certain arch in Trinity College, Cambridge, would stand until a greater man than your lordship should pass through it.

Bacon. Did you ever pass through it, Mr. Shakspeare?

Shakspeare. No, my lord. I never was at Cambridge.

Bacon. Then we cannot yet decide which of us two is the greater man. I am told that most of the professors there pass under the arch without fear, which indeed shows a wise contempt of the superstition.

Shakspeare. I rejoice to think that the world is yet to have a greater man than your lordship, since the arch must fall at last.

Bacon. You say well, Mr. Shakspeare; and, now,

if you will follow me into another chamber, I shall show you the Queen's Book of Sonnets; which, not to commend up to the stars, would show much blindness and want of judgment. Her majesty is a great princess, and must be well aware of the versatility of her own parts, which fit her no less for a seat among the Muses, than to fill the throne of her ancestors.

Shakspeare. Were her majesty to listen to all that might be spoken of her good gifts, she would find the days too short for expediting any other business. The most her subjects can do with their praise is, to thrust it upon her by snatches; and, as Jupiter is said to have had a small trap-door in heaven, through which, when open, ascended the foolish prayers and vows of mankind, so might her majesty's presence-room be provided with a golden funnel for receiving the incense of those innumerable worshippers, whose hearts are full of her, although their quality enables them not to approach her person.

Bacon. Walk this way, Mr. Shakspeare. The Queen's book is not to be found among ordinary classics.

SAMUEL JOHNSON AND DAVID HUME.

These two remarkable individuals, although contemporaries, never came personally in contact. Dr. Johnson was looked upon by his friends as the colloquial champion of England; and probably the exultation which they felt in seeing him thrash every opponent, could have received little addition, except from betting. If they had met, David Hume would probably have declined the contest. There is something extremely ludicrous in this headlong pugnacity, when manifested by an individual who is supposed to make reflection his business; and Dr. Johnson seems to have been the only modern philosopher whose propensities were likely to have revived those scenes described by Lucian, in his Banquet and other pieces. This was not altogether owing to bigotry. His character seems to have been originally endowed with an overplus of the noble spirit of resistance; so that even had his temperament been less morbidly irritable, and his prejudices less inveterate, he would still have betrayed an inclination to push against the movements of other minds. Upon the whole, it is probable that the cultivation of his conversational powers was not favorable to his powers of composition, because it habituated him to seek less after truth in its substantive form than truth corrective of error, and to throw his thoughts into such a form as could be most conveniently used in argument. Although gifted with great powers, both of observation and reflection, he passed his life in too great a ferment ever to make any regular philosophical use of them. He was full of those stormy and untoward energies peculiar to the English character, and would have required something to wreak himself upon, before he sat down to reflect.

This English restiveness and untowardness, with which the Doctor was somewhat too much impregnated, makes a ridiculous figure in literature, but constitutes a very important element when introduced into active life. It is in a great measure a blind element; but in the political dissensions of a free country, it is a far safer one than the scheming and mischievous propensities of personal vanity and ambition. It is a quality which rather inclines sturdily to keep its own place, than to join in a scramble.

David Hume's temperament was well calculated for a philosopher of the Aristotelian class; that is to say, one who founds his reasonings upon experience, and upon the knowledge gathered by the senses. His whole constitution seems to have been uncommonly sedate and tranquil, and no part of it much alive or awake, but his understanding. Most of the errors of his philosophy, perhaps, arose from his overlooking elements

of human nature which were torpid within himself, and which could not be learnt by the mere external observer of mankind. He knew more of the virtues in their practical results, than he knew of them as sentiments; and his theory of utility resembles that explanation of musical concords which modern physics have enabled us to draw from the vibrations of the atmosphere, but which is merely an external supplement to the musical faculty within us, which judges of the harmony of sounds by totally different means.

The coldness of David Hume's character enabled him to shake off all vulgar peculiarities of thought and feeling, and to ascend into the regions of pure and classical intellect. No English writer delivers his remarks with so much grace. The taste which he followed in his compositions was founded upon the most generalized principles, and the most extended considerations of propriety; and the consequence is, that they possess a beauty which, whatever may be the fluctuations of human opinion, will never decay. He was utterly beyond the contagion of contemporary notions, and seems to have habituated himself to write as addressing a remote posterity, in whose eyes the notions which during his time had stirred and impelled the world, would perhaps be considered as the mere infatuations of ignorance and barbarism. The worthy David is entitled to less credit for those passages where he seems impressed with a belief that his own writings might continue to be perused at some future era, when christianity would only be remembered as an exploded superstition. However, there was perhaps more skepticism than vanity in this. His writings are elaborately perspicuous. He thought he saw the foundations of all human opinions sliding so fast, that he was determined to give his own works as fair a chance as possible of being understood, if they survived the wreck.

David Hume had too little personal character about him, to bear the marks of any particular nation. The sedate self-possession for which he was remarkable, has sometimes, however, been ascribed to Scotsmen in general, and his countrymen have always been notorious for dialectical propensities. It is remarkable, that no particular intellectual faculty has ever been set down as predominating in the English composition. Her great men have excelled in every different way, both in isolated faculties and in the aggregation of them. Englishmen have long been the first, both in delighting and instructing the nations; but owing to constitutional causes, they have also, like Dr. Johnson, been the most miserable of mankind. Dr. Johnson thought that all foreigners were comparatively fools.

If we compare the lives of Hume and Johnson, we find Hume spending his years in a manner well enough suited for the cultivation of his metaphysical powers, but too secluded, and too much at ease, to make him practically acquainted with human passions. In all his writings, Hume appears as a philosophical spectator, capable of estimating the wisdom or folly of men's conduct in relation to external circumstances, and of prognosticating its result; but not very capable of entering sympathetically into their feelings, or of strongly conceiving the impulses by which they are guided. Johnson had better opportunities of observation, of which we see the products in his writings; and he might have observed still better, had his attention not been so often engrossed by the fermentation of absurd prejudices in his own mind. He was generally more anxious to know whether a man was a whig in politics, or a high-churchman, or a dissenter, than to understand the mechanism which had been implanted in the individual by nature.

Johnson, during his lifetime, enjoyed more fame than Hume, and more personal authority in the world of letters. His growling was heard all over Parnassus. The influence he had on English literature consisted, not in disseminating any new system of opinions, but in teaching his countrymen how to reason luminously

and concisely, and in making the taste for reflection more popular than it was before.

Johnson had certainly more of what is commonly called genius than Hume. Possessing a stronger imagination and warmer feelings, it would have been less difficult for him than for the skeptic to have mounted into the regions of poetry; as may be seen in his tale of *Anningait* and *Ajut*, and some other pieces. Hume is said to have composed verses in his youth, which would probably be written in imitation of the coldest and most artificial models. Although Johnson had imagination, there was no native grace or elegance in his mind, to guide him in forming poetical combinations; and perhaps there is not in any English book a more clumsy and ungainly conception than that of the *Happy Valley* in *Rasselas*. Any thing that Hume had, beyond pure intellect, seems to have been a turn for pleasantry, which his strict taste prevented him from ever obtruding gratuitously upon the reader.

During the time when these men flourished, it may be safely averred, that the influence of intellect was completely predominant over that of genius in this country. No great poet arose, who produced moral impressions fit to be weighed against the speculative calculations to which the times were giving birth.

ODE.

Among the happiest specimens of modern Latin, is Dr. Johnson's ode to Mrs. Thrale, from the Island of Skye. It begins,

"*Permeo terras ubi nuda rupe,
Saxæa miscet nebulae ruinas,*" &c.

Sir Walter Scott says that he landed some years ago on Skye with a party of friends, and had the curiosity to inquire what was the first idea on every one's mind at landing. All answered separately it was this ode. If the following translation, which makes no attempt to give a conception of the extreme elegance of the original, shall direct to it the attention of any of your classical readers, whose recollection it may have escaped, you will be rewarded for the space it fills.

FROM THE ISLE OF SKYE.

I tread the land where rocks piled high
In gloomy ruins threat the sky,
Whose clime unblessed and sterile soil
Deride the famish'd laborer's toil.
Among fierce highland clans I stray,
Where science sheds no cheerful ray,
Where rags and squalid want are found
Within their smoking hovels round.
While thus o'er regions wild and drear,
Remote I roam, condemned to hear
An unknown tongue's discordant noise,
I meditate what now employs
Sweet Thralia's hours. With kindest smile
Does she her husband's cares beguile,
While round her feet her children play,
And love and gladness fill the day?
Or, anxious novelty to find,
From various books adorns her mind?
Whate'er thy joys—be sacred yet
Thy plighted friendship, nor forget
The bard whose wandering muse still true,
In all her wanderings turns to you—
So shall thy rocks, O Skye, proclaim
To murmuring surges Thralia's name.

THE INFLUENCE OF MORALS

ON THE HAPPINESS OF MAN, AND THE STABILITY OF SOCIAL INSTITUTIONS.

By a native (but not now a resident) of Petersburg, Va.

Although it is impossible to foresee the ultimate consequences of the action, we can readily appreciate the motives of those master spirits of the latter ages, who gave resistless motion to the reformation or religious revolution of the sixteenth, and to the French or political revolution of the eighteenth centuries. It is no part of our design to dwell upon the virtues or the excesses of the prominent actors in the reformation of the ecclesiastical and political establishments of the world at these respective periods; but we feel irresistibly inclined to discuss the probable influence of these revolutions upon the happiness of man and the stability of his institutions. The period has not yet arrived to investigate the full extent of their influence in this regard; and the bias of public opinion is at this time too strong to render it an agreeable task to inquire whether they have exercised a beneficial influence over the destinies of social man, and if so, whether the purchase has not been dearly made. When time shall have shed its mellowing influence over these stupendous events, and they cease to loom up before us in deceptive magnitudes through the mists of passions, which have been too deeply agitated to subside speedily, the world will be prepared to inquire whether these revolutions have elevated the social and moral condition of the world to the extent so generally believed, and in fine, whether they were not the mere results of causes, which would have produced equal or greater benefit to mankind if these had never occurred.

Before the nineteenth century closes, it will be gravely asked whether these revolutions have retarded or promoted the social interests of the human family. The present generation, being composed for the most part of religionists, is unfitted for sober inquiry upon this subject; but when sectarian feeling shall have subsided, and these religionists shall have become religious, and the wild and speculative philosophism of the day shall have been subdued by the calm and sober spirit of philosophy, this great question will be settled. The contemplative mind is already inclined to attribute the wonderful change in the social condition of man within the last three centuries to the discovery of printing, and to look upon these two great convulsions as among the numberless results of that art which imparted to the operations of the human intellect electric activity and resistless energy. The fountains of living waters had been sealed up for ages, and man wandered in arid and uncultivated deserts; but no sooner was the rock smitten with the wand of Faust, than the whole wilderness was watered. Refreshed with the draught, man, prone to wander, resumed his journey with renovated strength; but whether he has been misled by the false lights of a

presumptuous understanding, or has meekly followed the pillar of truth in his pilgrimage, is the great question which is to decide the extent of the influence of these revolutions on his happiness. From the morning of life, even in the blissful walks of Eden, man was inquisitive and rebellious. When is it that the strong man fails to exert his strength, though he shake the horns of the altar or the pillars of the temple until himself shall perish in the common ruin?

The debasement of our species in the middle or dark ages has been the fruitful theme of declamation with modern writers; yet the discovery of arts the most useful to mankind was made in this period of universal gloom. The sceptre of the churchmen, who are accused of having usurped unbounded dominion, was twined with wreaths when it was broken; and when the tiara was smitten with the rod of innovation, many of its precious jewels were preserved by the thoughtful reformers. In our zeal to vindicate the necessity of religious reformation in the sixteenth century, we have been mindful only of the excesses of the clerical order; but the clear head and the upright heart, will also give them credit for signal blessings and benefactions to the human family. When the spirit of man had been crushed by the rude domination of the feudal barons, the clergy interposed the sanctity of the mitre to shield them from oppression. The feudal system was admirably adapted to the maintenance of unbridled power, and while it fenced around the few with insurmountable barriers, it reduced the many to unqualified submission and dependance. The arts and sciences were totally neglected by the mass of the people, and would have perished but for the clerical order, who watched the fitful flame with the devotion of the early vestals.

Mind is power. And whatever factitious aid or distinction physical endowments may borrow from the depraved taste or corrupt morals of a people, there is a resilient and recuperative energy in the powers of the intellect, which will, in due season, assert its supremacy. Hence when the chivalry of Europe returned broken and discomfited from the wars of the Holy Sepulchre, the gentle but resistless dominion of the lettered priesthood was substituted for the iron yoke of the barons. The clergy derived their power from the influence of cultivated intellect, and could only maintain themselves by its display and exercise. While by their great influence they were the rulers, they were also the teachers of their fellow mortals; and the powers of mind they exerted were caught by reflection, and gradually extended. With the ascendancy of the clergy letters slowly revived. The world was comparatively dark and void, but as the sun of science gradually lifted itself above the horizon, its light was spread around, until blazing forth in meridian splendor, the genial influence was felt throughout the habitable globe. The privileged classes under the rigor of the feudal law, having been shorn of a goodly portion of their power,

and the spirit of equality breathed forth in the doctrines of the christian dispensation, having been infused into the people, the middle classes rapidly arose, and assumed a prominent station in society. As the light of science was diffused, and the benefits of education were extended to the multitude, they acquired a knowledge of their natural rights, and became inquisitive concerning the authority of their rulers. It was not probable that in this improved condition of intellectual man, he should tamely submit even to the mild dominion of the priesthood; and the sovereign pontiffs, long before the days of the tenth Leo, felt that their temporal power could not survive the growing intelligence of the people.

At this propitious period the art of printing was discovered, and there was no temporal power so firmly established, or so securely intrenched as to resist its powerful assaults. It was perhaps unfortunate for mankind, that the first eruption of the volcano, should have been beneath the altars of religion. It would have been far more salutary, if the revolution in government had preceded instead of following the revolution in religion; for the clergy, having been the first who were assailed by the spirit of innovation, were placed unwittingly in an attitude of hostility to the projected reformation, and were opposed to the assertion of what were deemed popular rights. Unhappily there was a divorce between the people and the established clergy, and thus those, who, by their superior prudence and intelligence were best calculated to bear upon their consecrated shoulders the ark of the covenant, and conduct it to the promised land, were proscribed and denounced. It became necessary, therefore, for the people, unaided by these lights, to institute new forms of worship better adapted than the old to the spirit of the age. But after the attachment of men to the sacred institutions of their forefathers had been shaken, and the hierarchy had been weakened, it was long before they could be united in any settled form of worship, as a substitute for that which they had thrown down. And in their journey to the land of promise, there was no cloud of smoke by day, no pillar of fire by night, to conduct them in their weary pilgrimage. The ark with its holy symbols was no longer with them, for the people had turned to the left hand, while the Levites pursued the right. Having lost the priesthood, they were no longer restrained by authority in religious matters. Hence the necessity of *universal freedom of opinion*, the true spirit of religious liberty; but, alas! like all boons bestowed upon erring man, it was the fruitful source of abuse and misery in the fruition. We have intimated that it would have been better if the revolution in governments had preceded the revolution in religion; because, after the result had been attained, and the storm had wasted its fury, the disturbed elements of society might have once more blended peacefully together beneath the auspices of a common religion. In consequence of this separation of the clergy from the people in the religious revolution of the sixteenth century, it was not effected without a strong infusion of bitterness. Under the new doctrine of freedom of religious opinion, which, on account of this separation, it became necessary to establish, a thousand new creeds sprang into being; but, forgetful of their common origin, they were not less hostile to each other than to the an-

cient establishment; and the bitterness of this cup has not yet passed away. And if the ancient church discipline forbade religious freedom, the new codes were compelled to tolerate the propagation of the most destructive and licentious dogmas. Infidelity stalked naked through the world. Availing themselves of the great engine with which this revolution in religion had been effected, and protected by the genius of universal toleration, the disciples of the philosophists and illuminati poured forth from a teeming press their blasphemous doctrines, subversive alike of religion, morals, and all social institutions.

Although religion advanced with her hundred banners, the Holy Sepulchre could not be protected from the infidel. The opinions of men became unsettled; there was no longer any reverence for the institutions of antiquity; and though age called to age from the bottomless abysses of time, her hoarse voice was lost amid the tumult of noisy innovation.

The Papal hierarchy, seated on the seven hills of the Caesars, had been shaken to its foundations; and the fragments of its temporal power, like those of the monuments of the palmy days of imperial Rome, were crumbling in the dust. The storm of revolution now began to roll back from the altar to the throne,

Retortis
Littore Etrusco violenter undis,
Ire dejectum monumenta regis;

and the restless spirit of revolution sought out the ruins of other establishments, upon which to erect a trophy to the rights of man.

It soon became apparent that man, in the pride and excess of his newly acquired powers, was rushing madly forward to another revolution, which threatened to engulf all existing establishments, social, moral, and political. Freedom of religious opinion had been attained, but the price was yet to be paid. There was no establishment so sacred as to escape the indiscriminate ruin. The veil of the temple was rent asunder, and breaking into the innermost recesses of the sanctuary, these frantic levellers of the second or political revolution placed their sacrilegious hands upon the horns of the altar, questioned the attributes, limited the powers, blasphemed the name, and denied the existence of the unavenging Deity! The French philosophists, fostered by a profligate nobility, whose ruin they precipitated, had corrupted the national morals by their licentious writings. The social virtues had been shaken by the speculative productions of the learned Encyclopaedists. In the wild delirium of infidelity, *denuded beauty* usurped in the city of Paris the worship of the Deity! And the whole frame-work of society, "like the city of Persepolis, perished amid the vapors of wine, and by the seducement of courtizans." Yet a moment, and the lilies of France were as scarlet.

It was only by the abuse of the privileges conferred by the first or religious revolution, that designing men were enabled to produce the second or political revolution. The freedom of religious opinion enabled the philosophists and infidels to propagate their destructive doctrines, and poison and corrupt the morals of a whole people. At the head of this band of ruffians was the detestable Voltaire. "Let us contemplate the wretch," exclaims a beautiful writer, filled with holy indignation,

as he looked upon his bust. "Behold that repulsive countenance, over which modesty has never spread her glow, and those eyes, like two extinguished volcanoes, yet glimmering with the lurid glare of lust and hatred. That mouth, extending from ear to ear, and yawning like a fearful chasm; those lips compressed with malice, ready to pour forth the bitterness of sarcasm, or the mad ravings of blasphemy. Alas! what mischief has he not entailed upon us? Like that poisonous insect, the scourge of the garden, which attacks none but the most precious plants, Voltaire, with his rankling sting, never ceases to wound those two germs of society, women and young men. He infuses his poison into them, and thus transmits it from generation to generation. The great wickedness of Voltaire consists in the abuse of his talents, and the prostitution of a genius given him for the praise of God and virtue. He cannot, like so many others, allege in extenuation of his crimes, inconsiderateness, the seducement of the passions, or the frailty of our nature. His corruption is of a character peculiar to himself; it is seated in the innermost recesses of his heart, and is upheld by all the powers of his understanding. A sacrilegious wretch, he braves God to destroy his creatures. With unexampled frenzy the insolent blasphemer has dared to declare himself the personal enemy of the Redeemer. In the depth of his nothingness he applies a contemptuous epithet to the Saviour, and pronounces that law which he brought upon earth *infamous*. Abandoned of God, he knows no restraint. Other blasphemous railers have astonished virtue, Voltaire shocks vice. He surrenders up his imagination to the enthusiasm of hell, which lends him all its powers to lead him to the uttermost excesses of wickedness. A wretch, who would have been banished from Sodom, he is crowned at Paris. Insolent profaner of his native tongue and of the greatest names of France, he is the most contemptible of mankind next to those who admire him. When I contrast what he might have done with what he has done, his unrivalled talents only inspire me with a holy indignation, which I have no language to express. Hesitating between admiration and horror, I feel sometimes as if I would like to erect a statue to his memory—by the hands of the common hangman."

One of the necessary consequences and afflictive results of the reformation was the toleration of doctrines utterly subversive of religion, morals, and society; and the invention of printing and cultivation of letters have placed at the disposal of the wicked, irresistible means of poisoning the manners and morals of a whole people in the very gush of the fountain. The mind of man no sooner became unfettered, freedom of religious opinion no sooner became his priceless heritage, than straightway he proceeds to the most signal abuse of these inestimable blessings. Who shall control the powers of the free and gifted intellect? Springing into life from amidst the gloom of barbaric ages, like the electric flame from the dark bosom of the tempest, if it sometimes invigorates and purify, it is as often the herald, and the messenger, and the agent of desolation. Does the imprisoned eagle demand a whirlwind to lift him in the clouds? No—he only asks that his ligaments may be loosed, and that his wings may be unfurled. Aided by the formidable power of the press, and impelled by the restless and feverish condition of the public mind, then

beginning to expand with unwonted energy, the reformers shook the temporal and spiritual power of the Roman hierarchy, which had swayed its sceptre over the civilized world from the age of Constantine. So with the second revolution, or the revolution in government, which unsettled and upheaved the foundations of society.

In his farewell address to the people of this country, the first president, whose patriotic heart yearned for the perpetuity of our institutions, but whose sound understanding taught him to apprehend their speedy dissolution, exhorts us to indulge cautiously the belief that sound morals or integrity can be preserved without the aid of religion. He made law, order, and government repose upon morals, and held religion to be indispensable for the protection of morality. Whenever opinions utterly subversive of religion, and publications destructive of morals are freely tolerated, as in the period immediately preceding the French revolution, it follows as a necessary consequence that the bonds of society become as bands of flax before the flames of revolution. The world has not yet recovered from the effects produced by the writings of the philosophists. The Deity seemed in regard to that fated people, to have withdrawn for a season his superintendence of human affairs, and left to men the inevitable consequences of their own depravity. The morals of the French people had already been corrupted. There remained for Voltaire and his school nothing but to deny the existence of God. Alas! for them there was no God. He had already abandoned them!

Since the invention of printing the influence of men of genius over the public mind is incalculable. That which the great reformers and their associates effected in the religious world in the sixteenth century, Voltaire, Rousseau, Diderot, D'Alembert and their abettors repeated in the political world in the eighteenth. How frightful then is the responsibility of men of talent? What tremendous agency do they not exercise over the destinies of the children of men? And how important is it, that the public press should vigilantly guard the public morals, and restrain the publication of licentious works, or, if that be impracticable, labor at least to counteract their baleful influence? We have endeavored to show that the revolutions of the sixteenth and of the eighteenth centuries were the mere results of the discovery of the art of printing, and consequent improvement of intellectual man; or, in other words, that the press, by whose agency they were effected, is, in the hands of men of genius, a resistless agent for weal or woe. If it sometimes improve the heart by informing the understanding, it not unfrequently happens that it is prostituted, first to sap public morals, and then to overthrow the establishments which repose upon them. The ardent Milton, glowing with his customary eloquence in defence of unlicensed printing, exclaims: "And though all the winds of doctrine were let loose to play upon the earth, so truth be in the field, we do injuriously to misdoubt her strength. Let her and falsehood grapple: who ever knew truth put to the worse in a free and open encounter?" This is unquestionably a sound argument in favor of unlicensed printing in a political sense. But in the present condition of mankind the philosophic mind cannot admit its truth as applicable to social man. If the understandings of all men were as

clear as that of Milton, and if all men of sound understanding were so enamored of truth as to embrace her under all circumstances, we could safely admit the argument. But while the understanding of a vast majority of mankind is clouded by prejudice or overshadowed by ignorance, wisdom and truth may cry aloud in the streets, and few will hearken. The Bible contains in itself every lesson of morality and every rule of action: it is filled with the wisdom of inspiration, and breathes the spirit of eloquence; it is engrafted upon the civil code of every civilized nation, its copies are multiplied and circulated to almost infinite extent, it is the text book of religion, its lessons are enforced from the altar and the desk, it is to be found near every hearth and in the chambers of affliction and death; it has stamped upon it the broad seal of the Everlasting, and was delivered to man amid the thunders of Sinai; it has its thousands and its tens of thousands anointed for the propagation of its wholesome truths; and yet such is the perversity of man, such is the inability of the most imposing truths, revealed by the Deity himself, to wrestle with error, that myriads have been and still are seduced from the paths of truth and morality, by the apostles of untruth and infidelity.

From the two great revolutions of which we have spoken the world is supposed to have derived two invaluable blessings, freedom of religious opinion, and free political institutions. Let not our gratitude however deter us from speculating upon the ultimate operation of these transcendent gifts; let us endeavor to lift a corner of the veil which darkens the future, in order to gather a few salutary lessons. We do not limit our view to the present generation, but we speak of man, immortal in his essence, whose existence on earth will only cease when time shall be no more. In this enlarged sense man is not secure of these blessings. They are *experiments* in the midst of which we now are, and timorous men think the "beginning of the end now is." To have been delivered from the dominion of the priesthood seems to us in the midst of fruition a blessing vouchsafed; but inasmuch as by that deliverance it became necessary to recognize and establish freedom of religious opinion, christianity, religion, morals, and government have a new and formidable enemy to encounter in the shadowy monster *INFIDELITY*. And unless untried means be discovered to arrest the progress of this formidable foe in his desolating march, future generations will be startled with the question, what has religion profited by the reformation—in what has christianity been benefited by universal freedom of religious opinion? It will be remarked, that throughout this article we speak of religion generally—not of creeds, ancient or modern, reformed or otherwise. With the latter we have no concern.

We have been speaking of the unsettled experiment, which sprang from the first, or religious revolution: we will now proceed to the second experiment, which originated with the political or French revolution. And this latter problem is the "capability of man for self government." In this favored land it is a conceded truth, (may it be so ever!) which it is a species of treason to question. But the philosophic inquirer is not to be deterred from the investigation of wholesome truths by the partialities or prejudices of the age in which he lives. The prince of philosophers was a martyr in this

cause, but we have fallen upon better days. We are in the midst of the awful experiment. We have already remarked that the sagacious Washington doubted the stability of this government, and the characteristic of this truly great man was unerring sagacity. And ardent patriots have latterly been startled by the frequent and violent assaults upon the bonds of the Union. In stronger governments the centripetal power prevails, and the tendency of power is to the centre; but in our free institutions the repulsive power predominates to an alarming extent, and our most formidable enemy, as well as our national tendency, is licentiousness. Impatience of restraint, love of novelty, laxity of morals are alike opposed to the interests of true religion and the perpetuity of free institutions. Infidelity and licentiousness have increased in these latter days with frightful rapidity, and unless they be checked in their reeling and riotous career, they must ultimately stalk amid the disjointed fragments of desecrated altars and broken charters. Hence, it is the *FIRST DUTY OF EVERY CHRISTIAN AND OF EVERY PATRIOT TO OPPOSE EVERY THING, WHICH TENDS TO CORRUPT PUBLIC MORALS OR TO PROMOTE LICENTIOUSNESS OF OPINION.*

Time is not the great destroyer. Man is immortal, and his political and social establishments would, but for his licentiousness, endure until the voice of the Archangel, like to a passing-bell, proclaimed the funeral of time. The infidel Volney, while contemplating the ruins of the wilderness, which once blossomed as the gardens of Jericho; the unbelieving Gibbon, overshadowed by the ruins of the capitol, and meditating amid the fragments of mouldering columns,—beheld the *FRUITS OF LICENTIOUSNESS*. And the silent monitor within might have whispered to these unbelievers, that such as themselves had desolated empires.

Let it be the "first duty of every citizen to oppose everything which tends to corrupt public morals, or to promote licentiousness." History with her grave and solemn countenance constantly admonishes us, that whatever may have been the immediate cause of national calamities, licentiousness of morals and opinions has always preceded and precipitated the catastrophe. It is with individuals as with nations; the measure of chastisement is, for the most part, exactly proportioned to their delinquency. Man, being immortal, and capable of future suffering, and the extent of his malice and of the deliberate consent of his will being only known to the Searcher of hearts, appears sometimes to escape the penalties of this universal law, at least on this side of the grave. Moreover divine justice is not unfrequently appeased by submission and penitence. Not so with nations. They never escape the temporal punishment of crimes. National affliction and national degradation as assuredly follow national crime as effect follows cause. How beautiful is the moral of the Eastern allegory in relation to punishment? "The Brahmins represent Punishment as the son of the Deity, and the security of the four orders of the state. He rules with a sceptre of iron, and from the beast of the field to the children of men, the order of nature can never be violated with impunity. He is the perfection of justice. All classes would become corrupt, all barriers would be overthrown, and confusion would prevail upon the face of the earth, if punishment either

ceased to be inflicted, or were inflicted unjustly. But while the Genius of Punishment, with his dark countenance and fiery eye, presses forward to extirpate crime, the people are secure, if justice be impartial." From this avenging principle there is no escape, no mitigation for a guilty people; unless by a special dispensation of Providence, some inspired messenger should awaken them to a sense of impending ruin, and like the Ninevites of olden time, they should repent in sackcloth and ashes. But national worship, what is it for the most part, but sheer mockery? How often have we beheld injustice victorious, and bending beneath the weight of guilty laurels, leading subdued innocence a captive at her chariot wheels, lift up in the temple of the God of Justice canticles of rejoicing and thanksgiving to Heaven for its signal protection? In one of those genuine inspirations of genius, so rare with Voltaire, (*fas est et ab hoste doceri*), he exclaims with a just, we had almost said, with a holy indignation:

"Je n'ai cessé de voir tous ces voleurs de nuit,
Qui, dans un chemin creux, sans tambour et sans bruit,
Discrettement armés de sabres et d'échelles
Assaillent d'abord cinq ou six sentinelles;
Puis montant les toits aux murs de la cité,
Où les pauvres bourgeois dormaient en sûreté,
Portent dans leur logis le fer avec les flammes,
Poignent les maris, dishonorent les femmes,
Écrasent les enfans, et las de tant d'efforts,
Boivent le vin d'autrui sur des morceaux de morts.
Le lendemain matin on les mène à l'église
Rendre grâce au bon Dieu de leur noble entreprise;
Lui chanter en Latin qu'il est leurs digne appui,
Que dans la ville en feu l'on n'eut rien fait sans lui;
Qu'on ne peut ni voler, ni massacrer son monde,
Ni brûler les cités si Dieu ne nous seconde."

Greece was subdued by the Roman power, Rome was overthrown by hordes of barbarians. Yet it is admitted that these people were invincible while they were virtuous, and only perished when they had become licentious and corrupt. No matter what agency may have been employed in their desolation, we always find punishment, the avenger of crime, leading on the invader, and bruising guilty nations with his rod of iron. The warning is repeated throughout Holy Writ. The most sublime, the most affecting passages of Scripture, eloquently depict the lamentable consequences of national depravity. The most pathetic of the prophets, as he sat by the gates of the city, lifted up his voice in grief over the fallen fortunes of Israel, and spake of the sufferings and captivity of Judah. And invariably he attributes the afflictions of his people and their national degradation to their crimes and licentiousness. When the fair and fertile "valley of Siddim, once well watered, even as the garden of the Lord, became an arid and dismal wilderness, condemned to eternal sterility; when the graves of the once proud cities of the plain were dug by the thunders of heaven, and they were buried beneath the sluggish waters of that sea which holds no living fish in its bosom, bears no skiff on its surface, and sends not, like other lakes, a tribute to the ocean;" it was, in the expressive language of Scripture, **BECAUSE OF THE INIQUITIES OF THOSE CITIES.**

We are not of the number of those who consider political revolutions always beneficial to mankind, although popular rights and privileges may be extended

by them for a season. We are not of those, who would liken such convulsions in the body politic to the strife of the elements, which purify the atmosphere and restore a wholesome equilibrium. Their immediate results may be flattering to the patriot and philanthropist, and man, for a time, may enjoy a greater share of freedom. But in their ultimate effects, it is very questionable whether society is really benefited. We would rather compare these political shocks to a paralysis in the human system, from which the patient may recover for a season with renovated health, but only to await successive shocks in accumulative frequency, until he finally perish.

The political revolutions, which have most afflicted mankind, have been introduced by an era of national profligacy and licentiousness. Charles was the natural precursor of Cromwell, and Cromwell the fit successor of Charles. The libidinous Cavalier was aptly followed by the stern and formal Puritan. The morals, the literature, the religion of the English nation had become utterly depraved, and the interposition of the "Genius of Punishment, the avenger of crime, the security of the four orders of government," became necessary to chastise and to correct. The sufferings of the nation were terrific, but its crimes had been enormous. But as if to teach mankind a lesson, which tradition could never forget, the crimes of the French people were permitted to accumulate, until Paris rivalled Sodom in iniquity. And perhaps the sudden and consuming wrath which fell upon the city of the plain, was mercy compared with the protracted sufferings of this abandoned people. If the world shuddered at the enormity of their crimes, nations grew pale at the prolonged intensity of their sufferings. The Avenger of Crime again exacted the full measure of retribution.

A fact, which strikes us with great force in these latter ages, is the rapidity with which revolutions have been effected: a circumstance equally worthy of notice is the facility with which in modern times the morals of a whole people have been corrupted. This proceeds, as did the two great revolutions of which we have spoken, from the invention of printing, the agency of the press, that powerful engine, powerful alike for evil and for good. If revolutions thus destructive of the tranquillity and happiness of nations have been preceded by the prevalence of licentiousness, it becomes an important inquiry to ascertain the causes of the corruption of public morals. Alas! it is a matter of history. Prometheus stole the living fire from Heaven to inspire, to create a being like himself. But man, ever rebellious, has, in latter times, snatched the consecrated flame from the altar to fire the social edifice, and sought immortality in the enormity of his crime, and in the memorable beauty and sanctity of the building. With strange indocility and ingratitude, with unaccountable waywardness and perversity, he exerts the divine attributes of mind bestowed upon him by a munificent Creator, to mislead and destroy his creatures.

There are no periods in the history of England and France, in which corrupting and licentious writers were so freely tolerated, as those which immediately preceded the frightful revolutions that shook those kingdoms to their foundation. A licentious press has never failed to corrupt the people who tolerate the nuisance. The close contact into which the nations of the earth

have been brought by the cultivation of letters renders the action of the press electric. The attention of nations is no longer confined to the enemy within; there must be a warden at every gate, a watchman upon every tower. The electric influence imparted to one extremity of the chain is instantaneously felt throughout the lengthened links. As the powers of man have expanded, his dangers have increased. If to improve the understanding were in equal degree to purify the heart, if the tree of knowledge always bore the fruit of virtue, we would not be compelled to deplore the lamentable facility with which whole divisions of the human family have been latterly corrupted. Unfortunately the will of man is perverse. Hence he enjoys the freedom of religious opinion, and preaches infidelity; he exults in his political liberty, and teaches licentiousness and insubordination. When will he learn the whole lesson of wisdom and happiness, "*Sustine et Abstine*?" The press then is the great engine of good and evil—the press is the protector as well as the destroyer of morals—the press is the shield—it is also the leveller of nations. Tremendous engine! Frightful power! Can it be that Providence, stretching forth his kindly arm, has over-calculated the strength and skill, and virtue of his people, and has intrusted them with the guidance of the chariot of light, only that they may consume instead of enlightening the world?

But we must hasten to conclude an article, which has already transcended the limits of our design, by a few remarks peculiarly applicable to our own country, and addressed more particularly to the rising generation. There are deeply sowed in our soil seeds of destruction unknown to other lands; and it is therefore the more requisite for the preservation of our excellent institutions, that we, above all other people, should "*oppose everything which tends to corrupt public morals, or to promote licentiousness.*" Influenced by such considerations we feel impelled to censure the writings of EDWARD LYTTON BULWER, though we are filled with admiration for his transcendent genius. And yet the masterly style in which the immoral tendency of his works has been exposed and denounced by one of the most gifted correspondents of the Messenger, in the January number, has anticipated our design, and abridged our task. But the manner of Bulwer is so captivating and seductive, he wields over the youthful mind such overpowering influence at a season of life when their hearts and intellects are plastic and easily shaped, that we cannot refrain from superadding our testimony to that of the able reviewer to whom we have alluded. The lettered ease, the airy manners, the loose morality, with which he invests his striking characters, are well calculated to lead the youthful to erect a false standard of taste, and to adopt a perilous laxity of morals. He labors to substitute for the manly dignity of the educated gentleman the finical foppiness, the showy and superficial polish of a pert and puny *intellectualism*. He has done much to engraft upon the Saxon solidity of our language and character that frivolous levity, which seems only to have found a home in England and America, when it had been banished from France. But he has not only offended against the *lesser*, he has assailed the *greater morals*. Considering the toleration of immoral productions as evidences of the decline of any people, we have witnessed with no little

regret and alarm, the sensation this author has created. His example is even worse than his precept. Seduced from the path of duty by inordinate vanity, and bowing down before those conventional orders in Britain, which in his closet he seems to despise, Mr. Bulwer fails to fulfil his destiny. With creative powers beyond those of any living writer, with a free command and a beautiful fluency of language, deeply versed in the knowledge of political and social institutions, "learned in all the wisdom of the Egyptians;" the world had reason to require of this gifted man, that he should assert his proper station, and stand forth the eloquent champion of rational freedom, and like a tower of strength, defend against the fierce war of innovation, established institutions. Erect between contending parties, like the pillar of mingled darkness and flame, he should gild with cheering light the pathway of the friends of peace and order, and cast a withering shadow over the advancing footsteps of destroying anarchists. It is not enough that he should amuse or delight, he should be required to instruct mankind. The British parliament, and the British people, should be made to feel and to respect the powers of his genius. Alas! with all his endowments of mind, he is eminently deficient in that highest of human attributes, *moral courage*. Even the false gods he worships are of a secondary order. With less of ardor than the Persian, he turns from the great luminary; and with more than Babylonian idolatry, he bows down before the lesser lights. He is at once flattered and enslaved by the Aristocracy, and living but for their patronage and amusement, he adapts his morals to the lax standard of a profligate and unintellectual nobility. He is manifestly subdued by the social influences of a corrupt and corrupting metropolis. Instead of reposing with dignity upon the powers of his intellect, or lifting himself to useful eminence by their exertion, and fearlessly pursuing the high destiny that awaits him; he yields to the seductive influence of literary ease, and inhales the poisonous influence of that artificial and exclusive society, into which he only finds admission at the price of virtue. Yet he has not received even the full wages of iniquity, and his prostituted talents are not fairly compensated. Stung by the disappointment, his wounded spirit brooding in solitude over its fancied wrongs, sometimes breaks forth with resistless violence, and scourges with merciless severity those idols whom he despises in his soul, but whom he worships in all outward observance. Forming our estimate of his abilities from his writings, when we compare what he might have done with what he has effected, we feel impelled to inquire wherefore such talents should have been so unwisely bestowed. Far be it from us to detract from the full measure of his intellect. Radiant with celestial imagery, he breaks forth in his "Song of the Stars" with a wild burst of eloquence, which thrills the heart and leads captive the understanding. And in that other beautiful extravagance, "The Soul in Purgatory," how exquisitely, and yet how faithfully does he portray the constancy of woman's love? We have long since passed through the "May of youth and bloom of lustihood," and we begin to feel in our bosom the freezing influence of the snows that have fallen on our head; yet when in that beautiful fiction the "Angels string their harps in Heaven, and their music ascends like a stream of odors to the Pavilions

of the Most High," we seem to listen to the angelic minstrelsy, and feel that the harp of Seralim, sweeter than that of his fellows, had richly earned the "*gift, for the love that burned upon his song!*"

As productions of sheer entertainment, the works of Bulwer, the gay, the wild, the erratic, the voluptuous Bulwer, are inimitable. The outpourings of his wayward genius furnish some of the choicest specimens of sentimental epicurism. He appears in each succeeding volume to drink deep, and yet more deeply, of the bewildering draughts of that school, whose wildest errors have been consecrated and upheld by the transcendent powers of Goëthe. Would that we could stop here, or only turn aside to breathe a requiem over the departed spirit of the gentle LILIA! But beneath this bed of violets lurks the deadly serpent, in the vigor of his coil, and in the fulness of his sweltering venom. In a former number of this periodical, the immorality of Bulwer's works is ably displayed. We unhesitatingly pronounce the first and the last of the novels of Bulwer, the very worst books in the English language. In the expressive language of a beautiful writer, if any man arise from the perusal of "Falkland" and "Ernest Maltravers" with feelings of admiration for the writer, "*God does not love that man.*" They are the very breathings of licentiousness, and lewdness, and profligacy. The story of Ernest Maltravers is one of bald and denuded hawdery, unredeemed by one feeling of remorse, one touch of pity, on the part of the perpetrator of the most abominable and disgusting debauchery. It is impossible to unfold the dark abominations of this work in all their repulsive enormity, with due regard to the delicacy of those whose eyes will fall upon these pages, but whose glance, we fondly trust, will never be thrown upon the dark history of the wrongs of poor Alice Darvil, the motherless, the orphaned victim of the chilly profligacy of Maltravers. We have no language to express our reprobation of this outrage upon public morals and public decency. There is not to be found in English literature a more immoral and disgusting scene than is exhibited in the first fifty pages of the first volume of this work. In the third chapter of the second book of this same volume there is a sketch of maturer and more fashionable crime. Bulwer's heart is corrupt in its innermost recesses, and he pretends not to greater virtue for himself than he bestows upon Maltravers. For, notwithstanding the gentle protestation in the introduction to this shameful work, it is apparent that Ernest Maltravers is bound up in the self-love of the author, and that, by a pitiful imitation of Byron's worst vanity, there is a faint shadowing forth of Edward Lytton Bulwer in the reckless and icy profligacy of Maltravers. What a frightful audit awaits these enemies of the souls of the children of men! If we could be persuaded that the gross immorality of Bulwer was either tolerated or admired by the youth of our country, we would despair of the Republic.

Let us descend from the dignity of sober discussion, and address our concluding remarks to the rising generation, with that fervor of feeling, which has not yet ceased to animate us. The last hope of the Republic is in the rising generation: upon their prudence and integrity repose the destinies of our country. The world is no longer under the guidance of age and ex-

perience. There is a precocious vigor in the action—there is an unripe energy in the counsels of nations, which hurries to precipitate movements. The youth of the present generation enter too early upon the stage of life, and infuse into the elements of society an unwholesome degree of turbulence. Not unlike the son of the wise man, we spurn the counsels of the elders of the people, and listen to the suggestions of crude and hasty inexperience. The social, moral, and political world is in a restless and feverish paroxysm; and it is perhaps one of the most calamitous results of the two great revolutions of which we have spoken, that man, unwilling to submit to the superintendence of Providence, labors to control his own destinies. Weaned from the past, which he has been taught to consider the history of his debasement, he cares little for the present, and with the wicked curiosity of Saul, seeks to lift the veil which darkens the future. The waters of the great deep have been moved,—the Storm-God has smitten the caverns of the winds; and unless those who are to succeed us, will gather from the lessons of experience, wisdom for their future guidance, we shall scarcely survive the lowering tempest.

We live in an age of experiments—as a free people we are ourselves an experiment. Our excellent institutions seem to be no longer regarded as *republican settlements*, but as *nurseries of future revolutions*. In the brief period of sixty years from the foundation of our government, while our political establishments are yet in their infancy, reflecting men have been amazed at the alarming and gigantic strides of a youthful people in the paths of precocious corruption. The framework of our institutions—the sanctity of contracts—public faith and public credit—the arm of government—shrink and wither before the breathings of this turbulent spirit, like the sinew of Jacob's thigh beneath the touch of the wrestling angel. We repeat, that the last hope of the Republic is in the morals, the intelligence, the virtue of the rising generation. If they will impress deeply upon their youthful minds the stern truth, that the prosperity of a nation corresponds with the purity of its morals; if they will accustom themselves to reflect that our excellent institutions have been borrowed from the collected wisdom of successive ages, that they have descended to them from a long line of illustrious ancestry as a priceless heritage, to be transmitted unimpaired to their posterity; if they will steadily devote all the energies of their minds to rebuke that spirit of innovation, which, leaving all the ancient landmarks far behind, would plunge at once, without skill or experience, into the turbid and tempestuous waters of revolution; if they will look upon our frame of government as a kind of "family settlement, combining the interests of the state with the charities of social life, the affections of the heart, and with the sanctity of their hearths, their sepulchres, and their altars;" then may we confidently hope that the Eagle upon our banner, who has careered over so many fields of victory, and whose gaze has been gladdened by the stars that have been lit up around him, beaming with the mild lustre of freedom, will never behold one dark spot in the broad blaze of glory in which he floats, but bear them onward forever, the ever-burning type and emblem of that Union, which none but ourselves can put asunder!

WESTMINSTER HALL.

Westminster Hall, originally built by William Rufus, in 1096, was the place where Richard II feasted 10,000 guests,—where he was deposed in 1399, and also where sentence was pronounced on Charles I, in 1649.

Hail, antiquated hall! Methinks I mark
Thy Norman founder, his rude sceptre swaying,
With red elf-locks, and brow forever dark,
His unlov'd Saxon vassals still dismaying:—
Hark! To the chase! But Tyrrel's arrow speeds
The tyrant monarch where no hunted red-deer bleeds.

Thou wert the chosen spot, the vast area
Where he who claim'd the Black Prince for his air
A mighty banquet gave. (A bright idea,
Suggested by a royal brain on fire,
To feast ten thousand guests :) it puts to shame
The party or the ball of any city dame.

I marvel how they pack'd their dining-chairs,
Crickets, or stools, or whate'er else they sat on,
And where they pil'd their caps and roqueleires,
Unless they figur'd quaker-like, with hat on:—
Would I'd a yardstick, or some means of testing
The square amount of space, to separate truth from
jesting.

Amid the guests of royal birth, I see
Old John of Gaunt, musing with prophet-frown
On banish'd Bolingbroke;—while mad with glee
The giddy monarch shakes his rubied crown,
Reckless, as when he rush'd with beardless face
Amid Wat Tyler's mob, where Walworth rear'd his
mace.

Heard'st thou of Pomfret-Castle,—flaunting king?
Ah, breathe no thought to damp his hour of mirth!
To spoil a banquet is a sorry thing.
And could the wisest read their fate on earth,
With early gray the sunniest tress 'twould sprinkle
And plant the smoothest brow with many a rugged
wrinkle.

Poor Richard! Was it here, thy regal state
Was shorn, as woodman cleaves the forest-stem?
Here, did usurping Henry's vengeful hate
Rend from thy head its rightful diadem?
Whilst thou with trembling lip and tearful eye
Didst thrill men's wondering hearts, with powerless
sympathy.

The pageant fades. Slow ages seek the dead.
Plantagenets and Tudors disappear.
But see! What captive king is sternly led
From his drear prison, watch'd by guards severe?
Charles Stuart! Can it be! Alas, how vain
To seek for justice here, 'mid such unbridled train.

His doom is spoke. And must the headsman base
His life-blood shed, near his own palace-door?
Had pure-soul'd Marshall fill'd those judges' place,
Whalley and Goffe would ne'er have ventur'd o'er
To this New World, to prowl like birds of night,
And with outlandish feats, our Indian tribes to fright.

'Tis somewhat strange. For though I'm surely bound
As the true child of patriot parents born,
Of those who fought on Bunker's hallow'd ground,
The pride and pomp of kingly away to scorn,—
I ne'er could help the wish that woe and thrall
Had seiz'd on canting Noll and his queer roundheads
all.

Good night, old hall! With many a legend hoar
Hath Mother History hung thy vaulted roof,
And many a stolen thread from Fancy's loom
She deftly mingles with her crimson woof,—
Black passions, haggard crimes that shun the light,
And fierce ambition's spoils. Dim, ancient hall, good
night. L. E. L.

JOSEPH WOLFF, MISSIONARY.*

Few persons make good travellers: few journey with much profit to themselves, and still fewer to the advantage of others. The present generation is, indeed, well supplied with books of travels. A late number of the Edinburgh Review, taken up, at random, from among several others, contains, on its quarterly list of new publications, no less than fifty volumes of "travels and voyages." But the majority of these works are not fit even for light reading. Their details are too trifling and incorrect to be appealed to for important truth, and too insipid to be read as fiction. Very frequently their authors seem to imagine, that a voyage or journey of a certain number of miles entitles them to a patient hearing from the public, just as it is said to gain admission into the London Travellers' Club, and this whether they have made observations that are new and worthy of record, or not. If any vagrant wight has been so fortunate as to penetrate into a region before unvisited by book-makers, even though he can describe nothing more than his emotions on entering the unknown land, or the ceremony of taking possession thereof, for himself and his publishers, by inscribing his name on the bark of a tree, or the summit of a rock, his first business, after returning home, is to make a contract with a bookseller; and, then, drawing something from his notes, and memory, but still more from his imagination, he spreads out the issue in a watery film, over as many pages as it can be made to cover.

The prerequisites of a good traveller may be easily enumerated; not that they are few in number, but that they may be reduced to three general heads:—he should possess every possible bodily, mental, and moral accomplishment. No one needs to be more thoroughly furnished for his work. Strength of body and firmness of constitution are necessary to support fatigue, brave exposure, and sustain an eager and patient spirit of investigation. It is related of Volney, that, before he undertook his journey to the East, he imposed upon himself a regular course of physical training for the undertaking. He accustomed himself to every vicissitude of the seasons and of weather, to prolonged exer-

* Researches and Missionary labors among the Jews, Moham-medans, and other sects, by the Revd. Joseph Wolff, during his travels between the years 1831 and 1834. First American Edition. Philadelphia: 1837. 12mo. pp. 388.

tion and to coarse and slender diet. In this way, his naturally weak constitution was strengthened, so that he could endure hunger, thirst, long toil, and every hardship, with the Arab of the desert. He learned to walk at a measured pace, in order to calculate the distance of his marches. In fact, so unusual, unremitted, and long continued were these preliminary exercises, that he became the laughing-stock of his friends, and some entertained doubts even of his sanity. But, when the trial came, he reaped the full benefit of his perseverance. All bodily qualifications, natural, and acquired, most eminently assist the traveller's progress. A good outward appearance, acute senses, easy and polished manners, will greatly aid his investigations, while they add much to his comfort. The various arts of self defence and protection may, in various situations, be of incalculable service; and an expert hand will never long be unemployed.

What branch of human knowledge is there which the traveller does not need? To examine and describe the countries that he visits, even as to their physical aspect and productions, alone, requires a general acquaintance with the natural sciences. To become familiar with the character, habits and customs, governments, laws, religion, social condition, arts and sciences, and literature of their inhabitants, demands an extent of knowledge to which few have ever attained: above all, that knowledge of human nature, which is the most difficult of all to acquire. Let any one run over the whole circle of the objects of learning—he cannot lay his finger upon one, and pronounce it undeserving of the traveller's study. Our observations of foreign countries and people are, of necessity, comparative; and, if we have no standard of comparison, our labors must be fruitless. Narrow and prejudiced views of distant lands and institutions, are, always, the offspring of contracted minds.

And, besides that a great variety of studies is necessary to fit him for these comparative observations, knowledge is, in most cases, his surest passport and most efficient aid, in preparing the way for the accomplishment of his objects. Among an uncivilized people, learning, and, especially, scientific learning, exalts a stranger to the rank of a demi-god: gives him access to every class of society, and a thousand opportunities which were, otherwise, inevitably lost. We cannot illustrate our position more forcibly, than by instancing medical science, a knowledge of which has, doubtless, been a more fruitful source of correct and full information concerning the habits, condition, and institutions of barbarous and half civilized people, than any other accomplishment whatever. Even the jealously guarded prison of Mohammedan females—the harem—is thrown open to the enlightened physician. But we should tire ourselves and the reader, by attempting to enumerate, in detail, the various species of knowledge which the traveller should possess, and to show the particular use and importance of each.

But, again, exemplary morals are essential to the proper improvement of extensive foreign travel. How can a debauchee estimate aright the moral and social condition of the nations that he visits? Besides, those who journey in pursuit of objects to gratify avarice and lust, are always regarded with suspicion and dislike, where they should seek to cultivate intimacy and inspire confidence. Universal as is the reign of vice, virtue

always receives its meed of honor. In theory, at least, it is exalted, even by those who have left it at the greatest distance, in their erratic wanderings. And the traveller, whose immorality, in a measure, frustrates his own purposes, is also answerable for a still greater evil: the stigma which he casts upon the whole body of his countrymen, who are estimated by him as a standard, necessarily impairs the success of those who may follow in the same track. Who does not know, that the cupidity and manifold vices of English and American seamen, ranging the world in quest of riches, and holding no means for the attainment of this end, too base and degrading, have fixed a stain upon our national characters, which nothing can wash away, and rendered all bearing these names the abhorrence and detestation of many people? In the forcible language of the Patriarch, Jacob, we have been "made to stink" among the inhabitants of lands thus visited.

A traveller's moral and intellectual training should have rid him of that credulity, which swallows every thing without discrimination; otherwise he must often be led astray, not only by the mistakes of those really wishing to satisfy his curiosity with truth, but still oftener by the many, who are heartily fond of playing "tricks upon travellers." An acute and discerning mind, and a certain degree of skepticism are necessary, in order to see strange things in a true light, not shaded by clouds either accidentally or purposely cast over them. But here an extreme is to be carefully avoided. A man may come even to doubt his own being, if incredulity be too sedulously cherished. The traveller should follow lord Bacon's advice, and "Read (the book spread open before him) not to contradict and confute, not to believe and take for granted, nor to find talk and discourse, but to weigh and consider."

But we have rather pictured our *beau-ideal* of a good traveller, than described any one whom we have ever known; though there have been many, in whom we could point out a variety of individual features, which, if combined, would constitute this admirable whole. And, indeed, it is impossible that any person should possess all the important qualifications mentioned; therefore each should direct his attention to that kind of research for which his turn of mind and education have fitted him; but, still, we expect to find, in every traveller, a good degree of intelligence, in regard to all ordinary matters coming under his notice.

We have been led into these remarks, from a hasty glance at the book lately published in this country by Mr. Wolff, the Missionary. We have only glanced at it, and think that any one who does the same, will be satisfied, as we are, that this is quite enough for common readers. No foreigner, who has lately visited our country, has been more hospitably received and entertained, and has attracted more notice, than Mr. Wolff. He certainly was a *lion*, during his stay with us, as we heard some one remark, at the time when crowds were attending his lectures in Philadelphia. We had, before, known something of his singular history, his wonderful eccentricities, and his extensive travels, and, of course, regarded him as a real curiosity. We are not in possession of the means to give a very satisfactory account of his past life, but such facts as we have been able to collect may be not altogether uninteresting to the reader.

The father of Joseph Wolff was a Jewish Rabbi of

Bavaria, who, of course, educated his son "after the most straitest sect of his religion;" teaching him to regard Christians with abhorrence. But the child was of an inquiring mind, and, before the age when children often think of making inquisition into the peculiarities of religious belief, had so far profited by the occasional instructions of a village barber, as to purpose embracing Christianity. And, at fourteen years old, notwithstanding prejudices of birth and education, and his parents' violent opposition, he was baptised in the Roman Catholic Church. He seems to have been, after this, domesticated in the family of Count Stolberg, a German nobleman—how long, we cannot say; but, from thence, he soon proceeded to Rome, and entered the Propaganda, having determined on a Missionary life; his object, even then, probably being, to labor for the conversion of his own people, the Jews. He had not, however, been very long a student in this College, when he became dissatisfied with many things in the Romish faith; and, at length, after residing between two and three years in the imperial city, and receiving the "minor orders," he left his instructors, much to the apparent relief of both parties. Mr. Wolff was disgusted by the corruptions which he detected, and his teachers found him too disputatious, and too open in his denunciations. Indeed, the Pope's command was the immediate cause of the separation. Still he seems to have left some friends behind; and the Cardinal, through whom the order for his dismission was communicated to him, expressed sentiments of the warmest esteem and affection at parting.

From Rome he returned, we believe, to Germany, though without relinquishing the purpose of becoming a Missionary. Before, however, he had reached his twenty-fourth year, we find him at Cambridge, in England, under the tuition and enjoying the friendship of the Revd. Charles Simeon and Professor Lee. In the spring of 1821, at the age of about twenty-six, he left Great Britain to begin his travels in the East—the field of labor to which he had long looked forward with ardent desire. He was anxious, not only to preach to his acknowledged countrymen, but also to search after the ten lost tribes of Israel, in the regions where he thought it most likely that they would be found. Five years he spent in journeying through Palestine, Egypt, Mesopotamia, Persia, Crimea, Georgia, and the Turkish Empire. From 1826 to 1830, he labored among his brethren in Great Britain, Ireland, Holland, and the Mediterranean. He has published, in England, voluminous accounts of both these series of travels; and the book now before us, which, we believe was also first published there, contains the journal of his last adventures, from the year 1831 to 1834, in Turkey, Persia, Turkestaun, Bokara, Afghanistan, Cashmeer, Hindoostan, and on the borders of the Red Sea. Into some of these countries he penetrated much farther than any other modern traveller has done, and this at an eminent peril of life.

During one of his sojourns in England, we know not which, he married Lady Georgiana Wolff, a woman of noble birth, connected with the Walpole family, and a cousin of the celebrated Lady Esther Stanhope. She must have had a great deal of romance, or a wonderful zeal in the missionary cause, to have joined her fortunes to such a husband. She has since followed her lord, in

many of his wanderings, and he gives some ludicrous descriptions of their adventures during a journey in the desert, where they travelled in a most primitive manner, balancing one another in panniers along over a camel's back, (Lady Georgiana carrying weight, to preserve the equipoise, as she, naturally enough, was the lighter of the two,) and attended by another camel, bearing a piano-forte! How we should have fancied listening to the dulcet strains of her ladyship's music, near some clear fountain, bordered with a speck of green, amid that ocean waste of sand, when the train had halted to refresh body and soul with the cool water, and soothing melody! During her husband's last wanderings, she remained at Malta. She is, no doubt, ardently attached to him, but we could not help smiling at the *naïveté* with which he describes their consultation about the project of his last perilous journey through the countries above-mentioned.

"In the year 1823, being then at Jerusalem, I said to my wife, 'Bokara and Balk are very much in my mind, for I think I shall there find the ten tribes.' 'Well,' she replied, 'I have no objection to your going there.'"

Perhaps his habits are not very congenial to a married life. As a friend informs us, all day he digs in the Talmud, or some other like soil, and, at night, throws himself down to rest, any where, with a box of books for his bolster, if he can readily find no softer pillow.

Mr. Wolff is, certainly, a man of talent—in particular, a talent for the study of languages, of which he has acquired between fifteen and twenty, or, perhaps, a greater number. But his eccentricities are wonderful: some have even declared him insane. He notices the accusation in a paragraph, which prefaces this volume, addressed to his American friends, and adds what he calls a recommendation from the Quarterly Review:—

"The Reverend Joseph Wolff, a religious fanatic." Rather a doubtful way of proving his soundness of mind. There is a striking simplicity in his manner, but he exhibits the most singular compound of humility and egotism, that we have ever before witnessed. For the former trait we can refer only to his personal bearing and intercourse; the latter appears, very evidently, in his book, his valedictory letters to his friends in the United States—we mean those published in the newspapers, and his public pretensions. The speedy restoration of the Jews to their own land, he confidently predicts; and seems convinced, that they will enjoy a complete political ascendancy over us poor Gentiles, who are all to take the place of servants. In fact, if his mind is at all disordered, it is in regard to this subject: but who will not entertain extravagant notions, on a point of speculative belief, which has occupied his thoughts, and guided his researches, for twenty or thirty years? Mr. Wolff took orders in the Episcopal Church, during his visit to the United States, the strictness of English ecclesiastical canons, probably, not allowing his ordination in that country. His object in soliciting this right was, that he might thereby be enabled to return to his labors in the East, under the auspices of a society in England, which requires Episcopal ordination, as a requisite for missionaries claiming its patronage. We are glad that, under more liberal institutions, his praiseworthy object has been effected.

Of Mr. Wolff's lectures in this country, we have little to say. He travelled through a considerable

number of the Atlantic States, and addressed multitudes at various places in which he sojourned. He also contemplated a visit to the Rocky Mountains, in search of the lost tribes, but letters from Lady Georgiana gave intelligence, which compelled him to abandon this project, and hurry back to England, after a residence, among us, of about four months. We heard two of his lectures, and, from the impression made upon our own mind, can, well enough, understand the widely different opinions in regard to him, which we have heard expressed. One of the two was interesting, though it disappointed our expectations; the other so empty and tiresome, that we could hardly sit it out: it was very much like some of the most worthless parts of the book before us. Of course he labors under a great disadvantage, in not speaking English very intelligibly: his pronunciation is exceedingly imperfect. We must, however, give it as our opinion, that his lectures, taken all together, were neither entertaining, or instructive.

We shall now look at Mr. Wolff through the volume which we have in hand. It is rather difficult to estimate aright his character as a traveller; and we give our views of the matter with diffidence, more especially as such high encomiums have been passed upon him, by several men of learning and influence. As he has had uncommon opportunities of gathering important information, having travelled extensively among tribes of which little is known, we might confidently have looked for a very interesting and valuable work. He tells the reader, in the preface, that he "must not expect to find in the pages of this journal descriptions of ancient monuments, or of natural or artificial curiosities." Making this allowance, however, we might reasonably expect much more than we find, concerning the governments, customs, manners, religious sects, &c. which he had opportunities of observing; for, such information an inquisitive traveller could hardly have failed to obtain, and it would be of incalculable advantage to future missionaries in those countries. But, instead of this, his book is chiefly made up of dry enumerations of the names of places, marking the different stages of his journey, and of men, interspersed with barbarous legends, religious and political, accounts of his own discussions and conversations, and flattering letters which he received from various personages in India. If he mentions a peculiar sect, we learn scarcely more of it than its appellation, and the titles of its chief men, or some ridiculous tradition concerning its origin. One would almost suppose, that Mr. Wolff had published his loose scattered notes, originally intended only as memoranda of hard names and statistics, to be filled up afterwards with interesting details. He seems to have travelled about, with a sort of floating notion, that he might discover some traces of the lost tribes, but without any very definite object, or any strong motive to employ his senses. In short, the result of his labors, so far as it has been set forth in this volume, reminds us of an anecdote, which we heard from his own lips. Feeling interested in a singular race of people living in Egypt, he applied to a Frenchman long resident in that country, for information as to their character and peculiarities. The latter gravely replied, that the only conclusion which he had formed respecting them was, *that they had remarkably long noses!*

Credulity is a common weakness of travellers: they see so many strange things, that, unless their minds are

very acute, they become, at length, incapable of drawing the line between what is probable and improbable or impossible. But such credulity as Mr. Wolff's we have never before known in a person of liberal education, and his reputed strength of mind. He gravely assures us of his belief in witchcraft and sorcery; seems to consider dreams as supernatural communications, though of this he does not speak positively; and tells of having seen persons possessed with demons, and of having conversed with the evil spirits.

"It is the traveller's business," he remarks, (p. 170) "to gather sayings and traditions prevalent among the people he is visiting, and I confess, that I place the greatest confidence in the traditions of the barbarians: they not only transmit the names of their tribes from father to son, but even the names of their horses."

Before reading this paragraph, we had met with a number of traditions and legends, which Mr. Wolff had thought worthy of record, as we supposed, because they illustrated the religious belief, or some other characteristic of the people from whom they had been drawn. We thought the most of them supremely ridiculous; yet, that they might be regarded as curiosities of some value, considering the long way which they had travelled: even a weed from Asia is a wonder in America. But, though the most of them are gravely set forth without comment, we had never dreamed of any credit being attached to them, until met by this singular profession of belief. We will give two specimens of the traditions which he thus relates: they will serve the purpose of illustration, though not the best examples which might be selected, had we the patience necessary for a second examination of the volume.

"ORIGIN OF GYPSIES."

"The common people of Khorossau give the following account of their origin: 'Nimrod commanded Abraham to be cast into a fiery furnace; but two angels appeared, to hinder the execution of it. The Devil said to Nimrod, that he should place near Abraham a brother and sister, who should make the angels blush to such a degree, that they would turn away their faces, and consequently their protection from Abraham. During this time, he was cast into a fiery furnace, but came out from it unhurt. The brother's name was Cow, that of the sister Ly; the Gypsies are their children, and therefore called Cowlybur-band, i. e. the band of Cowly.' " p. 78.

"Mullah Meshiak, or, as the Mussulmans call him, Mullah Modhe, told me the following legend: When Moses was a child, Pharaoh one day played with him; Moses took hold of Pharaoh's beard, and drew out the jewels, with which it was covered. Pharaoh said to Jethro, Balaam, and Job, who were viziers at the time, 'I am afraid that this Jew boy will one day overturn my empire, what is to be done with him?' Balaam advised Pharaoh to kill Moses; Jethro said, 'No, but try whether he has understanding, by putting before him gold and fire: if he takes hold of the gold, then kill him; but if he touches the fire, then it will be a proof, that he will not become a clever boy.' Job was silent, but Jethro's advice was followed. Moses wanted to take hold of the gold; but the Angel of the Lord turned his hand toward the fire, and he put the coals to his tongue, on which account he had a difficulty of speech: 'I am slow of speech and slow of tongue.' Exodus iv. 10. Job, on account of having followed the system of expediency, by not having spoken out his mind, was punished as described in the book of Job. Balaam, who advised his being put to death, was killed." p. 95.

We do not much admire the spirit of the following paragraph. From one professing to be a disciple of

him, who even when reviled, reviled not again ; to obey the dictates of that religion which forbids to "speak evil of dignities," they come with a very bad grace.

"Sir Frederick Adams, Governor of Madras, is not only a weak and most consummate Jack in office, but a real follower and imitator of Jeroboam, who made Israel to sin, for he orders the British Soldiers to present arms in honor of the Hindoo Idols at their festivals, and hypocritically orders money to be distributed among the Brahmins, that they should pray to their Idols for rain.

"There is not a more ungodly Governor on the face of the earth, and one more unfit for his situation than Sir Frederick Adams. His whole political science and skill, consists in proving to the Hindoos that he is afraid of them, and therefore would be ready, in order that they may do him no harm, to countenance idolatry, and even make idolators of the English themselves. Sir Frederick Adams has all the wicked dispositions of Jeroboam, who made Israel to sin, without having the talents of Jeroboam ! for Sir Frederick Adams never could have made himself King ! not only not in Israel, but even not in Liliup." p. 297.

In conclusion, let us inquire what good appears to have resulted from Mr. Wolff's extensive travels and "labors." We cannot find words to express our admiration of the noble self-devotion of the true Missionary spirit ; but we fear that his exertions, though prompted by a sincere piety, have been sadly misdirected. Is it probable that, in his rambling excursions among Jews and Gentiles, any lasting impression has been made upon those who have heard from his lips the glad tidings of the Gospel ? Is it probable that his written "proclamations" to the wild Turkomauns and other tribes, exhorting them to renounce their habits of violence and rapine, and embrace the Christian faith, have wrought any reformation ? Has he made the way more easy for the Missionaries, who may follow in his track ? Perhaps we, or, perhaps, his printed journals do him injustice ; but we cannot discover, that he has accomplished any thing, at all commensurate with the object proposed.

From a man who has gained credit for so much learning ; who is acquainted with so many of the Eastern languages ; who has travelled so extensively, and penetrated so far beyond others into barbarous and unknown lands, both the church and the world might reasonably have expected much more than they have realized.

WILLIS'S LINES ON

'THE BURIAL OF ARNOLD.'

Some readers may remember, that in our last No. (amidst much praise bestowed upon the author,) we censured these 'lines' very sharply ; supposing them to be a most unmerited, nay, almost impious panegyric, upon General Arnold, the traitor. We learn, from a Norfolk paper (the editor of which was a college classmate of both the poet and his subject), that they allude not to the traitor, at all ; but 'to a classmate of Willis, who died in college, and was a young fellow of fine appearance.'

We are naturally somewhat provoked, at having been thus duped into the useless expenditure of so much good thunder. It is purely the fault of Mr. Willis himself. When 'Borgia,' 'Cicero,' 'Cæsar,'

'Newton,' 'Bacon,' 'Pope,' or 'Johnson' is mentioned, everybody understands a personage to be meant, who has attained that well known badge of celebrity, 'the honor of the surname ;' and not some obscure villager, or cloistered student. So, by the name 'Arnold,' no American, and hardly any Englishman, could understand any other than *Benjamin Arnold*, of the Revolution ; unless some explanation either accompanied the mention of the name, or chanced to be already in the hearer's or reader's mind, through an accident like that which enables the intelligent Norfolk editor to correct our error. A reviewer, 'tis true, is bound (and often assumes) to be omniscient : but it is a qualified omniscience. There are objects too small to be embraced by it ; as some things are too minute to be reached or regarded by the omnipotence of the law. Among the *minima*, thus below the dignity of knowledge, may safely be numbered the names of the schoolfellows of one, whom we are striving, with doubtful success, to elevate to the rank of a fourth rate poet : himself not yet canonized by death ; his life not yet written ; nor his name enrolled among the classics of his language. Mr. W.'s book contains not the slightest note or token, to inform us who was meant by his 'lines.' There they stand, headed 'THE BURIAL OF ARNOLD ;' and every thing they say, seems to point at a hero of no ordinary dimensions. As we before intimated, their strain of praise falls not much below the merits of him, who is everywhere the 'FIRST.' Could any mortal, without some special illumination, dream that they 'alluded' only to a student 'who died in college, and was a young fellow of fine appearance?'

We do not mean a tirade on the extravagance, of so handling such a theme. Youthful poets are at least as pardonable as newspaper obituary writers, for such kind exaggerations. But we mean to show that Mr. Willis alone is to blame for the mistake into which we, and ninety nine hundredths of his readers (if he have as many as he deserves) have fallen and will fall, with respect to the piece in question. He ought to have appended an explanatory note, or to have made the title itself speak more truly. He cannot have intended a quiz, upon such a subject.*

To justify all we have now said, and to prove the *naturalness* of our mistake, we copy the piece. As a poetical effusion, (its extravagance being forgiven) it has more than ordinary merit.

THE BURIAL OF ARNOLD.

Ye've gathered to your place of prayer
With slow and measured tread :
Your ranks are full, your mates all there—
But the soul of one has fled.
He was the proudest in his strength,
The manliest of ye all ;
Why lies he at that fearful length,
And ye around his pall ?

* Since the above paragraphs were in type, we have seen it mentioned, that in a former edition, Mr. W. did explain whom his 'lines' meant. It was reckoning too largely upon the effect of that edition, to suppose that it had won notoriety, and perpetual remembrance, for every subordinate fact it contained. One object of succeeding editions is, to supply chasms, not to make them. The fact now spoken of, the more needed continual mention, as the little notoriety it once had, would of course lessen with every year ; and the humble but unspiced name of 'Arnold' the student, sink constantly farther and farther out of sight, behind the 'bad eminence' which History will forever ensure to the name of "Arnold" the traitor. Then why was not the explanation still retained ?

Ye reckon it in days, since he
 Strode up that foot-worn aisle,
 With his dark eye flashing gloriously,
 And his lip wreathed with a smile.
 O, had it been but told you, then,
 To mark whose lamp was dim,
 From out yon rank of fresh-lipped men,
 Would ye have singled him?

Whose was the sinewy arm, that flung
 Defiance to the ring?
 Whose laugh of victory loudest rung—
 Yet not for glorying?
 Whose heart, in generous deed and thought,
 No rivalry might brook,
 And yet distinction claiming not?
 There lies he—go and look!

On now—his requiem is done,
 The last deep prayer is said—
 On to his burial, comrades—on,
 With the noblest of the dead!
 Slow—for it presses heavily—
 It is a man ye bear!
 Slow, for our thoughts dwell wearily
 On the noble sleeper there.

Tread lightly, comrades!—we have laid
 His dark locks on his brow—
 Like life—save deeper light and shade:
 We'll not disturb them now.
 Tread lightly—for 'tis beautiful,
 That blue-veined eye-lid's sleep,
 Hiding the eye death left so dull—
 Its slumber we will keep.

Rest now!—his journeying is done—
 Your feet are on his sod—
 Death's chain is on your champion—
 He waiteth here his God.
 Ay—turn and weep—'tis manliness
 To be heart-broken here—
 For the grave of earth's best nobleness
 Is watered by the tear.

We have heretofore spoken of several scripture incidents, which Mr. Willis has made the subjects of his best verse: and we entertained (perhaps intimated) a design, to copy one or more of them at a subsequent time. The present is as suitable an occasion as any, for following out this design. We therefore now select what may be deemed the happiest of those pieces.

THE LEPER.

By N. P. Willis.

"Room for the leper! Room!" And, as he came,
 The cry passed on—"Room for the leper! Room!"
 Sunrise was slanting on the city gates
 Rosy and beautiful, and from the hills
 The early risen poor were coming in
 Duly and cheerfully to their toil, and up
 Rose the sharp hammer's clink, and the far hum
 Of moving wheels and multitudes astir,
 And all that in a city murmur swells,
 Unheard but by the watcher's weary ear,
 Aching with night's dull silence, or the sick
 Hailing the welcome light, and sounds that chase
 The death-like images of the dark away.
 "Room for the leper!" And aside they stood—
 Matron, and child, and pitiless manhood—all
 Who met him on his way—and let him pass.
 And onward through the open gate he came,
 A leper with the ashes on his brow,
 Sackcloth about his loins, and on his lip
 A covering, stepping painfully and slow,
 And with a difficult utterance, like one

Whose heart is with an iron nerve put down,
 Crying "Unclean! Unclean!"

'Twas now the first
 Of the Judean Autumn, and the leaves
 Whose shadows lay so still upon his path,
 Had put their beauty forth beneath the eye
 Of Judah's loftiest noble. He was young,
 And eminently beautiful, and life
 Mantled in eloquent fulness on his lip,
 And sparkled in his glance, and in his mien
 There was a gracious pride that every eye
 Followed with benisons—and this was he!
 With the soft airs of Summer there had come
 A torpor on his frame, which not the speed
 Of his best barb, nor music, nor the blast
 Of the bold huntsman's horn, nor aught that stirs
 The spirit to its bent, might drive away.
 The blood beat not as wont within his veins;
 Dimness crept o'er his eye; a drowsy sloth,
 Fetter'd his limbs like palsy, and his mien
 With all its loftiness, seemed struck with eld.
 Even his voice was changed—a languid moan
 Taking the place of the clear, silver key;
 And brain and sense grew faint, as if the light,
 And very air, were steeped in sluggishness.
 He strove with it awhile, as manhood will,
 Ever too proud for weakness, till the rein
 Slackened within his grasp, and in its poise
 The arrow jereed like an aspen shock.
 Day after day, he lay, as if in sleep.
 His skin grew dry and bloodless, and white scales
 Circled with livid purple, covered him.
 And then his nails grew black, and fell away
 From the dull flesh about them, and the hues
 Deepened beneath the hard unmoistened scales,
 And from their edges grew the rank white hair,
 —And Helon was a leper!

Day was breaking
 When at the altar of the temple stood
 The holy priest of God. The incense lamp
 Burned with a struggling light, and a low chaunt
 Swelled through the hollow arches of the roof
 Like an articulate wail, and there, alone,
 Wasted to ghastly thinness, Helon knelt.
 The echoes of the melancholy strain
 Died in the distant aisles, and he rose up,
 Struggling with weakness, and bowed down his head
 Unto the sprinkled ashes, and put off
 His costly raiment for the leper's garb,
 And with the sackcloth round him, and his lip
 Hid in a loathsome covering, stood still
 Waiting to hear his doom:—

Depart! depart, O child
 Of Israel, from the temple of thy God!
 For He has smote thee with his chastening rod,
 And to the desert-wild,
 From all thou lov'st atway thy feet must flee,
 That from thy plague His people may be free.

Depart! and come not near
 The busy mart, the crowded city, more;
 Nor set thy foot a human threshold o'er;
 And stay thou not to hear
 Voices that call thee in the way; and fly
 From all who in the wilderness pass by.

Wet not thy burning lip
 In streams that to a human dwelling glide;
 Nor rest thee where the covert fountains hide;
 Nor kneel thee down to dip
 The water where the pilgrim bends to drink,
 By desert well or river's grassy brink.

And pass thou not between
 The weary traveller and the cooling breeze;
 And lie not down to sleep beneath the trees
 Where human tracks are seen;

Nor milk the goat that browseth on the p'vin,
Nor pluck the standing corn, or yellow grain.

And now depart! and when
Thine heart is heavy, and thine eyes are dim,
Lift up thy prayer beseechingly to Him

Who, from the tribes of men,
Selected thee to feel his chastening rod.
Depart! O leper! and forget not God!

And he went forth—alone! not one of all
The many whom he loved, nor she whose name
Was woven in the fibres of the heart
Breaking within him now, to come and speak
Comfort unto him. Yea—he went his way,
Sick, and heart-broken, and alone—to die!
For God had cursed the leper!

It was noon,
And Helon knelt beside a stagnant pool
In the lone wilderness, and bathed his brow,
Hot with the burning leprosy, and touched
The loathsome water to his fevered lips,
Praying that he might be so blest—to die!
Footsteps approached, and with no strength to flee,
He drew the covering closer on his lip,
Crying "Unclean! unclean!" and in the folds
Of the coarse sackcloth shrouding up his face,
He fell upon the earth till they should pass.
Nearer the stranger came, and bending o'er
The leper's prostrate form, pronounced his name.
"Helon!"—the voice was like the master-tone
Of a rich instrument—most strangely sweet;
And the dull pulses of disease awoke,
And for a moment beat beneath the hot
And leprous scales with a restoring thrill.
"Helon! arise!" and he forgot his curse,
And rose and stood before him.

Love and awe
Mingled in the regard of Helon's eye
As he beheld the stranger. He was not
In costly raiment clad, nor on his brow
The symbol of a princely lineage wore;
No followers at his back, nor in his hand
Buckler, or sword, or spear—yet in his mien
Command sat throned serene, and if he smiled,
A kindly condescension graced his lips,
The lion would have crouched to, in his lair.
His garb was simple, and his sandals worn;
His stature modelled with a perfect grace;
His countenance the impress of a God
Touched with the open innocence of a child;
His eye was blue and calm, as is the sky
In the serenest noon; his hair unshorn
Fell to his shoulders; and his curling beard
The fulness of perfected manhood bore.
He looked on Helon earnestly awhile,
As if his heart was moved, and, stooping down,
He took a little water in his hand
And laid it on his brow, and said, "Be clean!"
And lo! the scales fell from him, and his blood
Coursed with delicious coolness through his veins,
And his dry palms grew moist, and on his brow
The dewy softness of an infant's stole.
His leprosy was cleansed, and he fell down
Prostrate at Jesus' feet and worshipped him.

LORD BYRON,—

A BORROWER, OR A PLAGIARIST?

It is scarcely credible that Lord Byron had not read *CORINNE*, when he wrote his IV. Canto of *Childe Harold*; or that, in penning his magnificent stanzas to the Ocean, he did not have in view the following passage. If he has not copied Madame De Staël as closely as

Virgil does Homer, or Thomson, Virgil,—she certainly furnished the germ, which he has so nobly expanded. Our reading does not enable us to say, whether his Lordship has ever acknowledged his obligation to her, or not: nor whether the similarity of thoughts has been remarked by any other person. That it should not have been, however, is hardly possible. But no one, surely, can blame an appropriation, which has given to the English language one of its most sublime flights of poetry.

'Cette superbe mer, sur laquelle l'homme jamais ne peut imprimer sa trace. La terre est travaillée par lui, les montagnes sont coupées par ses routes, les rivières se resserrant en canaux, pour porter ses marchandises; mais si les valseaux sillonnent un moment les ondes, la vague vient effacer aussitôt cette légère marque de servitude, et la mer reparait telle qu'elle fut au premier jour de la création.'—*Corinne*, chap. 4.

—'that proud sea, on which man can never leave a trace of himself. The earth he belabors—his roads cleave mountains—rivers are narrowed into canals, to bear his merchandises;—but if his ships furrow the waves for a moment, a billow instantly obliterates that alight mark of servitude, and the Ocean appears again as it was on the first day of Creation.'

MISS HAYLEY.

"This is a sight for pity to peruse."

Cooper.

This young lady was by nature lovely—and had received all the advantages of an accomplished education. Her early life was passed for the most part at home, in her native village, under the roof of a widowed mother. At the age of seventeen, by the invitation of a cousin, she came to spend the winter in the city of New York. At the house of her cousin she frequently met a young man, in whose favor she was soon much prepossessed.

He was indeed at that time already engaged to her cousin—but of this Miss Hayley was entirely ignorant. The betrothed charmed with Miss H.'s beauty and wit, notwithstanding his engagement to her cousin, seemed to pay her very marked attentions: yet perhaps charity will not charge upon the betrothed a deliberate infidelity to his engagement on the one hand, or purpose of deceiving Miss H. on the other. Allowance must be made for the frailty of human nature. In a world where so many complex motives actuate, we ought not to be in haste to denounce what we can never fully comprehend. Perhaps the strong irresistible magnetism of female beauty, may sometimes weaken the ties of the firmest preconceived attachments, and shake from their centre the well founded purposes of life—for love, like the swollen tide of a spring freshet, sweeps everything before it, and in one short day wastes the labor of years.

The civility of the betrothed soon arose to fondness—a fondness, alas! too nearly allied to devotion! In this there is no doubt much to reprehend, and perhaps something to pity and forgive. However this may be, when Miss Hayley came to leave the city, he had, whether he was aware of it or not, or whether he intended it or not, completely won the affections of this young lady.

To confirm the attachment indissolubly, it was now only necessary for him to accompany her home. This he did—and after a few days, during which he was ever at her side, he returned to New York, leaving her perfectly enamored of him.

After the lapse of some weeks, he not revisiting her, as she fondly and certainly expected, she grew uneasy; yet why should she doubt his good faith whom she

loved, and by whom she credulously believed she was as truly loved in turn? Her fears, she was at times almost ashamed of, yet she could not altogether subdue.

Time glided on; Miss Hayley grew daily more and more pensive, and her lover still not coming, the roses on her cheek began to turn pale. Month after month rolled away, until it was now a year since she had seen or even heard from the object of her affections.

At length, she was again invited by her cousin in New York to visit her. She went, and found her kinswoman as affectionate as ever. It was not long before she made her the confidant of her love, and opened to her her whole heart. She recounted to her all the series of hopes, and fears, and doubts, that now had agitated her for more than a year. While she was speaking, the tone of her voice and the expression of her eye were tender, touching and subdued; and many were the tears that she shed. She had not yet ended her story, when her cousin too burst into tears—only able to exclaim, "He is engaged to me!"

The words rang in the ear of Miss Hayley like the notes of a deathbell. In a moment she snatched up her bonnet, and rushing from the house, ran through the streets frantic, until she found her way to the house of a relative who lived in an adjacent square.

There every means was used to soothe the anguish of a wounded spirit. She at length was prevailed upon to go back to the house of her cousin; but on her arrival there, she refused to speak to her, or to the betrothed.

It was not long before Miss Hayley went back to her home, as a wounded fawn returns to her lair, but leaves not the fatal arrow in its flight. "Hæret lateri lethalis arundo." Shortly after, to the inexpressible grief of her friends, this unfortunate young lady began to exhibit the symptoms of mental derangement.

These symptoms were not at first such as absolutely to demand her removal from home.

Indeed the friends of one so unhappily affected are slow to admit the necessity of committing what is so dear to them to the care of a public establishment. The means of cure, if means of cure there be, are sometimes deferred until, alas! the malady strikes its roots so deep as to be ineradicable.

At length, the retirement of home and assiduities of friends bringing no alleviation, Miss Hayley was invited by a former teacher, the head of a celebrated female school, to stay with her. Here she was persuaded to occupy herself in giving lessons in music and painting—in both of which she was a proficient.

In this situation she passed three years. Her demeanor was flighty and disturbed, but she mingled somewhat in company. More than one young man was here captivated by her charms, but whenever the string of her affections was touched, with an hysterical laugh, she would rush from the room—fly to her chamber—throw herself on the bed and weep for hours; yet as soon as the storm of grief was over, in a moment she would appear gay as a bird, and perhaps join the girls in a walk or a dance. Sometimes when alone, she would be overheard exclaiming, "I see his noble brow—that eye—that mouth—that dark hair," or repeating some expression of her lover, or reciting some favorite verses of poetry.

She prized more than all her wardrobe, a blue and white checked gingham dress—a present from the betrothed; she would wash and iron it herself—no one else was permitted to touch it; she called it the true blue, and often wore it. She was also fond of singing the "Bonnets of Blue," and declared that she could never bear to be addressed by any one beside him she loved.

Miss Hayley was of a romantic turn, fond of looking at the moon, and of composing verses.

On Saturday afternoon she would walk out to a favorite rock, near a murmuring brook, and with a pencil write verses, but she would never consent to show them to her companions. "I was told by one of these, her associates, from whom indeed I received the greater part of the information contained in this story, that

Miss Hayley would sometimes burst into tears in the midst of a music lesson, and that she sung one of her favorite airs in a style so touching as to draw tears from those around her.

"She never blamed him—never!
But received him when he came,
With a welcome kind as ever,
And she tried to look the same.

But vainly she dissembled;
For whene'er she tried to smile,
A tear unbidden trembled
In her dark eye the while.

She sighed when he caressed her,
For she knew that they must part—
She smiled not when he pressed her
To his young and panting heart.

But yet she never blamed him
For the anguish she had borne,
And though she seldom named him,
She thought on him alone."

At length Miss Hayley was removed to one of those institutions founded for the benefit of the alienated in mind. She soon became attached to her new abode, which she infinitely preferred to her own home. She had the prettiest room in the hospital, and in it a piano-forte.

Her naturally fine mind, though fatally unbinged, was as active as ever, and on some subjects as rational; like a wrecked ship at sea, at the mercy of every wind that blows.

Miss Hayley was an exquisite painter, and often occupied herself with her pencil. Whenever her nerves would allow, she would read. She took a fancy to some rabbits in the hospital garden, and might often be seen pulling grass to feed them.

The physician of the establishment showed her parental kindness. Indeed he was the soul of kindness and generosity. Never was man more exactly fitted for the office he held. Mild, yet firm—ardent, yet cautious—full of professional enthusiasm, he was in his element among the wrecks of mind which he lived to repair. Miss Hayley loved him as a father. Sometimes, it is true, in moments of excitement, she addressed him in bitter, passionate, vindictive language; but she always soon relented, and with tears sought his forgiveness. She was reserved to strangers—affable to her friends, but rather inconstant in her regard.

At length, the hallucination of this young lady underwent a change, and she took up a most extravagant attachment to an idiot boy from the Three Rivers, Canada. This poor youth had been a promising lad at school, but from venturing into the water when his body was too much heated, he had suffered a paralysis, and was now sunk in absolute idiocy, and would stand for hours with his face to the hospital wall, uttering only the unmeaning mutter of insensible fatuity. Some metaphysicians, they say, once essayed to prove that nothing exists really, but only in idea. What is a paradox in reference to the sane, is a truth in reference to the insane. To them nothing is real, everything is ideal.

Accordingly, in her disordered fancy, perhaps Miss Hayley confounded the Canadian with her former lover, and then invested him with a thousand imaginary charms. Before this, she had often begged her physician to adopt her as his daughter; but that, and even her continuance under his care, was cut off by the new and unfortunate turn that her malady had taken. She was removed home, where the arguments and entreaties of her friends only confirmed her hallucinations, and she became incensed against her nearest relatives.

She was at times so nervous that she could read only one verse in the Bible at a time. Her face was uncommonly fine and intellectual—her dark eye could beam with melting beauty, or sparkle like the glance of a meteor in the sky. One could not behold her without pity and admiration. Her attachment to the idiot boy resembled that of Shakspeare's Titania, enamored of an ass's head.

Alas! was ever so sweet a flower blasted by the storms of life!

"Woe is me
For what I have seen and what I now see."

The following lines allusive to this young lady, I have, since writing this sketch of her, found in a newspaper:

"I saw her in the bloom of youth
When joys were bright and hope was high,
And love and innocence and truth
Glowed in her dancing azure eye;
And every thought of hers was fair,
And pure as angels' visions are;
And sweet as innocence can be,
Was her light laugh of frolic glee.
And ne'er a fairer ringlet strayed
Around a neck more clear and bright,
Than hers o'er which enchanting played
Her auburn hair in silken light.
Her step was light, as fabled tread
Of fairies o'er the wild flowers' bed;
Her form so fragile, light and fair—
It seemed much less of earth than air.
But she is changed—for sorrow stole
The roses from her glowing cheek;
And grief, the mildew of the soul,
Flushed her clear brow with hectic streak;
And those soft charms of youth are gone,
That once I loved to gaze upon—
That seemed the brightest flowers of all,
That glow in beauty's coronal.
Now oftentimes her mood is wild,
And oft she raves and curses him,
Who first deceitful on her smiled,
Till fever throbs through every limb;
But when her wilder mood is fled
She calls for blessings on his head,
And seems forgetful that his vow
Was false—is lost and broken now.
And when a ray of reason breaks
Across her dark bewildered brain,
The wretched maiden only wakes
To more intense—to wilder pain—
To all the woes that mem'ry brings
Upon her particolored wings—
To that full sense of wretchedness,
Which man may feel, but not express.

Petersburg, Va.

C. C.

EMINENT PLAGIARISTS.

Bacon, Newton, and Boyle reduced the fanciful philosophy of France into experiment and demonstration. Helvetius and Diderot gleaned their pretended discoveries from Shaftesbury, Mandeville and Toland. Hackluyt, Churchill, &c., furnished Montesquieu with the moral facts in his *Esprit des Loix*. The *Cyclopaedia* of Chambers was the parent of the French work.*

A COUPLE OF LOVE-LETTERS.

"Come," said my friend, as we rose from a Virginia breakfast, the merits of which were better discussed by my dentals than they can be by my pen, "come, let us adjourn to the library. The ladies always like to have every body out of the way when they are clearing off the table, so that the contrast may be more striking, when one returns and finds every thing in order."

"Capital!" cried Miss Bella. "What a fine excuse to be rid of our company!"

The latter part of the speech we only conjectured, for ere it was completed we had closed the door behind us, and, in a moment more, were enjoying each a com-

fortable corner, beside a fine fire in the old library room.

It was merry Christmas, and beside us stood a long table covered with various presents which the owner of the mansion was accustomed, on such occasions, to distribute among his servants, who soon came dropping in to receive them. At length, there remained but one bundle, when a matronly, sedate negress opened the door, and dropping a low courtesy, wished the gentlemen a very merry Christmas. We returned her salutation, and my friend, Charles L——, handing her the packet, she gravely received it, and in the same dignified manner left the room. There was a something so striking about her, that she had scarcely shut the door, when I remarked to him on her intelligent and matronly appearance.

As I spoke, he suddenly dropped his chin on his breast, seemed lost in thought for a moment, when his features relaxed into a smile, and he vented his feelings by a low chuckle.

"Old aunt Dinah:"—responded he to my look of inquiry. "She has never forgotten a trick I once played her, when she was much younger than she is now, and myself just beginning to raise a pair of whiskers."

"I had returned from college but the day before, and was sitting just here, by this very table too, when one of the servants tapped lightly at the door, and asked permission to come in. It was Charles, my namesake. He always had been particularly attached to me. We were christened on the same day, and shortly after, his mother died, leaving him a month old. There happened to be no nurse on the plantation at the time, and so my mother took him into the house and raised him along with myself. The poor little fellow used to amuse us very much, by calling her "mammy," until he was taught differently, but his devotion to herself and the family has never subsided, and, to this day, her grave is to him the holiest spot of all the earth."

"Supposing he had come in to receive my orders in relation to the next day's hunt, I proceeded to inquire concerning the abundance of the game, and so forth; but this, from his unconnected answers, was very evidently not his business. I therefore said to him, 'Well, Charles, what do you want to see me about?'

"I dont want nothin," replied he.

"Who does, then?" said I.

"The poor fellow screwed his mouth into all possible contortions; grinned, and muttered some broken sentences, from which I gathered that aunt Dinah had received a letter from somebody or other, and wished me to read it for her.

"Very good," said I, "send her up."

"Charles disappeared, apparently glad to complete his commission, and presently aunt Dinah availed herself of my leave, by making her appearance."

"She had the letter in her hand, and gave me to infer that it was nothing particular. She would have burned it, only she felt a little curious to know what the fellow had to say. But stop; I will read it to you." So saying, L. opened a small writing desk, and took out a couple of letters, one of which looked as if it had lain for ages in a tobacco chest. This he unfolded, and began to read. But as he allowed me to copy the letter, I will give the reader an exact transcript of it, and the answer to it.

* See another instance, p. 156.

"My dear Mrs. Dinah,

I take this opportunity of writing unto you, hoping these few lines may find you well. dear mrs. my heart is fascinated with your charms. dear mrs. you must pardon my boldness for sending you these few lines. oh dear mrs. I want to come pay my addresses to you. my dear mrs. I wold have come myself, but my dear I cold not see you at no convenient time. oh dear mrs. I'll try the second time. oh dear mrs. I like you very much. I think if I cold only get you for my beloved my heart wold leap for joy to contemplate on it. dont be ofeaded at my later. my heart is drawn aside from all others for thee. my poor soul wishes for your love, to prevent it from doing harm.

my pen is poor, my eyes do fail,
my love to you shall never fail.

CÆSAR R."

L. went on with his narration.

" 'Well,' said I, 'Dinah, you must answer this letter.'

" 'Oh Lordy, Mass Charley, I aint got any thing to say that wold do him any good, and, any how, I should have to think awhile before I could give him my mind.'

" 'Very well, then, think about it until to-morrow night, and then come to me, and I will write an answer for you.'

"At the appointed time, Dinah tapped at my door, came in, and continued, for a minute or two, in a brown, or as my good father used to say, when he noticed any thing of the kind in the servants, a black study.

"I interrupted her, by saying, 'Well Dinah, what have you thought, by this time, to say to Cæsar?'

" 'Why I suppose I must begin by saying, How do you do Mr. R.?' "

"I took the pen and wrote word for word, as she dictated, and a very good letter she made of it.

"How do you do, Mr. R.? I now take the opportunity of writing a few lines to you, hardly knowing what to say. I have said so much that I hardly think it worth my while to say any more. I thought old coals had died away, but I find they are kindling agin. I shouldn't have put myself to so much trouble to write to you, only I thought to render you a little satisfaction, I woud. I haven't seen you for the last six months past, and yet we live so short a ways from each other as what we do. You mention in your letter, hopin that I am well. But I've not been well for the last four weeks past—chills and fever every other day. Your not having been to see me and me sick, gives me to believe there's not much faith in your love, though you say you love me as hard as eight horses can eat the bark off a black jack tree. But I think if we could see each other face to face, we could talk to each other better about these matters. I have turned you off seven times, but you told me you would never give it up till you die. I am sorry to see you so deep in love, and its hard to love and not be loved agin. But if I was in your place I would give it up as a bad job. I hardly know what to say. But you know you wasn't a widower two months before you come to see me, and I think where you forget one female so quick, you are liable to forget another. Therefore, I think it best my way, to keep my head out of the halter. You've told me you've laid and shed tears till twelve o'clock at

night thinking of my hardheartedness. I dont know whether I had better give you my word or not, but I suppose I had, and I think it would be taking worse for better to have you. And I say these words hoping they will drive home to your heart. I dont know what else to say, but I wold rather see you and have a chat with you than to read your writing. You is a very bashful man, I know; but you always call me a very bold woman, and so, if you'll come to my residence, I'll be ready for any discourse you may please to put before me.

DINAH L."

L. continued.

" 'That will do very well Dinah,' said I, 'but you see I have written it on this rough piece of paper. You must let me transcribe it for you on a whole sheet, Come back in an hour, and I will give it you.'

"This promise I honestly meant to fulfil, but hardly had she left the room, when a mischievous thought crossed me, and I determined to write Cæsar, as if she had repented of her 'hardheartedness' and concluded to accept him. I did so: wrote to him that she had only rejected him to test his attachment, and assigned on the next night a meeting. I then sealed the letter, directed it, and when she came in, persuaded her to give me Cæsar's letter, to pay me for my trouble. I have, as you see, preserved it, with hers, as a literary curiosity. Suspecting nothing, she took the one I had written, and sent it, as directed.

"The next day, during my hunt, I asked Charles if he was as sly as he used to be before I went to college; and then told him Cæsar is coming to-night to court Dinah. You must hide under the kitchen window, and tell me what they do. Only do your work well, and you shall have a new breastpin.

"The next morning I summoned Charles to the library."

Just at this moment the identical personage of whom we were speaking made his appearance, with an armful of wood. L. arose and remarked, "But here he is in the very nick of time. I have a little business that requires my presence, and while I am gone he can tell you the story himself. He can do it far better than I can."

Rightly conjecturing that L. had left the room to remove all restraint from Charles, I slipped a small piece of silver into his hand to increase his freedom, and proceeded to ask him if he had forgotten all about Cæsar and Dinah's courtship.

"D'n know, Massa; good while ago since that night."

"Well, you can tell me what they did, can't you?"

"Lord Amighty, Massa, do so many things as I can't think of, tickular as I liked to died a-laughing."

"What did Cæsar do when he first went in?"

"He run'd up to Dinah, and he ketched her round the waist, and squeezed her till I thought she woudn't have to wear cossetts for a year. And then he kissed her, as if he was gwine to kiss her face off."

"And what did Dinah do?" said I, laughing.

"She looked as she kind o' didn't know what to make on it at first, so she didn't do nothin till he let loose of her."

"What did she do then?"

"She jist drew'd herself up, and fetch'd him sich a

wipe longside of the head, and then the sparks come out of his eyes so, if they hadn't been on the hearth they'd a set the house a-fire."

"How did Cæsar like that?"

"Well, it sort o' raised his Africky, at first; but that didn't last long. He went right away to 'spostulatin with her, and sayin how could she be so cruel."

"Did Dinah seem disposed to relent?"

"Well, ra'ly Massa, he talk so fast, and she talk so fast, that I couldn't rightly make out what they said. She'd scold, and he'd beg; but it didn't make no odds, she went on scoldin. At last he gan to get rael mad, too, and said how it was a queer way for a woman to tell a man she'd marry him, and then make so much fuss cause he showed how glad he was.

"Who said she'd marry you, you ugly brute?" said aunt Dinah.

"You did," said he, "and I got the letter this mornin, and have got it yet."

"It's a lie," screamed aunt Dinah.

"And then they went to talkin low so as I couldn't hear them, only they seemed to be splainin about the letter: he said what was in it, and she said what she told to be put in it, and she knew Mass Charley wouldn't write anything she didn't tell him to. Jist as she said that, Cæsar jumped up with his teeth sot, and his nails stickin in his hands, and jist as he got out o' the door, he shook his fist towards the big house, and sort o' said 'tween his teeth,

"Mauss Charley! cuss him!"

Q. E. D.

THE SICK CHILD.

BY THE AUTHOR OF 'ATALANTIS.'

I had been many nights a watcher by
The couch of one I loved. Sickness had come,
And laid a heavy hand upon her form;
And, for the delicate tints of her fair cheek,
Most like a leaf in softness, had bestowed
An ashy shade like death. 'And she must die!'—
Said those who stood beside her; but my heart,
Chafed at the dire decree, though filled with fears;
And said unto itself, 'She must not die!'—
Yet while it spoke thus confident, mine eyes
Swam in their tears,—a coldness at my heart,
Clung heavy with ill-omens. Skill, in vain,
Seemed to administer, and kindness spoke
No longer in the soothing tones of hope,
Beguiling grief with comfort. Still we gave
The hourly medicine, though some that came
Reproach'd us for the toil, which carried pain,
And promised to the sufferer no relief.

The mother of the infant came not nigh,
But, in a corner of the room apart,
She sat, and leaned her head against the wall;
And said no word, and ask'd for no report,
And dreamed, and dreaded, what we dared not say!
But, ever and anon, her eyes would turn,
Without an impulse, on the unmeaning face
Of that young child; and with as dull a gaze

Out-stared the malady that preyed on life,
Too lovely for low earth, and yet too frail
For its endurance. Gazing thus, as if
Her soul had shrunk to marble, there was speech
Yet in her sorrows. Slowly in her eyes,
Gathered big tears, that froze upon the cheek,
Where no one hope had refuge. It was well
She had no farther action in her grief,
Else had the infant perish'd. She was wild,
Wild with the dread of that impending woe,
Already felt in fear. Madness, that brings
Blessed oblivion of o'erwhelming truth,
Had been to her a boon—had saved her all
That death of apprehension, which, of all,
Is the worst form of death. Yet, though shut out,
As by a veil, all knowledge, all design,
Life, action, hope;—all capability
To succor, where she ever prayed to save;
Yet the one dreadful agony, untouched,
Grew to a double in her soul, and took
Acuter form and feeling from the rest,
In their suspension. Nothing did she know,
Nothing she saw, nought felt, but that one grief!—
And while she nothing asked nor cared to know,
And her words wanted all intelligence
Of the calm reason, and deliberate rule,
Her anguish, far too strong for idle speech,
Or a more idle show, swelled in her heart,
And choked her utterance, and left her dumb!—
Speaking, when heard, in faint and broken sounds
Unsyllabled in language. Had the Death
Stood by, and bade her save the babe by speech,
She had not spoken! Vainly had she striven
To give the nourishing draught to the poor child,
She had been glad to die for.

There it lay!—

Affection's idol,—now disease's toy,
And many were the watching friends that came
To shorten the long night, and cheer it on.
The infant was beloved;—and I have seen,
When she was yet in bloom, and ere disease
Had blighted the sweet promise of her cheek,
Fond strangers press it as they pass'd her by—
And parents, gray with years, have linger'd oft
To note in her some well-known lineaments
Of a beloved one, cut away in youth,
That was a blessing, bright and beautiful,
Like her, and with a glory like the spring,
Mocking at blight of time; and then they gave
A tribute to her beauty in the tear
They shed for the beloved one which was lost.
How could they else than deem her bright and fair,
With eyes of such pure light, with such long hair
Shading the morning freshness of her cheek,
As the broad leaves the crystal brook that sings
When the sun glows in April—golden hair
In infantine luxuriance, streaming down
Her bare and snowy shoulders.

She had grown
Beneath mine eye, and it had been my task
To portion out her labors; and each day
When from my toil I came, 'twas she who still
First at the entrance met me, prattling out

Her baby lessons, as at conquests made
 Over new realms and subjects—and as now
 She lay before me, to our anxious eyes
 The victim of the pestilence, that like
 Some fierce and flaming despot, struck at all,
 The old and young alike, and struck not twice—
 With a stern mood, my heart its reckoning made,
 Summed up the vast of its expected loss,
 And, for the first time, shrunk in grief to know
 How deeply it had cherish'd her. And now
 That she lay sick, how did I look in vain
 For all her idle prattle,—which had grown—
 So slight the source of human happiness,—
 To a familiar union with my wants,
 Which left of, I was lonely;—and I pray'd
 That God might spare the little innocent,
 To bless us with its laughter;—and he did!

THE NEW YORK MIRROR.

It is a subject of self-reproach with us, that we do not oftener advert to and quote from our contemporary periodicals. Even if they had but mediocrity of merit, they furnish so large a part of the reading of the age, that an occasional notice of their contents is almost an indispensable item in the history of the times. But the *NORTH AMERICAN REVIEW*, the *NEW YORK REVIEW*, the *KNICKERBOCKER*, and (though last, far from the least in merit) the *NEW YORK MIRROR*, often teem with matter both solid and pleasant, from which, had not original articles a more sacred claim, we could fill all our columns agreeably and usefully. We meditate an improvement in this respect: that is, we have a thought of noticing, sometimes if not regularly, what is particularly worthy of notice, in other journals; and selecting from them what may seem likely to divert or profit our readers. Their horizon will thus be widened, and the scenes it displays, be richly diversified.

In no sheet of the day, does it appear to us that so pleasing a variety of reading matter is presented, as in the *N. Y. Mirror*. Over its selections, the very genius of Taste seems to preside: while its editors and contributors wield pens instinct with humor, life, and grace. The following paragraph, besides the raciness of its humorous vein, is so ingenious a touch upon a sad epidemic of the times, that we commend it, with unusual cordiality, especially to a certain class of our subscribers.

From the *New York Mirror*.

"Living upon air. A queer idea has somehow got abroad, that periodical proprietors, printers, pressmen, and all the multifarious viviparous warm-blooded animals connected with publishing matters, share the properties of the camelion. There can be no greater mistake than this, as our readers may inform themselves by attending the lectures of Professor Smith, or consulting any authentic work upon natural history. Whatever theories may exist upon the subject, it is a well-ascertained fact that none of these classes of people are exempt from the ordinary laws of humanity, but are compelled, in order to preserve their vitality, to repair

the waste of nature from time to time with substantial aliment. But this zoological absurdity is not more preposterous than another dogma which seems to obtain among some of our delinquent agents and subscribers. They seem to think that a periodical is one of the lower order of vegetables, which, when once planted, grows and flourishes of itself, and drops its blossoms and fruits at their door without any expense of care and culture. How such a stupid belief can obtain currency among people so enlightened as the readers of the *Mirror*" [or *Messenger*, either], "we are wholly at a loss to determine: but we earnestly hope that every subscriber to whom the suspicion attaches of such laughable ignorance, will at once exonerate himself and prove his undoubted intelligence, by forwarding the funds, which will enable us to go on cheerfully, administering to his entertainment and delight in these columns."

RELICS OF THE OLDEN TIME.

A gentleman in the county of Albemarle has an engraving, evidently almost as old as its subject, representing the Boston Massacre, of March 5, 1770; when five citizens of that town were killed in a street encounter, by the British troops, then stationed there to repress the rising spirit of Liberty. As a specimen of the Fine Arts, the picture is ludicrously rude: not equalling the wood-cuts in the *Penny Magazine*; and scarcely surpassing those which schoolboys of twenty years since may remember, as most equivocally illustrating Webster's and Dilworth's spelling-books, and Croxall's Fables. Yet it presents the terrible scene with a good deal of graphic power. The still presented muskets of the soldiery, with fixed bayonets, just beginning to appear from amidst the curling volumes of smoke that arose from the fatal discharge; the captain (Preston) leading forward and waving his sword as if encouraging his men to press on and push their outrage further; the throng of citizens, wavering and receding in dismay; the dying and wounded, stretched motionless on the ground, or supported and borne off by their friends; while above the whole, rise church steeples and blocks of old-fashioned three-story houses;—these objects, despite their homeliness of execution, appear with exciting vividness. Over the picture is printed, in characters too awkward to be expressed by any types of this day, the following caption:

'THE FRUITS OF ARBITRARY POWER,
 OR THE BLOODY MASSACRE, PERPETRATED
 IN KING STREET BOSTON, ON MARCH 5TH. 1770, IN
 WHICH MESSRS. SAM'L GRAY, SAM'L MAVERICK, JAMES
 CALDWELL, CRISPUS ATTUCKS, PATRICK CARR, WERE
 KILLED, SIX OTHERS WOUNDED, TWO OF THEM MOR-
 TALLY.'

Underneath, are verses 4—7 of the 94th Psalm:

'How long shall they utter and speak harsh things,
 and all the workers of iniquity boast themselves? They
 break in pieces thy people, oh Lord, and afflict thine
 heritage: they slay the widow and the stranger, and
 murder the fatherless: yet they say, The Lord shall not
 see, neither shall the God of Jacob regard it.'

The same gentleman has a still older relic: a number of a Boston Newspaper, dated June, 1768. In its folio form, it is just two inches longer and wider than a sheet of foolscap; and three inches *shorter*, and one inch and a half *narrower*, than a number of the *Liberia Herald*, now before me—to which, moreover, it is decidedly inferior in typographical neatness, and in varied richness of matter. One leaf bears the title of “*The Massachusetts Gazette*,” the other, that of “*The Boston Post-Boy and Advertiser*,” as if intending to combine two papers into one.

Its contents afford some interesting signs of those times. There is a letter from London, dated March, 1768, relating to the famed election of Mr. Wilkes, for Middlesex; detailing the outrages of a London mob who, in the name of ‘*Wilkes and Liberty*,’ kept the city and suburbs in uproar and dismay for several days. The editor heads the letter, ‘A true specimen of what is called *English Liberty*.’

Other columns are filled with the Circular Letter of the Massachusetts Legislature (February 11, 1768) to the Legislatures of the other States, animating them to concerted remonstrance (if not action) against Parliamentary taxation: taking the bold grounds, that the ancient *English right*, of paying no taxes but by voluntary grant, pertained to the colonies; that a representation of them in Parliament would be a mockery, more galling, and would lead to greater oppressions, than even the wrongful power already exercised by that body; and that, consequently, their local legislatures, alone, should impose taxes for revenue upon them. The New York and New Jersey Houses of Representatives respond with rather faint applause to the appeal. But the Virginia House of Burgesses in a letter signed by ‘PETER RANDOLPH, Speaker,’ give back much more than an echo to the boldest sentiments of Massachusetts; and refer to three several papers which they had already forwarded to England, and which now figure in History;—a Petition to the King, a Memorial to the Lords, and a Remonstrance to the Commons. This correspondence is drawn before the public (apparently for the first time, on the 27th of June) by a letter from Lord Hillsborough to the Rhode Island council, communicating the Massachusetts circular; denouncing it as ‘of a most dangerous and factious Tendency, calculated to enflame the Minds of his Majesty’s good Subjects in the colonies; to promote an unwarrantable combination, and to excite and encourage an open Opposition to and Denial of the Authority of Parliament, and to subvert the true Principles of the Constitution. It is his Majesty’s Pleasure,’ continues Lord Hillsborough, ‘that you should, immediately upon the Receipt hereof, exert your utmost Influence to defeat this flagitious Attempt to disturb the public Peace, by prevailing upon the Assembly of your Province to take no Notice of it, which will be treating it with the Contempt it deserves.’

Even these interesting papers, however,—thus shown to us, as it were, *almost* in the handwriting of their authors—will hardly be deemed such curious memorials of that day, as the following advertisements; which I commend especially to certain self-styled philanthropists of the good old Bay-State—degenerate children of a worthy mother. If to these I could add one or two of the many advertisements of Guinea tra-

dera, doubtless to be found in old files of Rhode Island Newspapers,—the lesson of charity, deducible from likeness of transgression, would be complete.

Here are the advertisements—from a *Boston newspaper*! of which ‘GREEN & RUSSELL’ were the printers.

I. TO BE SOLD,

A likely Negro MAN, about 22 Years of Age, he has been us’d to Husbandry, and waiting on a Gentlemen, can have a good recommendation, and is sold for no fault. Inquire of GREEN & RUSSELL.

II.

Worcester, June 14, 1768.

RAN away from his master Robert Barber of Worcester, this Morning, a Negro Man named Mark, of middling Stature, about 35 years of Age, very much Pock-broken, and can read and write; he carried away with him two blue Coats, one lined and bound with red, the other not lined, a pair of green plush Breeches, a pair of trowsers, and an old Beaver Hatt. Whoever shall take up said Runaway, and convey him to his said Master, shall receive SIX DOLLARS Reward, and all necessary Charges paid.

ROBERT BARBER.

Then, in an N. B., follows a warning to masters of vessels and others, against harboring the runaway.

But the following, most oddly jumbles heterogeneous articles together. How grave and unscrupulous the mingling of wine, handkerchiefs, felt hats, breeches patterns, cotton hose, negroes, portmanteaus, &c.!

III.

On Thursday next, 30th Inst.

at Three O’clock Afternoon,

Will be sold by PUBLIC VENDUE, at the Auction Room in Queen Street,

A Variety of GOODS, among which are, Irish Linnens, Calicoes, Lutestrings, black Sattins, black corded Silk, stripe Hollands, Keating Handkerchiefs, Scotch Threads, Dowlas, Duroys, Druggets, Breeches Patterns, Men’s and Women’s fine Cotton Hose, Felt Hats, Men’s and Women’s Saddles, Portmanteaus, Housings and Holsters, Cases with 15 Bottles, a Cask of very good Indigo; also a Negro Girl, 13 years old.

J. RUSSELL, Auctioneer.

AT PRIVATE SALE,

Two Pipes of Sterling Madeira, a Negro Man 40 years of age, a Boy of 14, and two Girls about 13 Years of Age, a second-hand Chaise and Harness, and sundry riding Habits, trimm’d with Gold and Silver Lace.

Men, boys, and girls, classed among ‘GOODS’!—and this, not in New Orleans—not in Charleston—not in Richmond: but in Boston!

‘But,’ some “philanthropist” may say, on seeing this evidence that his country was once as ours is,—‘we have put away that evil from us. We declared a general emancipation in 1780.’

And how many of that species of Goods did Massachusetts have, at that time? Why, not quite *five thousand*. Virginia has little, if any fewer than *five HUNDRED thousand*: just an hundred for one! How could she follow the example of her northern sister? Other considerations, make the contrast, and the impossibility, yet more striking: the difference of climate; and the immensely greater disproportion of the whites to the blacks (in Massachusetts sixty to one; in Virginia not two to one.)

The facts here presented are designed to rebuke only the intermeddlers—not the rational and forbearing part—of the northern people. I am among those who believe the latter sort to be a majority there; not only in numbers, but still more in virtue and intelligence.

J. A.

SONG.

FROM THE FRENCH.

If Fate had call'd me to a throne,
Had bless'd me with a poet's vein,
Made immortality my own,
Or doom'd me to the captive's chain—

King—I would share my state with thee,
Poet—for thee my lays would pour,
Slave—in thy chains would happy be,
And deathless—wear them evermore.

M. M. S.

INGERSOLL'S ADDRESS.*

We do not belong to the Phi Beta Kappa Society; nor do we know precisely its objects. But we believe them to be the cultivation of literature, and the diffusion of acquaintance and good feelings among literary men. At any rate, it has large claims upon public gratitude, if it causes many discourses like the present to be made. The best definition we can give, of the general scope of the Address, is, That it aims to point out the advantages of Science and Literature; especially in knitting together the parts of our vast country, and perpetuating her freedom, and happiness. There are some very fine passages, designed to make the Northern people more favorably known to their Southern brethren, which we shall extract. Mr. Ingersoll, being a Pennsylvanian, stands impartial between the two extremes of the Union.

"No covet's cruelty, no thirst of gold, are discernible in the adventure of the pious pilgrims who settled upon the rock of Plymouth. If fiction were tasked for an Utopian story, in which a fabled commonwealth should gild its dawn, with hues as pure as those the chaste fancy ever painted, it would turn for its brightest, best original, to the history of that colony. It could not draw from the imagination a picture half so vivid, or frame a model so full of virtuous simplicity and fearless devotion—one so well calculated to win the cordial esteem of men, or give character to a mortal race, as the unvarnished reality of a pious pilgrimage. Not a sordid motive influenced the departure of these ambitious travellers from their native home, or from their short-lived European sanctuary. Not an unholy desire lurked upon their painful and perilous voyage. Not an unruly passion disturbed their arrival. All, with them, was Christian charity and peace. They brought with them lowly thoughts and tranquil feelings, and they sought for thoughts and feelings such as those, congenial objects, and a congenial home. They kindly hoped that nature, in her interminable solitudes, would at least be peaceful; but they found that even there, the

common lot of man, his inheritance of trouble, still awaited them. They met disease, and savage enemies, and fraud, and want, and even as a refuge, death in every hideous shape; "non spes saluæ, sed exili solatium." Their little flock, though threatened, was not dismayed; though wounded, did not perish. It survived, and with it the institutions by which it was characterized, the establishment of equal rights, legislative provision for the education of every child, and a firm reliance upon the protection of Almighty God, and the cultivation of his religion as the basis of their civil polity.

A century and a half rolled on. The colonists, who had imbibed the fearless but unostentatious spirit of their ancestors, were still willing to cherish it, and the first threat of danger found them ready to defend the soil and the principles which they had inherited together. A libation was poured out in patriot blood at Lexington, not less pure than that first fervent prayer which ascended in gratitude to heaven, after a deliverance from a long and perilous voyage. It was repeated, in more copious streams, at Bunker Hill, and it sanctified anew the ground which had been consecrated to the God of peace, but which willing hearts and hands were found ready to crimson, when its occupants were threatened with oppression.

The purposes of warfare gained, the same devoted zeal manifested itself in works of peace, in efforts and enterprises for the advancement of all that was good and useful. A system of public, universal, equal, lofty education was matured, which ensures to posterity a body of enlightened citizens, such as could scarcely have existed in another country, or another age.

War again unrolled her purple, bleeding testament. Who then struck the first, the decisive, the prophetic blow, which was to stamp the character of the American navy, to give it pride, and power, and eminence, and to place the banner of spangled stars in the same historic galaxy, where, above the blaze of glancing lightnings, had shone, for ages, the glorious oriflamme of St. Denis, and the young eagle of Imperial Rome? It was a son of New England! Through the whole of this, as of the former conflict, fortitude in endurance, which has not even the relief of active danger to animate and arouse; courage in battle, which is often supposed to be the companion of reckless ambition rather than of patient and reflecting wisdom, were no where more conspicuous than among his brethren of the northeastern states. Are we asked for deeds of chivalry? Scarcely a battlefield was lost or won, without a struggle and a valor among the New England soldiery, that would have done honor to the victors of Marathon, and would have earned a shower of crosses, to reflect the brightest rays that fell from the star of Austerlitz. Is enterprise or activity—is zeal in pursuit, energy in application, ingenuity in invention, or success in the mastery of mighty undertakings, a mark of merit? These qualities, and the consequences of them, have no where been more brilliantly displayed, or more usefully applied, than in the regions which surround us, iron-bound as are their coasts, and comparatively sterile and unproductive as is their soil. If commerce be the prevailing spirit of the country, its unchecked and prosperous career is soon exhibited among the merchants and the seamen of the cities of the north. If another policy predominate, and productive energies are called into active existence at home, every stream becomes the motive power of machinery, and the interior teems with manufactures, the products of a thousand and a thousand hands. If a momentary stagnation has been produced in the current of productive industry, by causes that seem to pervade the residence of civilized man, it will be only too prompt to the exercise of new energies, in some untried sphere. Lands which are occasionally overwhelmed by the swelling waters of the Nile, find themselves fertilized and enriched when the river has regained its accustomed channel. While at home and abroad, two of the primary sources of national prosperity, which are, in a greater or less degree, common to every people, have been driven to extremes on their proper element, the adventurous spirit of New England sends out its own peculiar mariners to wield the harpoon, instead of guiding the ploughshare, amidst boundless fields and gigantic furrows, which are almost exclusively its own, indulging, as it were, in creative agriculture, and reaping abundant harvests by disarming the terrors of the ocean, as it had conquered the sterility of the land. Nothing can stay its onward progress; nothing can subdue a temper which finds or forces a vent for its exuberance wherever nature would render its exercise appropriate or useful, or art can furnish weapons for its ever-varying exploits.

*An Address delivered before the Phi Beta Kappa Society, (Alpha of Maine) in Bowdoin College, Brunswick, Sept. 7, 1837. By Joseph B. Ingersoll. pp. 40.

Such a people are worthy to be free! Were their fields as barren as the banks of Lybia, they would stand conspicuous, in whatever can conduce to their own advancement and prosperity, or the elevation and improvement of the human race."

After observing, that "the war of the revolution did not know more gallant soldiers than Greene, and Warren, and Wooster, and Stark, and Lincoln, and Putnam;" Mr. Ingersoll pays successive, and in the main just tributes, to Samuel Adams, Fisher Ames, and Chief Justice Parsons. We dissent only from the sentence which places Ames with the most elevated statesmen of his time. As an orator, he was unmatched, or matched only by Henry and Randolph: but we have read newspaper essays of his, breathing a party-venom and bigotry, calculated entirely to mar the character for high, enlightened statesmanship, which we had previously deduced from his speech on the British Treaty, and his Eulogy on Washington.

Mr. Ingersoll next bestows handsome and reasonably just praises on Judge Story and Mr. Webster. While speaking of the former, he brings in (rather violently, if any honor to Washington could ever be ill-timed) the following deeply interesting incident:

"The late Lord Chancellor Erskine, when in the enjoyment of a reputation more elevated than rank and power could confer, the fearless and successful advocate of the liberty and the constitution of England, addressed a voluntary letter to General Washington, of which a copy was found among the papers of Lord Erskine, after his decease.

"London, March 15, 1795.

"I have taken the liberty," said he, "to introduce your august and immortal name in a short sentence, which will be found in the book I send to you. I have a large acquaintance among the most valuable and exalted classes of men; but you are the only human being for whom I ever felt an awful reverence. I sincerely pray God to grant a long and serene evening to a life so gloriously devoted to the universal happiness of the world.

T. ERSKINE."

After the tribute to Mr. Webster, comes the following just and fine paragraph, with which we must close our extracts:

"Living or dead, these, and the like examples, are of inestimable value, to stimulate our love of country. That feeling which is the moving spirit of a republic, derives its true aliment from the contemplation of them. It is a feeling, without which, no country was ever served with zeal or fidelity, for which there is no substitute in the mere calculations of reason, in the instinct of which, there is a pledge for deeds of daring and devotedness, which sometimes can alone preserve and perpetuate the institutions of freedom. If any one suppose that the love of country, in its best estate, is subordinate to self-interest, or even absorbed in the social affections, let him seek for better instruction in the inspiration of some well known spot, which has been sanctified by the devotion of unflinching patriotism. None can be more familiar, yet none more convincing, than the straits of Thermopylae. There, pausing on the hallowed ground where Leonidas and his fellow-patriots went to meet their inevitable fate, he will find no record of an achievement induced by the purest love of country, which does not unfold a motive as disinterested as the deed was heroic. No proud monument is there erected to posthumous fame, by overweening admiration. Nothing is commemorated but a submission to the law; nothing is proclaimed but the performance of a duty. 'Passenger! go tell at Lacedaemon, that we lie here in obedience to her sacred laws.'"

* Ω ξειρε, αγγελων Λακεδαιμονιοις οτι τηρε
Κειμεθα, τοις κεινον ρημασι κειθαμενοι.—Herodot.
Go, stranger! and our native Sparta tell
That here, obedient to her laws, we fell.

STANZAS,

UPON GOING ABROAD AFTER ILLNESS.

Hail! Sun, and Birds, and Clouds, and Air
Of flowery-crested Spring!
Around this weak and weary form
What happiness ye fling!
Ye've given me back to life, and friends!
Ye've chased away my tears!
My path, fresh-strewed with smiles and hopes,
Like fairy ground appears!

Thou glorious, glorious Sun! thy rays
Are cheering to my heart!
They give me strength—they give me life,—
As o'er my frame they dart!
How long I've pined away from all
Thy health-inspiring beams!
And now the vigor they impart
Like new creation seems!

Ye merry, merry Birds! I hear
Your early songs of Spring!
To me they're like the seraph notes
That angels love to sing,
As round the throne of Heaven they stand
With their immortal lyres!
So cheering to my saddened heart
Are your harmonious choirs!

Oh ever-changing Clouds! how soft,
And bright, and clear, ye are!
No storm, no gloom is on your wings,
So beautiful and fair!
Your fleecy bosoms, like the down
Upon the swan's white crest,
Are gently swelling in the breeze
That fans me from the west!

Oh Zephyrs mild and soft! how light
Your trembling breath is sped!
Like gales of paradise ye seem
From Eden-bowers shed.
Ye're welcome, viewless messengers!
Sweet wanderers of air!
Ye're welcome! as upon your wings
To me new life ye bear!

o.

FRANKLIN.

A writer on Craniology, in *Blackwood's Magazine*, describing Franklin, says, the largeness of his features made his brain appear smaller than it was. His temperament, partaking a good deal of the phlegmatic, gave him large cheeks and a heavy chin. Never was there an individual, however, more happily compounded by nature. Serene in his temper,—virtuous and rational in his inclinations,—sage in his schemes,—his personal feelings and understanding seem to have walked hand in hand. He was, like Socrates, not only wise in consequence of observation and thinking, but also from

the happy natural ingredients of his character—wise even in his wishes. On examining the portraits, we see a forehead apparently well advanced, although not uncommonly high. It narrows a little from the lower part. His metaphysical and comparative organs were probably less expanded than that of observation. We see nothing here of that magnificent pile of brain, in the upper part of the forehead, which enabled Bacon to become the legislator of philosophers. Franklin had a good ear for music, as also a turn for the mechanical arts, which two organs help to spread the forehead laterally in the lower part. Farther up, the sides of his forehead incline to fall inwards; the reason of which is obvious, for he had little imagination. Franklin was pious from reflection, but had not by nature much ardor of devotional sentiment. He lived at a time when religious opinions were so much canvassed as to exercise rather the metaphysical faculties than the moral ones.

THE STORY OF AGNES.

(A sequel to "The Spy."—Vid. Lit. Mess. Vol. III, No. 8, p. 400.)

BY J. M. C., ESQ.

So mourned the Dame of Ephesus her love,
And thus the soldier armed with resolution,
Told his soft tale and was a thriving wooer.

Shakespeare.

Months rolled on. The betrothed of Dormer, who had been borne from the scene of his melancholy death to the mansion of her father in a state of insensibility, gradually recovered from the shock, and resumed the tranquillity of her feelings. Under the magic and ameliorating influences of time, "the pale and sickly cast of thought," was banished from her countenance; and yielding to the tender and urgent solicitation of her friends, she once more mingled in the dazzling *soirées* of fashionable society. Her unrivalled beauty and accomplishments speedily attracted around her a crowd of suitors; among whom was a British officer of high reputation and distinguished gallantry. At first she looked coldly upon all advances; and, throwing her heart back on its early affection, mentally vowed that she would be faithful, and true allegiance bear to the memory of her betrothed. But, alas! for the constancy of the sex! What dead lover, ever yet maintained the citadel of their affections, against the persevering assaults of a living one—except in the legends of romance? As the story of her bereavement faded from the speculation of society—and was lost in the heady whirl of that excited period, she began to realize the prolific germ of a new sensation—which soon budded forth into maturity, beneath the ardent attentions of the Briton. The impressions of her early years became daily less distinct. Her recollection of the devoted and chivalric Dormer, melted down to the accord of a soothing sorrow, which only facilitated her unfaithfulness.

It is the fashion of the age, to draw a distinction between love in the female bosom and in that of man. And, whilst in the one, it is said to constitute a part of

existence, and to be ever-enduring under all circumstances, in the other it is set down as a mere by-play—only an interlude in the drama of life. An accurate observation of the human character, will hardly justify this discrimination. In man or woman, the passion is the same, and it is governed in each by the same laws. In man and woman, it is alike predominant, until mastered by some stronger feeling. Nor is it more likely that any other passion should absorb it in the one, than in the other. The world of fashion, contains as fascinating objects for female ambition—as does war or politics, for man. Love, in a word, I mean the love of the sexes, is, in the bosom of either, like everything else human, liable to *limitation and change*. Time, and absence, and separation from the object of our affection, without hope of another meeting, and the homage of other and more attractive worshippers, will have their influence in modifying, altering, and diverting the currents of the heart. Why marvel then, that Agnes Pontois, should become inconstant to the dead?

Another year passed by. In the same apartment in which we first found her, but at a later hour of the evening, with the polished astral shedding its mellow light upon the jewelled cincture that adorned her brow, Agnes was again seated on the ottoman. But she was now, not alone. Beside her sat a gentleman of commanding appearance; and earnest was the tone of his voice, and impassioned was the expression of his features, as he poured into her ear the words of love.

"It never can be," said Agnes, with downcast eyes and hurried voice, as her companion made a pause; "I never can quit my native land for a foreign home."

"We will then dwell in America," replied her lover. Agnes raised her eyes in gratified astonishment. "And what if our independence is acknowledged, and America becomes a distinct nation?"

"I will then throw up my commission in the army, and renounce my allegiance to my native England," replied the Briton.

"And can you do this, with all your bright and flattering prospects before you?"

"I can do anything—make any honorable sacrifices for your gratification, Agnes. After the war, I shall be free to choose my course of life. I have thought deeply on this subject, and am prepared for the step. My favorite author, Plutarch, has contributed much to the formation of my present determination."

"How," said Agnes, eagerly; "what does he say on the subject?"

"He who studied the human character in all situations," replied her lover—"he who has recorded the lives of the sages and heroes of ancient times, as an incentive to glorious ambition in all after ages,—who looked into the heart of the victor, on the battle field, and in his hours of triumph,—who traced the exultation of the orator, ruling the fierce democracy, 'from Macedon to Artaxerxes' throne,' has left as the recorded wisdom of all his observation, the palpable conclusion, that the purest and most permanent happiness that mortals can enjoy, is to be found in the devoted love, of one beloved object. I have myself had some experience of the joys of worldly honors—and have found them, all vanity. I am willing for the future to profit by the lesson of Plutarch. Will you now be mine?"

The voice of the soldier was low, deep-toned and

musical; and as he concluded, he seized the yielding hand of the maiden and pressed it to his lips.

* * * * *

Revelry and rejoicing were in the halls of the father of Agnes. The mirrored lamps shed their dazzling and multiplied reflections throughout the mansion—and music breathed its potent spell upon the joyous company. The gay and the fashionable of the city were there, and many a dark eye was rolling beneath the ardent gaze of conscious admiration. But hushed were the sounds of music—and still and silent the expectant assemblage, when the door of the saloon was opened, and a train of attendants, of both sexes, passed in, dividing as they entered, and arranging themselves on each side of a venerable minister that occupied a position at the farther extremity, to make room in their centre for two that did not separate—the one a gentleman of distinguished appearance—the other a fair and gentle female—the unrivalled Agnes. Her dress was rich but plain; she wore no brilliants, save those which sparkled in her eyes—no gems or costly ornaments, but the spirit's lustre. Clinging to the arm of her supporter, they stood before the priest. The Briton had wooed and won her: the words of contract were spoken and they were wedded.

Time sped on with fairy foot. The war was over. American independence had been recognized; and the United States had assumed among the nations of the earth, the lofty eminence of a free representative republic. The vestiges of the Revolution, sanguinary and devastating as it had been, were obliterated—and the fair forms of art and science, were springing up in their freshness, and scattering their beauties throughout the land. The axe of the frontier settler had begun to level the wilderness, and let in the light of the sun upon spots of earth that had been shaded from the beginning of creation, and stately edifices of polished architecture were everywhere starting up in the more settled portions of the country. It is to one of those, situated upon the banks of the Hudson, near the junction of the Mohawk with that romantic river, that our attention is now turned. The building crowned the brow of a hill, that overlooked the waters for many a mile in each direction. A clump of ancient oaks adorned the front yard, and shaded with their broad boughs the velvet sod beneath. On this spot, about ten years after the bridal festival we have described, on a balmy summer evening, was collected together an interesting group. An old negro woman, gray and bent down with exceeding age, was sitting on a low stool at the foot of one of the trees, whilst four or five children, girls and boys of different ages, buoyant in health and blithesome in spirit, were clustered around her in various amusements. A little apart from there stood a gentleman and lady, contemplating the smiling landscape that was spread far out before them. The sun was just sinking behind the western hills with its train of purple light. Tinkling bells were heard in the distance, and various droves of cattle were seen browsing in the meadows around. It was the time of the day which Holy Writ tells us the Creator himself chose "to walk out in the afternoon air" of Eden, to see that the work of his hands was all good. The hour is still full of inspiration and beauty, and in no period of the twenty-four, does the heart more readily yield to tender feelings, or soft and pleas-

ing reminiscences. The gazers from the hill entered into its spirit and enjoyed it.

"That is a bright and beautiful prospect, Agnes," observed the gentleman—"What is there, in the artificial splendors of a city, to be compared to the grandeur of that scene?"

"Nothing, nothing," replied Agnes; "Oh, I do love the country."

"And do you never feel lonesome here—do you not sometimes sigh in secret for the pleasures of society?"

"Never—with you and our children here, what more society do I want? Since our marriage, home is the world to me."

"I have somewhere read," continued the gratified husband, "of a sect called the St. Simonians, who maintained the doctrine that every human being has a fitting mate created, and that unless the persons so intended for each other are united together, there can be no harmonious or happy marriages. Their text runs thus: '*Il n'y a sur la terre pour chaque homme qu'une seule femme, et pour chaque femme qu'un seul homme, qui soient destinés à former dans le mariage, l'union harmonique du couple.*'"

"If that theory be true," said Agnes; "in the lottery of human happiness, how large, how very large is the number of the blanks to the prizes; and oh, how grateful ought I to be."

"It was, I presume, upon this hypothesis," resumed the husband, "that the shepherd Sylvander decided, for Cleon and Leonice, the important question, '*Si amour peut mourir par la mort de la chose aimée.*'"

"And how did he decide it?" said Agnes, with a slight appearance of agitation, and in a lower tone of voice.

"Why his judgment was, '*Qu'une amour périssable n'est pas vrai amour; car il doit suivre le sujet qui lui a donné naissance.*'"

"'*N'est pas vrai amour,*'" repeated Agnes to herself.

"What do you think of his decision, Agnes?" said her husband.

"That it is correct," replied Agnes, mournfully.

"And yet do you not remember," he pursued with a mischievous archness of expression, "how hard I had to plead before you would consent to be mine, and how often you told me you *never* would marry? What was the reason for that declaration? or did you only make it, to render me more assiduous in my attentions?"

Agnes saw the expression of intelligent meaning in his countenance, and blushed. The husband drew her to his bosom, and imprinting a kiss upon her still smooth fair brow, continued—"Yes, yes! you only wanted to try me—and many were the sleepless nights it cost me too. I am sure you meant no more. Methinks, dearest, that apart from all other considerations, it were happier to be the centre of a circle like that," pointing to the children, "than linger through life, single and isolated, the mere tolerated appendage of another's household. Is it not?"

Agnes replied not; but turning from her husband, cast a brief glance towards her light-hearted and beautiful offspring, who were gambolling on the green around her, then looking up to the heavens, offered from her heart of hearts, a silent and fervent thanksgiving to the Deity for the blessings of her allotment. "*Felices, ter et amplius, quos irrupta tenet copula amoris.*"

TO AN INFANT.

Dear angel babe ! would I could once behold thee,
 Ere thy sweet infancy has passed away !
 Thou art like thy lovely mother, they have told me ;
 Thou wouldst to me recall her childhood's day.
 Thou bearest her name, and thou wouldst seem her spirit
 Embodied once again ; and if 'tis true
 Thy mother's lineaments thou dost inherit,
 Than thee, no brighter blossom ever blew.

I see her oft when mem'ry's steps are stealing
 Back to the past, in all her earliest bloom ;
 Then o'er my bosom comes a tide of feeling :
 She sleeps the silent tenant of a tomb !
 O'er her lone grave the southern winds are sighing ;
 At that sad, hallowed spot I may not weep ;
 But love, a cherished spark, pure and undying,
 Must in my heart her memory ever keep.

But thou wilt live, I trust ; in beauty beaming
 And innocence, a parent's joy to be ;
 And may the future with rich blessings teeming,
 Long days of gladness bring to him and thee !
 Dear child of love and sorrow ! fancy lingers
 Oft on thy image, pictured fair and bright ;
 In my day-dreams her soft and fairy fingers
 Paint thy cheek's hue of bloom—thine eyes of light.

And though perhaps I may not see thee glowing
 In infant charms :—Ah ! not when on thy face
 Beams woman's smile, (my stream of life is flowing
 Near the dim abodes of death,) though none may trace
 Even my name before thee ; though no feeling
 For me of fondness dwell within thy breast ;
 A prayer shall rise, my love for thee revealing,
 The prayer that thou mayst be forever blessed !
 January, 1836.

E. A. S.

CONSTANCE WOODBURN:

A TALE OF EVERY-DAY LIFE.

BY MISS CHARLOTTE M. S. BARNES.

CHAPTER I.

—Her life hath flowed
 From its mysterious urn, a sacred stream,
 In whose calm depth the beautiful and pure
 Alone are mirrored ; which, though shapes of ill
 May hover round its surface, glides in light,
 And takes no shadow from them.

Lon.

Constance Woodburn was the daughter of a merchant of respectability and wealth, residing, about fifty years ago, in New York. She was the eldest of five children, three of whom she had followed to an early grave, and the hour that gave birth to the youngest, saw its mother's death. Constance was ten years of age when her mother died : too young, it is true, to profit by the instructions of a parent in worldly accomplishments, but not too young to retain a clear recollection and scrupulous observance of that parent's pious precepts. As her eldest hope, Mrs. Woodburn had endeavored to instil into the mind of Constance that she was in a measure the guardian of her brothers and sisters. For this pur-

pose, she educated her from infancy in the strictest principles of rectitude. She saw that Constance possessed the gift of extreme loveliness, which may become so fatal to its possessor. She sought not to teach her child that she was *not* beautiful, which her own heart and the flattery of the world would soon have contradicted,—but she taught her that beauty in itself was valueless—that she possessed it in common with the gaudy tulip or the ephemeral butterfly ; she taught her that when nature had granted a faultless face, the advantage was too often counterbalanced by ignorance or imbecility of intellect. She bade her consider how slight an accident, how short a sickness might deprive her of all personal attractions, and that *then*, all those adulators who had thronged around her, would avoid and desert her. She solemnly enjoined her to cultivate her taste and understanding, to improve her intellectual endowments, to refine and polish all the native graces of her mind. Above all, she taught her that her only hope, her only stay was in religion ; and that, without that support, were she endowed with an angel's beauty or a prophet's soul, she would be nothing. Constance profited by her mother's lessons while that mother lived ; and her death gave an impressive holiness to all those precepts which it had been the study of her life to practise and inculcate. Time passed on. Constance was the guardian friend of her little Rose. The child needed all her watchful care, for, from her birth she had held existence on so frail a tenure, that Constance feared this tender tie would soon be severed. Too old to be a companion, she became, as it were, the parent of her sister—she held before her own eyes the image of her mother—and on that model she strove to form her conduct.

At sixteen years of age, Constance was left an orphan, with the little Rose dependent on her for protection. Mr. Woodburn had died *rich*, in the usual acceptance of that most indefinite word. His wife's brother took the orphans to his own elegant and luxurious home in Virginia. Being childless, he sought to make Constance stand towards him in the relation of a daughter. Her education continued under the superintendence of the most able instructors that could be procured, and amply did she repay their care. Domesticated like herself beneath her uncle's roof, was Edward Delancy, a youth ten years her senior, the only son of a late dear and valued friend. In his person, he was a model of all that is noble and manly. When at college he had far outstripped all competitors, and even in the domestic circle, where extraordinary genius is often least appreciated, it was fondly hoped that he would one day shine in the annals of his country's fame.

When Constance arrived at her uncle's mansion, her regal beauty, and the vivacity of her intellect, (though still in her first girlhood,) charm-

ed Edward. A feeling of compassion for the lonely orphan whose fate so much resembled his own, strengthened this attachment. Being some years her senior, she looked up to him as a protector, and adviser.

At length, after two years had elapsed, Edward took his departure for Europe, intending to make not merely the now fashionable tour of the continent, but to explore in the most distant lands all the relics of ancient times. He departed; his letters, long and frequent, related his adventures to those he left behind. The glowing descriptions which he gave served but to bring him almost visibly before the eyes of Constance, and in each letter a portion was devoted especially to his little pupil, his dear sister,—enumerating the valuable curiosities he had in store for her, recommending various works for her perusal, and assuring her how dearly she was remembered by her former preceptor.

The long and protracted mourning having expired, as Constance grew older she entered into the gaieties of society. Wherever she went, she attracted universal admiration. The native dignity, the true simplicity of her character, which repelled all fulsome adulation, produced an effect as novel as it was striking. But little versed in the artificial accomplishments of fashionable coquetry, she was followed and admired at a distance. The thousand butterflies of society who fluttered round her, thought it were all one

"That they should love some bright particular star,
And think to wed it, she was so above them!"

CHAPTER II.

My child,
My blithe and innocent girl—more fair in soul,
More delicate in fancy than in mould—
Loves thee with other than a sister's love.
I should have cared for this: I vainly deemed
A fellowship in childhood's thousand joys
And household memories, had nurtured friendship
Which might hold blameless empire in the soul;
But in that guise the traitor hath stolen in,
And the fair citadel is thine!

Ion.

Some time after Edward's departure, the sudden appearance of a work written by him, astonished the literary world. Unknown even to his nearest friends, he had been long and laboriously engaged in completing it. The new and original character of the subject—the masterly and classical powers employed in its delineation—the exquisite flashes of true poetry which gleamed in every page—the deep reflection and solid philosophy which appeared in a garb at once concise and captivating,—alike excited admiration and surprise. With what rapture did Constance dwell on the accounts of Edward's success, and how fully did she participate in his triumph! But what joy

could equal hers as she perused the work itself, which seemed to promise Edward a never-dying fame! Nothing could increase her delight, but the news of his return. How anxiously she anticipated the moment when her own lips could congratulate him! Her feelings towards him precluded the indulgence of any warmer sentiment to others. Suitors were not wanting for the hand of the lovely heiress. But her calm, friendly indifference showed them that they had no hope. Her most assiduous and devoted admirer, however, would not be thus repulsed. This was Alfred Walton, a young Virginian of high family and immense wealth, and in every way calculated to make her happy. His affection, based upon esteem, was ardent and sincere. He persevered in his suit, and at length offered his hand and heart. He received Constance's modest, but firm rejection, and finding success hopeless, he bade her adieu, and left his native country, to find in foreign lands oblivion and consolation.

Soon after, Edward returned. With heartfelt joy did Constance welcome him; she paused not to analyse her feelings; she felt that she was happy. A halo of brightness seemed shed around each domestic duty, each mental occupation. As months passed on, Constance wondered why they flew upon such light and rapid wings. She reflected; she looked within herself: she discovered that the spell which thus enthralled her, was love! She sought not to combat the feeling, for she knew its object was worthy. Her own heart whispered,—“that feeling is returned.” She saw not the wo that was in store for her; she looked with joy upon her future prospects, and felt that they were bright and cloudless.

CHAPTER III.

Oh! but ill
When with rich hopes o'erfraught, the young high heart
Bears its first blow; it knows not yet the part
Which life will teach — to suffer and be still!
And with submissive love to count the flowers
Which yet are spared, and through the future hours
To send no busy dream!
the hope is crushed
That lit my life; the voice within me hushed
That spoke sweet oracles; and I return
To lay my youth as in a burial-urn,
Where sunshine may not find it. All is lost!

Mrs. Hemans.

Mr. Glenford, (Constance's uncle,) had invited many guests to meet Delancy at his house to dinner. Women of pure and polished minds, men of strong sense and grasping intellect were there to meet him; and Constance gloried in the thought that in all that array, *he* shone pre-eminent. The sun of her existence rose on that day without a cloud. The guests arrived: the dinner, an interchange of social and intelligent intercourse, ended,

and the ladies retired to the drawing-room. To gratify the guests of her relative, Constance exerted herself to the utmost; her vivacity and elegance charmed all around her. They expressed a wish to inspect some glorious triumphs of the artist's skill, which Edward had brought from Europe. Constance had them intrusted to her care. Playfully protesting that no hand save her own should be permitted to touch the treasures, she flew down stairs to the apartment adjoining that in which they had dined. She opened the library, and the search occupied her some moments. Scarcely had she commenced, when she heard the rich tones of Edward's voice apparently raised in argument. As the sound struck her ear, she paused; her hand yet supporting the port-folio which she had been seeking. Suddenly she bent forward in an attitude of attention, remaining breathless for an instant. As he continued, a faint cry escaped her, and the volume fell from her hand. Its valuable contents were scattered on the floor before her—she heeded them not: she would have given worlds for the power to move; but spell-bound she stood listening to his words, each syllable being distinctly heard through the thin partition that divided the apartment. At length his voice ceased, and the conversation changed. By a violent effort, Constance aroused herself; but how altered was the expression of her face! The object of her love, of her adoration had avowed himself,—nay, triumphantly avowed himself—an Atheist! That being who had hitherto so cautiously concealed from her knowledge all idea of his entertaining such thoughts, had now expressed himself in terms, alas! too plain to be misunderstood. She had heard his arguments in favor of his disbelief, and his assertion that those subjects which she revered, were mere fables to keep grovelling minds in subjection, and that the philosopher, the man of science or of intellect was above such childish prejudices. One or two guests, it is true, at first supported him, but even they soon shrunk abashed from his bold asseverations. "Alas! Poor Constance." Footsteps approaching awoke her from her stupor. Suddenly starting, she gained sufficient presence of mind to attempt to collect the scattered drawings, when her sister entered the room, wondering at her protracted absence. The wild and incoherent replies of Constance alarmed Rose. She gently attempted to soothe her sister, and after completing the search which had so fearfully begun, she conducted her to the garden. The cool, mild air, the calm repose of all nature, the stillness of evening, gradually restored her to herself.—She returned to the drawing-room, where she found all the guests assembled. At the sight of Edward she trembled, but she remembered that all eyes were upon her, and pride came to her aid. Never had she looked so wildly beautiful. Conversation, laughter, music,

succeeded each other rapidly, and Constance was the life, the light of all. So inspired, so animated was her manner, she might have served as an illustration of the Pythones revealing the oracles of her god; but the resemblance went still further: the struggle of giving utterance to those oracles, often cost the priestess her life. That evening, which to her seemed eternal, at last ended. The guests departed. Edward was the last to linger; and as he pressed her hand, murmuring "good night," the tremulousness, the coldness of that hand startled him. He gazed in her face. Its expression, wild and varying, was still so gay and beautiful, that he treated the circumstance lightly. Months after, he recalled it with a shudder.

No eye saw Constance that night in her chamber.—No eye witnessed her agony. She had all her life been in one happy dream, from which, even at the acme of enjoyment, she had been suddenly, fearfully awakened to the consciousness of misery. Edward called on the ensuing day; Rose informed him that Constance was too much *fatigued* from the previous evening, to receive him. She had made a superhuman effort, while subject to the scrutiny of a large assembly, but she knew herself unequal to the task of meeting him so soon at home. He withdrew, though manifestly grieved; informing the family that he had received news from Europe, which required his absence, and would perhaps detain him for some months.

CHAPTER IV.

————— I will do
What heaven approves—my duty!

Knowles

Mon cœur, peut-il porter, seul et privé d'appui,
Le fardeau des devoirs qu'on m'impose aujourd'hui?
A ta loi, Dieu puissant, oui, mon âme est rendue,
Mais fais que mon amant s'éloigne de ma vue.
Cher amant! Ce matin l'aurois-je pu prévoir
Que je dusse aujourd'hui redouter de te voir?

* * * * *
Dieu de tous mes parens, de mon malheureux père,
Que ta voix me conduise, et que ton œil m'éclaire!

Zaire.

On the same evening, Edward called to bid them all farewell. His request to see Constance being again denied, he left a letter which he entrusted Rose to deliver. She did so. Constance gave one hasty glance at its contents, and then laid it aside until all the house had retired to rest. When she was quite alone, she drew forth the letter, and read its contents as follows:

"Miss Woodburn will pardon the hasty, inconsiderate anxiety of one who looks to her to decide his future fate. He trusts that she will not censure his abruptness, but ——— Oh, Constance, I cannot address you in a formal phrase. My heart is now so overflowing with mingled hope and fear,

that I can scarcely command sufficient calmness to write these words. I have to-day received a letter which peremptorily summons me to Europe. I must leave home to-morrow. These circumstances alone have made me presume to address you thus abruptly.

"Constance, from childhood we have been friends. I have watched your beauty as it expanded into womanhood—have watched the more angelic unfoldings of your mind. In all your little difficulties you looked upon me as your friend, your counsellor. Even then I hung with rapture upon each modulation of your voice—even then I wished that your fate might be linked with mine. I felt myself unworthy of you: the idea of possessing your love inspired me. For *your* sake I entered into the world, I strove for mastery in the intellectual arena; I succeeded. I returned. I found you all, nay, more than my fond heart could have wished. You seemed, (dare I assert it?) to take pleasure in my society. Yet would I not thus have dared, had not my hasty departure compelled me. No! months of silent devotion of each look, word, and thought, should have insensibly expressed my feelings; but I have now no alternative.

"Constance, dearest, adored Constance, I love you! You know the ardor of my nature. You know how deep, how fervent, how idolatrous a passion is comprehended in these words! Accept my hand, and the devotion of my life shall be yours, to study every look, to anticipate every wish! Say but those blessed words—that I may hope, and my dreary pilgrimage will seem a paradise—the days will glide in golden succession till my return. I love, I adore you! Say then that I may hope! To-morrow will behold me at your feet to hear my sentence from your lips—my everlasting bliss, or my irremediable misery! My pen is cold! it cannot express what I feel. My very thoughts when written bear another aspect. Imagine then, dearest Constance, all that love or passion can form in its wildest dreams,—even of such a nature are my prayers to you.

EDWARD."

Here then was the crisis of her fate. Principle, virtue, religion, prompted a sudden and decisive refusal, but all their efforts were combatted by "the broadest, deepest, strongest passion, that ever woman's heart was borne away by." How anxiously did she question her own heart, and how bitter were its answers! She had raised in her own soul an object of love; she had invested it with ideal charms and perfections. That object, that form was ever the engrossing feature, the guiding principle of all her plans for the future: there was no thought of happiness in which the thought of *him* did not mingle. There was no obstacle to their union; their friends approved; fortune smiled on them; and should she be the only cause of her own grief and future misery?

Her heart was a well of ever-springing aspirations after affection. An orphan from her childhood, with but few objects on whom to bestow her love, on those who dwelt around her she lavished all the treasures of her heart. What then would she feel for him whom every duty as well as inclination, would call upon her to love with all the intensity, the devotion of which her nature was capable! But one fault, but one error could be imputed to him. Might not the love which he bore his wife incite in him a desire to listen and believe? Firm in her own path, strong in the consciousness of undeviating rectitude, might not her example persuade and at length convince? Would not her refusal plunge him still deeper into error? Might she not be called upon to answer for the destruction of him whom she might have preserved?

But in vain were all these suggestions. She knew too well he did not only doubt; he disbelieved in the very existence of those objects of love and reverence which were to her a day-spring of bliss. It was not from the assertions of others that she judged; his own lips had pronounced his opinions: and could a wife hope to effect that which the courted mistress had been unable to complete? Instead of converting him to her own feelings, would she not rather be influenced by example, far more powerful than precept, and at last become herself less firm and less devout? Or if she still passed the ordeal unmoved, would not her continual difference of opinion, her repeated observance of those duties which he despised, be a constant source of bickerings? And must she not either be silent on all those subjects on which she loved to commune, or else hear them ridiculed, or at least listened to in sullen silence by the being whom she had promised to love, honor and obey?

All these, and many more arguments, alike of passion and of virtue, did Constance bring forward in terrible array before her mind. Hard indeed was the struggle; it seemed to rend asunder her heartstrings. Again she hurriedly reflected upon his merits, his worth,—and again that one fatal thought glared visibly before her. Again she caught up his letter;—those words breathing tenderness again subdued her. She pressed it to her lips, to her heart; she exclaimed, "No, no! it is too great a trial, too great a sacrifice! But the lessons, the holy principles instilled into me, are they nought? Oh God! assist and strengthen me!" She sunk on her knees,—and prayed for aid; shrinking from a reliance on her own powers—she cast her burthen upon her Heavenly Guide, and he sustained her. Tears, tears of bitter anguish followed her supplication, but they could not alter her resolve. She arose from her knees, and without trusting her eyes again towards the letter, she threw herself on the bed, and ere an hour had passed, her sobs and tears had ceased in sleep.

CHAPTER V.

And she, that ever through her home had moved
 With the meek thoughtfulness and quiet smile
 Of woman calmly loving and beloved,
 And timid in her happiness the while,
 Stood brightly forth, and steadfastly, that hour,
 Her clear glance kindling into sudden power.

And were not these high words to flow
 From woman's breaking heart?
 Through all that scene of bitterest woe
 She bore her lofty part.
 But oh! with such a glazing eye,
 With such a curdling cheek—
 Love! love! of mortal agony
 Thou, only thou shouldst speak!

Mrs. Hemans.

The next morning Constance arose, and fortified herself again by prayer. She performed her accustomed duties at home with her usual regularity, but at length she heard the sound of Edward's foot ascending the stairs. Clinging to the chair near which she stood for support, she sunk into it as the door opened. With the freedom their long acquaintance warranted, he entered the room unannounced; he approached; his face radiant with smiles alike of hope and expectation. She felt thankful at the moment that a domestic was present, as Edward was under the necessity of speaking on some other subject than the only one of interest to them. He spoke of indifferent topics; she answered gravely, but calmly. She was bracing her heart for the approaching trial. At length the domestic quitted the room, and they were alone. A pause ensued, which was soon broken by Delancy. "Constance—Miss Woodburn—I have called thus early, as I am absolutely compelled to leave home to-day. I have long wished an opportunity of speaking to you alone, and failing in that wish, I sent a letter last night. May I ask if you have received it?"

"I have."

"You have, then, read my feelings. I have told you that my heart is wholly devoted to you—I have entreated you to accept my hand, my love—to share my fortune: that offer I now repeat. Is it presumption to entreat a reply? Were I not obliged to depart, (and I could not bear to go, uncertain of my fate,) I would not have thus suddenly declared my hopes, my wishes. Speak then, dearest Constance, and tell me your answer!"

"Edward—Edward Delancy," she replied, speaking with difficulty, but gathering strength as she proceeded; "I have received your letter, and had I possessed sufficient firmness to write my reply, I should have spared both of us the pain of this interview. I regret, most sincerely, that circumstances have obliged you to depart thus suddenly, otherwise my future conduct might gradually have explained what I am now compelled to declare to you at once. I fully appreciate the value of the preference you have shown me;—a

preference of which women far superior to me might be proud—I speak this from my heart! But Edward, I grieve most deeply, bitterly, that this offer has ever been made, for, however the decision may pain us both, I—cannot—accept it!"

Had the earth opened suddenly before him, Edward could scarcely have been more thunderstruck or appalled. Hope, bordering almost on certainty, had buoyed him up during the conversation, and the sudden blow was only more fearful, from its being so utterly unexpected.

"Constance, am I dreaming? What can have caused your peremptory rejection? What can so suddenly have altered your whole demeanor towards me? Have I unconsciously offended?"

"Edward, do not, I beseech you, accuse me of caprice; it is rather to free myself from such a charge, that I have spoken thus firmly. We may still be friends, but my decision cannot be retracted."

"Nay, madam, I will not presume to remonstrate;" he answered, striving by a sarcastic tone to hide his despairing feelings. "You are above the trifling affections that generally interest your sex. Your heart did not need to be consulted, and your judgment since last evening must no doubt have found cogent reasons for thus deciding."

"Edward Delancy, however I might have wished to enter into an explanation, it is but a duty to myself not to reply to such language uttered in such a tone;" she observed with dignity, rising from her seat.

"And can you, Constance," he exclaimed, casting aside the pride in which he had endeavored to fortify himself: "can you not pardon those words? Can you not feel for me? Have you not snatched from me all hope of happiness? Have you not, with one blow, forever destroyed the fond aspirations of my heart? And can you look thus unmoved upon the ruin of my peace, upon my blighted hopes, my crushed spirit? Has then my own egregious vanity deceived me; and have you never felt more for me than for a mere acquaintance? It must be so; this determination causes you no pang!"

"Edward! Edward! I do not deserve that reproach!" she exclaimed in anguish, as her assumed firmness gave way, and the tears coursed each other from her eyes.

"Why then inflict that pang upon yourself and me? Constance, dearest, beloved Constance, hear me! You know how fondly I love you. My whole life shall be employed in rendering you happy. Let me not believe that my own love has blinded me—that those bright eyes, when they grew brighter as I approached—that this hand, when it trembled at my touch—that those sweet blushes, (that even now chase each other over your face,) when they followed my breathing your name—(nay, do not turn from me, Constance, nor withdraw your hand!) Let me not believe that those tokens,

seen only by a lover's eye, have deceived me! From childhood you have been the guiding star of my existence. If your heart is now turned towards me, may not time ripen your friendship into love? Dearest, best beloved, speak, I beseech you!"

"Edward Delancy, listen to me, while I make a disclosure which is perhaps unmaidenly, but which, for my own justification it is necessary you should hear. I will not deny or disguise the truth. You have been a friend, a brother to me from infancy, and I have ever esteemed and admired you. When we parted last, in the simplicity of my heart, I gave you a sister's farewell. I heard of your success in life,—of your ambition—of your genius. You returned—I saw your attention, your unceasing devotion—and I loved you. Yes, Edward, I do not shrink from the avowal—I loved you!" Misled by these words, by the crimson flushes that came and went like lightning o'er her face, and still more, by the womanly faltering of her voice, which defied the control of the high resolution which actuated her, Edward passionately pressed her hand to his lips. Calmly, but firmly she withdrew it from his grasp, and with a look that could not be mistaken, she resumed: "Edward, I speak of *past* feelings. I shall ever think of you as a friend, but to love I have bid adieu. It is no idle caprice to enhance my future acceptance—it is no thoughtless fantasy of a heartless coquette which now urges me to speak—your own lips have pronounced the decision—your own heart has divided us forever! Two nights have passed since, in this very room, by accident I heard your conversation with the guests at my uncle's table. I heard you, Edward Delancy, jest upon those subjects which I have been taught to revere. Nay more, you, (and you the most eagerly,) disclaimed all belief in the existence of that religion and its attributes on which I rest all my hopes here and hereafter!"

"And, Constance, can you lay such stress upon a mere difference of opinion?"

"*Opinion!* and is such the term you give it? Why, Edward, are you thus unjust? Would not even you shrink from a woman who professed such opinions? Would you not avoid, as a pestilence, an irreligious wife? Where would be your confidence in her honor or her virtue? Would not the very fulness of her love make you doubt her? For what can be opposed to the raging floods of a woman's passions, when religion's barriers are swept away?"

"Constance, you consider this too deeply. I honor, I respect your prejudices, and were you mine, never should they be interfered with."

"And what prospect could such a pledge present, but constant suspicion and a mutual want of confidence? No, Edward, it cannot be."

"But, my own Constance, loving you as I do,

what might not your pure example effect? Consider then."

"Edward, all this, and more, much more, has my own heart urged! You know not, you cannot picture to yourself the anguish which this resolve has cost me, but I will not now waver. I doubt not that you would do all to make me happy. But your principles, right or wrong, are firmly, irrevocably established. An erring, hesitating being like myself can never hope to alter them. You deride, you deny the existence of that true and holy faith, on which I rest my hopes of eternal salvation—and were my love even more maddening than I have proved it—were you a thousand times more fitted to inspire that love—though my heart should break I would not accept your hand!"

A death-like silence succeeded to this solemn asseveration. Awed by her manner, Edward did not attempt to utter a word; he looked at her, and revered her more than ever. At length, rousing himself as from a dream, he spoke:

"Constance, I shall urge you no more. I now see clearly your motives, and though they destroy all my happiness, I respect them. You have taught me, Constance, that which I ever doubted until now; that religion and duty may have greater power over a woman's heart, than even love itself. To prolong this interview is now prolonging misery to both. Let me still live in your memory! Whatever be my fate hereafter, my love towards you will be still unchanged. And if we should meet again, I will strive to conquer the selfish repinings of my heart, even though I see another in the enjoyment of that affection which I once hoped to have called my own."

"That, Edward, you will never see. The heart which you won, cannot idly be caught by another. In wealth or in poverty, in life—or in death, I will cherish, with a pure and passionless regard, the recollection of my earliest, dearest friend. Should we meet no more—let your last remembrance of me be my blessing. May that Supreme Being, whose power you deride, soften and enlighten your heart—protect and bless you!"

"Noble-hearted, exalted woman, farewell! For the last time I press your hand in mine; remember him who, whatever were his faults, deeply, truly loved you. Farewell! farewell!" Again, and again he pressed her hand to his lips; she made no effort to withdraw it. She murmured "farewell!" it was the word that severed them forever.

Her scalding tears flowed in rapid succession, and fell upon his hand; and as the answering drops glistened in his own eyes, with man's feeling of shame at such weakness, he suddenly gasped forth an adieu, and rushed from the house. Weeping, Constance feebly tottered to her own apartment, where, unseen by any mortal eye, she passed hours in comfortless agony.

CHAPTER VI.

The strait

I'm fallen into, my patience cannot bear;
It frights my reason, warps my sense of virtue,
Of religion; changes me into a thing
I look at with abhorring!

Knowles.

There are a thousand joyous things in life
Which pass unheeded, in a life of joy
As thine hath been, till breezy sorrow comes
To ruffle it; and daily dudes paid
Hardly at first, at length will bring repose
To the sad mind that studies to perform them.

I'm.

Three weeks had passed—a blank in existence. Edward had departed. The family deemed that Constance was seriously indisposed, and physicians were sent for; but their skill was exerted in vain. At length, Constance herself made a last effort to rise from her lethargy. When alone, she would pace the apartment for hours reflecting on what she had done, and by a rigid self-examination, discovered wherein she had erred. "What avails it," she would exclaim, "that I have bidden him farewell; and that forever? Do I not still love him? If duty required that I should reject him, that duty is not fulfilled while I thus cherish and feed a consuming melancholy. The affection of my relatives I cast aside with indifference—the glowing health which heaven has granted, I wantonly abuse by this indulgence of grief—the precious time which never can return, I waste in fruitless retrospection—and those talents and acquirements which might make me estimable and useful to my friends, I daily enfeeble and neglect. More than all these, I nourish and encourage the absorbing passion which principle first taught me to shun, and which I feel is *now* sinful. When I bade him farewell, I vowed to remember him as a friend—let me keep my promise! Let me look upon him, not with the regret I should feel for the *beloved dead*, but with that pure regard due to a *brother living*! Let me live for others, as well as for myself—and let me avoid, as a serpent, one moment's idleness; that sure foster-mother of all vain fancies and uncontrolled imaginations. Let me cast all my sorrows at the feet of my Heavenly Father, and let the past week be the last of my existence, which I can reproach myself with having wasted!"

Earnestly she besought of heaven the aid none ever sincerely asked in vain. Strictly she adhered to the undeviating path she had marked out. She allowed herself no time for regrets. She plunged deeply into studies the most scientific and abstruse. She determined to comprehend them in all their bearings. To effect this it became necessary to exert to their full extent all the powers of thought and reasoning which she possessed; and by this constant and untiring exercise, the healthful tone of her feelings was by degrees restored. The struggle was great, nor was the change soon effected; but at last she was triumphant. She had schooled her heart most bitterly, and persevered

in her resolve. Months passed on, and with a mild and cheerful resignation she could speak and think of Edward Delancy composedly, as the friend of her childhood. Her relatives rejoiced at the restoration of her health, and while she gradually unfolded the long-concealed treasures of her mind, and more than all the rest, while they experienced the blessings bestowed by her benign and sunny disposition, they felt that "to know her was to love her,—to name her, but to praise!"

CHAPTER VII.

Misfortune liketh company; it seldom

Visits its friends alone.

Knowles.

Now and then an ample tear trilled down
Her delicate cheek: it seemed she was a queen
Over her passion, who, most rebel-like,
Sought to be king o'er her.

* * * * * There she shook
The holy water from her heavenly eyes,
And clamor-moistened: then away she started
To deal with grief alone.

Shakespeare.

Three years and more had elapsed, and Constance had heard repeatedly of Edward, both from his letters to her uncle, and from public report. He had again appeared before the world as an author, and again success had triumphantly crowned his efforts. Time had given new strength to his intellect, and it seemed as if, thwarted where his whole heart had been devoted, he had determined to "pursue a nobler mistress, Glory!"

During Edward's absence, in the eventful course of those three years, Constance experienced a change in all her prospects. Her aged uncle died, after a short, but painful illness, of which she too soon learnt the fatal cause. Being naturally of an indolent disposition, having seen but little of the world, and deeming all mankind as honest as himself, he had unreservedly entrusted the care of all his property to an agent, who, by his plausible, and seemingly disinterested arguments, had so far misled Mr. Glenford, as to persuade him to enter into vast speculations, in which, (having obtained the consent of Constance,) a considerable portion of her property had also been embarked. These speculations proved, in part, successful; but, on pretence of urgent business, the agent hastened to New York and thence absconded no one knew whither, carrying with him an immense sum of money, and all the documents which were requisite to substantiate Mr. Glenford's claims. The officers of justice were eagerly engaged in the search, and the agent was traced on board a vessel coasting to the south of France, where the ship was wrecked, and every soul perished. The news of the search having terminated thus hopelessly, overcame Mr. Glenford. Appalled by the accumulated weight of business which came pouring in on every side, and called for exertions be-

yond what even his youth could have accomplished, bewildered by the enormous and unexpected demands made on him, and above all, overcome by a reverse too great and sudden for his mind, (weakened by age and infirmities,) to bear, Mr. Glenford sunk under the blow, leaving all in utter confusion; which Constance alone was to reduce to order.

After the first passionate grief was over, and she had paid the last sad duty to him who had been her second father, Constance wasted no time in fruitless lamentations at the task which lay before her. As usual, the visits of condolence were paid, and the orphan received numerous *indefinite* proffers of assistance. But the *heiress* was an heiress no longer; and those who had formerly praised the liberal hospitality of the uncle, now spoke of his imprudent extravagance, and complained bitterly at the prospect of a girl nursed in luxury like Constance, being obliged to live with her sister, as a dependant in the family of some charitable friend. But they knew little of Constance Woodburn, who supposed that she would ever consent to be dependent on any one. She thanked those few who really showed themselves her friends, but declined all offers except those of advice. She applied to Mr. Walton, an elder brother of her former admirer, and whose family had ever been her friends. He was an able lawyer, and him she consulted on all subjects relative to her uncle's property. Day after day found her poring over deeds and intricate accounts; and melancholy indeed was her employment, when she discovered that it was doubtful if more than a bare maintenance would remain to her after all demands had been satisfied, according to her request, with scrupulous integrity.

It was natural that Constance should deeply regret this circumstance, but she braced herself for the trial. "By my own earnings," said she to Rose, who wept bitterly at the news, "will I obtain a subsistence. The education I have received I will now employ. There are many parents around us who will rejoice at sending their children to be my pupils; our name and family are in themselves too honorable to fear that they can ever be degraded by honest industry. Our reverse has already shown us how few in the world are real friends. Those who *are*, will still equally respect us even though I may give instruction; and for those who are *not*, my dear Rose, that mind must indeed be weak which sets a value upon their attentions. The bleak prospect of a government, is not, I own, very gratifying, but *any* sacrifice is better than being *dependent*."

Owing, however, to the indefatigable exertions of Mr. Walton, seconded by those of Constance herself, this project was never executed. By diligent investigation he found that many debts had been shamelessly exaggerated, and many demands put forth without just right, as the claim-

ants had supposed, in the confusion of Mr. Glenford's affairs, solely entrusted to an inexperienced girl, their practices would not be discovered. All was, however, clearly settled, the offenders fully exposed; and it was proved that the two sisters would enjoy a neat and ample competence. Immediately after her uncle's death, Mr. Walton had, at the request of Constance, written to inform Edward of the sad news, (but without mentioning their pecuniary embarrassments;) and to request him not to feel any anxiety on her account, as she was kindly aided by Mr. Walton and his family. As Edward was then travelling in Europe, it was uncertain when any letters could reach him.

Mr. Walton had heard from his brother, who was on his way from Germany, and intended to visit them in Virginia. He arrived, and was fondly welcomed. With sisterly kindness he was received by Constance at his brother's house; and as he admired her exquisite beauty now in its bloom, and felt that her noble mind and heart equalled, if not surpassed her rare loveliness, he could not avoid again wishing that the fate of so pure a being might be united to his own. Such a wish, however, never escaped his lips; he perceived that it was vain to hope; he saw that she esteemed him as a friend,—he determined to prove that he could be a sincere one. He exerted himself with fraternal kindness to contribute to her comfort, and had it not been for the severe loss which they had experienced in the death of their oldest friend, the happiness of that little circle would indeed have been without a cloud.

CHAPTER VIII.

He faded; but so calm and meek,
So softly worn, so sweetly weak,
So tearless, yet so tender-kind,
And grieved for those he left behind,
With all the while a cheek whose bloom
Was as a mockery of the tomb;
An eye of most transparent light,
That almost made the dungeon bright;
And not a word of murmur—not
A groan o'er his untimely lot, * * *
And then the sighs he would suppress
Of fainting nature's feebleness,
More slowly drawn—grew less and less!

Byron.

But a dear object soon called for all the attention of Constance—her sister Rose, whose health from infancy had been a source of painful solicitude; and at length that remorseless fiend consumption, who preys upon the loveliest of America's daughters, marked her for his own. How bitterly did poor Constance weep over the gradual decay of this, her beloved mother's last legacy—the sweet solace that she had looked for in after years—the dearest and the only tie which she now possessed! Every effort of medical science was used

to save her, and the hope of change of climate was advised. The society of Mr. Walton's wife and family, among whom was Alfred, rendered their visit to a more southern state comparatively delightful, and at times the delusive glow of health which bloomed upon her sister's cheek, would make Constance fondly hope that she would recover. But each day that hope grew less. After an easy journey, they returned home, where for many months they remained. But at length the last forlorn hope was tendered—Italy, that refuge, and often grave for the dying invalid. It was hoped that the interest arising from the contemplation of scenery, inhabitants, customs, differing from her own, might prove as beneficial as the air itself.—Previous to her departure, Constance entrusted to Mr. Walton's care all those objects of affection which she left behind. A family with whom her uncle had been intimate were about taking their departure for Italy. Under their protection Constance went with her sister, exiled from her home, like many other victims of consumption, to die in a foreign land. Sincere prayers for their welfare, “not loud, but deep,” accompanied them on their way, and each friend she left blessed her as she departed.

* * * * *

Italy, bright, beautiful Italy was visited; and each moment, each thought of the life of Constance was employed to administer to her sister's happiness. Absorbed in her affection for the poor, fading flower, all other thoughts seemed dead within her. When, however, her friends informed her that Edward Delancy was in the neighborhood and would soon visit them, she felt agitated and alarmed. After a short, but rigorous discipline of her heart, she became composed; and when Delancy approached, she gave her hand with friendly eagerness, and met him with a firm step and an unhesitating welcome. For a moment Edward looked with surprise at her care-worn face, which nights of ceaseless watching by her sister's couch had robbed of its brilliancy; then, attempting to speak as he grasped her hand, he felt that utterance was impossible, and dropping her hand, turned to the window which an Italian sunset was gilding with its usual splendor—a type of the fair and virtuous girl who was daily sinking in unclouded innocence to the grave. Soon Edward mastered his emotion and returned. He spoke to Constance on the all-engrossing theme, her sister's health; he used every means to cheer and to console, and formed a thousand plans for affording amusement to the invalid and her almost exhausted nurse. This was the trial which Constance had feared. She dreaded that, being continually in his society, fascinated by the spells of his intellect, she might again have the same struggle to undergo. To deny herself his presence, would

be to deprive her sister of many gratifications, and this thought at once decided her.—Wherever she went, she saw him courted and admired, but Rose's danger made her forget even him! * * *

CHAPTER IX.

Heaven and yourself had part in this fair maid;

Now Heaven hath all!

Shakespeare.

As Rose grew nearer her end, her sole unceasing prayer was to return home, to visit the scenes of her childhood, and there to breathe her last; and as she had ceased to derive benefit from her present long sojourn, they determined to gratify her, as the denial of this, her only request, seemed to render her miserable. Edward was their constant and assiduous companion. From different sources he had heard of the firm conduct of Constance at her uncle's death, and had repeatedly expressed his regret that she had refused to confide in him. He saw that although she was still his friend, she no longer felt towards him as she had once felt; and his respect for her and his own pride prevented him from again subjecting himself to what he felt assured would be a refusal. He took a kind and friendly leave of her, anxiously hoping to meet them all, as soon as his affairs would permit, in happiness and health in their native home. * * *

They had approached the end of their voyage, and in a few hours they hoped to reach the shore. Rose, who was now sinking hourly, lay within her sister's arms, propped up by cushions on the deck. Her friends had withdrawn to a slight distance. Now and then an inarticulate moan would break from Rose's lips, yet visibly she struggled to repress it. The pious resignation, the fortitude of that innocent girl, her constant endeavors to appear cheerful, her reluctance to give pain or trouble, and the meek, consoling words which she ever and anon addressed to those around her, only made her still dearer to her sister, while they increased the agony that sister felt at the thought “of this last loss, of all the most.” Silently the tears flowed, but Constance did not attempt to notice them, lest they should excite the observation of her sister. But Rose, glancing her eye upwards, saw them, and clasping her arms more closely around the neck of Constance, said, “Do not weep, dear Constance,—do not weep for me I am dying, it is true; but I am going to a happy place of rest, where sorrow and tears cannot come. I once did think that it was hard for one so young to go to the cold grave; but long suffering has made me think otherwise. It will be a blessing for me to be taken from this world, where I feel nought but pain, and cause grief to those around me. I only grieve to leave you, sweet

Constance, who have been a mother to me. Comfort yourself with that thought, my sister! When I am gone, you will have no little Rose to comfort you, but you will marry—do not shake your head so mournfully, sister—you will marry some worthy man who will love you as you deserve to be loved, but not more dearly than your own poor little sister has always loved you, Constance.

* * * * * Sister, draw this cloak more closely round me; it is growing cold. Look, Constance, there is our own dear land stretched out before us, and the sun is going to rest,—*like me*,—and its beams are shining so brightly on the waters that dance around us!—I feel so calm and happy!—Sister, repeat with me the first prayer that mother taught you—for see, she is looking at us both, and smiling so sweetly—Bless you, dear sister—“Our Father, who art in Heaven, hallowed be—thy name.”—And thus, with her first innocent prayer upon her lips, she nestled her head in her sister’s bosom, and gently closed her eyes. Fearful of disturbing her, Constance remained motionless. But at length the face grew paler, the faint breathing ceased;—in sight of that home she had sighed for—in the arms of the sister whom she loved, the pure spirit had fled from its earthly abode, and “poor little Rose” was dead!

CHAPTER X.

Fame, fame! thou canst not be the stay
Unto the drooping reed,—
The cool, fresh fountain in the day
Of the soul’s feverish need.

Where must the lone one turn and flee?—
Not unto thee,—oh! not to thee!

Mrs. Hemans.

Thus at twenty six years of age, Constance was emphatically *alone* in the world, without a single relative. Still she had friends who loved and respected her. Immediately on her arrival, they hastened to assuage her grief.

During four ensuing years, she lived as secluded as possible, entering into society only so far as to avoid being a restraint upon her friends. Nor did she pass those years without admirers; but all were alike rejected. She had once loved deeply, earnestly, with her whole soul,—and her first bright vision had passed away for ever. Since that hour, the constant succession of incidents, eventful and engrossing, which had marked the last few years of her life, had so entirely occupied every thought and feeling, that she had not experienced even a wish to enlarge her sphere of affection. When competitors for her heart appeared, she saw that all were far inferior to the ideal image which her soul had cherished; and when she reflected how she had once been deceived, she feared to hazard the certain content which was now hers, for the chance of comparative misery.

She heard again and frequently of Delancy. He had hitherto dwelt in Europe, but his present plan was to return to his native land. He still strode onward towards the goal of fame. Time had polished the rich gems of his mind, but there was a scoffing wildness, a skeptic daring in his theories, which made the thoughtful pause and weigh his opinions ere they rested faith in them; and while they could not avoid admiring the expansive mind of the author, grieved that it wanted the best and only sure foundation of true greatness, and dreaded the power which his intellect gave him in the “empire of mind.” To enjoy for a time repose and leisure, were his objects in revisiting America. He arrived; and wherever he went, he was the object of curiosity and admiration.

At the time of his arrival in New York, Constance was absent from that city on a visit to a friend; but she heard of his welcome in every circle, and of his subsequent visit to the country residence of a family in the neighborhood of her present abode. He immediately visited her, and while he received her heartfelt congratulations on his success, and in his turn conversed with kind sympathy respecting her sister’s death, he felt that had he any sacred trust to confide, Constance was the friend on whom he might rely. As companions from infancy, reared in the same dwelling, they were regarded by their acquaintances in the light almost of brother and sister. Constance saw him now standing on the highest pinnacle to which he could aspire; but though each sentiment he uttered in society was like a sparkling gem,—though he participated in every species of gaiety, yet there were now and then perceptible a restlessness in his expressions, and a transient gloom upon his countenance, which suggested the idea that his mind was not entirely at ease.

* * * * *
It was evening—a bright, lovely, summer’s evening: the dwelling of Constance’s friend, (a villa more resembling an Italian palace, than the retreat of a republican citizen,) was illuminated with unusual splendor. The ball-room was thronged with gay and beautiful faces, and the present, the joyous, cloudless present, alone occupied each heart.

The fete was given in honor of the marriage of Alfred Walton with a lovely, amiable girl, who had been a playmate of Constance, who sincerely, gratefully rejoiced in this union. She at last beheld two beings whom she equally esteemed, made happy in each other; and she felt, as she offered her hearty wishes for their welfare, that this was one of the few occasions in life when such congratulations could be offered without the least shade of doubt or fear to cloud the bright hopes which they expressed.—Edward and Constance were present, the cynosure of all that brilliant festival. For a short time during the evening, the

lovely children of Mr. Maynard were indulged by a participation in the general gaiety. One of the guests, reminded by their presence, accidentally remarked the excessive grace of a child, some seven years old, whom Mr. Delancy had brought with him from Europe. This excited surprise; whereupon Edward related the melancholy situation of the little orphan, whose parents, (his valued friends,) had died in Switzerland, leaving their infant Laura to his care. The conversation then turned to other topics.

Morning broke in upon the revellers, and slowly they departed. Constance, though at this late, or rather early hour, was still buoyant and untiring, and as the last guest bade her adieu, she wished the family good night, and with a light step and heart, retired to rest.

CHAPTER XI.

Surely a sense of our mortality,
A consciousness how soon we shall be gone;
Or, if we linger,—but a few short years—
How sure to look upon our brother's grave,
Should of itself incline to pity and to love!

Rogers.

On the following day, Edward called at the mansion; the drawing-room was filled with guests. One by one they took their leave, but still he lingered. The family dispersed to their several amusements and occupations; when, after a few moments' conversation with Constance, Edward abruptly said: "Do you remember, Miss Woodburn, the remarks casually made last night concerning my little ward, Laura Seaforth? I most earnestly wish for your advice on the subject of her education. To whom can I intrust it? Accomplishments she can easily acquire; but can I rely upon an uninterested stranger to instil into her mind the lessons of fortitude and endurance which she must learn, to enable her to combat with the world?"

"Has she no relatives, no friends, who might undertake the charge?"

"No, none; she is alone."

"Could you be induced to part with her to——"

"Oh! no, no! While I live she remains with me. As a father I will watch over and protect her. It will be but a poor atonement for—a poor proof of the affection I bore to her parents."

"It is strange that, having known you so long, her name, that of your friend, should be so unfamiliar to me. Did I know her mother?"

"Her mother! No! impossible! I—I believe not. But pray answer the question I have asked."

"I cannot do that hastily. So much depends on the choice of a person who is to be the guardian and instructress of a child like her, that I must reflect. But you shall know soon,—very soon."

"I thank you most sincerely; but, Constance, promise me this: If I should die, or should any ill befall me, I beseech you, by the recollection of that love—pardon me—that *friendship* which you once felt, if it have any weight, promise me that you will be a mother to that child—that you will rear her in virtue and honor, and make her like yourself—all that woman can be!"

"I do promise it, Edward, *solemnly*: the recollection of which you speak *has* weight; it is idle in you to doubt it. Your happiness is, and will ever be, dear to me. I solemnly pledge you my word, to be a mother to her. This is worthy of you, Edward."

"Let me thank you from my heart for your promise; it has relieved me from a burthen of anxious dread. And now," added he, departing from the subject as abruptly as he had introduced it,—“when do you intend to return home?”

* * * * *

Three days after this visit, as the family of Mr. Maynard, with Constance, were wandering over a part of the grounds which commanded a view of the road, they perceived a gentleman on horseback riding towards the mansion, and soon recognised Mr. Delancy. He saw them, and waving his hat, spurred his horse towards them. By leaping a low hedge which he was approaching, more than half the distance could be avoided. The moment Mr. Maynard saw Delancy turning towards the hedge, with an exclamation of horror, he endeavored by signs and shouts, to forbid his proceeding: but it was too late; ere a word could be uttered, the leap had been taken. For the purpose of some improvements, within the last two days, an excavation of immense depth had been made immediately within the hedge. With culpable, and as it proved, fatal neglect, no notice or warning had been placed there; and as the circumstance of the alteration had been previously unknown to Mr. Maynard, he had been unable to remedy the carelessness of the workmen. The leap was within view of the party assembled in the garden. Before their eyes, the rider lay extended beneath his horse in the deep cavity. Shrieks of horror at the fearful catastrophe, burst from the lips of all, save Constance. The gentlemen hastened to render assistance. The ladies remained, uttering loud ejaculations of pity or of fear,—when suddenly one of them turned to Constance, wondering at her silence. She was still seated, leaning against a tree; she spoke not: she had fainted! * * * * * While they were engaged in restoring her to herself, the wounded man was brought to the house; and as they conveyed him to the nearest room, each movement, however slight, however careful, extorted a groan of such fearful agony that it seemed as if death would follow. His right arm was broken, but the deepest injury appeared to be internal. Anx-

iously, breathlessly, they awaited the arrival of the surgeon. He came. The result of his examination was indeed mournful—the internal injuries which Edward had received, left a hope of his recovery, but with the sad expectation of his being a helpless, maimed invalid. Constance having in some degree subdued all outward signs of emotion, had earnestly requested to see him, and at length succeeded in effecting her object. She entered the room, which was partly darkened—but still she could distinctly see the couch and its almost insensible occupant. His eyes were closed; his faint and labored breathing, and the convulsive clutching of the bed by his uninjured hand, alone gave token that he lived. The attendants who were in the room were engaged in various employments. Constance approached the bed unheeded. She thought of him—her childhood's friend, who had been the first love of her young heart—whose acquirements were the objects of her admiration,—the thought of what he had been, and what he now appeared, overcame her. She clasped her hands in agony, while tears fell rapidly from her eyes unmarked; she sunk on her knees, burying her face in the folds of the drapery, and with her hands joined over her brow, she prayed in her heart for him by whom she knelt. As these entreaties arose from each gushing fountain of her soul, her grief was mitigated; she trusted in the mercy of that Being in whose power are life and death. With feelings subdued and grateful, she arose from the posture in which she had sunk in despair. She turned towards the surgeon, and by her apparent calmness, obtained, in answer to her inquiries, a true and undisguised account which she sought, yet dreaded to hear. The bodily inflictions with which Delancy was threatened, she trusted he could endure;—but what horror was hers, when she was informed that the ruin of his mind might ensue!

The gradual decay which age and time cause in the human frame, and which death sends as his warning precursors, it is true, excite melancholy and compassion. But there cannot be in nature, an object so appalling, so humiliating, so crushing to the heart, as the contemplation of the strong man's mind struck down in the plenitude of its wisdom!—"In fear and trembling" Constance retired to her apartment. The hours passed in sleepless anxiety. And as she looked forth on the starry and cloudless night, on the wonders and glory of the heavens,—and then looked within,—at the struggles of despair, of hope—of misery and resignation,—she felt that her lot in life indeed exemplified the truth of her mother's precept, that though the world, amidst pleasure and happiness contains fearful woe, there is still one blessed asylum where "mercy and truth have met together—where righteousness and peace have kissed each other."

CHAPTER XII.

How shocking must thy summons be, O Death!
To him that is at ease in his possessions;
Who, counting on long years of pleasure here,
Is quite unfurnished for that world to come. *Blair.*

Many and sharp the numerous ills
Inwoven with our frame;
More pointed still we make ourselves,
Regret, remorse, and shame. *Buras.*

The following day, Edward seemed hovering betwixt life and death. Towards midnight, Constance, who had continued for some time restlessly watching in the adjoining room, heard Delancy's inarticulate murmurings—and her own name uttered in agony. She could not resist the impulse, and noiselessly she stole into the room. The nurse, inured to these scenes of misery, and overcome by fatigue, sat sleeping in a chair near the door. Mr. Maynard, who had never relinquished his station by the sufferer's side, seeing Constance approach, advanced to prevent her. He besought her earnestly to retire. Firmly she denied him, and seated herself beside him. Thus passed a fearful night of watching. Who that has not seen the human frame writhing under an attack of insanity, and witnessed the superhuman strength with which the paroxysm endows its victims,—who that has not heard the wanderings of their minds—the repetition of each expression or sentiment which they, when rational, admired,—the noble and poetical thoughts which they often utter,—the wild snatches of songs or prayers which they repeat—the intense agony which they express at the fancied perils they endure or witness in imagination,—and worse than these, the unjust hatred, the ingratitude and malignity, and often the profanity and even blasphemy which are then frequently given vent to, by even a virtuous mind,—who, that has not witnessed all this, can form an adequate estimate of its horror! For the first time, Constance beheld this; and but too often, words met her ear, whose import made her shudder. The declarations of insanity are, it is true, frequently without foundation; yet, sometimes, they lay bare the inner recesses of the heart: and those sacrilegious thoughts, which, in life's ordinary course, only gleam forth suddenly and for a moment, blaze out with scorching, withering power in madness. Morning gloomily began to dawn, and the streaks of sickly, yellow light which forced their way into the apartment, only added to the apparent desolation. The lamps were flickering dimly, and by the bedside the two watchers still sat, hoping even in despair. Suddenly Delancy seemed writhing in torture, as, with dreadful imprecations, he called for assistance—pointing, amidst the distant darkness, at some object which appeared to his disordered brain. With a loud shriek, and with a madman's strength, dashing

aside Mr. Maynard and the awakened nurse, who strove to detain him, he sprang from the bed, and rushed towards the fancied spectre of his mind—with one convulsive grasp he clutched at it, and then, uttering an exulting laugh, fell prostrate on the floor. His attendants approached to raise him, while Constance summoned additional aid:—he had expired! * * * *

When, a few weeks after this sad event, Mr. Walton the elder, as the nearest friend of Delancy, undertook to examine his papers, the will was found. After many noble donations both public and private, the residue of his property was left to Laura Seaforth, who was bequeathed to the protection of Miss Woodburn. A letter was also found, addressed to Constance, but apparently unfinished. Mr. Walton enclosed it to her. It had been written two days previous to the accident. It was as follows:

"Constance, ten years have elapsed since I first wrote to you; this is my second intrusion, and shall be the last. Our conversation yesterday eased my mind of all anxiety relative to the future fate of Laura. I deem it right, however, to state to you the truth of her history. When you have read it, I feel assured, however justly you may shudder, you will still more compassionately regard the poor child, who is thus fatherless, friendless, and alone.

"During my repeated sojourns in Italy, I renewed my acquaintance with a fellow-collegian who had been for years residing abroad for his health. He introduced me to his young wife. Her beauty was that of an angel! For her intellect—yours, Constance is noble and refined; but it has been tempered and shadowed by rectitude and misfortune. Helen had never known a moment's grief. She had lost her mother in infancy. She had been the idol of a doting, aged father, who so worshipped her that he never offered to exercise that healthful authority so necessary to a wild and daring spirit. Uncontrolled in any wish or desire, she had roamed through the fields of literature and science, bewildered by the treasures opened suddenly upon her exuberant imagination, and, without a guide or instructor "to winnow the gold dust from the barren sand," she plunged into all the mazes of mystery and doubt. The attractive garb in which each undermining assertion was decked, blinded her innocent mind to its falsity or crime. In dying, her father bequeathed her to a husband's care. He, in his turn, though a man of strong sense and judgment, could not participate in the flowery delights of her fancy; he smiled at the exaggerated pictures which she drew, and saw not the strong influence which an unrestrained indulgence of any passion, however indefinite, must ultimately gain upon the soul. When I first knew her, I became fascinated—I know of no other word so applicable to my feelings. We looked upon our devotion to each other as an interchange of sentiment. We

reflected not that a passion, which engrossed each thought and action of our lives, must, by its *excess alone*, be culpable; and that when, in addition, there was another being who held an exclusive right to her affection, the measure of our errors was fearfully increased.

"A short time before your arrival in Italy, Helen and her husband had gone with their little Laura, (then near three years old,) to visit Switzerland. After your departure, I rejoined them. Time passed. Our infatuation still continued.—One day, her husband had gone, with some friends, on an excursion to the lake in the vicinity; we were together, engaged in perusing a work breathing tenderness and love in every line. From this, the transition was easy to that dangerous and oft-indulged theme—ourselves. Our uninterrupted interview more palpably suggested the projects of flight which we had but too often distantly formed. Abruptly, wildly, did Helen reply to all the arguments I urged in favor of protracting our stay for a brief period. 'Delancy!' she cried, 'call it folly, madness, or what you will, I cannot longer endure this hypocrisy. I cannot receive the tenderness, the love—Oh Heaven! the love of that man, and appear, (wretch that I am,) to return them, when my heart and soul are given to another! You are that other. You share in my passion,—you *shall* share in my punishment. Hesitate—and at the price of my own degradation, I will disclose all to him! I cannot bid you leave me forever; I have not fortitude to do it: but I would sooner *die*, Delancy,—die by my own hand, than longer endure this burthen of duplicity. I cannot look in my husband's face, I cannot take my child in my arms, without feeling myself unworthy of the name of wife and mother! I care not for the world's scorn. If I am willing to brave it, you should not hesitate. Edward, I fly with you now or never!' In silence I assented. For the first time, I clasped her in my arms, and at that moment we would both gladly have relinquished for our sinful passion, our hopes in this world—and even in the next. But even at *that very moment*, we heard a hurried sound of feet in the hall. In great agitation the domestics entered and informed Helen that her husband had on that day's pleasure-voyage been accidentally *drowned*! Even as they said the words, his friends bore the lifeless body into the house. As it met Helen's eye, that shriek, that appalling shriek that burst from her, is even now echoing in my brain. Horror-stricken as I was at the sudden and blasting doom which had thus fallen on our guilty projects, I turned to console her. She fell at my feet in violent convulsions. Every aid was rendered her, in vain! In a few hours she died—cursing her God and me!

"In intrusting Laura to your care, I feel I am offering to her mother's memory the only poor atonement now in my power. Make her resem-

ble yourself, and whatever ills the errors of others may cause to her in after life, she will, she must be happy in her own innocence of heart.

"Each hour of my life involves me still deeper in intricacy and doubt. If I have passed all my existence in one wilful error, what may I not dread hereafter! And if there be no Heavenly Guardian, no eternity, how poor and unprofitable, how inadequate to my own vehement aspirations after happiness, will this world have been! Constance, years are before me, in which, if I have been wrong, I may repent my error; but whatever be my fate, instruct Laura as you have yourself been instructed.—Though man may for a time reject piety with disdain, yet *even with him* a time may come when he will see the insufficiency of this world's wealth, and will pine for the *one* resting-place, like the "travelled dove:" but religion is *woman's only* safeguard against misery and ruin!"

CHAPTER XIII.

Pauline, the meekly bright; though now no more
Her clear eye flashed with youth's all tameless glee,
Yet something, hollier than its dayspring wore,
There in soft rest lay beautiful to see;
A charm with graver, tenderer sweetness fraught,
The blending of deep love and matron thought.

Mrs. Hemans.

Extract from a letter written by the young Mrs. Wakon to a friend in Europe:

NEW YORK, May, 1837.

* * * * * We are at present somewhat melancholy. The light of our circle is gone—our own dear Laura has left us. The first year of her marriage passed without a cloud; but her husband has lately received an appointment in the East Indies. His wife accompanies him, and Constance remains behind. She resisted, mildly, but firmly, all their entreaties. "No, Laura," said she, "I am too old to go to a foreign land, to seek new friends and new connections. Should any misfortune occur to you, fail not to summon me. But I devoutly hope you will be safe and happy. Go, my child; write to me often; make me still the sharer of all your feelings. Go, and may God bless you!" But what Laura has lost we have gained. Their dwelling is near ours, and each day we enjoy the society, the friendship of Constance Woodburn. Oh, Henrietta! if you did but know her! She has been beautiful—*has been*;—for she is now fifty-five years old, and her form is bowed "beneath the weight of sorrow, not of time." Her voice is clear and full as ever, and to hear that alone is enough to make you love her. Her dress is ever marked by a rich simplicity; and even her scrupulous attention to neatness and precision, is not carried to a fault. There is withal a calm dignity, a mild determination in her man-

ner, which makes her revered as well as loved. The thousand little sacrifices of feeling, acts of self-denial, thoughtfulness for the comfort of others, gentle reproofs, heartfelt commendations, which each day discloses, only make her more and more endeared. All her affection seems lavished on my children. She is indeed their second parent. In sickness, when even a mother's strength has sunk beneath fatigue, her parental love and unceasing care have given additional efficacy to all medical aid. The poor around bless her. She indeed "hath never let her left hand know what her right doeth," but accident has betrayed her charities. No wretched novel was deemed too revolting for her mild and beneficent presence; her purse, her assistance, her time she has given, with, above all, that benevolent sympathy that weighs so deeply with the unhappy; and many a lip that never breathed its Maker's name except to curse, has been taught by her to call upon Him with heartfelt prayer and penitence. I have heard from her own lips all her history, which I will one day relate to you: its narration affects us, because it is what we also feel; and often, Henrietta, over the page that relates a simple story of the human heart, we drop that tear which we have denied to the loftier and more talented conceptions of sublime genius. A transcript of that history she intends to leave as a legacy to my children. "I will leave it," said she, "as a warning and a lesson. It is a mere record of events, similar to what passes every day around us; but when your daughters grow to that age when a parent most trembles for their future lot—the time when they will love,—perhaps the history of one who was their childhood's friend may offer a sincere and protecting moral. My life has been a series of storm and sunshine, but I am content; and quietly and calmly, I shall lay myself down to rest, seeking a sweet and peaceful sleep, from which to wake on another and a brighter day. Such are my hopes; be such yours, my beloved friend—be such your children's! And when they drop a tear for my sorrows—a blessing for my love towards them,—let them learn that no station, however confined or deprived of all natural ties, is devoid of usefulness or consolation; that no passion, in a strong and pious mind, is beyond the control of religion and virtue; and that, notwithstanding the ridicule of the world which drives so many thoughtless girls into a life of misery, content and indeed happiness may be felt and dispensed by that most lonely and reviled being—**AN OLD MAID!**"

An Austrian censor of the press, not many years ago, condemned as heretical, a work entitled, "*Principes de la Trigonometrie*," because the Trinity, which he supposed to be included in Trigonometry, was a subject not allowed to be discussed.

WOMAN.

Not thine! not thine! is the glittering crest
 And the glance of the snow-white plume—
 Nor the badge that gleams from the warrior's breast,
 Like a star 'mid the battle's gloom!—
 Nor is *thy* place 'mid thy country's host,
 Where the war-steed champs the rein—
 Where waving plumes are like sea-foam tost,
 And the turf wears a gory stain.

Not *these!* not *these!* are *thy* glorious dower!
 But a holier gift is *thine*,
 When the proud have fallen in triumph's hour,
 And the red blood flowed like wine,
 To wipe the dew from the clammy brow—
 To raise the drooping head—
 To cool the parched lips' fevered glow—
 And to smooth down the lowly bed!

Not thine! not thine! is the towering height,
 Where Ambition makes his throne—
 The timid dove wings not her flight
 Where the eagle soars alone;—
 But in the hall, and in the bower,
 And by the humblest hearth,
 Man feels the charm, and owns the power
 That binds him still to earth.

Yes, *these* are *thine!*—and who can say
His is a brighter doom,
 Who wins Fame's gory wreath of bay,
 Round an aching brow to bloom?
 Oh! to watch death's livid hues depart—
 To soothe every pang of woe—
 And to whisper hope, to the fainting heart—
 Is the proudest meed below!

THE TRUCE GROUND.

FROM THE DIARY OF AN INVALID.

NO. III.

(Concluded from page 122.)

It was now the middle of May, and the woods were redolent with sweets. Who could resist the charm to wander through the green-curtained labyrinths of nature, and inhale the incense of her pure offering to the source of beauty and happiness! Edith and I had roamed out with more than usual exhilaration of spirit, hoping to pluck the first blossoms of the rich magnolia on the banks of the neighboring stream. We had not proceeded far in our ramble when our attention was arrested by the echo of a horse's hoofs moving with swift tread. We were startled. Our first thought in these perilous times was of danger from the lawless hordes of the enemy. However, as we quickly perceived it was only one rider who was approaching, we determined to stand our ground, and face the foe, if indeed he were one. It was not until he came within a few paces of us, that Edith recognised her brother,

and springing forward to meet him, exclaimed, "Sydney, my brother!—good heavens, how you frightened me! I thought you were Butler and his gang, and expected every moment to be shot down."

"Ah, you little heroine! how could you stand so firmly then? Well, let this kiss seal my pardon," he said, pressing her to his bosom.

I was a few steps behind, when Edith called out to me, "Come, Constance, and salute this brigand. I think you will recognise in him an old acquaintance."

"Good heavens!" I heard Norwood exclaim in a suppressed voice, "can it be?—yes, it is she"—and then advancing, he greeted me with the most distant and chilling politeness. His manner was so marked—so different from what it used to be in the days of his youthful fervor, that I felt a deathlike coldness settle at my heart.

"What is the meaning of this?" asked Edith, breaking the pause. "Is this the effect of what I had hoped was an agreeable surprise—Sydney petrified, and Constance looking as if she trembled with fear?"

"I must confess," he replied, still in the same cold manner, "that I am surprised to find Miss Marion here."

Edith saw that some mysterious change had come over her brother since they parted, and desisted from further remark, while indignant pride came to my relief, nerved my step and fired my eye. We returned to the house; Edith endeavoring during the way to keep up a conversation, which consisted principally in monosyllables.

Sydney and herself took the first opportunity of retiring together, and several hours elapsed before Edith returned. She found me like the marble statue transfixed in coldness and silence. There was grief and perplexity painted on her brow. Concealment with her was impossible. There was no dark spot in her soul where suspicion or jealousy could harbor.

"My dear Constance," she began, while she threw her arms around my neck, "could any thing make you believe that Edith Norwood can change in her affection towards you?"

"No, Edith," I gasped out, overpowered with the mysterious cloud that hung over me, "nothing; even were your hand to hold the dagger that pierced me."

"Then," continued she, "I will tell you all that the mouth of slander has dared to utter against you."

"About me, Edith!" I exclaimed in astonishment. "What can it be? Tell me. I am perfectly unconscious of giving the smallest cause."

"I believe you, my Constance; but prepare yourself to hear the most improbable thing upon earth.—Was Col. Webster ever an admirer of yours?"

"To you, Edith," I replied, "I may say he was."

With a look of surprise, she paused a moment, and then said, "Well, I denied to Sydney that he ever was, for I had never heard you speak of him as any thing more than a casual acquaintance. Did you ever meet him clandestinely at the house of a domestic?"

"My God, Edith! what does that imply? I did have an interview with him at Kate Sweeney's cottage."

"And last of all, did a private correspondence pass between you, whereby the plan of an elopement with him was laid and executed under the pretence of meeting Gen. Marion at Georgetown? Now for your defence, if astonishment does not hold you speechless."

For a moment or two, I sat in amazement. At length, I replied, "I will not stoop, Edith, to refute anything so preposterous, so malicious. Those who could listen to such a tale, are no better than the framer of it. I will treat both with contempt."

"But for my sake, Constance—for the sake of the perfect love and confidence between us, explain all the grounds for this slander, as far as you are able."

"Edith, I cannot resist your appeal. I have told you I was dying in the house where Heyward's presence tormented me."

"Oh, yes; go on, go on."

"I heard through Sweeney of Marion's arrival with recruits near Georgetown. My only thought was to fly to his protection. Col. Webster, though a rejected lover, was still my friend. He saw in his visits to Sir John's, that I was unhappy from some hidden cause. He offered his services to relieve me, if it were in his power. I told him my wish to go to my uncle Marion. He insisted on furnishing me with a sufficient escort from his own troops, which I at first accepted; but receiving contrary directions from my uncle, I wrote to Col. Webster, requesting an interview at Sweeney's cottage, that I might communicate the change in my plans, and also to ask his passport, as a security from interruption and insult. You understand that my motive in observing secrecy in my communications with Col. Webster was on account of the jealous and irritable feelings of Heyward."

"Well," exclaimed Edith, with her wonted vivacity, "my penetration can easily unravel the mystery. If I am not mistaken, the whole plot is Heyward's. By some means, he became acquainted with your correspondence with Webster, and upon that hung this diabolical slander."

"What could be his motive?" I asked. "I am sure it was not the way to promote his own wishes; and if he meant it as a piece of revenge, it could avail nothing."

"I will tell you, Constance, how this aspersion, in his own view, could promote his object. He hoped by cheapening your reputation in the eyes of the world, to do it in your own; so that to avoid reproach, you would yield to his overtures; and thus the affair could be salvaged over. Such men have their agents; and one of his has been reporting your movements to this prince of darkness. Has he no humble friend or dependant, subservient to all his wishes?"

I replied that I had never seen him familiar with any one but his groom George, who was always more than civil to me.

"Did you pass or see him the evening you met Webster?"

"Yes, I saw him carrying up Heyward's phaeton as I went, and he passed again while Col. Webster was at the cottage."

"That is enough, Constance; he is the spy, depend on it. For confirmation, we will compare notes with Sweeney, whose acuteness is never at fault, you know."

My breast heaved with agonizing emotion, when I felt that the dart of the destroyer had reached me in this my last covert, and yielding to the weakness of nature, I burst into tears.

"Is this weakness becoming Constance Marion?" exclaimed Edith. "Rather let her stand erect in innocence, to the confusion of vice and hypocrisy; for as I

live the guilty shall cower before her. Sydney shall be the first to know its falsehood."

She was going to find him, when I arrested her footsteps, beseeching her that nothing might be said to him on the subject. "Edith," I said, "though he is your brother, I must say his suspicions are ungenerous and dishonorable. Let him entertain an opinion which a noble mind would have disdained: self-respect forbids my descending to any explanation to him who knew me too well to suspect—". My utterance failed, while the burning tears chased each other down my cheeks.

Edith sprang forward to embrace me. "You are right, Constance; it was unworthy of him, to think for a moment that you could deviate from the path of rectitude. I do not mean to plead his excuse, when I tell you that it is the jealousy inseparable from the deep passion of love, that has infected the mind of poor Sydney. I know that your image has lived in his heart for the last two years; but what changes had come over yours in that time he knew not. The heart of many a fair one veers to every point of the compass in less time. Sydney never suspected your conduct of criminality; fickleness and imprudence were his harshest terms. May I go, Constance?" continued the noble girl: "never believe that I will compromise the dignity of my sex, much less that of the unbending Miss Marion, before any man."

"Go, Edith," I replied, "but remember I will sooner die the victim of defamation, than seek the friendship of any one who has lent a ready ear to this tale of slander."

Edith found Norwood in the library, pacing the floor with agitated step. The tumultuous state of his feelings forbade any thing like composure, while the dread uncertainty rested on his mind.

"Edith," he exclaimed, as she entered, "your face was wont to be my mirror of hope; but now it forebodes evil. Does no beam of light glance across the darkness?"

"Darkness!" she replied, "there is no darkness, except in the minds of the malicious and contracted. I blush that the high-born Sydney could lend an ear to so foul a tale." She then gave him a history of the transactions between Col. Webster and myself, and of the circumstances which induced me to wish to leave Sir John's. When she had done, not a doubt of the plot's being a fabrication of Heyward's, remained on his mind; and his first impulse was to confront the villain and demand instant recantation of what he had reported, or else to take the satisfaction which justice and honor required. "But, Edith," he said, "this will be no reparation for the injury I have done Constance. I feel that her scorn is my due, and that I cannot meet her indignant glance without being miserable forever."

"There is no danger of encountering it shortly, I assure you. From her present mood, I believe she will not soon trouble you with her presence."

"Good heavens, Edith! then I have plunged the dagger into my own bosom! Tell her it was the love that brooks not a rival, that phrenzied my mind, and set my soul aflame.—What presumption! I never told her in set phrase that I loved her, though every look and every action confessed it. Was it a delusion! I thought my love had an advocate in her own bosom. Edith, forgiveness must be a part of so divine a being. I will throw myself at her feet, and plead the memory

of our past confidence and happiness. Go, ask her to give me a moment's interview. A refusal will seal for me a miserable destiny."

After much persuasion on Edith's part, I consented to see Norwood, resolving that I would abate nothing of my resentment. Oh, how weak are our resolves, when they are combatted by the affections! I heard his self-reproaches, and I knew they were sincere. The deep pathos of that voice, which in former days had so often sent the thrill of delight through my soul, now trembling with emotion, while he confessed his fault, melted down my harshest feelings towards him into a tide of deep and unalloyed sympathy with the sufferer. Our interview ended with the confession of an attachment which two years of absence and trial had only deepened, and our mutual faith was plighted on the altar of true love, whose fires burned brighter and brighter, as congenial tastes and dispositions were developed. Oh! it was a sweet moment to me, when my heart which had so long been buffeted by the storms of life and the conflicting passions of a proud and sensitive nature, seemed to cast its anchor of hope into this haven of perfect happiness.

Edith's joy at this issue of the scene, was too evident to be concealed. She declared that there was nothing so fine as a storm to clear the atmosphere of the affections. "But now, Constance," she said, "let there be no more clouds; I have no patience with these ups and downs, which poets say are essential to the existence of true love: where the heart once confidently trusts, I think it may trust forever. I see my lecture does not well assort with your buoyant feelings; so I will reserve the remainder for Sydney, whose Quixotic bravery I fear will involve him in an affray with Heyward."

Her words struck me with instant alarm; for I knew the inflexible hatred of Heyward towards any one whom he thought his rival with me. It was not without earnest persuasion, and even tears, that I prevailed on Norwood to relinquish his purpose of calling him to immediate account for his conduct. Edith added her advice on the subject, in her characteristic manner, by reminding Sydney that he had an affair of honor on hand of longer claim and more momentous consequence, to which his attention, she thought, was first due.

"And what is that, Edith?" he replied: "since you and Constance have undertaken to judge for me on the point of honor, I should like to know my future course of conduct."

"Have you not pledged your sword, and even your life, to defend and establish the liberty of your country? Should you without forethought or due investigation rush on danger, or perhaps death? Let time develop this plot. Gen. Marion being Constance's nearest relation, will take every measure to arrest the calumny, if it has obtained any credit; and if there is to be any fighting, I am sure he will let you be the champion on her side."

"Well, Edith, under your ridicule I dare say there is some wisdom; so I must e'en break the spell that binds me here, and rejoin my brigade."

In a few hours afterwards I sat alone, watching the last glimpses of Norwood's plumes, as he passed down the avenue.

For some time, our life went on very quietly at the Lodge. The country was infested with the enemy, and

we heard nothing from our troops, except by the occasional visits of Sweeney. He told us that the brigade on Snow's island had made some successful sorties on the enemy, but the marauder and his gang were still lurking in the morasses of the Pedee.

Sweeney was off again to the camp, and did not return as usual to bring us tidings. At length I became uneasy, and had fearful apprehensions of some disaster at my uncle's quarters. In this melancholy frame of mind I walked out alone, (for grief loves solitude,) and pursuing the path towards Kate's cottage, reached the door before I was conscious that I was near it. My attention was caught by hearing my own name pronounced in a low voice by a stranger. I stood utterly confounded, for I heard Sweeney say in reply, "As your business is a secret, Kate had better step up and give her a hint to come down."

I could listen no longer, but hastily opening the door, entered. The first person I saw was a man of pleasing countenance, habited in a citizen's dress. Sweeney was sitting near him, with his eye anxiously fixed on the door, as if fearing intrusion. He started on seeing me, but it was the surprise of pleasure. "Your servant, Miss; this is a God-send, your coming just now," (looking at the stranger.) He bowed respectfully, and requested Sweeney to observe we were not interrupted while he did his errand. He then informed me that he was the bearer of an important letter to me. He said he knew not its contents, and only obeyed the behest of a person dearer to him than life, in delivering it to the lady, with a caution to read it alone. I felt my courage vacillate while the man ripped the leather of his jack-boot, in which the token was secreted; but looking towards Sweeney, I saw his countenance calm and confiding, and was reassured. As soon as the paper was extricated, I retired into a little inner room with the letter. It was without superscription or signature. The hand struck me as one I had seen before. Could it be?—yes, it was Col. Webster's. I scarcely breathed while I read the following words:—

"A real friend—one who scorns the base attempt to link your fair name or his own with infamy, braves the danger of losing his station in the British army, to warn you of a plot formed by your worst enemy, to surprise the camp of —; but doubtless the primary object with him is to get possession of your person. I cannot believe he has joined the marauders under British colors with any other motive. I esteem it more than disgraceful to gain conquests leagued with banditti. I communicate this information that you may take such measures as prudence requires for your own safety, and give the necessary warning to others. This must all be done in perfect secrecy, and no time lost on your part, as I have reason to believe the enemy are already secretly approaching your quarters. This intelligence I send you by a trusty hand. Destroy the record of it, and dismiss him silently. God preserve you from the machinations of one whom you have every reason to fear."

I could not mistake the noble feelings that dictated this communication, and I trembled under a weight of horror and apprehension; but there was no time to yield to feelings of this sort. I roused myself to consider what was best to be done; and resolving to be myself the bearer of the intelligence to my uncle, re-

quested Sweeney to convey me as soon as possible to Snow's island. He was alarmed at my pallid looks, and begged me to compose myself, while he went out to call Kate to my assistance.—The stranger having finished his commission, rose and respectfully saluting me, departed.

While Sweeney was saddling the horse on which it was agreed I should ride behind this faithful friend, I told Kate as much of my cause of distress as it was fit I should reveal, and left a message for Edith, that unexpected intelligence rendered it necessary I should see Marion immediately, and I had taken Sweeney as a guide to his camp. I took an affectionate leave of my dear foster-mother, whose heart seemed to swell with suppressed grief at the trial to which she saw me exposed by this mysterious journey.

Securely mounted, we proceeded on rapidly in the direction of Marion's camp, keeping clear of the beaten track, for Sweeney knew every path and turn, however intricate to a general observer. We proceeded in silence for some time; at length I ventured to ask him how he ascertained the errand of the person who brought me the letter.

"La! my lady, a'nt that all my business, to find out what folks are after, specially when they come this way? You know, Miss Constance, I a'nt been at the Lodge for some time."

"No, I wondered you did not return to bring us accounts of the camp, as usual."

"Well, I'll tell you why. I was gone to Camden, to hear a leetle more about them fellows under Watson, as was coming down so fast to break us up at Snow's island. I got certain information that they are coming, but not so soon but we can outwit 'em. Jogging along with some cow hides before me, (for you must know I am sometimes a trader in leather, if the turn suits my purpose,) I overtakes a stranger undertaking to be a countryman; but you see it's not for Sweeney to be fooled that way. I knowed him for a soldier as soon as I set eyes on him, and a British soldier too: I'm too old a cock not to know the game when I see it; but I didn't let on, but jest fell into chat about the hard times, and the scarcity of leather and other necessities. I asked him if he knowed the price of leather in Charleston at the present time. I saw he was rather jubous about talking of that place; so I goes on and says I sold some prime leather some time since to the British officers there, and as I knew Webster, I named him. He sort o' started at that, and said he had heard Col. Webster was much of a gentleman. 'More,' I replied, 'than can be said of many of them that wear the king's gewgaws.' He answered nothing, but turning the subject, asked me if I was much acquainted in the neighborhood around, as he was a clock-mender by trade, and would like to get business. I told him the folks about here was glad to keep their heads on their shoulders; they didn't care much about clocks or any of them jimcracks now-a-days. 'What,' says he, 'a'nt they got Gen. Marion there at Snow's island to defend them?' 'It don't signify,' I says, 'whether he's there or elsewhere, unless he could be everywhere at once; though he pretty near does it, I must agree.' The stranger paused a little, and then said, 'There's been a talk in Charleston that a niece of his wanted to run off with a British officer. I suppose he keeps her under

his own eye now.' 'It's a lie,' I said, feeling my dander rise; 'she never wanted to do no such thing: the British officers might go to Guinea, before she'd soil her hand by giving it to one of them.' 'I meant no affront,' said the other; 'I did not know that you were a friend or servant of the lady's. But if you are, I can tell you how you can serve her in a most important matter.' 'I reckon I know what will serve her as well as you can tell me.' 'Maybe not. I have a letter for her; and if you will bring me in speech of her, it will be the greatest kindness you ever rendered her in your life.' 'How do I know you speak fair?' I answered, 'for you a'nt what you pretend to be, but a British soldier, if ever I saw one.' 'I perceive,' he replied, 'that deception is a vain attempt with you: my errand is to Miss Marion, from a tried friend of hers. I have promised to deliver into her hand a paper on which much depends.' 'I believe you now speak true,' says I, 'and if you will follow me, I will bring you to her presence.' The rest you know, my lady. I don't want you to break your word, but I guess there is foul dealings between that hot blooded villain Heyward and the robber Butler, who I hear is on the watch to surprise our camp. But don't shiver so, my pretty bird; my notion is that they'll fall into their own snare."

Upon this, he quickened the pace of our little palfrey, and about dusk we came in view of Marion's fire.—Sweeney was too well recognised to be interrupted in his progress, so that we halted at the General's tent without being questioned by any one. Our first inquiry was, whether Marion was within; which being answered in the affirmative, I entered hastily, without giving notice of my arrival. My uncle's astonishment at seeing me there was too evident to be disguised, though he did not express it in words until the officers of his staff who were present had withdrawn. His first words were full of interest and affection. "My dear child, what misfortune has driven you here? for I am sure from your looks that something weighs heavily on your heart." I then told him the substance of the information I had received, and the source from which it came. He said there could be no doubt of its authenticity. It was corroborated in his own mind by evident signs of the secret movements of the banditti, which had induced him to change his position so as to entrap the enemy whenever they made the assault.—"The only puzzling question, my Constance," he said, patting my pale cheek, "is what to do with your little self. It is evident the ruffians think you are secreted in my quarters, and I would place you beyond the scene of conflict."

"Let me, dear uncle, return to the Lodge. You know that is in the trace ground."

"Yes, were you only there; but should you remain here until to-morrow, there might be some risk in returning; and you look too much exhausted for further travel to-night."

I declared myself capable of further exertion, and insisted on being allowed to remount behind Sweeney and retrace my steps to the Lodge. He preferred waiting until the scout under Norwood returned, which, he said, must be in the course of an hour, when we should hear whether the passes were practicable, and I could be attended by a sufficient escort.

Before the expected time, the young officer and his

party returned. Norwood's consternation at meeting me in Marion's tent, was little less than if he had seen an apparition. He could scarcely restrain the fearful emotion with which his mind was filled in beholding me. His first words were, "Do I dream, or do I really behold Miss Marion? I almost fear to ask what accident, or rather misfortune, has brought her to our quarters?"

"Rather tell me, Sydney," I said, gaily smiling, (for I saw fearful apprehension on his brow,) "by what fortunate accident I can escape from them; for I perceive from your's and Gen. Marion's salutations, I am rather an unwelcome visitor."

"Certainly an unlooked for one; and only unwelcome, because too precious to be exposed to danger," he said, pressing my hand in his own.

After making inquiries as to the position of the enemy, and ascertaining that the passes were still open, it was arranged that Capt. Norwood and ten good troopers should attend me back to the Lodge. I was mounted on a fleet little jennet of my uncle's, and with Sweeney acting as vanguard, we set forth. Sydney endeavored to reassure me by assuming a gaiety which I saw he did not feel, while I attempted to disguise the fear that even the rustling of a leaf gave me, lest the dark hearted Heyward should arise in our path.

We had proceeded quietly along several miles, when our scout Sweeney gave notice that there were two riders a little ahead, who by their lagging pace seemed to wish to be overtaken by our party. As our intention was to avoid observation, we struck off into a footpath just before us. At this, the horsemen halted, and seemed to wish to reconnoitre our numbers as we passed. When we were quite clear of them, Norwood regretted that he had not kept the road, as the passengers were probably hunters waiting for the game. Sweeney was of a different opinion. He said they had too much curiosity to see who we were, and what was our strength. "I wish," he said, significantly, "we may be clear of them now. I have a suspicion I have seen one of the fellows before."

I started with dread, and asked who he thought it was.

"Oh, lady, there's few travel these parts that can say Sweeney's eye ha'n't been on him. Capt. Norwood," he continued, "I'm thinking two or three of us had better ride ahead, and see whether all's clear in the bottom below here: it's like as not the villains have laid an ambuscade in the pass, for I know something of their devilment."

"An excellent suggestion, Sweeney," replied he, "and as you are acknowledged to be the best file-leader in our troop, I depute you to take four of our number and reconnoitre the passes below."

Our advance-guard were soon out of hearing, and we proceeded cautiously forward, listening intently for a signal from them. At length we heard the sound of horses' hoofs; but whether behind or before us, it was difficult at first to ascertain. Too soon we perceived that horsemen in our rear were gaining fast upon us, and we pushed forward to meet our spies, who told us there were full twenty men stationed in the defile below us, through whom we must cut our way if we attempted to pass. Norwood evinced no trepidation, but ordering his men to wheel about, declared his determination of

forcing a passage through the ranks of the pursuers, now galloping down the footpath. "God and our good swords, my comrades," he exclaimed, "will give us the victory. Show no quarter to a single villain who does not surrender immediately. Sweeney, I commit to you the precious charge of Constance. Hazard every thing for her safety," were his last words, as he rode forward in the front of his troopers.

The firing now began; the numbers appeared equal, but such was the courage and skill of Norwood's party, that they had nearly disarmed the band, when the enemy from below hearing the musketry, rushed forward with all speed to the attack. One exclamation from Sweeney, "My God, we are gone!" gave me the full conviction that my fate was sealed. He waited not another moment, but snatching me from the saddle, bore me into the woods. I heard the tramping of horses, the clashing of swords, mingled with the curses and groans of the falling and dying—and my senses vanished in the horrors of the scene. Soon I was alike unconscious of the desperate fury with which Norwood's party fought, until they were overpowered by superior numbers, or the rude grasp which tore me from the arms of Sweeney, a breathing but senseless thing, or of the dreary abode to which my inanimate form was hurried, where the spell of insensibility was only broken by the ravings of a brain fever. For ten days the liquid fire rolled through my head, creating a world of frantic griefs and joys in its own fancy; and well it was that reason did not sooner resume her empire; the conflict between that and despair must have ended my existence. Nature at length worn out with exertion, fell into a deep repose, which lasted without interruption two entire days, and which was supposed by my attendants the immediate precursor of death; but the buoyancy of young and vigorous life was again to awake.

It was during this long dream, that the soft whisper of a gentle voice stole into my ear and awoke me to something like consciousness of my being and identity. I looked up without fear, for I was not yet awake to the past or present, and saw a lovely little girl bending over me, and adjusting the pillow that supported my head. A smile of delight brightened her cheek, as her eye met my glance, and she exclaimed, "Oh! lady, you are better! How glad I am!"

"Where am I, dear child?" I said; "tell me, had I not an uncle Marion, and a dearer friend still? Are they here too?"

"I don't know their names, but grandmother does; the gentleman loves you much, and watches by you every day. I hope he is the one you love so much."

"Norwood!" I exclaimed, "isn't that his name?—tell me, dear, for my head turns with the dreadful thoughts that come over me. How came I here?—for I was in a mortal conflict. Will you tell me, good lady?" I exclaimed with palpitating heart, addressing myself to the old woman.

"She is deaf," replied the girl, "but I will tell her what you say." She then repeated my words.

"You are with friends, lady: the gentleman is your relation."

"My uncle!" I repeated, with clasped hands, looking to heaven.

"You will soon see him," she replied. "I will tell him you are better."

She left the room, while I impatiently awaited his entrance. She returned, saying that my friend thought I was not yet strong enough to bear his presence; but recommended an anodyne, which would compose me, and he promised to see me early the next day. I was soothed again to repose, and did not awake until the sun was pouring his morning rays full in at my window. My little nurse was soon near me, greeting my reviving senses with a smile.

"Has my uncle Marion come?" were my first words.

"Marion! is that his name?"

"Do you doubt it?" I exclaimed, with emotion.

"No; only I never heard them call him so: but he is here, and talks of carrying you away, if you are well enough, to-day."

"Go, my sweet child," I answered eagerly, "tell him to come to me this moment."

The girl went out; and in a few minutes, the door opened gently, and looking up, I beheld Heyward!—Why I did not expire at the sight, is a wonder to me. The fangs of the destroyer seemed to be in my heart; but God's mercy preserved me to mourn over my past ingratitude, and praise him for future blessings.—After a paroxysm of anguish too great for expression, I heard the pretending villain declare, that he had saved me from the grasp of the ruffian, worse than death, and borne me to this place of safety. He asseverated that his only wish was to make me happy; and wound up all by hoping that as a reward, I would crown the ardent desires he had so long entertained with success. I could scarcely restrain my resentment at his base and hypocritical conduct; but prudence urged me to speak calmly, while I said, "Heyward, I am in your power; your victim I may be, but only in death. Restore me to those from whom you have torn me: then only shall I believe you intend me any thing but evil."

"What," he replied, "had you rather be in the power of Butler's gang, than under my protection, with every thing in the world to minister to your happiness?"

"Where are the protectors under whose charge I started from my uncle's camp?"

"Norwood and his troopers, do you mean?—all cut off or made prisoners by the banditti. I found you in their power, and rescued you at the risk of my own life."

"Heyward," I asked firmly, "was Capt. Norwood killed?"

"No, he was not dead when I left the field, but mortally wounded."

"Then show me one act of mercy; let the same sword that drank his blood end this wretched existence."

I heard not his answer; darkness again rolled over my sight, and forgetfulness swept its oblivious wing over my mind.

Heyward left me to the care of the old woman, while he went to seek a more secluded abode for me. An hour afterwards, the little nurse seeing me stir, whispered in my ear, "Lady, wake, for heaven's sake wake!—here is something for you—look! it is a note for you—a friend brought it, and I have promised no eye but yours shall see it." I heard, and roused my exhausted powers to attend to her words. "Here, take it, lady," continued Nannie, "and read it before any body comes in: it is of great consequence he said, and I promised to help you all I could, and keep it a secret from the

gentleman and his people." I seized the paper, and read these words:

"I have discovered the place of your confinement, and will rescue you at the risk of life. To-night at the hour of twelve expect deliverance; but on no account betray your hopes. You are surrounded by the creatures of your persecutor. Do not suffer yourself to be moved to another place to-day. Feign extreme illness, insensibility, or any other stratagem that will best succeed."

It was Norwood's hand that traced the lines. He was then alive, and able again to venture his life for me! My heart throbbed with the idea till it was near bursting. I concealed my head under the bedcover until I could recover something like tranquillity. Then embracing Nannie, who stood in tearful silence by my side, I said, "You are a beam of hope to light up my darkness."

"Be cautious, lady," she whispered, "all in this house, except me, are friends of your persecutor, and Butler's folks hang round the house to do his bidding."

"Who gave you this note?" I said softly.

"A lame man, with a fiddle and dancing dog. He has been here before since you came, and plays for a penny; but no one cares to hear him but me. I had no notion he knew you when I first told him how sick you were, and how sorry I was because I thought something troubled your mind. To-day he came again, when the men were all gone, and slipped this into my hand, telling me that the young lady's life depended on this paper. 'If you love her, let no eye but her's see it.' I took it, and promised to give it to you secretly."

Hearing a noise in the adjoining room, I motioned to her to put it in the flames, and closing my eyes, affected sleep. It was the old woman, whose deafness proved quite a blessing to me. I heard her ask Nannie how the sick lady seemed to be. Nannie, having her part ready, screamed out, "Still quiet; I don't believe she will ever open her eyes again in this world."

"Well, it can't be helped. It's true I had rather she should not die here. It seems to give a house a kind of strange feeling like; but it's certain she can't be carried off while she's in this way."

The day passed away, and I still affected a deathlike stupor. About nightfall Heyward returned, having made preparations to take me away. I heard him inquire eagerly, "How is the lady now?—better, I hope."

"Better! No," replied the woman, "she seems to be going very fast. She is past rousing now, and she strangles if you attempt to give her any thing to drink."

"Impossible!" was his only reply. "Let me see her this moment." He approached the bed, and took my apparently lifeless hand in his. The trepidation of his soul shook his frame—his hand trembled, while he pressed mine to his lips, and besought me by every endearing name to speak but once to him. My only answer was a convulsive groan. "She must have medical assistance," he said hurriedly. "I will go immediately in search of it. Her pulse still vibrates. Live she must, she shall, by heaven!"—and he dashed off in pursuit of assistance.

He had some difficulty in procuring medical advice; which detained him until the hour of twelve had nearly

arrived. He was rapidly ascending the steps which led to the room where I lay, when the alarm was given that the house was besieged by an armed force. In a moment all was confusion. Heyward rushed out to meet the foe; and in the general panic I was left alone with Nannie, whose self-possession never forsook her. She proceeded quickly to assist me to rise and dress myself, so as to be ready for flight whenever the auspicious moment should arrive. The combat seemed to rage without. At length the strife approached nearer, and the door of my chamber was burst open by the furious struggle of two combatants, one of whom fell headlong on the floor, weltering in his own blood. I instantly recognised in the fallen victim the wretched Heyward, and in the other the triumphant Norwood. My senses swam round at the sight, and for a few moments I was transfixed with horror. The first words I distinctly heard were those of the conqueror—"Perish, base wretch, at the feet of her whom you would have made the victim of your perfidy and crime." Heyward turned his dying eyes towards me, and consternation was mingled with the phrenzy of rage and anguish. "Death," he said "has cheated me at last of the prize for which I sacrificed peace, honor and life. Constance Marion lives while I"—die, he would have said, but the last word was lost in expiring nature.

Norwood turned away from the shocking spectacle, and claspng me in his arms, exclaimed, "My Constance does live—but oh! how does the pallid cheek, the wasted form, speak of sufferings too great for expression."

As soon as I could calm my agitated feelings, I gave Norwood some account of the frightful dream of existence since we parted. He besought me to seek repose, while he proceeded to the neighboring village to procure a light vehicle for my accommodation.

The following morning, I took leave of my prison, not without taking an affectionate leave of the lovely Nannie. Tears of unaffected sorrow moistened her cheek in parting with me, while I placed on her slender finger a jewelled ring, the symbol of my sincere and grateful recollection of her kindness to me.

Norwood supported me in the carriage, while his faithful followers escorted us safely to the Lodge. I inquired of him on the way, how he and so many of his troop had escaped the snare of the banditti.

"All," replied he, "through Sweeney's art. When he found their numbers overpowering us, and you were snatched from his arms, he slid through the bushes, and getting into the rear unperceived, raised the shout of Marion in so loud and triumphant a voice, that the whole gang believed Marion was just on them, and they took to flight, leaving all the spoils, except yourself, on the field. My wounds were severe, but with the help of my brave fellows, I reached camp. Parties were immediately sent by the General in different directions in search of you, and the enemy who had borne you off, (for their plan of surprising our camp, was abandoned as soon as you were captured,) but without success. Ten days elapsed without our obtaining any intelligence of you; at length Sweeney recognised Heyward's groom, George, in one of the hangers-on at a little inn in the country, and dogging his footsteps unperceived, watched him to his master's quarters. Afterwards he played the part of the stool-

ling fiddler, in order to ascertain where you were, and prepare for the rescue. The rest, dear Constance, is deeply impressed on your memory."

I replied, that my only cause of sorrow was the coldness of my heart towards the great Author of all goodness, who had given success to the efforts used for my deliverance.

Edith met me with her accustomed heartfelt joy, mingled with a sympathy for my past sufferings, which often suffused her bright eyes with tears. My strength returned rapidly, and my spirits, though somewhat chastened in the school of affliction, regained their wonted cheerfulness, without the undue proportion of pride and self-will, which had once combated, and often ruled my better feelings. I now felt that "better is he that ruleth his spirit, in the fear of the Lord, than he that taketh a city."

Gen. Marion was soon to join the southern army under Greene, and Norwood urged the consummation of our engagement before his departure. My uncle and Lieutenant Stuart were the only guests present. The former gave me a father's blessing in confiding my future happiness to another. Edith and Lieut. Stuart plighted their vows of mutual love on this occasion; but their marriage was deferred until the end of the campaign.

We both remained at the Lodge, while our hearts' best hopes were reaping laurels in the glorious fields which expelled the enemy from our southern country. Our lives passed quietly, except as our bosoms throbbed for the safety of those dearest to us, whose absence was not relieved by the frequent tidings which now fills up the tedious void. Sweeney too was gone, whose store of accurate information, gathered in all quarters, was a resource in times of danger or doubt.

The evacuation of Charleston, sounded a note of joy through the whole country. Sydney wrote me by an express to meet him in the now free and joyous capital. With hearts almost bursting with joy, Edith and myself obeyed the summons. My husband was not one of the last to feel the impulse of delight which pervaded all ranks at the departure of the enemy.

After a rehearsal of all that had transpired since we were separated, of deepest interest to ourselves, I naturally turned towards the early scenes and associations of my life. Inquiring for my good old friend Sir John, I was told that he died suddenly a short time before. It was thought the old man was brokenhearted, being left alone in the world, by the death of his son, and the elopement of Miss Rachel with the British Captain Dawkins. The lady who gave me these sad details, said he pondered on his misfortunes till he neither ate nor slept. My heart melted at the recital, and I learnt another lesson of the vanity of all hopes built below the skies.

The fate of the noble Webster is too well known to need repetition. The bloody field of Guilford was strewn with the chivalry of both England and America; but among the fallen brave, were none more worthy to be lamented than the generous Col. Webster.—Gen. Marion's history is interwoven with the records of our national existence. It does not remain for me to speak of his deeds of excellence or glory.—Your father lived to receive the honor and gratitude of his country, and to see the fruits of our glorious victory in the freedom

and happiness of a whole nation. Death at last came in so gentle a form, that he seemed not a tyrant, even while he stole from my heart its only earthly stay. Consumption terminated his life in the tenth year of our union. But he died not as the wicked perish; the hopes of a glorious immortality illumined the darkness of the tomb, and shed on his last moments the ineffable light of a blissful eternity.

I cannot close this sketch without leaving a tribute of affection to the tried and faithful virtue of my humble friends, John and Kate Sweeney. They were my counsellors and support in all my sorrows and difficulties, and I leave them not only a competency for life, but my ardent prayers that God may shower every blessing on their heads.

Thus ended the manuscript. The old woman informed me that her husband only died two years ago, with all his faculties in good exercise. "But," said she, "his full time had come, he being by the best calculation upwards of ninety years old."

SONG.

To the air of "Tell him I love him yet."

Tell her the spell is o'er,
She cannot now be mine;
She can deceive no more,
With smiles, howe'er divine.
Tell her, when morning beams
O'er earth and sky and sea,
I wake from faithless dreams
That paint her true to me.

Tell her, in crowds to bear
A mien as joyous now;
Tho' she in truth may wear
An aching breast and brow.
Tell her new hearts to break,
To spurn such hearts as mine;
I will not, for her sake,
Bow at another's shrine.

Tell her the star has set
That cheered my lonely way;
But that I linger yet
Where she was wont to stray.
Tell her, when youth has flown,
When pleasures swiftly flee,
And beauty's bloom is gone,
Tell her to think of me!

R. A. S.

ROLLIN'S IDEA OF BELLES LETTRES.

Rollin, in his "Manière d'étudier les Belles Lettres," seems to have no precise idea of what the Belles Lettres are. He introduces sacred and profane history, long dissertations upon solid glory and true greatness, with many similar things.

LORD BACON.

HIS CHARACTER, AND WRITINGS.

PART III.

Common sense, the ruling principle of Bacon's philosophy. Contrast, between a Baconian and a Stoic. Importance attached by Bacon to the physical sciences---His contempt for the schoolmen's metaphysical subtleties, morals and theology. The inductive method, not invented by him---he only taught a more accurate use of it. His temperament, sanguine---his mind, at once comprehensive and microscopic---averse to disputation---eloquence, and wit, in his writings---poetical spirit---resemblance to Burke, in one respect---remarks on Bacon's Essays---The *Newum Organum* his greatest work---concluding reflections.

Great and various as the powers of Bacon were, he owes his wide and durable fame chiefly to this, that all those powers received their direction from common sense. His love of the vulgar useful, his strong sympathy with the popular notions of good and evil, and the openness with which he avowed that sympathy, are the secret of his influence. There was in his system no cant, no illusion. He had no anointing for broken bones,---no fine theories *de finibus*,---no arguments to persuade men out of their senses. He knew that men, and philosophers as well as other men, do actually love life, health, comfort, honor, security, the society of friends; and do actually dislike death, sickness, pain, poverty, disgrace, danger, separation from those to whom they are attached. He knew that religion, though it often regulates and moderates these feelings, seldom eradicates them; nor did he think it desirable for mankind that they should be eradicated. The plan of eradicating them by conceits like those of Seneca, or syllogisms like those of Chrysippus, was too preposterous to be for a moment entertained by a mind like his. He did not understand what wisdom there could be in changing names where it was impossible to change things---in denying that blindness, hunger, the gout, the rack, were evils, and calling them *αναπονυμια**---in refusing to acknowledge that health, safety, plenty were good things, and dubbing them by the name of *αδιαφορα*.† In his opinions on all these subjects, he was not a Stoic, nor an Epicurean, nor an Academic, but what would have been called by Stoics, Epicureans, and Academics, a mere *ιδιωτης*,---a mere common man. And it was precisely because he was so that his name makes so great an era in the history of the world. It was because he dug deep that he was able to pile high. It was because, in order to lay his foundations, he went down into those parts of human nature which lie low, but which are not liable to change, that the fabric which he reared has risen to so stately an elevation, and stands with such immoveable strength.

We have sometimes thought that an amusing fiction might be written, in which a disciple of Epictetus and a disciple of Bacon should be introduced as fellow-travelers. They come to a village where the small-pox has just begun to rage; and find houses shut up, intercourse suspended, the sick abandoned, mothers weeping in terror over their children. The Stoic assures the dismayed population that there is nothing bad in the

* 'Insignificant circumstances.'

† 'Things neither good nor evil,---things wholly indifferent.'

small-pox, and that to a wise man diseases, deformity, death, the loss of friends, are not evils. The Baconian takes out a lancet and begins to vaccinate. They find a body of miners in great dismay. An explosion of noisome vapors has just killed many of those who were at work; and the survivors are afraid to venture into the cavern. The Stoic assures them that such an accident is nothing but a mere *anastrophe*. The Baconian, who has not such fine word at his command, contents himself with devising a safety-lamp. They find a shipwrecked merchant wringing his hands on the shore. His vessel with an inestimable cargo has just gone down, and he is reduced in a moment from opulence to beggary. The Stoic exhorts him not to seek happiness in things which lie without himself, and repeats the whole chapter of Epictetus *ἄπορτος τοὺς τῶν ἀστυχῶν δόλουρας*.^{*} The Baconian constructs a diving-bell, goes down in it, and returns with the most precious effects from the wreck. It would be easy to multiply illustrations of the difference between the philosophy of thorns and the philosophy of fruit—the philosophy of words and the philosophy of works.

Bacon has been accused of overrating the importance of those sciences which minister to the physical well-being of man, and of underrating the importance of moral philosophy; and it cannot be denied that persons who read the *Novum Organum* and the *De Augmentis*, without adverting to the circumstances under which those works were written, will find much that may seem to countenance the accusation. It is certain, however, that, though in practice he often went very wrong, and though, as his historical work and his essays prove, he did not hold, even in theory, very strict opinions on points of political morality, he was far too wise a man not to know how much our well-being depends on the regulation of our minds. The world for which he wished was not, as some people seem to imagine, a world of water-wheels, power-looms, steam-carriages, sensualists, and knaves. He would have been as ready as Zeno himself to maintain, that no bodily comforts which could be devised by the skill and labor of a hundred generations would give happiness to a man whose mind was under the tyranny of licentious appetite, of envy, of hatred, or of fear. If he sometimes appeared to ascribe importance too exclusively to the arts which increase the outward comforts of our species, the reason is plain. Those arts had been most unduly depreciated. They had been represented as unworthy of the attention of a man of liberal education.

This opinion seemed to him '*omnia in familia humana turbasse*.' It had undoubtedly caused many arts which were of the greatest utility, and which were susceptible of the greatest improvements, to be neglected by speculators, and abandoned to joiners, masons, smiths, weavers, apothecaries. It was necessary to assert the dignity of those arts, to bring them prominently forward, to proclaim that, as they have a most serious effect on human happiness, they are not unworthy of the attention of the highest human intellects. Again, it was by illustrations drawn from these arts that Bacon could most easily illustrate his principles. It was by improvements effected in these arts that the soundness of his principles could be most speedily and

decisively brought to the test, and made manifest to common understandings. He acted like a wise commander who thins every other part of his line to strengthen a point where the enemy is attacking with peculiar fury, and on the fate of which the event of the battle seems likely to depend. In the *Novum Organum*, however, he distinctly and most truly declares that his philosophy is no less a moral than a natural philosophy, that, though his *illustrations* are drawn from physical science, the *principles* which those illustrations are intended to explain are just as applicable to ethical and political inquiries as to inquiries into the nature of heat and vegetation.

He frequently treated of moral subjects; and he almost always brought to those subjects that spirit which was the essence of his whole system. He has left us many admirable practical observations on what he somewhat quaintly called the *Georgics* of the mind—on the mental culture which tends to produce good dispositions. Some persons, he said, might accuse him of spending labor on a matter so simple that his predecessors had passed it by with contempt. He desired such persons to remember, that he had from the first announced the objects of his search to be not the splendid and the surprising, but the useful and the true,—not the deluding dreams which go forth through the shining portal of ivory, but the humbler realities of the gate of horn.

True to this principle, he indulged in no rants about the fitness of things, the all-sufficiency of virtue, and the dignity of human nature. He dealt not at all in resounding nothings, such as those with which Bolingbroke pretended to comfort himself in exile; and in which Cicero sought consolation after the loss of Tullia. The casuistical subtleties which occupied the attention of the keenest spirits of his age had, it should seem, no attractions for him. The treatises of the doctors whom Escobar afterwards compared to the four beasts, and the four and twenty elders in the Apocalypse, Bacon dismissed with most contemptuous brevity: '*Inanes plerumque evadunt et futes*.'^{*} Nor did he ever meddle with those enigmas which have puzzled hundreds of generations, and will puzzle hundreds more. He said nothing about the grounds of moral obligation, or the freedom of the human will. He had no inclination to employ himself in labors resembling those of the damned in the Grecian Tartarus,—to spin forever on the same wheel round the same pivot,—to gape forever after the same deluding clusters,—to pour water forever into the same bottomless buckets,—to pace forever to and fro on the same wearisome path after the same recoiling stone. He exhorted his disciples to prosecute researches of a very different description; to consider moral science as a practical science—a science of which the object was to cure the diseases and perturbations of the mind,—and which could be improved only by a method analogous to that which has improved medicine and surgery. Moral philosophers ought, he said, to set themselves vigorously to work for the purpose of discovering what are the actual effects produced on the human character by particular modes of education, by the indulgence of particular habits, by the study of particular books, by society, by emulation, by imitation. Then we might

* 'To those who fear poverty.'

* 'They are generally worthless and empty.'

hope to find out what mode of training was most likely to preserve and restore moral health.*

What he was as a natural philosopher and a moral philosopher, that he was also as a theologian. He was, we are convinced, a sincere believer in the divine authority of the christian revelation. Nothing can be found in his writings, or in any other writings, more eloquent and pathetic than some passages which were apparently written under the influence of strong devotional feeling. He loved to dwell on the power of the christian religion to effect much that the ancient philosophers could only promise. He loved to consider that religion as the bond of charity; the curb of evil passions; the consolation of the wretched; the support of the timid; the hope of the dying. But controversies on speculative points of theology seem to have engaged scarcely any portion of his attention. In what he wrote on church government he showed, as far as he dared, a tolerant and charitable spirit. He troubled himself not at all about Homoousians and Homoiousians, Monothelites and Nestorians. He lived in an age in which disputes on the most subtle points of divinity excited an intense interest throughout Europe; and nowhere more than in England. He was placed in the very thick of the conflict. He was in power at the time of the Synod of Dort, and must for months have been daily deafened with talk about election, reprobation, and final perseverance. Yet we do not remember a line in his works from which it can be inferred that he was either a Calvinist or an Arminian. While the world was resounding with the noise of a disputatious philosophy, and a disputatious theology, the Baconian school, like Alworthy seated between Square and Thwackum, preserved a calm neutrality,—half scornful, half benevolent, and, content with adding to the sum of practical good, left the war of words to those who liked it.

We have dwelt long on the end of the Baconian philosophy, because from this peculiarity all the other peculiarities of that philosophy necessarily arose. Indeed, scarcely any person who proposed to himself the same end with Bacon could fail to hit upon the same means.

The vulgar notion about Bacon we take to be this,—that he invented a new method of arriving at truth, which method is called induction; and that he exposed the fallacy of the syllogistic reasoning which had been in vogue before his time. This notion is about as well founded as that of the people who, in the middle ages, imagined that Virgil was a great conjurer. Many who are far too well informed to talk such extravagant nonsense, entertain what we think incorrect notions as to what Bacon really effected in this matter.

The inductive method has been practised ever since the beginning of the world by every human being. It is constantly practised by the most ignorant clown, by the most thoughtless schoolboy, by the very child at the breast. That method leads the clown to the conclusion, that if he sows barley he shall not reap wheat. By that method the schoolboy learns, that a cloudy day is the best for catching trout. The very infant, we imagine, is led by induction to expect milk from his mother or nurse, and none from his father.

Not only is it not true that Bacon invented the inductive method; but it is not true that he was the first

* *De Augmentis*, Lib. 7, Cap. 8.

person who correctly analysed that method and explained its uses. Aristotle had long before pointed out the absurdity of supposing that syllogistic reasoning could ever conduct men to the discovery of any new principle; had shown that such discoveries can be made by induction, and by induction alone; and had given the history of the inductive process, concisely indeed, but with great perspicuity and precision.*

What Bacon did for the inductive philosophy may, we think, be fairly stated thus. The objects of preceding speculators were objects which could be attained without careful induction. Those speculators, therefore, did not perform the inductive process carefully. Bacon stirred up men to pursue an object which could be attained only by induction, and by induction carefully performed; and consequently induction was more carefully performed. We do not think that the importance of what Bacon did for inductive philosophy has ever been overrated. But we think that the nature of his services is often mistaken, and was not fully understood even by himself. It was not by furnishing philosophers with rules for performing the inductive process well, but by furnishing them with a motive for performing it well, that he conferred so vast a benefit on society.

To give to the human mind a direction which it shall retain for ages, is the rare prerogative of a few imperial spirits. It cannot, therefore, be uninteresting to inquire, what was the moral and intellectual constitution which enabled Bacon to exercise so vast an influence on the world.

In the temper of Bacon—we speak of Bacon the philosopher, not of Bacon the lawyer and politician—there was a singular union of audacity and sobriety. The promises which he made to mankind might, to a superficial reader, seem to resemble the rants which a great dramatist has put into the mouth of an oriental conqueror half-crazed by good fortune and by violent passions:

'He shall have chariots easier than air,
Which I will have invented; and thyself
That art the messenger shall ride before him,
On a horse cut out of an entire diamond,
That shall be made to go with golden wheels,
I know not how yet.'

But Bacon performed what he promised. In truth, Fletcher would not have dared to make Arbaces promise, in his wildest fits of excitement, the title of what the Baconian philosophy has performed.

The true philosophical temperament may, we think, be described in four words—much hope, little faith; a disposition to believe that anything, however extraordinary, may be done; an indisposition to believe that anything extraordinary has been done. In these points the constitution of Bacon's mind seems to us to have been absolutely perfect. He was at once the Mammon and the Surly of his friend Ben. Sir Epicure did not indulge in visions more magnificent and gigantic. Surly did not sift evidence with keener and more sagacious incredulity.

Closely connected with this peculiarity of Bacon's temper was a striking peculiarity of his understanding. With great minuteness of observation he had an amplitude of comprehension such as has never yet been

* See the last chapter of the *Posterior Analytics*, and the first of the *Metaphysics*.

vouchsafed to any other human being. The small fine mind of Labruyère had not a more delicate tact than the large intellect of Bacon. The 'Essays' contain abundant proofs that no nice feature of character, no peculiarity in the ordering of a house, a garden, or a court-masque, could escape the notice of one whose mind was capable of taking in the whole world of knowledge. His understanding resembled the tent which the fairy Paribanou gave to Prince Ahmed. Fold it, and it seemed a toy for the hand of a lady. Spread it, and the armies of powerful Sultans might repose beneath its shade.

In keenness of observation he has been equalled, though perhaps never surpassed, but the largeness of his mind was all his own. The glance with which he surveyed the intellectual universe resembled that which the Archangel, from the golden threshold of heaven, darted down into the new creation.

'Round he surveyed—and well might, where he stood
So high above the circling canopy
Of night's extended shade,—from eastern point
Of Libra, to the fleecy star which bears
Andromeda far off Atlantic seas
Beyond the horizon.'

His knowledge differed from that of other men, as a terrestrial globe differs from an atlas which contains a different country on every leaf. The towns and roads of England, France, and Germany, are better laid down in the atlas than in the globe. But while we are looking at England we see nothing of France; and while we are looking at France we see nothing of Germany. We may go to the atlas to learn the bearings and distances of York and Bristol, or of Dresden and Prague. But it is useless if we want to know the bearings and distances of France and Martinique, or of England and Canada. On the globe we shall not find all the market-towns in our own neighborhood; but we shall learn from it the comparative extent and the relative position of all the kingdoms of the earth. 'I have taken,' said Bacon, in a letter written when he was only thirty-one, to his uncle Lord Burleigh—'I have taken all knowledge to be my province.' In any other young man, indeed in any other man, this would have been a ridiculous flight of presumption. There have been thousands of better mathematicians, astronomers, chemists, physicians, botanists, mineralogists, than Bacon. No man once or art; any more than he would go to a twelve-inch globe in order to find his way from Kennington turnpike to Clapham Common. The art which Bacon taught was the art of inventing arts. The knowledge in which Bacon excelled all men, was a knowledge of the mutual relations of all departments of knowledge.

The mode in which he communicated his thoughts was exceedingly peculiar. He had no touch of that disputatious temper which he often censured in his predecessors. He effected a vast intellectual revolution in opposition to a vast mass of prejudices; yet he never engaged in any controversy:—nay, we cannot at present recollect, in all his philosophical works, a single passage of a controversial character. All those works might with propriety have been put into the form which he adopted in the work entitled *Cogitata et visa*—'Franciscus Baconus sic cogitavit.'—These are thoughts which have occurred to me:—weigh them well—and take them or leave them.

Borgia said of the famous expedition of Charles the Eighth, that the French had conquered Italy, not with steel, but with chalk; for that the only exploit which they had found necessary for the purpose of taking military occupation of any place, had been to mark the doors of the houses where they meant to quarter. Bacon often quoted this saying, and loved to apply it to the victories of his own intellect.* His philosophy, he said, came as a guest, not as an enemy. She found no difficulty in obtaining admittance, without a contest, into every understanding fitted, by its structure and by its capacity, to receive her. In all this we think that he acted most judiciously—first, because, as he has himself remarked, the difference between his school and other schools was a difference so fundamental that there was hardly any common ground on which a controversial battle could be fought; and, secondly, because his mind, eminently observant, pre-eminently discursive and capacious, was, we conceive, neither formed by nature, nor disciplined by habit, for dialectical combat.

Though Bacon did not arm his philosophy with the weapons of logic, he adorned her profusely with all the richest decorations of rhetoric. His eloquence, though not untainted with the vicious taste of his age, would alone have entitled him to a high rank in literature. He had a wonderful talent for packing thought close and rendering it portable. In wit, if by wit be meant the power of perceiving analogies between things which appear to have nothing in common, he never had an equal,—not even Cowley,—not even the author of *Hudibras*. Indeed, he possessed this faculty, or rather this faculty possessed him, to a morbid degree. When he abandoned himself to it without reserve, as he did in the *Sapientia Veterum*, and at the end of the second book of the *De Augmentis*, the feats which he performed were not merely admirable, but portentous, and almost shocking. On those occasions we marvel at him as clowns on a fair-day marvel at a juggler, and can hardly help thinking that the devil must be in him.

These, however, were freaks in which his ingenuity now and then wantoned, with scarcely any other object than to astonish and amuse. But it occasionally happened that, when he was engaged in grave and profound investigations, his wit obtained the mastery over all his other faculties, and led him into absurdities into which no dull man could possibly have fallen. We will give the most striking instance which at present occurs to us. In the third book of the *De Augmentis* he tells us that there are some principles which are not peculiar to one science, but are common to several. That part of philosophy which concerns itself with these principles, is, in his nomenclature, designated as *philosophia prima*. He then proceeds to mention some of the principles with which this *philosophia prima* is conversant. One of them is this. An infectious disease is more likely to be communicated while it is in progress than when it has reached its height. This, says he, is true in medicine. It is also true in morals; for we see that the example of very abandoned men injures public morality less than the example of men in whom vice has not yet extinguished all good qualities. Again—he tells us that in music a discord ending in a concord is agreeable, and that the same thing may be noted in the affections. Once more he tells us, that in physics the energy with

* *Novum Organum*, Lib. 1, Aph. 86, and elsewhere.

which a principle acts is often increased by the antipraxis of its opposite; and that it is the same in the contests of factions. If this be indeed the *philosophia prima*, we are quite sure that the greatest philosophical work of the nineteenth century is Mr. Moore's 'Lalla Rookh.' The similitudes which we have cited are very happy similitudes. But that a man like Bacon should have taken them for more,—that he should have thought the discovery of such resemblances as these an important part of philosophy,—has always appeared to us one of the most singular facts in the history of letters.

The truth is, that his mind was wonderfully quick in perceiving analogies of all sorts. But, like several eminent men whom we could name, both living and dead, he sometimes appeared strangely deficient in the power of distinguishing rational from fanciful analogies,—analogies which are arguments from analogies which are mere illustrations,—analogies like that which Bishop Butler so ably pointed out between natural and revealed religion, from analogies like that which Addison discovered between the series of Grecian gods carved by Phidias, and the series of English kings painted by Kneller. This want of discrimination has led to many strange political speculations. Sir William Temple deduced a theory of government from the properties of the pyramid. Mr. Southey's whole system of finance is grounded on the phenomena of evaporation and rain. In theology this perverted ingenuity has made still wilder work. From the time of Irenæus and Origen, down to the present day, there has not been a single generation in which great divines have not been led into the most absurd expositions of Scripture, by mere incapacities to distinguish analogies proper,—to use the scholastic phrase—from analogies metaphorical.* It is curious that Bacon has himself mentioned this very kind of delusion among the *idola specus*; and has mentioned it in language which, we are inclined to think, indicates that he knew himself to be subject to it. It is the vice, he tells us, of subtle minds to attach too much importance to slight distinctions;—it is the vice, on the other hand, of high and discursive intellects to attach too much importance to slight resemblances; and he adds, that when this last propensity is indulged to excess, it leads men to catch at shadows instead of substances.†

Yet we cannot wish that Bacon's wit had been less luxuriant. For,—to say nothing of the pleasure which it affords,—it was in the vast majority of cases employed for the purpose of making obscure truth plain—of making repulsive truth attractive—of fixing in the mind forever truth which might otherwise have made but a transient impression.

The poetical faculty was powerful in Bacon's mind; but not, like his wit, so powerful as occasionally to usurp the place of his reason, and to tyrannize over the whole man. No imagination was ever at once so strong and so thoroughly subjugated. It never stirred but at a signal from good sense. It stopped at the first check from good sense. Yet though disciplined to such obedience, it gave noble proofs of its vigor. In truth, much of Bacon's life was passed in a visionary world,—

amidst things as strange as any that are described in the 'Arabian Tales,' or in those romances on which the curate and barber of Don Quixote's village performed so cruel an *auto da-fé*,—amidst buildings more sumptuous than the palace of Aladdin,—fountains more wonderful than the golden water of Parizade,—conveyances more rapid than the hippogryph of Ruggiero,—arms more formidable than the lance of Astolfo,—remedies more efficacious than the balsam of Fierabras. Yet in his magnificent day-dreams there was nothing wild,—nothing but what sober reason sanctioned. He knew that all the secrets feigned by poets to have been written in the books of enchanters, are worthless when compared with the mighty secrets which are really written in the book of nature, and which, with time and patience, will be read there. He knew that all the wonders wrought by all the talismans in fable were trifles when compared to the wonders which might reasonably be expected from the philosophy of *fruit*; and, that if his words sank deep into the minds of men, they would produce effects such as superstition had never ascribed to the incantations of Merlin and Michael Scot. It was here that he loved to let his imagination loose. He loved to picture to himself the world as it would be when his philosophy should, in his own noble phrase, 'have enlarged the bounds of human empire.*' We might refer to many instances. But we will content ourselves with the strongest—the description of the 'House of Solomon' in the 'New Atlantis.' By most of Bacon's contemporaries, and by some people of our time, this remarkable passage would, we doubt not, be considered as an ingenious rhodomontade,—a counterpart to the adventures of Sinbad or Baron Munchausen. The truth is, that there is not to be found in any human composition a passage more eminently distinguished by profound and serene wisdom. The boldness and originality of the fiction is far less wonderful than the nice discernment which carefully excluded from that long list of prodigies every thing that can be pronounced impossible; every thing that can be proved to lie beyond the mighty magic of induction and of time. Already some parts, and not the least startling parts, of this glorious prophecy have been accomplished, even according to the letter; and the whole, construed according to the spirit, is daily accomplishing all around us.

One of the most remarkable circumstances in the history of Bacon's mind, is the order in which its powers expanded themselves. With him the fruit came first and remained till the last: the blossoms did not appear till late. In general, the development of the fancy is to the development of the judgment what the growth of a girl is to the growth of a boy. The fancy attains at an earlier period to the perfection of its beauty, its power, and its fruitfulness; and, as it is first to ripen, it is also first to fade. It has generally lost something of its bloom and freshness before the sterner faculties have reached maturity; and is commonly withered and barren while those faculties still retain all their energy. It rarely happens that the fancy and the judgment grow together. It happens still more rarely that the judgment grows faster than the fancy. This seems, however, to have been the case with Bacon. His boyhood and youth appear to have been singularly se-

* See some interesting remarks on this subject in Bishop Berkeley's 'Minute Philosopher.' Dialogue IV.

† *Nepum Organum*, Lib. 1, Aph. 55.

* 'New Atlantis.'

date. His gigantic scheme of philosophical reform is said by some writers to have been planned before he was fifteen; and was undoubtedly planned while he was still young. He observed as vigilantly, meditated as deeply, and judged as temperately, when he gave his first work to the world as at the close of his long career. But in eloquence, in sweetness, and variety of expression, and in richness of illustration, his later writings are far superior to those of his youth. In this respect the history of his mind bears some resemblance to the history of the mind of Burke. The treatise on the 'Sublime and Beautiful,' though written on a subject which the coldest metaphysician could hardly treat without being occasionally betrayed into florid writing, is the most unadorned of all Burke's works. It appeared when he was twenty-five or twenty-six. When, at forty, he wrote the 'Thoughts on the causes of the existing Discontents,' his reason and his judgment had reached their full maturity; but his eloquence was still in its splendid dawn. At fifty, his rhetoric was quite as rich as good taste would permit; and when he died, at almost seventy, it had become ungracefully gorgeous. In his youth he wrote on the emotions produced by mountains and cascades; by the master pieces of painting and sculpture; by the faces and necks of beautiful women; in the style of a parliamentary report. In his old age, he discussed treaties and tariffs in the most ferid and brilliant language of romance. It is strange that the essay on the 'Sublime and Beautiful,' and the 'Letter to a Noble Lord,' should be the productions of one man. But is far more strange that the essay should have been a production of his youth, and the letter of his old age.

We will give very short specimens of Bacon's two styles. In 1597, he wrote thus:—'Crafty men condemn studies; simple men admire them: and wise men use them; for they teach not their own use: that is a wisdom without them, and won by observation. Read not to contradict, nor to believe, but to weigh and consider. Some books are to be tasted, others to be swallowed, and some few to be chewed and digested. Reading maketh a full man, conference a ready man, and writing an exact man. And therefore if a man write little, he had need have a great memory; if he confer little, have a present wit; and if he read little, have much cunning to seem to know that he doth not. Histories make men wise, poets witty, the mathematics subtle, natural philosophy deep, morals grave, logic and rhetoric able to contend.' It will hardly be disputed that this is a passage to be 'chewed and digested.' We do not believe that Thucydides himself has any where compressed so much thought into so small a space.

In the additions which Bacon afterwards made to the 'Essays,' there is nothing superior in truth or weight to what we have quoted. But his style was constantly becoming richer and softer. The following passage, first published in 1625, will show the extent of the change:—'Prosperity is the blessing of the Old Testament; adversity is the blessing of the New, which carrieth the greater benediction and the clearer evidence of God's favor. Yet, even in the Old Testament, if you listen to David's harp you shall hear as many hearse-like airs as carols; and the pencil of the Holy Ghost hath labored more in describing the afflictions of Job than the felicities of Solomon. Prosperity is not with-

out many fears and distastes; and adversity is not without comforts and hopes. We see in needle works and embroideries it is more pleasing to have a lively work upon a sad and solemn ground, than to have a dark and melancholy work upon a lightsome ground. Judge therefore of the pleasure of the heart by the pleasure of the eye. Certainly virtue is like precious odors, most fragrant when they are incensed or crushed; for prosperity doth best discover vice, but adversity doth best discover virtue.'

It is by the 'Essays' that Bacon is best known to the multitude. The *Novum Organum* and the *De Augmentis* are much talked of, but little read. They have produced indeed a vast effect on the opinions of mankind; but they have produced it through the operations of intermediate agents. They have moved the intellects which have moved the world. It is in the 'Essays' alone that the mind of Bacon is brought into immediate contact with the minds of ordinary readers. There, he opens an exoteric school, and he talks to plain men in language which every body understands, about things in which every body is interested. He has thus enabled those who must otherwise have taken his merits on trust to judge for themselves; and the great body of readers have, during several generations, acknowledged that the man who has treated with such consummate ability questions with which they are familiar, may well be supposed to deserve all the praise bestowed on him by those who have sat in his inner school.

Without any disparagement to the admirable treatise *De Augmentis*, we must say that, in our judgment, Bacon's greatest performance is the first book of the *Novum Organum*. All the peculiarities of his extraordinary mind are found there in the highest perfection. Many of the aphorisms, but particularly those in which he gives examples of the influence of the *idola*, show a nicety of observation that has never been surpassed. Every part of the book blazes with wit, but with wit which is employed only to illustrate and decorate truth. No book ever made so great a revolution in the mode of thinking—overthrew so many prejudices—introduced so many new opinions. Yet no book was ever written in a less contentious spirit. It truly conquers with chalk and not with steel. Proposition after proposition enters into the mind,—is received not as an invader, but as a welcome friend,—and though previously unknown, becomes at once domesticated. But what we most admire is the vast capacity of that intellect which, without effort, takes in at once all the domains of science,—all the past, the present, and the future,—all the errors of two thousand years,—all the encouraging signs of the passing times,—all the bright hopes of the coming age. Cowley, who was among the most ardent, and not among the least discerning followers of the new philosophy, has, in one of his finest poems, compared Bacon to Moses standing on Mount Pisgah. It is to Bacon, we think, as he appears in the first book of the *Novum Organum*, that the comparison applies with peculiar felicity. There we see the great law-giver looking round from his lonely elevation on an infinite expanse; behind him a wilderness of dreary sands and bitter waters in which successive generations have sojourned, always moving, yet never advancing, reaping no harvest and building no abiding city; before him a goodly land, a land of promise, a land flowing with milk and honey. While

the multitude below saw only the flat sterile desert in which they had so long wandered, bounded on every side by a near horizon, or diversified only by some deceitful mirage, he was gazing from a far higher stand, on a far lovelier country,—following with his eye the long course of fertilizing rivers, through ample pastures, and under the bridges of great capitals,—measuring the distances of marts and havens, and portioning out all those wealthy regions from Dan to Beersheba.

It is painful to turn back from contemplating Bacon's philosophy to contemplate his life. Yet without so turning back it is impossible fairly to estimate his powers. He left the University at an earlier age than that at which most people repair thither. While yet a boy he was plunged into the midst of diplomatic business. Thence he passed to the study of a vast technical system of law, and worked his way up through a succession of laborious offices to the highest post in his profession. In the meantime he took an active part in every Parliament; he was an adviser of the Crown; he paid court with the greatest assiduity and address to all whose favor was likely to be of use to him; he lived much in society; he noted the slightest peculiarities of character and the slightest changes of fashion. Scarcely any man has led a more stirring life than that which Bacon led from sixteen to sixty. Scarcely any man has been better entitled to be called a thorough man of the world. The founding of a new philosophy, the imparting of a new direction to the minds of speculators,—this was the amusement of his leisure, the work of hours occasionally stolen from the Woolsack and the Council Board. This consideration, while it increases the admiration with which we regard his intellect, increases also our regret that such an intellect should so often have been unworthily employed. He well knew the better course, and had, at one time, resolved to pursue it. 'I confess,' said he in a letter written when he was still young, 'that I have as vast contemplative ends as I have moderate civil ends.' Had his civil ends continued to be moderate, he would have been, not only the Moses, but the Joshua of philosophy. He would have fulfilled a large part of his own magnificent predictions. He would have led his followers, not only to the verge, but into the heart of the promised land. He would not merely have pointed out, but would have divided the spoil. Above all, he would have left not only a great, but a spotless name. Mankind would then have been able to esteem their illustrious benefactor. We should not then be compelled to regard his character with mingled contempt and admiration,—with mingled aversion and gratitude. We should not then regret that there should be so many proofs of the narrowness and selfishness of a heart, the benevolence of which was yet large enough to take in all races and all ages. We should not then have to blush for the disingenuousness of the most devoted worshipper of speculative truth,—for the servility of the boldest champion of intellectual freedom. We should not then have seen the same man at one time far in the van, and at another time far in the rear of his generation. We should not then be forced to own, that he who first treated legislation as a science was among the last Englishmen who used the rack,—that he who first summoned philosophers to the great work of interpreting nature was among the last Englishmen who sold justice. And we should conclude our

survey of a life placidly, honorably, beneficently passed, 'in industrious observations, grounded conclusions, and profitable inventions and discoveries,'* with feelings very different from those with which we now turn away from the checkered spectacle of so much glory and so much shame.

* From a letter of Bacon to Lord Burleigh.

JOURNAL

OF A TRIP TO THE MOUNTAINS, CAVES AND SPRINGS OF VIRGINIA.

By a New-Englander.

TO CHARLES E. SHERMAN, Esq., of Mobile, Ala.
These fragments of a Diary, kept during a tour made in his society, are respectfully and affectionately inscribed, by his friend and fellow-traveller,
THE AUTHOR.

Virginia! Yet I own
I love thee still, although no son of thine!
For I have climbed thy mountains, not alone,—
And made the wonders of thy valleys mine;
Finding, from morning's dawn till day's decline,
Some marvel yet unmarked,—some peak, whose throne
Was loftier,—girt with mist, and crowned with pine:
Some deep and rugged glen, with copse o'ergrown,—
The birth of some sweet valley, or the line
Traced by some silver stream that murmurs lone:
Or the dark cave, where hidden crystals shine,
Or the wild arch, across the blue sky thrown.

CHAPTER II.

Richmond—Hotels—Ride over the Blue Ridge—Fellow-Travelers—Charlottesville—Monticello—Wirt's "Blind Preacher"—An accident—Warm Springs—The Baths—The Host—A Legend of the Spring—The Nabob's departure—The Mountain excursion—Ladylike seats.

Richmond, Va. July 15, 1835.

I entered Richmond, prepared (from the river view) to be delighted with it; but the landing, and the progress to the Eagle Hotel on Main street, amid huts and hovels, and over a pavement, which formed of stones of all shapes and sizes, seems made to rack one's bones, and for naught else, worked a thorough disappointment in my mind. A walk through the city has convinced me, however, that my first impressions were not erroneous. Richmond is composed seemingly, of an old and new "town," like Edinburg. The lower portion of the city is old, dirty, and in many parts dilapidated. It is the business or mercantile part of the town, and is certainly stirring and active enough. The upper or hill portion, in the immediate vicinity of the Capitol, is, on the other hand, very beautiful. Splendid residences, well laid out streets, delightful walks, a most enchanting prospect of James river, winding its way among wooded shores, like a silver thread crossing an emerald, characterise it as fully deserving all the merit and beauty its citizens and admirers claim for it. The Capitol stands on the highest point of land in Rich-

mond, facing the river, and presenting a most elegant front—a Grecian portico, extending the whole width, the pediment of which is supported by Ionic columns of beautiful material and structure. The entrances to the public halls are at the wings; and those to the offices connected with the government, are in the front basement. The portico forms a splendid promenade. A sentinel, in the uniform of the state, is constantly patrolling the gravel walk that surrounds this building, which contains a celebrated statue of Washington. This work I did not see, as the halls are not now open, and the keeper was not easily accessible. Directly in the rear of the Capitol, is the City Court House—and this is also a fine building of the same material—a hardened stucco—a good imitation of freestone, or granite.*

One should always go the "Powhatan House," on coming to Richmond. It is kept by Mrs. Duvall, and is on the scale of the Tremont House. It is situated on Capitol Hill, and combines all the advantages I have attempted to describe, as peculiarly belonging to that vicinity as a residence. The grounds surrounding the Capitol are always open to the people, who make them a thoroughfare. Approaching the Capitol through them from the lower town, you get a view of the building among the trees, more beautiful than any *coup d'œil* of the kind I ever saw, excepting those which abound from every point of view on the Boston common. Through these walks you reach the "Powhatan House," whence I should at this moment have been writing instead of the Eagle, had not my hack-driver solemnly assured "Mama" that there was no other tavern in the city. Let my fate be a warning to future travellers. Let them think of *Pocahontas*, and go to the *Powhatan*.†

Blue Ridge, July 16.

I packed up yesterday morning, and took stage for the Mountains, in company with Judge Tucker, going to Lewisburg to hold a Court of Appeals, with a fine old specimen of the real Virginia tobacco planter, a half domesticated son of France, who has for some time been teaching his native language in Richmond, and a young South Carolinian, who is going to White Sulphur to pass the vacation of the University of Virginia. The morning was lowering, but soon cleared, and by the middle of the forenoon the day was quite pleasant. The immediate environs of the capital of Virginia are by no means picturesque or attractive, and, although they presented me with a view of several country residences of gentlemen, some of whom are highly distinguished, they disclosed nothing deserving of a particular description. The first part of the ride was passed in that dull, monotonous, reserved style which is characteristic of all unexpected meetings of people from various quarters of the country; but towards noon we had warmed into something very like

* Much of the Court House is built of stone, as the pillars, foundation, corners, cornices, door and window frames, &c.—
[Ed. Mess.]

† The Powhatan still maintains its high character, and the Eagle has much improved. There are also now a number of other extensive and well-conducted houses of entertainment in Richmond. Mrs. Elisey's Virginia House, Mrs. Richardson's, and Mrs. Claiborne's Marshall House, stand very high. The Hotels too, are generally creditable to the city: the Union, Bell, Columbian, and Earley's, are justly quite popular down town, while the Washington and Swan maintain their credit on the hill.—[Ed. Mess.]

an acquaintance with each other. The old planter knew the Judge, the Judge knew *Monsieur*, and *Monsieur* was well acquainted with the student; the way-bill, (which, by invariable custom in these parts, is always carried in a little tin case under the forward seat of the coach,) told the rest, upon being consulted at sly intervals,—and by some means or other, (they manage these things nobly in the "Old Dominion,") ere dinner time, we were all as well acquainted, as if we had known each other for years. The tobacco grower was an original: Virginian to the back-bone, and declared that Judge Tucker ought to be the successor of John Marshall, because he was the only other Judge he knew of in Virginia! He talked of his crops, which he has sold for three years ahead, in Richmond;—of the Anti-Slavery movements at the North—of the comfortable condition of his slaves,—and of Garrison, of whom he seemed to think as the Scots do of "Auld Cloutie." He is of the firm opinion that G. could not possibly get through this part of the country alive. The old gentleman left us before our arrival at my present quarters, being pressed thereto by an old acquaintance on the road.

The Judge I found to be a gentleman of the old school; easy in his address, though dignified in his manner, as became a judge and a gentleman, upon so short an acquaintance. But all reserve wore off apace, and I discovered him to be what I have ever fancied a Virginian—frank, open, hospitable, cordial and even hearty in his intercourse with those around him. He was very entertaining, full of anecdote, proud of his State, as all his countrymen are, free from sectional prejudices, as all his countrymen are not, and altogether the most agreeable travelling companion it has ever been my fortune to encounter. He is a half brother of the late John Randolph of Roanoke, and connected by marriage with several of the principal families in Virginia. He is an honest, worthy, upright man, a good constitutional lawyer, an intelligent, discriminating, and experienced judge, and although by reason of the arduous nature of his official duties he is not an active politician, yet he is well known in this section of the country, as a profound venerator of our constitution, devotedly attached to the institutions of his country, and to the Union; and in short, as a politician of the Washington school. Easy in his address, affable, accessible, and agreeable to strangers, gentlemanly in manner, generous and hospitable in feeling, he adds all the private virtues possessed by the late Chief Justice, to the same devoted attachment to his profession, the same reverence for the law and the constitution, and the same unwearied research into their nature, and the means of their perpetuation and proper administration. I write here from experience and common fame. A journey of some days in his society, and the universal accord of his fellow-citizens, afford me the means of bearing this willing, though weak tribute to his virtues in private and public life.

The most amusing specimen of a true Frenchman I have ever met was *Monsieur H*—, my other travelling companion. He was a perfect bibliomaniac. Not a book was alluded to, that he did not instantly say 'I have it!' and the merits of which he did not proceed immediately to discuss; and not only did he pretend to an intimate knowledge of the contents, but in almost

every instance, of the author also of the work alluded to. Among others of his whims, he said he had in his possession as many as a hundred and fifty volumes of *American poetry*! And on our asking him what he intended to do with them, he told us he was going to Paris ere long, and intended to present them to some public library there. What an unanticipated apotheosis is this, for the sixteen and thirty-two-mos of American bards, with which our prolific press has so long been teeming. Next to France, *Monsieur* thinks very highly of America, and believes Benjamin Franklin has done more for our land than George Washington. He diverges shortly from our onward route, to view the natural bridge and the caves of Virginia. He is a comical little genius.

We had a fine road, a fine driver, and an elegant new coach, as our comforts to-day,—offsetting which—for all pleasure is dashed with pain—we were called to encounter the most sudden and violent storm of rain and hail it was ever the lot of a Virginian, (so said the planter,) to abide. It streamed down in torrents from the thickening clouds, from noon to sunset. The tobacco grounds, the corn, and wheat were deluged, and the little fordable streams that occasionally crossed our path were swelled to a formidable height. At about an hour before sunset, we came to the “Little Bird” river, which we all agreed must be impassable, and after an hour’s parley, the driver, who was conscientious on the score of Uncle Sam’s bags, gave in, and we went back a mile to a small farm-house, where an acquaintance of our tobacco raiser resided. He hospitably provided us with a good supper, and spread bedding for us upon the floor of the best room in his humble cabin, and there, Judge, Planter, Student, *Monsieur*, Driver, and I, turned in *en masse*, and slept soundly till the moon rose. At about two this morning, we again set off, found the stream passable, and by breakfast time discovered that after all, we were only about four hours behind our time of arrival at the usual place of stopping. Here, (the morning being fine,) we had a splendid first view of the Blue Ridge,—the first chain or range of the Alleghanies which the traveller from the North approaches. A blue hazy mist hung over them, not concealing them in the least degree, but forming a thin transparent veil, through which their regular slope and wooded sides were beautifully disclosed. I found the Judge an invaluable aid in pointing out the best views, the most pleasing prospects, and the most picturesque points of view, from which the landscape could be observed. Interspersed with all his descriptions of natural scenery, and the different localities through which we passed, he delighted us by the narration of several personal anecdotes, which were indeed quite amusing, as well as strikingly illustrative of the country. We passed Charlottesville, the seat of the University of Virginia, and Monticello, the residence of Jefferson, both of which we admired as much as the blending of all orders of architecture in the one, and the elevated location of the other, would permit. The present proprietor of Monticello, is not a favorite in that neighborhood—his improvements on the estate are pronounced as tasteless, and his rules and regulations as to the admission of visitors, pompous and absurd. The University is a collection of brick buildings, forming a square; on one side of which are the residences

of the faculty, and the *cabins* or dormitories of the students,—and at the head of which is the great hall containing the library, and the recitation rooms.

This is perhaps as beautiful a structure as could be made of red brick. Its portico is ornamented with columns of the Corinthian order, while the piazzas of the lateral buildings have those of the Doric and Ionic orders. This mingling of architecture produces an *outré* and unpleasing effect upon the eye of the observer, and is regarded universally as a failure to produce what its founder intended it to be, the finest building in Virginia. This institution is now in a flourishing condition. We parted with our amusing French companion here;—and took up a gentleman from Mississippi, and another from Southern Virginia, returning home by the way of the Sulphur Springs.

Our ride to-day has been delightful. We have been passing through a rich and productive country, and the fine crops of corn, and grain, and grass,—the splendid foliage of vigorous forests, in which are observable all varieties of trees, common and rare, the well built and well stocked farms, with here and there a country seat, situated in the midst of plenty and high cultivation, have all combined to render the prospect pleasing in the highest degree. During the afternoon, we have been constantly ascending the first hills of the Blue Ridge, and are now quietly settling ourselves to repose, with an assurance of more lovely prospects and more rich enjoyments on the morrow.

Warm Springs, July 17.

The day has been very fine, and my ride among these picturesque mountains more charming than I can describe. The prospects on all sides of my path have been varied and enchanting. The hills forming the Blue Ridge, the South River Range, and the Warm Spring Mountains, are undulating and woody, and enclose the traveller in a beautiful succession of well cultivated intervals, through which runs a turnpike road, smooth, well graduated, and level, for fifty or sixty miles. I know no better roads in New England than those from Charlottesville to this place have proved.

We have heard all along the road that the White Sulphur Springs are overflowing with visitors, and divers plans entertained us as we rode on, having for their object some relief for ourselves, who were going to that place first. Major M——, whom we took up this morning, and who saw service in the last war, was for erecting a regular camp, cantonment, or bivouac on the spot, sending out regular foraging parties, and bidding defiance to the chances of our deprivation of bed and board, that seemed to be threatening us. But the majority of our party decided to wait awhile at the Warm Springs, which comes first upon the road, and after spending some time there, and bathing in those mild waters, to pursue our way to the Hot, and afterwards to look in upon the denser crowd at the White Sulphur.

This afternoon we passed the house of Mr. Waddell, the son of the celebrated Blind Preacher, so pathetically described by Mr. Wirt in his *Letters of a British Spy*. I looked at him with deep interest, as he was pointed out to me, standing on his door step, apparently a wealthy and enterprising farmer. Pursuing our way, we were suddenly alarmed by the breaking of the perch

of our stage coach, and were obliged to walk about a mile to have it repaired. This was done at a farm house in the possession of an honest Virginian, who made great boast as we walked along together, (for he was near, at the happening of the accident,) of his being able to do *any thing*. By his aid we were soon again on our way, which carried us through mountain gaps, and over mountain tops, along a road every moment increasing in charming prospects, until we had attained the last of the range to be passed to-day. From its summit we looked down into a well cultivated valley, near the centre of which was a neat settlement, gathered around the *Warm Springs*. Here we stopped, and parting company with the Judge, the Major, and the Student, who went to the next county, we quietly settled ourselves down in this haven of rest, and, as we hope, health, delighted that we had attained such an enviable stage in our long journey.

I have already taken one bath in these celebrated waters. At a little distance from the Hotel is a hexagonal wooden building, erected over an area of about two hundred yards in circumference, filled with clear spring water, constantly rising and flowing off, leaving about five feet depth in a hollow basin,—the temperature of which is about 97 degrees Fahrenheit. The ladies and gentlemen have every two alternate hours, from sunrise until ten at night, appropriated to them for bathing,—and these hours are almost constantly employed. I cannot describe to you the luxury of bathing in these springs. They seem to be the waters of Eden, clear, soft, transparent, mild, healthful, and full of delight. The sulphate of magnesia forms the basis of their mineral properties, and they are said to be exceedingly efficacious in cases of rheumatism and similar complaints. Of this more hereafter.

Our hotel is kept by a very accommodating landlord by the name of Fry. His establishment is unexceptionable. Good beds, good rooms, good servants, and good fare, (all of them rare enough in this region, and most of them, it is said, very deficient at White Sulphur,) are here to be enjoyed by the traveller. The house stands in the centre of a productive intervale, on every side surrounded by densely wooded mountains, and commanding an extensive and varied prospect, on every hand. There is a great deal of company here,—though less than at the Sulphur Springs, forty-five miles further in the interior. The visitors to this Springs country are not content with the first series on their route, but as it is *the fashion* to go where the crowd is most dense, and the accommodations most scanty,—they pass by this delightful *locality*, and fare worse at the most crammed and crowded resort. Fashion, and a desire to see whatever is to be seen, will doubtless attract us thither also for a few days,—but not until the use of these health-giving waters has given us more strength and nerve than we now possess.

I would advise the visiter to this part of the country to provide himself bottles of water at those places on his journey where it is good, and such as he has been used to drink at home. This can always be made cool and in fitting order to use, as all the stopping places abound with ice. The lime-stone water, which is common from Richmond to the Springs, is apt to have a powerful effect upon the system of one unused to it;—and to its effects I attribute a violent illness to which I

have been subjected ever since my arrival at this place. There is no deficiency of the pure element here, however,—a perennial spring of freestone water constantly flowing from a spring of unequalled coolness and purity.

July 18.

The gray-haired keeper of the Great Bath entertains me at times with his account of old days in Virginia,—the incidents which he can remember as happening during the revolution and the first Presidency,—anecdotes of Washington and Jefferson,—descriptions of the great men he has seen and known, or heard of and never seen—and legends of his own infantile years, that come to him as he chatters about things and times that are nearer, until he is at length in *the old man's element*,—and while I float quietly on *mine*, he sits beside me and rocks to and fro, as if inspired, upon *his*. In one of those moods, this morning, he told me of the discovery of the spring which was bubbling up around me, and from the clear waters of which I was gathering health and strength, and freedom from pain. I cannot repeat the old man's very words; but nearly thus his legend went:—

A young Indian, more than two centuries ago, was coming from the western valley of the great Appalachian chain of mountains, towards the waters of the east, that opened into the beautiful bay whose branches now touch the strands of some of the mightiest marts of a nation that was not then in existence. He had never trodden that path before, and nothing but the pride of youth which would not brook that his brethren of other tribes should triumph over him as their inferior in adventure, had sustained his manly heart so far; for he had come, since the rising sun first touched, that day, the mighty peaks of the Alleghanies, from the vales that lay at their feet on the west. He was going to carry the voice and vote of a powerful nation to the council-fire that was kindling on the banks of the great water, and he felt shame at the recurrence of the idea that the place of the Young Appalachian Leopard could be vacant. But the night winds beat coldly around him, and his way was dark. There had been rains, and the earth was damp and swampy; and no grass, or fern, or heather were at hand with which to make a bed in the bosom of the valley where he stood. He had not strength to climb the near range of mountains that threw up their summits before him, as if to shut out all hope that he could accomplish his ardent desire. Weary, dispirited, and ready to despair, he came suddenly upon an open space among the low underwood that covered the valley where he was wandering, and upon looking narrowly, he observed that it was filled with water. He could see the clear reflection of the bright evening star that was just declining to her rest, and that was peeping into the fountain,

“Like a bride full of blushes, just ling'ring to take
A last look in her mirror, at night ere she goes.”

By this translucent reflection he could perceive that the water was clear, and its depth he could discern by the pebbles that glistened in the starlight from the bottom. He saw too that the water was continually flowing off, and supplying a stream that ran rippling away among the roots of the old oaks that surrounded the spot—and as he stooped to taste the liquid element, he found it warm as if inviting him to relax his chilled limbs by

bathing in its tepid bosom. He laid aside his bow and quiver, unstrung his pouch from his brawny shoulder, took off his moccasins, and plunged in. A new life invigorated his wearied spirit, new strength seemed given to his almost rigid nerves; he swam, he dived, he lay prostrate for hours upon the genial waves, in a sort of dreamy ecstasy of delight; and when the first dawn of day broke over the rock-crowned hill, at the foot of which the Spring of Strength lay enshrined, the Young Leopard came forth from his watery couch, and donning his simple array, strode proudly up the mountain, "where path there was none." He was "a young giant rejoicing to run his course,"—full of new fire and vigor he manfully sped on his way—and upon the eve of that day, when the chiefs and the sons of chiefs were seated around the solemn council fire, no one of them all was found more graceful in address, more commanding in manner, more pleasing in look, and more sagacious in policy, than the *Young Appalachian Leopard*, who bathed in the *Spring of Strength*.

* * * * *

July 21.

The life of an invalid at a watering place is dull and monotonous enough, if he be left to himself, without books, without acquaintance, and without the power to brave all weathers in pursuit of amusement. The first a sensible traveller will always carry with him,—the second such a one can never be at a loss to find, and, as to the latter, he must seek in the other two resources for that which shall stand him in its stead.

The varied scene that may be viewed from my landlord John Fry's long piazza, any fair morning or evening, does not comprehend alone a prospect of hills and vallies,—of rocks and trees, and gushing springs, but there is mingled in the view a study, more interesting while it lasts, and perhaps more useful in the lessons it teaches. I have just returned from a listless saunter along the colonnade, where I have been watching the departure of a Georgia gentleman with his family for the North. He certainly presented the most curious specimen of that mixed *genus* of gentleman and jockey which may often be observed among our countrymen, it has ever been my lot to encounter.

At an early hour in the morning, a phaeton was brought up to the door by a black, (without horses,) and underwent the process of loading. Trunks, bandboxes, bundles, umbrellas, *et id omne genus*, were nicely stowed away in every nook,—when up comes another black dragging a large barouche, doomed to undergo the same process of stuffing. The boys and negroes assemble round, one by one, and squad by squad, displaying all that curiosity for which youth and Yankees are renowned. The little nabob at length issues forth from his breakfast, and with his own hands brings out a natty pair of black colts he had been buying as he came along: they were not broken to harness, and were to be led behind the barouche and phaeton. Mark the glee with which he shows them off,—he pats them, trots them out before the assembled gaping multitude,—and

"More true joy Marcellus feels,
Than Cæsar, with a Senate at his heels!"

The colts are admired,—the taste of their purchaser applauded, and they are confided to the care of the attendant satellites, who feel proud of the honor of being permitted to hold them by the halter. In the

meantime, the horses are harnessed in pairs, but singly and with great deliberation, to the respective vehicles: each in turn, by couples, and collectively, are criticised, and praised, and appraised, and curiosity stands on tiptoe to see what is coming next.—Behold another branch of the cavalcade approaches! Three horses, saddled and bridled, champing the rein, reproving delay, and ready to claim their proportion of the day's glory. After due time has been given to admire the new comers sufficiently, the lord of the whole approaches the barouche with an air of half-subdued mysteriousness, opens the box, and takes thence a something that baffles the curiosity of the most knowing. What is it? What can it be? Unheeding the commotion he has raised, our Georgian proceeds to screw the non-descript article upon the top of one of the saddles of the last arrived horses, and to exchange the left stirrup for a shorter and a lighter one: and presto! a side-saddle stands revealed to the wondering gaze of stupified mankind.

The preparations are complete. The laudable curiosity of the crowd has been raised to the highest possible point. Tom has seated himself on the box of the phaeton, and Bill upon the dicky of the barouche. The cigar is stuck between our hero's teeth,—his pretty wife is lifted on the transformed saddle,—two "friends of the family" mount the remaining two, the nurse and baby are hoisted with the baggage into the barouche,—the planter takes his most confidential crony with him into the phaeton, and all dash down the hill before the house together, as fine a cavalcade as any since the days of Gilpin. The crowd disperse, the piazza becomes deserted,—the bad points of the horses, the prominent faults and peculiarities of their owner, and the imperfections, real and imaginary, of the whole concern, seem one by one to come most marvellously to light,—and the voices loudest but now in praise, are swiftest and most ingenious in censure. Soon, however, the whole thing is forgotten: another nabob will come among the same crowd, sport his horses, his jests, his bets, and his purse,—move the sluggish waters of idle curiosity, till they run in waves mountain-high,—and in his turn dash off, down that very hill, to leave them once more to subside. *Telle est la vie!*

To a dweller at a watering-place no incident is really trifling; and the parting array of a Southern planter from the piazza of a mountain inn is not a scene to be forgotten suddenly.

July 22.

Believing that I may now venture to speak *ex cathedra* upon the nature, character and virtues of the Warm Springs, at which I have been for some days sojourning, I shall attempt to journalise some idea of this most delicious bath.

You enter the village formed by the accidental collocation of some six or eight residences, (of which that of the proprietor of the hotel, Mr. Fry, is the principal) over a mountain called after the Springs, embedded at its feet. The road is perfect: being skilfully graded, and as smooth as if McAdamized. The gentleman of Boston who takes a horseback ride, upon an afternoon, over the mill-dam, is not more highly favored as to the road, than is the traveller upon this turnpike across the Alleghanies. The entrance to this little village is delightful. As you wind around the descending path, you catch glimpses of the white colonnade running the

entire length of the hotel, from which the residents, in their turn, watch the approaching carriage or cavalcade, as it occasionally appears among the masses of foliage that for the most part obstruct the view. Arriving, you experience a most gentlemanly and cordial reception from the very polite host, who accommodates his guests to the extent of his house, in the first place, and afterwards fills up in succession the several rows of wooden and brick cabins, that are built in different parts of his grounds,—being files of small sleeping rooms, about eight feet high, and as many wide. The table is of the very best description, far surpassing, I am forewarned, any thing to be obtained farther on.

A little below the house is the Bath; being a wooden shed, covering a basin five feet in depth, and nearly forty feet wide. The water is perfectly pellucid, and constantly flows off as it attains the depth described. This water is about 98 degrees above Fahrenheit, and is not affected by the weather. The whole lot of ground in the centre of which this pool rises, is filled with these little bubbling springs, and an area of many similar diameters could be easily formed, if desired, on the spot. At present, the bath is covered by a miserable hovel.* It should be replaced by one of granite or marble; and doubtless some such improvement will occur to its enterprising proprietor as proper to be bestowed upon it. I believe one of his neighbors, who claims a right to share the waters with him, as property under a pretended grant from the vender of the land to certain common purchasers, is talking somewhat sharply just now, about an intended suit to recover his alleged share. When that question is decided, if in favor of the new claimant, competition will secure improvements;—if against the suit—John Fry is the very man (all obstacles removed,) to “go ahead!”

A bath in the Warm Springs is beyond all description luxurious. No eastern monarch, whose appetite and love of luxury ever quickened his ingenuity to discover new delights, can command one so transcendent as this. But in order to bear me out in my encomiums, my readers must try it. It is a delightful bath for the strong and healthy,—and by such may be used daily through the year, a half hour or more at a time. It is useful in chronic and acute rheumatism, dropsy, and in some complaints of the liver. Yet it is not uniformly efficient in cases seemingly alike. It must be taken carefully and under medical advice, by invalids. An analysis of this water shows it to consist of carbonate of lime, sulphate of iron, and sulphate of magnesia.

Such are the Warm Springs of Virginia: and to all who are afflicted with dyspepsia, rheumatism, gout, dropsy, hepatic complaints, and *enxuri*, I would recommend a fair trial of them. To some the trial will yield a perfect cure, to others it will begin a good work to be finished by future carefulness and attention, and to all, the luxury of travelling in a most delightful country, a sojourn in a pleasant valley, unsurpassed in loveliness by that inherited by Rasselas himself, and a constant access to waters that seem to rival those fabled streams, in which to bathe was to banish all pain, to remove all sorrow, and to renew the vigor and freshness of buoyant youth.

*I learn that a more fitting building has since been erected.
1838.—[Author.]

July 23.

A party from the Warm Springs, made the ascent of the mountain in front of our hotel, this morning, prior to our intended departure. The morning was very fine, and promising of much pleasure to the adventurers. Providing ourselves with all the conveyances the neighborhood afforded, including carriages, which could go but half way, and horses, the most sure footed of which could ascend to the summit, we set out after breakfast time, and in a couple of hours attained the Warm Spring Rock, from which a view was presented to our admiring eyes that baffles description. We stood on an elevated rock on the highest peak of the centre Alleghany ridge, the horizon on every hand formed by the blue outline of the distant mountains, hills on hills arising from the base of that on which we were, covered densely with masses of deep rich foliage, excepting in those scattered spots where cultivation was claiming from nature a field for the trial of her skill. The waving cornfields, the ripening grain, “yellow to the harvest,” the shepherd driving his sheep afield, the busy activity of the little village around the spring, were among the features of the scene. The filling up and the coloring must be described by nature herself; words are inadequate to do them justice. After a visit of more than an hour to the Spring Rock, we turned our faces homewards, and, arriving at the dinner hour, were duly complimented by our merry landlord upon the imposing display made by our cavalcade upon the mountain’s brow.

The rock we have just left is the scene, (so goes report,) of a most romantic love adventure, the details of which, at length, would be doubtless delectable to some lady readers, inasmuch as they are literally true and well authenticated. I am no weaver of love tales, however, and must simply hint at a fair southern belle, a youth from the middle country, a ride on gallant steeds up the mountain path, the momentary danger of the lady, and the consequent peril of the gentleman in his successful attempt to save her,—a fall, a swoon, a partial recovery, and the tears of beauty falling upon the cheek of manhood,—the sympathy of fond hearts, declarations, troth-plights, and happy consummation. These hints I leave for the filling-up of any of my readers who may fancy to figure in a “Romance of Real Life,” in the pages of some Ladies’ Magazine.

Another anecdote of the bravery of a southern belle, who boasts of doing many things that no woman ever did before, is related here in connection with the Warm Spring Mountain-rock. Some say it is the above story, in its more veritable shape, and that it more truly describes the wooing and winning of the Amazonian lady alluded to, than the other. But this I deem questionable, if not decidedly fabulous. The belle is said to have ascended, *en cheval*, to the rock that rises out of the peak of the mountain: and attaining this eminence, there stood upon the saddle of her horse, and challenged her cavalier to transcend that feat: on which he instantly stood upon his head on the saddle of his horse. The lady declared herself defeated, and gave the gymnast her fair hand as his reward. I prefer the former version: but this last is quite current here, nevertheless.

I leave this delightful spot, with a party, to-morrow morning, for the White Sulphur. The Hot Springs are next in order, but, by medical advice,—I shall reserve them until my return.

TO MY MOTHER.

Written on Christmas morning, 1837, at Ballston Spa, N. Y.

Wake, mother! wake to youthful glee!
The golden light is dawning.
Wake, mother, wake! and hail with me
This happy Christmas morning!

Each eye is bright with pleasure's glow,
Each lip is laughing merrily;
A smile hath passed o'er winter's brow,
And the very snow looks cheerily!

Hark to the voice of the "wakened day!"
To the sleigh-bells gaily ringing;
While a thousand thousand happy hearts
Their Christmas lays are singing!

'Tis a joyous hour of mirth and love,
And my heart is overflowing;
Come, we will raise our hearts above,
While pure, and fresh, and glowing!

'Tis the happiest day of the rolling year,
But it comes in a robe of mourning;
Nor light, nor life, nor bloom is here,
Its icy shroud adorning!

It comes when all around is dark;
'Tis meet it should so be,
For its joy is the joy of the happy heart,
The spirit's jubilee!

It needeth not the bloom of Spring,
Or Summer light and gladness,
For Love hath spread his blooming wing
O'er Winter's brow of sadness!

'Twas thus He came! a Spirit cloud
His Spirit's light concealing!
No crown of earth, no kingly robe
His Heavenly power revealing.

His soul was love, his mission love,
Its aim a world's redeeming!
To raise its darkened soul above
Its wild and sinful dreaming!

With all his Father's love and power,
The cords of guilt to sever,
To ope a sacred fount of light,
Which flows—shall flow forever!

Then we will hail the glorious day,
The Spirit's new creation!
And pour our grateful feelings forth,
A pure, and warm libation!

Wake, mother! wake to chastened joy,
The golden light is dawning!
Wake, mother! wake, and hail with me,
This happy Christmas morning!

THE HOME OF THE DESOLATE.

A FRAGMENT.

BY C. W. EVEREST.

"How many drink the cup
Of baleful grief, or eat the bitter bread
Of misery! Sore pierced by wintry winds,
How many shrink into the sordid hut
Of cheerless poverty!"

Thompson.

It was night—the storm howled sadly by—and the mother sat in silence by the scanty fire, that warmed and faintly lighted the wretched, dilapidated cottage, once, in brighter days, her happy home! She had divided to her ragged and starving babes the little pittance of bread remaining to her, yet scarcely sufficing to satisfy the mad cravings of hunger! Little thought they that they claimed their mother's all: yet freely was it given, with a silent tear *that it was all!* She hushed their cries—soothed their sorrows—covered them with her tattered mantle—bade them a sad 'good-night'—and returned to her sorrowful vigil.

The night wore away,—and still sat the mother over the fading fire she could not replenish, waiting the coming of him whose returning footsteps once caused a thrill of joy through her bosom, and was hailed with boisterous glee by his little ones. Once, he promised at the altar to love and cherish her, and nobly, awhile, did he redeem the pledge. His cottage was the home of comfort, and his wife and infants divided his love! But ah! how changed! He had become a *Drunkard!* His business was neglected—his home was deserted—and his late return was but the harbinger of woe! He came to curse the innocent partner of his misery as the author of his wretchedness, and his frightened children shrunk away from him, screaming, as from a fiend! Where waits he now? The shadows of night have long darkened the landscape! What delays his return?—Alas! the low haunt which has nightly witnessed the shameful revel, now echoes to his frantic shout! Surrounded by boon companions, he seeks to drown the memory of his sorrows in the bowl: while his wretched, starving, squalid wife still keeps her lonely vigil by her cheerless hearth!

Stillness—solemn stillness, like the grave's, reigns in that dreary habitation: and no sound is heard, save when the fitful sighing of the wintry blast, or the low murmur of her dreaming infants, rouses the watcher from her trance. Then she raises her aching eyes to the dim dial, and with a glance to Heaven, turns to her lonely watch again. But now "the tempest of her feelings has grown too fierce to be repressed"—her bosom heaves with the wild emotions of her soul—and her thin hands seem endeavoring to force back the bursting torrent of her tears!

* * * * *
The clock struck the hour of midnight—and he came as wont! With a fearful oath, he cursed his wife's fond care: and that mother's silent tears, and the low wail of his frightened babes, went up to God for witness!

* * * * *
Would you know the conclusion of the story? Go, ask the jail, the almshouse, and the grave—and they will tell you!

Feb. 9, 1838.

De Saussay wrote a folio volume consisting of panegyrics of eminent persons named Andrew—merely because his own name was Andrew.

PANDEMUS POLYGLOTT.

In the October number of the Blackwood Edinburgh Magazine, there is an amusing article purporting to be an account of the learned Doctor Pandemus Polyglott, and of his extensive erudition. It professes to present to the reader from the manuscript folios of the Doctor, certain remains of the ancient classics, which his diligence has rescued from oblivion, and from which, as he alleges, the plagiarists of later days have taken some of their most exquisite effusions. The reader soon discovers, that the whole is but an ingenious method of offering to the public some very beautiful specimens of Latinity, and of Greek composition; the machinery of Dr. Polyglott's life and labors being designed to render the introduction of them more graceful and interesting. In the Greek version of "Canning's Knifegrinder" there is an amusing betrayal of its character in the translation of the following line:

"Have you not read the Rights of Man by Tom Paine?"

Ολοθα Τομπαίου Μίσητον τὰ χρήστὰ—

where the old champion of the Rights of Man stands forth as a witness, whose veracity will not even be questioned by his foes, of the imposture of the fictitious Grecian bard.

We remember to have seen some years ago a very beautiful Latin version of the modern song "I'd be a Butterfly born in a bower," which was attributed to the pen of a learned English prelate; and all must recollect the excitement, some years past, in regard to one of Mr. Wilde's beautiful effusions, which was translated by some ingenious classic into Greek, and palmed upon the public as the production of an ancient author. We regret that we have not these articles to bind up with the beautiful bouquet which we are about to offer to our readers. We shall ask leave, however, to add to those which are selected from the magazine, two versions which to our imperfect skill in the language, appear to be good Latin.

The first piece of Dr. Polyglott is "The Friend of Humanity and the Knifegrinder," of which we omit however the Greek version, from the deficiency of our press in the necessary type.

SAPPHICS.

SAPPHICA.

THE FRIEND OF HUMANITY AND THE KNIFEGRINDER.

PHILANTHROPUS ET FABER FERRARIUS.—DIALOGUS.

*Friend of Humanity.**Philanthropus.*

Needy Knifegrinder! whither art thou going?
Rough is the road; thy wheel is out of order;
Bleak blows the blast; your hat has got a hole in't,
So have your breeches.

Hinc ita quonam, Faber o egene?
Et via horrescit, rota claudicatque;
Flat notus; rimis petasus laborat,
Tritaque bracca.

Weary Knifegrinder, little know the proud ones,
Who in their coaches roll along the turnpike-
Road, what hard work 'tis crying all day 'Knives and
Scissors to grind O,'

O Faber languens, patet haud superbis,
Appia ut rhedis habet otiantes,
Quid sit ad cotem vocitare cultros
Fissaque ferra.

Tell me, Knifegrinder, how came you to grind knives?
Did some rich man tyrannically use you?
Was it the 'squire? or parson of the parish?
Or the attorney?

Dic, Faber, cultros acuisse quis te
Egit? anne in te locuples tyrannus
Sæviit? terræ dominus? sacerdos?
Causidicusve?

Was it the 'squire for killing of his game? or
Covetous parson for his tithes distraining?
Or roguish lawyer made you lose your little
All in a lawsuit?

Ob feras terræ dominus necatas?
Aut tenax poscens decumas sacerdos?
Lite vel rem causidicus malignè
Abstulit omnem?

Have you not read the 'Rights of Man' by Tom Paine?
Drops of compassion tremble on my eyelids,
Ready to fall as soon as you have told your
Pitiful story.

Nonne nosti 'Jura Hominum' Pani?
Ecce! palpebris lacrymæ tremiscunt,
Inde casuræ simul explicâris
Tristia fata.

*Knifegrinder.**Faber.*

Story! God bless you! I have none to tell, sir;
Only last night a-drinking at the Chequers,
This poor old hat and breeches, as you see, were
Torn in a scuffle.

Fata—Dii magni! nihil est quod edam,
Ni quod hesternâ ut biberem in popinâ
Nocte lis orta; heu! periire braccæ
Atque galerus.

Constables came up for to take me into
Custody; they took me before the justice;
Justice Oldmixon put me in the parish
Stocks for a vagrant.

I should be glad to drink your honor's health in
A pot of beer, if you will give me sixpence;
But for my part I never love to meddle
With politics, sir.

Friend of Humanity.

I give thee sixpence! I will see thee damn'd first,
Wretch, whom no sense of wrongs can rouse to ven-
Sordid, unfeeling, reprobate, degraded, [geance;
Spiritless outcast.

Pacis occurrunt mihi tum ministri,
Meque Prætoris rapiunt ad aulam;
Prætor erronis properat numellâ
Figere plantas.

Jamque gaudebo tibi si propinam
Poculum, tete mihi dante nummum;
Me tamen stringo, neque, pro virili,
Publica curo.

Philanthropus.

An tibi nummum? potius ruinam;
Perdite, ulcisci mala tanta nolens;
Sordide, infelix, inhoneste, prave
Turpis et excora.

The next of Dr. Polyglott's productions, is a monkish version of a little song, in which the closeness of the translation, and the ingenuity of the versification, are conspicuous.

YOUNG LADY.

Child of Earth,
With the golden hair!
Thy soul is too pure,
And thy face too fair,
To dwell with creatures
Of mortal mould,
Whose lips are warm
As their hearts are cold.
Roam, Roam
To our fairy home.
Child of Earth,
With the golden hair!
Thou shalt dance
With the Fairy Queen
O' summer nights
On the moon-lit green,
To music murmuring
Sweeter far
Than ever was heard
'Neath the morning star,
Roam, roam, &c.

DR. POLYGLOTT.

O Terræ puella,
Auricoma, bella,
Mens puraque, et ora
Te vetant decora
Incolere tribus
Mortalium, quibus
Sunt Verba fervoris
At corda rigoria.
Nubiscum vagare,
Fit domus in aere;
O Terræ puella,
Auricoma, bella!
Sis pars chorearum
Cum summa nympharum
In nocte festiva,
Sub Cynthia viva,
Dum Musica tales
Dat sonitus quales
Non quisquam audit
Sub sole qui vivit.

Next comes Waller's Rose,—one of the most beautiful specimens of English poetry, which the Doctor pronounces to be the translation of a Latin poem by Watinstern, a professor of Humanity in the University of Leyden. The Latin translation is not worthy of the English original. It has some blemishes which ought to have been avoided.

WALLER.

Go, lovely Rose,
Tell her, that wastes her time and me,
That now she knows,
When I resemble her to thee,
How sweet and fair she seems to be.
Tell her that's young,
And shuns to have her beauties spied,
That hadst thou sprung
In valleys where no men abide,
Thou might'st have uncommended died.
Small is the worth
Of Beauty from the light retired;
Bid her come forth,
Suffer herself to be desired,
And not blush so to be admired.
Then die; that she
The common fate of all things rare

WATINSTERN.

I, Rosa, purpurei flos jocundissime prati,
Dic cui labe pari tempora meque terit,
Illius laudes tecum peræpe paranti,
Quam pulchra et dulcis visa sit illa mihi.

Dic cui flore datur primo gaudere juvenas
Gratia quæ vero ne videatur avet;
Nescia fortè virum si te genuisset eremus,
Mortem tu laudis nescia passa fores.

Nil valet omnino lucem male passa venustas.
In lucem veniat protenus illa, jube.
Quam petit omnis amor virgo patiatur amorem,
Nec, cum miretur, quis stet in ore rubor.

Tum morere, ut rerum videat communia fata
Rararum, fato conscia facta tuo.

May read in thee;
 How small a part of time they share,
 That are so wonderful bright and fair.
 Yet though they fade,
 From thy dead leaves let fragrance rise,
 And teach the maid
 That goodness Time's rude hand defies,
 And virtue lives when beauty dies.

Parte frui fas est quam parvâ temporis illia,
 Queis tantum veneris tantaque forma datur.

Sed quamvis moriari, tamen post fata peracta
 Qui fuit ante tuis frondibus adsit odor.
 Temnere sic discat Pietatem Temporis arma;
 Vivere Virtutem cum mera Forma perit.

The five last lines are not Waller's. They were added by Kirke White, and though very pretty in themselves, they are altogether incongruous with the tone and character of Waller's lines. His are decidedly light and amatory, while Kirke White's are marked by his grave and moralizing temper.

Next we have a song of old Ben Jonson. "Rare Ben" cuts a figure in his Latin dress, but we think he is much more admirable in his Anglo-Saxon garb.

SONG: BY BEN JONSON.

Take, oh take those lips away,
 That so sweetly were forsworn;
 And those eyes, the break of day,
 Lights that do mislead the morn:
 But my kisses bring again,
 Seals of love, but seals in vain.

Hide, oh hide those hills of snow,
 Which thy frozen bosom bears;
 On whose tops the pinks that grow
 Are of those that April wears;
 But first set my poor heart free,
 Bound in these icy chains by thee.

CARMEN: AUCTORE JOANNE SECUNDO HAGENSI.

Hinc ista, hinc procul amove labella,
 Quæ tam dulcè fuere perjurata;
 Auroræ et radiis pares ocellos,
 Lucas mane novum e viâ trahentes.
 At refer mihi basia huc, sigilla,
 Frustra impressa tamen, sigilla, amoris.

Oh! cela nivis ista colla, cela,
 Ornant quæ gremium tibi gelatum;
 Quorum in culminibus rosæ vigentes
 Sunt quales referunt Aprilis horæ;
 At primùm mea corda liberato,
 His a te gelidis ligata vinclis.

Lastly, we have an exquisite version of the good old Bacchanalian, "The Glasses sparkle on the Board." Dr. Polyglott says the Latin is an original production of Cæsius Bassus. It is hard to say whether the English or Latin is most beautiful.

SONG: THE GLASSES SPARKLE.

The glasses sparkle on the board,
 The wine is ruby bright;
 The reign of pleasure is restored,
 Of ease and gay delight:
 The day is gone, the night's our own;
 Then let us feast the soul;
 Should any pain or care remain,
 Why drown it in the bowl.

This world they say's a world of woe;
 But that I do deny;
 Can sorrow from the goblet flow?
 Or pain from beauty's eye?
 The wise are fools with all their rules,
 Who would our joys control—
 If life's a pain, I say't again,
 Why drown it in the bowl.

That time flies fast the poet sings,
 Then surely 'twould be wise
 In rosy wine to dip his wings,
 And catch him as he flies.
 This night is ours; then strew with flow'rs
 The moments as they roll;
 If any pain or care remain,
 Why drown it in the bowl.

CARMEN: AUCTORE CÆSIO BASSO.

Eu! pocla mensis compositis micant;
 Vini refulget purpureus color;
 Regnant voluptates, feruntque
 Gaudia deliciasque secum.
 Invitat Euhæ! nox; absit dies;
 Indulgeamus nunc genium mero,
 Mergamus et curæ vel atri
 Quod superest cyathos doloris.

Sunt qui gravari tristitia ferunt
 Vitam; sed o! ne credite fabulam—
 An Liber effundit dolorem?
 An Veneris lacrymas ocelli?
 Omnis Catonum copia desipit
 Vinclis volentum stringere gaudia;—
 Si vita fert luctum, sodales,
 Heus iterum! cyathos lavemus.

Poeta labi quàm rapidè monet
 Tempus; quid ergò, quid sapientius
 Quàm spargere in pennis Falernum,
 Cùmque movet celeres morari?
 Hæc nostra nox est; nos quoque floribus
 Spargemus horas usque volubiles;
 Mergemus et curæ vel atri
 Quod superest cyathos doloris.

Here end our extracts from Dr. Polyglott: and now follow the two versions which we proposed to add to them. For the first, we are indebted to our learned friend, Mr. Reynolds*, whose classical taste and finished acquirements are the subject of general commendation. It is the work of a Kerry Latinist.

THE SABINE FARMER'S SERENADE.

Being a newly recovered fragment of a Latin Opera.

I.

'Twas on a windy night,
About two o'clock in the morning,
An Irish lad so tight,
All wind and weather scorning,
At Judy Callaghan's door,
Sitting upon the pailings,
His love-tale he did pour,
And this in part his wailings:
Only say
You'll be Mrs. Brallaghan;
Don't say nay,
Charming Judy Callaghan.

II.

Oh! list to what I say,
Charms you've got like Venus;
Own your love you may,
There's the wall between us.
You lie fast asleep,
Snug in bed a-snoring;
Round the house I creep,
Your hard heart imploring.
Only say
You'll have Mr. Brallaghan;
Don't say nay,
Charming Judy Callaghan.

III.

I've got a pig and a sow,
I've got a sty to sleep 'em,
A calf and a brindled cow,
And cabin, too, to keep 'em;
Sunday hat and coat,
An old gray mare to ride on;
Saddle and bridle to boot,
That you may ride astride on.
Only say
You'll be Mrs. Brallaghan;
Don't say nay,
Charming Judy Callaghan.

IV.

I've got an acre of ground,
I've got it set with praties;
I've got of 'baccy a pound,
I've got some tea for ladies;
I've got the ring to wed,
Whiskey to make us gaily;
I've got a feather bed,
And handsome new shilelagh.
Only say,
You'll have Mr. Brallaghan;
Don't say nay,
Charming Judy Callaghan.

I.

Erat turbida nox
Hora secunda mane,
Quando proruit vox
Carmen in hoc inane;
Viri miseri mens
Meditabatur hymen,
Hinc puellæ flens
Stabat obsidens limen,
Semel tantum dic
Eris nostra Lalage;
Ne recuses sic,
Dulcis Julia Calage.

II.

Planctibus aurem fer,
Venere tu formosior;
Dic hos muros per,
Tuo favore potior!
Voce beatum fac;
En, dum dormis, vigilo,
Nocte obambulans hac
Domum planctu stridulo,
Semel tantum dic
Eris nostra Lalage;
Ne recuses sic,
Dulcis Julia Calage.

III.

Est mihi prægnans sus,
Et porcellis stabulum;
Villula, grex, et rus
Ad vaccarum pabulum;
Feriis cerneris me
Splendido vestimento,
Tunc heus, quam bene te
Veherem in jumento!
Semel tantum dic
Eris nostra Lalage,
Ne recuses sic,
Dulcis Julia Calage.

IV.

Vis poma terræ? sum
Uno dives jugere;
Vis lac et mella, cum
Bacchi succo, sugere?
Vis aquæ vitæ vim?
Plumoso somnum sacco?
Vis ut paratus sim
Vel annulo vel baculo?
Semel tantum dic
Eris nostra Lalage;
Ne recuses sic,
Dulcis Julia Calage.

* Since this paragraph was penned, this accomplished gentleman has paid the debt of nature. His loss to the rising generation will be sorely felt, as he was and had long been the principal classical teacher in the Richmond academy.

V.

You've got a charming eye ;
 You've got spelling and reading,
 You've got, and so have I,
 A taste for gentle breeding ;
 You're rich, and fair, and young,
 As every body's knowing,
 You've got a dacent tongue
 Whene'er 'tis set a-going.
 Only say
 You'll have Mr. Brallaghan ;
 Don't say nay,
 Charming Judy Callaghan.

VI.

For a wife till death,
 I'm willing to take ye ;
 But, och, I waste my breath,
 The devil sure can't wake ye.
 'Tis just beginning to rain,
 So I'll get under cover ;
 To-morrow I'll come again,
 And be your constant lover.
 Only say
 You'll be Mrs. Brallaghan ;
 Don't say nay,
 Charming Judy Callaghan.

We conclude with the following translation of "The Poet's Sigh." It is the work of a tyro, and we are not critics enough to pronounce upon its merits.

THE POET'S SIGH.

BY T. MOORE.

Drink to her who long
 Hath waked the poet's sigh ;
 The girl who gave to song
 A heart that none could buy.

Oh woman's heart was made
 For minstrels' hands alone ;
 By other fingers played,
 It yields not half the tone.

At Beauty's door of glass,
 Where Wit and Wealth once stood,

They asked her which might pass :
 She answered, "He who could."

Wealth tried a golden key,
 But found it would not do ;
 While Wit a diamond brought,
 And cut his bright way through.

The love which seeks a home,
 Where wealth or grandeur shines,
 Is like the gloomy gnome,
 Who dwells in dark gold mines.

But oh ! the poet's love !
 It boasts a brighter sphere ;
 Its native home's above,
 Though woman keeps it here.

Then here's to her who long, &c. &c.

V.

Litteris operam das ;
 Lucido fulges oculo ;
 Dotes insuper quas
 Nummi sunt in loculo.
 Novi quod apta sis
 Ad procreandam sobolem !
 Possides (nesciat quis ?)
 Linguam satis mobilem.
 Semel tantum dic
 Eris nostra Lalage ;
 Ne recuses sic,
 Dulcis Julia Calage.

VI.

Conjux utinam tu
 Fieres, lepidum cor, mi !
 Halitum perdimus, heu,
 Te sopor urget. Dormi !
 Ingruit imber trux—
 Jam sub tecto pellitur
 Is quem crastina lux
 Referet huc fideliter.
 Semel tantum dic
 Eris nostra Lalage ;
 Ne recuses sic,
 Dulcis Julia Calage.

LATIN VERSION.

BY —.

Puellæ poto caræ,
 Cui poeta suspiravit,
 Et auro, quæ, inemptum
 Cor, carmini donavit.

Oh ! fidicinis pro manu,
 Cor fœminæ creatum,
 Enervem edit sonum
 Ab alio modulatum.

Dives, ad fores vitreas,
 Juvenisque solers, stantes,
 Formosæ Aphrodites,
 Et cupide pulsantes,

Rogarunt vehementer,
 Cui liceat introire,
 " Illi," dixit subridens,
 " Qui potest aperire."

Tunc aureo, seram, clave,
 Divite frustra tentante,
 Persecuit cito Juvenis,
 Fulgenti adamanta.

Amor, qui petit domum,
 Auro, gemmis micantem,
 Æmulatur tristem larvam,
 Fodinam habitantem.

At sedes effulgentes,
 Habet amor poetarum,
 Hic, fœminâ moratus,
 Sed Indigena stellarum.

Puellæ tunc bibemus, &c. &c.

TO THE MOUNTAIN VIOLET.

Yes! ye are beautiful; and on your clear
 Blue tablets I can trace the smile of Heaven;
 And ye are lovelier for the love I bear
 Him by whose gentle hand and kind ye were given;
 But oh! ye are not the violets of mine own,
 My 'sunny south,' whose fragrant breath steals o'er
 Our hearts'-heart, like an unforgotten tone
 From lips whose music we shall hear no more!
 Painfully sweet, but shedding in its flight
 The soothing balm of hope upon the soul—
 Chasing away the gloom of sorrow's night,
 And bidding the dark clouds of grief all backward
 roll!

But thou'rt as fair as they, and yet I gaze
 Upon thy beauty with an unmoved heart—
 For ye are scentless, and no fragrance strays
 From your bright leaves, its sweetness to impart.
 Alas! ye are too like the hopes they fain
 Would kindle in me of returning health—
 Of energies renewed—disease and pain
 'Whelmed in the ocean of life's hoarded wealth!
 I listen to their tales of love and hope,
 And life and joy, and all things fair and bright,
 Even as I gaze upon the sunny slope,
 Where ye, fair violets, repose in light;
 My eye drinks in your beauty, but there breathes
 No fragrance o'er me from your purple wreaths.

I listen to them calmly, for I know
 They fain would keep me with them yet awhile—
 But when the flower is crushed, what hand below
 Can heal its bruised leaves—restore its smile?
 In vain, in vain, the healing balm is poured—
 In vain affection's tears bedew its bed—
 E'en tho' its bloom a moment be restored,
 'Tis like a pall empurpled o'er the dead;
 And though my cheek bright as that shroud may glow,
 The worm is at the heart, and all is dark below!

LETTER OF LAFAYETTE.

TO MR. T. W. WHITE.

Washington, Jan. 18, 1838.

Sir,—I send you a copy of a letter, addressed during the Revolutionary war by General Lafayette to General Morgan, which I made in July last, from the original in the National Museum of the city of Mexico. How this letter found its way to Mexico, I could not learn; but I was induced to suppose that it may have been carried thither by General Wilkinson, who died in that city about ten or twelve years ago.

The letter contains nothing of manifest importance; yet as it was written just after the retreat of Cornwallis to Portsmouth, and just before his occupation of Yorktown, it may perhaps serve to throw some additional light on the proceedings of that most interesting period of our history.

I am, sir, your obed't serv'nt,

R. G.

BRIG'G GEN. MORGAN—Goode's Bridge.

Malvern Hill, 24th July, 1781.

Dr. Sir,—I am very sensible of the peculiar circumstances of the gentlemen from Maryland, and how much they sacrifice by remaining with the army. I said to you that I wished to dismiss them as soon as possible; and for this purpose, I am making up a corps, which I expect to have complete in a few days, and will send it to you, when they will be able to go home. I beg you to present my compliments to them, and am,

Dr. sir, your ob. servt.

LAFAYETTE.

Brig. Gen. Morgan.

FORGET ME!

Forget me? No! when pleasure fills
 Her goblet to the brim,
 And mirth and song, like sparkling rill,
 No breath of care may dim,
 Then withered joys, and love betrayed,
 And many a fond word spoken,
 And many a hope all lowly laid,
 And many a bright charm broken,
 Like spectres from the buried past,
 Shall mem'ry summon up,
 And from his fevered lip shall cast
 The yet untasted cup!

Forget me? When the tempest's might
 Dissolves itself in rain,
 And human power shall reunite
 Those scattered drops again.
 Forget me? No! in life's dark bowl
 There's no oblivious wave,
 No Lethe for the guilty soul,
 Save that within the grave:
 And oh! how oft the weary breast
 Would seek from mem'ry's gloom,
 A refuge in the dreamless rest
 That dwells within the tomb!

SENTIMENT.

FOR AN ALBUM.

I breathe thee the lay of another,*
 When doomed with a fair friend to part;
 That lady he loved, as a brother,
 And thus was the song of his heart:
 "I present thee the prayer of a rover—
 That thy happiness never may end,—
 That thy lord may be a way thy lover,
 As I will be always
 Thy friend."

C. W. E.

* Moore—I believe.

SOUTHERN LITERARY MESSENGER.

VOL. IV.

RICHMOND, APRIL, 1838.

No. IV.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

MR. JEFFERSON.

We feel it to be our duty to publish the following Review of an article in "The New York Review and Quarterly Church Journal," of March, 1837. The person to whom it relates has filled a large space in the eyes of his countrymen. The New York Review is conducted with no little ability, and makes a great figure in the Republic of Literature; and the Reviewer, who has taken up arms, in defence of Mr. Jefferson, against the attacks of the New York Review, appears to be a champion of no ordinary power. All together, the article comes commended to us in a manner, which does not permit us to deny the use of our columns—and it will probably attract a large share of the attention of our readers. We admit it to be somewhat *spicy* in its composition; but if the New York Reviewer should feel himself under any obligation to make a reply, we will cheerfully extend to him the hospitality of our house. Our columns are open to him; and they are at his service. The Editor of a Periodical like this is not at liberty to consult his own feelings, in what he excludes or admits: but having admitted such an article as the following, it is his duty to render justice by admitting a reply.

We mean not to play the Critic upon the two Reviewers. The attack and the defence are both before the public tribunal; and the reader must judge for himself. The reviews of Mr. Jefferson's moral principles and his intellectual character, will be reviewed in turn by the public. We mean not to decide between them. But there is one circumstance alleged by the New York Reviewer in relation to Mr. Jefferson, upon which we would offer a few explanatory remarks, though our own Reviewer has nearly exhausted the subject. It is a curious literary problem, whether Mr. Jefferson in preparing his own Declaration of Independence of July 4, 1776, did not commit a plagiarism upon the Declaration of Independence adopted at Mecklenburg, North Carolina, on the 20th May, 1775. It has already given rise to much discussion. Mr. Joseph Seawell Jones of North Carolina has made it the theme of some severe strictures on the Virginia politician. Mr. Tucker, in his "Life of Thomas Jefferson," has defended him against the charge of plagiarism. And the New York Reviewer, in reviewing Mr. Tucker's work, has attempted to refute the Biographer, and to bring back the charges, with other cases of plagiarism, home to Mr. Jefferson. Our own Reviewer has gallantly stepped forward to defend the memory of Mr. Jefferson; and brought up for that purpose a contemporaneous piece of history, which had entirely escaped the researches, both of Mr. Tucker and his Reviewer. But our Reviewer himself has dropped two links in the chain of proofs, which we beg leave to supply.

The charge consists in Mr. Jefferson's borrowing from the Mecklenburg Declaration four phrases for his own. We believe this is the amount of the alleged plagiarism.

These phrases are, "dissolve the political bands which have connected"—"absolve from all allegiance to the British crown"—"are, and of right ought to be"—"pledge to each other our lives, our fortunes, and our sacred honor."—We do not adopt Professor Tucker's theory, that the extant copy of the Mecklenburg Declaration is so far spurious, that the compiler of it borrowed from Mr. Jefferson's draft these parallel phrases and interpolated them into the Mecklenburg copy. We are willing to admit the present Mecklenburg copy to be as it was at first written, and we entirely dissent from Professor Tucker's account of the changes and interpolations which he has assigned to that copy. But is Mr. Jefferson, then, the plagiarist? Certainly not, of the three first phrases, and from the Mecklenburg copy.—Mr. Jefferson's copy was drawn out by the resolution of Mr. Richard Henry Lee, as quoted by our Reviewer. That resolution was founded on the resolution of the Virginia Convention of May 15, 1776, instructing their Delegates in General Congress "to propose to that respectable body, to declare the United Colonies, free and independent States." Richard Henry Lee, as one of their Delegates, moved the resolution, as quoted by our Reviewer. The Committee was then appointed by Congress to draft the Declaration; and it fell to Mr. Jefferson, as one of the Committee, to make the original draft, and report to the Committee. When reported, it underwent several alterations. It was then reported to Congress itself, and adopted by that body on the 4th July, 1776. Now, the following facts appear, from a comparison of these several documents: 1st. That the phrase "absolved from all allegiance to the crown," is in the original resolution: 2nd. That this same phrase, as well as the phrase "are, and of right ought to be," are found in Mr. Lee's resolution: and, 3dly. That the other phrase, "dissolve the political bands which have connected," is also to be found in this form in Mr. Lee's resolution, "all political connexion, &c. &c. is and ought to be totally dissolved:" and, 4thly. That even these phrases were not adopted by Mr. Jefferson in his original draft, but that they were interpolated by the Committee itself, to whom he reported;—for, they were introduced subsequently to the report, in the following form, the words thrown in by the Committee being in italics: "That these United Colonies are *and of right ought to be*, free and independent States; *that they are absolved from all allegiance to the British Crown, and that all political connexion between them and the State of Great Britain is, and ought to be totally dissolved.*"—As to the last of the four parallel phrases, we cannot trace them to any other document. In the Mecklenburg Declaration, the phrase stood, "to the maintenance of which independence we solemnly pledge to each other our mutual co-operation, our lives, our fortunes and our most sacred honor." In Mr. Jefferson's Declaration, it ran, "and for the support of this Declaration [with a firm reliance on Divine Providence,] we mutually pledge to each other, our lives, our fortunes, and our sacred honor." [The words in brackets were

introduced by the Committee.] We have not been able to trace the origin of this phrase to any other source, than the Mecklenburg paper; but it may be, if we had the state or other papers of that remarkable age before us, our researches might trace Mr. Jefferson's phrase to some other intermediate channel, or to some common fountain.

It may be supposed, that we are wasting too much time upon this question. But when it is considered how much factitious consequence some things derive from the facts with which they are associated; and how much interest this literary problem has acquired from the curiosity it has produced, and the attention which has been bestowed upon it by the Historian of North Carolina, the Biographer of Mr. Jefferson, the New York Reviewer of the Biography, and our own Reviewer of the Review, we hope we may be excused for the labor we have spent upon it.

We cannot throw down our pen, without laying before the reader the following beautiful and prophetic passage, which formed a part of Mr. Jefferson's draft, and which was stricken out by the committee, we do not exactly see for what good reason: "We must endeavor to forget our former love for them, and to hold them as we hold the rest of mankind, enemies in war, in peace friends. *We might have been a free and a great people together; but a communication of grandeur and of freedom it seems is below their dignity. Be it so; since they will have it. The road to happiness and to glory is open to us too; we will climb it apart from them, and acquiesce in the necessity which denounces our eternal separation.*" What visions of glory rush upon the mind of the American, as he weighs these memorable words, traced by the pencil of Thomas Jefferson *more than sixty years ago!* How rapidly is the fulfilment confirming the prediction! No nation can boast of sixty years of equal prosperity and glory with those we have *already* witnessed. And if wisdom should guide our destinies, what new glories await us!

THE NEW YORK REVIEW'S

REVIEW OF MR. JEFFERSON.

MARCH, 1837.

This is very extraordinary--a coarse political and personal article in a religious and literary journal. But besides the manner of it, the subject too, is strangely chosen; for the life of Mr. Jefferson furnishes little to illustrate religious literature--and therefore to form a fit subject for such a work. His life, or the active part of it, was spent in political affairs. It was as a statesman and politician that he appeared to the men of his own times; and it is only as such that other times should recur to his memory. But it is not in this character that the critics of the "New York Review and Quarterly Church Journal" choose to consider him. By them he is made into a drum--a drum ecclesiastic--to animate a battle of religion and politics. They declare in the outset, an intention to examine, not his public acts, but his private character; or as they phrase it, "to study, not the politician, but the man--and the qualities of his head and heart." And this is defended

at the end, by the declaration that the "characters of public men are public property."

The reviewer does not confine himself to the limits he had prescribed; but he canvasses Mr. Jefferson's religion, his morals, and his politics. Whatever may be said of the first, we hardly thought the last made a part of private character. He does not formally divide his subject in this way, but mixes the political disquisition with the moral and religious.

Intending to examine, with some detail, this attack on the illustrious patriot whose principles are the basis of a party, and whose memory is much revered by his country, we shall follow the Review, *seriatim*, in its own order of topics.

It opens by quoting from Professor Tucker's Life--"It was the fate of Thomas Jefferson to be at once more loved and praised by his friends, and more hated and reviled by his adversaries, than any of his compatriots." And, on this, says, in the style of a certain desk for public teaching, "*The inquiry naturally suggests itself, why Mr. Jefferson should have enjoyed the peculiar love, or felt the peculiar hate of those who knew him?*" The question is meant to be put with some sarcastic point. It appears only for the sneer, for it is never answered; but introducing some refined reflections and obscure reasoning, conducts the critic, on his 7th page, to the discovery, that "If Mr. Jefferson is now less loved than some of his contemporaries, it is because we find less to love in him." He travels thus far in his inquiry, and misses the object of his search by the way. The answer to his question is obvious. Mr. Jefferson was a party-man, the framer of party, the leader of party, and the author of party political revolutions. He had pulled down a great party, though aided by Washington's name, (for they professed to have taken him into their political keeping, and his principles into their exclusive practice,) and he had built up another. Mr. Jefferson, moreover, was no neutral in any thing. He thought of neutrals as Burke has portrayed them in his fine declamation. He was an ardent and bold man, who pursued his ends always with zeal; and in this he was influenced as much by principle as by temper. Regarding party as an association for the establishment of public principle, he esteemed such political connexions highly useful to the state--and necessary to our system. See what he has said of the whig and tory divisions in English politics. All sagacious men practically acquainted with the machinery of popular government have thought with him. Burke has very profoundly developed the same opinions in his Reflections on the French Revolution. Essentially then, and in this sense a party-man, Mr. Jefferson was loved by the men whose political fortunes and opinions he had established, and hated by the opposite party which he had overthrown.

We presume this curious difficulty, which so perplexed the philosophical reviewer, was less embarrassing to the professor. Though he states it with too much solemnity, for so plain a matter.

Mr. Jefferson's religious opinions are next arrayed by his clerical examiner. That is declared the truest test of character, and Mr. Jefferson's "rejection of revelation" pronounced at the bottom of all his "defects." Without religion, the reviewer admits, but hesitatingly and reluctantly, that man "may distinguish the right

from the wrong," but will want "a principle of action sufficiently powerful," &c. &c. to "do the right rather than the wrong." Now we reject, entirely, this dogma, from the reason of life and the philosophy of history; at least in the application and for the use the reviewer makes of it; who asserts that irreligion was the cause of all Mr. Jefferson's "defects;" and among these, numbers cowardice, duplicity, and general laxity of principle. We reply, that these vices, and this depravity of character, (had they existed,) were, in no measure, the consequence of infidelity. It is not worth while to reason about it; the question may be left to men's understandings. Religion is the surest stay of virtue, but men have been, and men are, brave and honest without it.

These, the reviewer's speculations, are not so material as his facts; and they are only referred to, to show the animus of his article, and the value of his opinions. He holds always a pulpit-style; for these are not the sentiments of a liberal-minded man of the world, or of one who has been in any way, and from any point of view, a cool spectator of life.

But to return where we left him, investigating Mr. Jefferson's religion. The end of the inquiry is, that he was an infidel, and a noxious proselytizing infidel. Professor Tucker,—who, in this, is charged with being a "partial apologist"—says he was nearly a socinian; that he wrote logically on natural theology, and professed himself a unitarian. All which, is obstinately denied by the reviewer, who no doubt has gone deeper than the professor into the arcana of theological mystics. He is anxious to preserve the unitarians from the taint of such a heresy; and to confine each infidel apart to his own barren patch in the *hortus stercus* of disbelief.

He concludes at last that Mr. Jefferson "had so far as man is concerned, a right to entertain these opinions." Then why does he make or meddle with them? What good comes of such discussions? It is not to stop the spread of these opinions; for he offers no argument, no refutation. Nor was it necessary. Learning and human reason have long poured all their light into the dark places of theology. No benefit can now arise from religious disputings. Every one may think as he pleases, and no man has a right to judge him. But the federalist divine would blazon the infidelity of his subject to bring odium on the man, and discredit on his general opinions. Such a dishonest artifice may have its influence.

The reviewer thinks the attempt to pervert others to infidelity a crime more enormous than the infidelity itself; and reasoning upon this at some length, and after his own way, he plunges down the lowest deep of intolerance. Whoever may think that the practice of virtue is not embarrassed by the knowledge of truth, may rightly communicate whatever opinions he sincerely holds, and enforce them by the reasonings on which his own conviction rests. But Mr. Jefferson, we believe, was no infidel propagandist. Professor Tucker says he was always reluctant to speak of religion. He does sometimes speak, and freely too, on this subject, in letters to his philosophical friends. But no man will lock his thoughts in his own breast. The reviewer asserts that he founded the University of Virginia for a nursery of infidelity, and that the young men were entertained at his table on Sundays with infidel conversation. It is

hardly credible that any man, however inflamed and blinded by religious and political passions, could assert such things. The University was the crowning work of a long life spent with unexampled usefulness in the public service. It had no chaplain, nor a foundation for religious instruction; because, in these matters, Mr. Jefferson meant to leave every one to himself—and not, by a selection, to prefer one sect before another. Had he looked to the sinister designs with which he is so fiercely charged, he might have placed that reverend casuist Doct. Cooper in a chair of French philosophy, or brought his reviewer in a chaplain's desk to preach charity and toleration.

The other assertion about Sunday-dinner conversations, if true, is defended by repeating that a man may say what he thinks. It is opposed by Professor Tucker's general declaration, and by the specific declarations of others.

Having canvassed Mr. Jefferson's conduct and opinions on religion, the reviewer proceeds to hunt up his moral "defects." The first of the catalogue is extreme sensitiveness to men's opinions. The proofs of this monstrous vice are that he complained of newspaper abuse, and that he provided for his own fame by leaving in his letters and his *ans* a history of his life and times. But this is a very solemn parade of trivial and accidental circumstances. The thing itself is, to a degree, the consequence of public life, and the moral and mental habitudes it creates. Mr. Jefferson, though surrounded by the many able men with whom he acted, was always a leader, and predominated with a high ascendancy. No bolder thinker ever urged speculations *extra flammantia munda mundi*—beyond the flaming bounds of nature; and never was popular leader less controlled by other men.

Under this head the reviewer alludes to the style of the *ans*, and the occasional solemn attestations to the truth of the facts there recorded; and here he finds and applies the maxim, that he who swears lightly will swear falsely. If this means any thing, it means to brand Mr. Jefferson with the infamy of a moral perjury. To so foul a charge, no answer need be given.

The next "defect" is excessive self-esteem. The proof, is his letter upon the grant of a lottery privilege to him by the Virginia Legislature. In that letter, his public services are briefly spoken of; but it has always appeared to us, that the reckoning was made with great dignity. The style and circumstances of this letter are made by the reviewer proof of opposite and inconsistent weaknesses—meanness and arrogance. Of course, if it proves the one, it disproves the other.

The next charge—and the stream of calumny deepens and widens as it descends—is "insincerity;" a feeble word, which appears to the writer very insufficiently to mark his meaning, for he changes it, with much nicety and variety of selection, first for "management," then for "duplicity," till the critic reaches his grand and scurrilous climax upon the phrase "basest hypocrisy." Never was painter more fastidious and fickle with his colors, than this moral and critical limner. The ground of all this, is the letter to Mazzei, and the correspondence with Burr. These letters were examined with great severity in a tract published by Major Henry Lee on the entire Jefferson correspondence. The motives to this publication, the style and general ability of the

tract, (unusual in political writing,) and the interest of the public in the subject, invited general attention at the time. The reviewer has culled from Major Lee, and repeated him in a bad form. Mr. Jefferson had addressed to Mr. Van Buren an explanation of the letter to Mazzei, and Professor Tucker has enlarged the defence. The charge was, that by the letter, he had stabbed the reputation of Washington, for whom, personally and publicly, he professed friendship. Mr. Jefferson's defence substantially is—that he never meant to include Washington among the monarchists; nor among the “Samsons in the field, and Solomons in council,” and that his letter has no direct mention nor indirect allusion to General Washington, except the passage which speaks of the “executive” as opposed to the democratic party. In this there was no reproach. It was notoriety then, and it is history now. In fact we see nothing in that letter, which General Washington's best friend, if of opposite politics, might not have written in all faith and friendship. The interpretation comes at last to a question of veracity; nor do we see, how, in any possible way, the meaning of such language can be ascertained but by the declaration of the writer. The reviewer finds no force in such testimony; he does, of course, reject the averment of a man whom he would not credit on his oath. In this way, Mr. Jefferson's evidence in this court of critical justice is treated as the law treats a felon whose infamy is proved by a record of conviction and sentence.

The letters to Burr show that at different times Mr. Jefferson thought and spoke of him in a different manner, as he was more or less acquainted with Burr's character and conduct—that he wrote him a letter of compliment, and designed him for a cabinet office. The former, in their situation, was merely a common decency. The latter was in deference to party and public sentiment; a principle which, under our government, must always govern appointments to office. The accidents of political life placed these men together, and they acted together. The politician who would consent to act only with those whose personal characters and conduct squared to his own tastes, would be useless and impracticable, and must soon remove himself from all the means and occasions of public service. He would be forced to retire and leave the way to others. Mr. Jefferson contributed in no degree to Col. Burr's elevation. That was his own work. He built up and pulled down his own political fortunes, without any aid from Mr. Jefferson, beyond the accidental party circumstances of the times. Nothing appears in the connection of Jefferson and Burr, but what is common to the lives of most public men. When Burr afterwards stood as a state-criminal, the conduct of the executive in providing for his trial and pressing his condemnation, was no doubt the dictate of his judgment of Burr's guilt, and of the danger and magnitude of the occasion.

The list of “defects” (the word is the reviewer's) ends in cowardice. This item is thrown in to make up that general sum, that compound mass of qualities, principles, opinions and conduct, which, according to the reviewer, forms private character. He says, indeed, it is “of no moment” whether Mr. Jefferson was a “coward or not.” There is a delightful candor in this sort of proceeding. To charge a man with the meanest and most disreputable infirmity, and then say

it is of no moment whether it be true! It is no justification to reply, that the reviewer does not positively assert it; that he only hints it. That aggravates the flagitious intention. The bare imputation has the effect of proof. In this nice point of honor and character, suspicion disgraces. The reviewer does no credit to his own feelings, and shows no modest respect for other men's sentiments, when he pronounces cowardice a thing so very immaterial. Truth and courage are at the foundation of all that gives dignity and elevation to character; they are closely allied to the “whole line of the masculine virtues.” High and heroic courage is a godlike quality. I mean not a mere physical rigidity of nerve, a stupid insensibility, but that moral principle which raises us superior to the sense of danger, which is the first—and to the fear of death, which is the most powerful instinct of nature. In modern Europe, and since the time of chivalry, courage and truth have been the point of honor among the cultivated classes. Sentiments interwoven into our language, our manners, our very moral constitution, and the whole framework of society, are not to be blown away by the breath of a sermon, or of a **** review.

In Mr. Jefferson's particular case, it may be enough to say, that he lived amid circumstances sure to unfold that weakness, had it been inherent in his temper; he lived during a national war, and in a very agitated period afterwards, in the thick of party contentions, and all the passions they engender. He never was found unequal to any crisis of affairs, but was esteemed the boldest political leader of the times. His conduct of the campaign against Arnold in Virginia cannot now be examined, for the facts are not known; while it is easy to criminate and difficult to disprove. He received the deliberate thanks of the Legislature of Virginia. And we know no better way to judge of events which have passed, and which are otherwise but imperfectly known to us, than by some respectful attention to the judgment of contemporaries: such modesty is quite as commendable, and as instructive too, as that other spirit which arrogates all wisdom to ourselves, and shows us all other men and times wrapped in ignorance.

The author of the Declaration of Independence is charged with shameful literary dishonesty, in taking ideas and phrases for that occasion from other state-papers and political writings; and for proof of this, the reviewer compares the National Declaration with the Mecklenburg Declaration and with the Preamble to the Old Constitution of Virginia. This Preamble Professor Tucker says was written by Mr. Jefferson; of which fact so positively asserted, the reviewer chooses to doubt; because, he “infers,” that Mr. Wythe, to whom, it is said, Mr. Jefferson sent the paper, was not then in Virginia, but at Philadelphia. This is his single reason. It was a sarcasm of Junius, that “some men are infidels in religion, who are bigots in politics.” The converse may sometimes be true. But this reviewer's skepticism and bigotry are not so well marked and separated. What better proof can there be of authorship? Mr. Jefferson always claimed it, and no one else ever did; and from that day it has been so received in Virginia. That he wrote the National Declaration of Independence, and the Preamble to the Constitution of Virginia, is known by the same kind and amount of evidence.

The subject of this Preamble was identical with

what is now called the list of grievances in the Declaration. The same mind employed to express the same thoughts, must naturally fall into the same mode. To avoid it scrupulously, must be a laborious trifling of vanity and affectation.

In 1819, forty years after the event, the Mecklenburg Declaration came to the knowledge of ex-president Adams, who, surprised and perplexed, wrote to Mr. Jefferson—"How is it possible that this paper should be concealed from me to this day? Had it been communicated, &c. &c. it would have been printed in every whig newspaper upon the continent. I would have made the Hall of Congress echo and re-echo with it fifteen months before your Declaration of Independence." Mr. Jefferson replied, that, "he believed it spurious." And after giving his reasons, drawn from the character of the evidence which supported it, he proceeds—"When Mr. Henry's resolutions, far short of independence, flew like lightning through every paper, and kindled both sides of the Atlantic, this flaming Declaration, &c. although sent to Congress, is never heard of. It is not even known a *twelve* month after, when a similar proposition is first made in that body. Armed with this bold example, would not you have addressed our timid brethren in peals of thunder? Would not every advocate of independence have rung the glories of the Mecklenburg Declaration?" &c. &c.

Now we ask how is it possible that this paper, if it reached Congress, was concealed? Did the North Carolina representatives suppress it? With what a weapon would it have armed the whigs! The charge against Mr. Jefferson, supposes that this remarkable paper became known to him particularly and alone of the General Congress; not to Adams and others of that body, at that time more distinguished; that he concealed it, (though how he prevented it from reaching others is inconceivable,) because he found in it four expressions of remarkable rhetorical excellence, which he might use for some future state paper; which occasion did, a year after, present itself in the National Declaration of Independence. This is the reviewer's charge, with all its absurdities and improbabilities. Mr. Jones of North Carolina has made these Mecklenburg proceedings the subject of a book of invective on Mr. Jefferson. But this notion of the plagiarism was too silly for his adoption. The four expressions which constitute all the verbal likeness of the two papers, are—"dissolve the political bands which have connected"—"absolve from all allegiance to the British crown"—"are, and of right ought to be"—"pledge to each other our lives, our fortunes and our sacred honor." They are a slight temptation to a literary theft. The first is periphrastical and incorrect; the second and third have no remarkable elegance; and a better than the last may be found on any page of any classic of our language. Did Mr. Jefferson think to build a literary fame on four lucky phrases? and was this the ambition of a man engaged in great affairs, and to whose hands were committed the destinies of a people?

Both the professor and his reviewer marked these expressions, and both determined that their appearance in the two papers could not have been accidental. But they differ as to the right of property; the professor giving them to Mr. Jefferson, and the reviewer (equally faithful to his own side) giving them to the Mecklen-

burg writer. Both reasoners easily find what they wish to discover. The first three certainly are not Mr. Jefferson's—they were perhaps in common use at the time. They are the language of the resolutions by which Richard Henry Lee moved the Declaration;—which were—"That these united colonies *are, and of right ought to be*, free and independent states; that *they are absolved from all allegiance* to the British crown; that all *political connexion* between them and the state of Great Britain is and ought to be totally dissolved," &c.

We have now examined the whole article in the New York Review of Mr. Jefferson. Some of those charges are repeated, and in a more invective form, in the January No. of 1838, in the article on Davis's Burr. These two articles are from the same political clerk and clerical politician. The spirit is preserved, but the style is a little changed with the title of the work. It is no longer the "Quarterly Church Journal." The church device is stricken from their banner; and having thrown off their clerical incumbrances, surplice, cassock, and all, and got a party uniform, these gentlemen return to the old political scuffle with a good deal more fierceness. Our soldier, in particular, flourishes in the field like a Bishop of Beauvais.

We thought the party malice of the federal journalist and political divine was too concentrated for diffusion; that his phial was emptied on Mr. Jefferson. But his January number pours a full stream on Burr; whom he subjects, in the test of character, to the same sort of analysis. First, he settles his religion, then his morals, and then his politics; the whole sparkling with critical eloquence and personal denunciation, much after this fashion. Burr is styled an "unprincipled, and almost peerless villain;" and afterwards, more figuratively, "a wretch whom purity would scarce look at, much less touch." "We would we knew a word stronger than any the language affords, which might express the concentrated wickedness of a thousand villainies compressed into one; some little syllabic formation which might convey with comprehensive brevity the idea of a devil's spirit linked to a brute's propensities; and verily," he proceeds more jocosely, "Burr should have the benefit of it." After this *con amore* sketch, where, in his railing, our language breaks down under him, he returns to Mr. Jefferson, and declares, p. 210, that "a good man would long hesitate in his choice, were he forced upon the hard alternative of being either Thomas Jefferson, or Aaron Burr." Here we have the eminent citizen and President of the Republic, who lived and died in the unbounded devotion of the whole American people, branded as a "peerless villain"—"a wretch whom purity would scarce look at"—"a devil and a brute."* And this is the way a living clergyman talks of a dead patriot. It was not in this style his political enemies wrote his funeral oration; it was not with such sentiments Daniel Webster exclaimed, "We would have borne him upward in a nation's outspread arms, and with the prayers of millions and the blessings of millions, have recommended him to the favor of the Divinity." Let the American people learn from the New York Church Review what a crime-stained monster has been the god of their political idolatry.

One extract more—the conclusion on Burr—to show

* P. 202, we have a "viper"—"the cowardly chronicle of his posthumous slander," &c. &c.

somewhat more of the temper of the whole. The style is Counsellor Phillips' run mad, but the sentiments are like the rest. It is meant for fine writing, and was, no doubt, a matured and digested passage. It is of Burr. "He lay a shattered wreck of humanity just entering upon eternity, with not enough of man left about him, to make a christian out of. [!!!] Ruined in fortune and rotten in reputation, thus passed," &c. &c.—and "when he was laid in the grave, decency congratulated itself that a nuisance was removed, and good men were glad that God had seen fit to deliver society from the contaminating contact of a festering mass of moral putrefaction."

This is like an hyena; it is the rancorous malignity of a fiend. There is nothing human in this chuckling over a deathbed, a miserable, deserted deathbed, and a dishonored grave. Surely that ambitious, and singularly worldly-minded man must, in his own feelings, in his political prostration, and his deep personal abasement, have sufficiently avenged his enemies. No matter what his errors and crimes were; a feeling man would pity as well as condemn, while he regarded his elevation and his fall; and a just man would decide that his misery was punishment enough. How a man of religion regards all these circumstances, we charitably take it, the New York reviewer is no example.

This article on Burr quotes from Davis a detailed account of the opening of the ballots before Congress in the presidential election of 1801; in which is stated—that the votes presented for Georgia were not authenticated; and that, notwithstanding, Mr. Jefferson passed them for himself and Burr. The reviewer thinks, "there was nothing in Mr. Jefferson's character to render the story improbable;" but that the testimony of an anonymous witness is insufficient evidence. He might have found, in the very statement, a conclusive refutation of it, made as sure as human testimony can make any thing. The circumstances are these. This unknown witness of Mr. Davis' "secret history" says he had it from Nicholas and Wells, two of the tellers. If the fact be true, then four perjuries were committed; by the three tellers and the presiding officer—for with all it was a violation the grossest, of their oath of office. Two of them afterwards confess their infamy, in the way of babbling gossip and secret history, to a man in New York, who furnishes it for the enduring record and eternal blazon of Davis' biography. Wells too was a federalist; yet he sinned against his oath, and all his political feelings and interests. Rutledge, of South Carolina—an honorable and distinguished man—he too colluded!! These monstrous improbabilities are involved in this libel. Yet it is welcomed by the reviewer, who calls on Davis to produce his witness!—In the January No. of the Democratic Review, published at Washington, is given a copy of the Georgia ballot, taken from the archives of the United States Senate, by which it appears that the votes were authenticated in every legal form, by the signatures of the electors, by the signature of the governor, and by the executive seal of the state. This removes the very foundation on which this great fabric of slander was erected.

The reviewer's estimate of Mr. Jefferson's abilities is as just, and candid, and liberal as his moral strictures. On p. 34, article Jefferson, he pronounces it ludicrous to compare him with Hamilton or Jay. But what was

the general opinion of their countrymen then, and what is that opinion now? Mr. Madison may be allowed as a competent judge. He had tried Hamilton's strength in every form, and did full justice to his ability; but declared, that in the gradation of intellect, there were many orders, between such a mind and Mr. Jefferson's. Judge the men too, by what they attempted and accomplished. Jay, after his treaty, retired from public life. But Hamilton lived on, in political struggles, and political defeats; while Mr. Jefferson triumphed, and from president to president of his party, led the political opinions of his country through twenty-four years. A man who passes through life unimpressive as a shadow, may be gifted with higher powers than he who governs the mind of his age; but, of this, we can only reason in the spirit of the Latin maxim, and infer that only to exist, which appears.* But these reviewers judge men and things by the illumination of a higher wisdom—which teaches them to know that the race is never to the swift, and to believe whatever is contrary to facts and probable evidence.

The New York Church Quarterly cannot be regarded as the most valuable gift that Divinity has bequeathed to politics. The habit of taking a little verse of text, and wire-drawing it into a sermon, makes weak and diffusive writers. The labor of writing about nothing, disqualifies them to write well about any thing. But were it otherwise,—were it the direct reverse of this review,—no learning or eloquence, not even Milton and Salmasius, could reconcile us to the revival of the vulgar and atrocious railing, which was the old language of church controversy. We therefore hope that the tempting opportunities of this Review, and the ambition of that sort of reputation may not turn the New York ministry into a set of political and pamphleteering clerics.

GENERAL HUGH MERCER.

Among the many acts of tyranny and oppression, which exiled from Britain her noblest sons, and which crowded the forests of America with an educated and enterprising population, was the memorable battle of Culloden. The dull pen of history slumbers over the details of that terrific conflict, while romance has caught from it some of the proudest examples of virtue, patriotism and chivalry. The Stuarts' throne was filled by a sullen and phlegmatic race—the unholy union with England; a nation's birthright prostituted to sale by a hireling parliament—the burnings, wastings and judicial murders, under the iron law of the sword, and the heroism of her true, though proscribed sovereign, all conspired to leave a festering wound on the heart of Scotland, and to render her restless and insubordinate under the rule of a foreign king. The battle of Culloden

* The maxim referred to by the writer is, "*De non apparentibus et non existentibus, eadem est ratio.*"—Things not appearing, are considered as not existing.—[Ed. Mess.]

quenched the last gasp of her independence, and the stern revenge inflicted on the vanquished by the merciless Cumberland, while it filled the nation with woe and wretchedness, expelled from her bosom those sons whom power could not purchase, and whom cruelty could not conquer. In that memorable engagement, the subject of our memoir bore an honorable part in the service of his oppressed country. Having graduated at an early age in the science of medicine, he acted on this occasion as an assistant surgeon, and with a multitude of the vanquished, he shortly after sought a refuge of virtue and a home of freedom in the wilderness of America.

Landing in Pennsylvania, he remained there a short time. From thence he removed to Fredericksburg in Virginia, where he married and became highly distinguished for his skill and success as a practitioner of medicine. An unsubdued enemy—merciless, treacherous and revengeful, hovered around the frontiers of Maryland, Pennsylvania and Virginia, repressing settlements—murdering defenceless women and children, and frequently making inroads into the cultivated and open country of the colonies. Joining the army under Washington, which was collected for the purpose of subduing the Indians, General Mercer, then holding the rank of captain, became an actor in those wild, perilous, and spirit-stirring scenes which characterized the Indian war of 1755. In one of the engagements with this wily foe he was wounded in the right wrist by a musket ball; and in the irregular warfare then practised, his company scattered and became separated from him. Faint from loss of blood, and exhausted by fatigue, he was closely pursued by the savage foe, their thrilling war-whoop ringing through the forest, and stimulating to redoubled energy the footsteps of their devoted victim. Fortunately the hollow trunk of a large tree presented itself. In a moment he concealed himself in it, and though his pursuers reached the spot and seated themselves around him, he yet miraculously escaped! Leaving his place of refuge, he sought the abodes of civilization, through a trackless wild of more than one hundred miles in extent, and after supporting life on roots and the *body of a rattlesnake*, which he encountered and killed, he finally reached Fort Cumberland in safety. For his gallantry and military skill in this war, proved in a distinguished degree, by the destruction of the Indian settlement at Kittaning, Pennsylvania, the Corporation of Philadelphia presented to him an honorable and appropriate medal.

The commencement of the American Revolution found him in the midst of an extensive medical practice, surrounded by affectionate friends, and enjoying in the bosom of a happy family all the comforts of social life. Stimulated to action by a lofty spirit of patriotism, he broke from the

endearments of domestic life, and gave to his country in that trying hour the energy and resources of a practised and accomplished soldier. In 1775 he was in command of three regiments of minute men, and early in 1776 we find him zealously engaged as a colonel of the army of Virginia, in drilling and organizing the raw and ill-formed masses of men, who under the varied names of sons of Liberty, minute men, volunteers and levies, presented the bulk without the order—the mob without the discipline of an army. To produce obedience and subordination among men who considered military discipline as a restraint on personal liberty, and who had entered into the war unpaid and unrestricted by command, was a severe and invidious task. The courage—the fortitude—the self-possession of Col. Mercer quailed not to these adverse circumstances, and by the judicious exercise of mingled severity and kindness, he soon succeeded in reducing a mutinous soldiery to complete submission. Tradition has preserved the following anecdote, illustrating in a striking manner, his characteristic promptitude and bravery.

Among the troops which arrived at Williamsburg, then the metropolis of Virginia, was a company of riflemen from beyond the mountains, commanded by Captain Gibson. A reckless insubordination, and a violent opposition to military restraint, had gained for this corps the sarcastic name of “Gibson’s Lambs.” They had not been long in camp before a mutiny arose among them, producing much excitement in the army, and alarming the inhabitants of the city. Freed from all command, they roamed through the camp, threatening with instant death, any officer who should presume to exercise authority over them. In the height of the rebellion, an officer was despatched with the alarming tidings to the quarters of Col. Mercer. The citizens of the town vainly implored him not to risk his life and person amid this infuriated mob. Reckless of personal safety, he instantly repaired to the barracks of the mutinous band, and directing a general parade of the troops, he ordered Gibson’s company to be drawn up as offenders and violators of law, and to be disarmed in his presence. The ringleaders were placed under a strong guard, and in the presence of the whole army, he addressed the offenders in an eloquent and feeling manner—impressing on them their duties as citizen-soldiers, and the *certainty of death* if they continued to disobey their officers, and remained in that mutinous spirit—equally disgraceful to them, and hazardous to the sacred interests they had marched to defend. Disorder was instantly checked, and after a short confinement, those under imprisonment were released, and the whole company were ever after as exemplary in their deportment and conduct as any troops in the army.

A similar incident in the life of Germanicus, must recall to the memory of the classical reader the imperishable page of the *Annals*, and he will find the glowing panegyric of Tacitus applying with redoubled force to the character of Col. Mercer. In the one case the legions of Pannonia, on the death of Augustus, revolted for the sake of plunder, and the army of Germany which joined them, were inspired by the double motives of revolution and pillage. The virtue of Germanicus refused a crown stained with treason, and he was forced to suppress the rebellion by means degrading to the soldier, and disgraceful to the patriot. He addressed the hearts of an army composed of the refuse of Rome, in the language of sympathy and compliment, and the honor of the soldier did not blush at the cowardice of a largess. Col. Mercer appealed to the sense and patriotism of his rebellious soldiers—to the holy cause in which they were engaged; and while he awakened their remorse by his passionate eloquence, he asserted and maintained the supremacy of the laws.

Colonel Mercer now joined the continental army, Congress having conferred on him the rank of Brigadier General; and throughout the whole of the stormy and disastrous campaign of 1776, he was a bold, fearless and efficient officer. The fatal conflict at Long Island—the capitulation at Fort Washington, and the evacuation of Fort Lee, were the painful preludes to the disastrous retreat of the American army. From Brunswick, through Princeton, to Trenton, our ragged and suffering army was driven by a powerful and exulting foe, until it was forced to cross the Delaware in search of an uncertain refuge in Pennsylvania. Dispirited by defeat, and disheartened by abject want, desertion daily thinned the feeble ranks of the patriot army, and in that darkest hour of our history the proclamation of General Howe, offering a free pardon, scattered far and wide the leprosy of treason. In vain did the commander-in-chief implore the assistance of the New Jersey and Pennsylvania militia. Terrified or desponding, they refused all aid, and cautiously withdrew from an army now rapidly approaching the verge of destruction. Flushed with victory, the enemy rioted on the plunder of the country, and calmly awaited the extinction of its humbled foe. The genius of Washington arose above these accumulated misfortunes. He could no longer repress the fatal disease of desertion and treason, which was fast reducing his army to a skeleton. The torrent of illfortune threatening to overwhelm his country, must be rolled back on the enemy, and he resolved to hazard one desperate effort for victory. On the night of the 25th December, 1776, he crossed the Delaware at Trenton—surprised a body of Hessians stationed there—took nearly nine hundred prisoners, and immediately

recrossed the river, having lost but nine of his men.

This bold and masterly stroke awoke Cornwallis from his dream of conquest, and leaving New York, he returned with an additional force, and concentrated his troops at Princeton. A portion of Pennsylvania militia now joined the standard of Washington, and having persuaded the New England troops to serve six months longer, he again crossed the Delaware, and took post at Trenton.

On the morning of the second of January, 1777, the enemy advanced to attack the American army. On their approach, Gen. Washington prudently retired across a creek which runs through the town, and then drew up his troops. The fords being guarded, the enemy could not pass, and halting, a brisk cannonade was kept up with great spirit by both sides until night. In this critical situation, Gen. Washington conceived the bold design of abandoning the Delaware, and marching silently in the night along the left flank of the enemy into their rear at Princeton. The plan was instantly approved by a council of war, and as soon as it was dark the baggage was removed to Burlington. About one o'clock, on the morning of the third of January, the gallant band—its van led by General Mercer, decamped, and silently threaded its circuitous march along the left flank of its exulting foe. Reaching Princeton about sunrise, General Mercer encountered three British regiments, who had encamped there on the previous night, and who were leaving the town to join the rear of their troops at Maidenhead. A fierce and desperate conflict immediately ensued. The American militia, constituting the front, hesitated, became confused and soon gave way, while the few regulars in the rear could not check the dastardly retreat. Ere the fortune of the day was changed, and ere victory perched on the patriot standard, the heroic Mercer fell. Rushing forward to rally his broken troops, and stimulating them by his voice and example, his horse was shot from under him, and he fell dangerously wounded among the columns of the advancing enemy. Being thus dismounted, he was instantly surrounded by a party of British soldiers, with whom, when they refused him quarter, he fought desperately with his drawn sword until he was completely overpowered. Excited to brutality by the gallantry of his resistance, they stabbed him with their bayonets in seven different parts of his body, inflicted many blows on his head with the butt-ends of their muskets, and did not cease their butchery until they believed him to be a crushed and mangled corpse. Nine days after the battle he died in the arms of Major Geo. Lewis of the army, the nephew of General Washington, whom the uncle had commissioned to watch over the last moments of his expiring friend. His latter hours

were soothed by the skilful and affectionate attendance of the distinguished Doctor Rush. He complained much of his head, and frequently remarked to his surgeon, "that there was the principal danger," and Doctor Rush whenever he detailed the thrilling narrative of his patient's suffering, always ascribed his death to the blows on the head more than to the bayonet wounds, although several of these were attended with extreme danger.

In a small house, a few yards distant from that blood-red plain of carnage and of death, far away from the soothing consolations of domestic affection, this distinguished martyr of Liberty breathed his last. The victorious flag of his country proudly floated over a field of triumph, and without a murmur he sank into a soldier's grave—finding a hallowed sepulchre in the hearts of his countrymen, and a fadeless epitaph in their institutions.

The mangled body was removed under a military escort from Princeton to Philadelphia, and exposed a day in the coffee-house, with the design of exciting by that mournful spectacle the indignation of the people. The *Pennsylvania Evening Post* for January 18, 1777, has thus recorded his death and funeral obsequies. "Last Sunday evening, died near Princeton, of the wounds he received in the engagement at that place on the 3rd instant, Hugh Mercer, Esq., Brigadier General in the continental army. On Wednesday his body was brought to this city, and on Thursday buried on the south side of Christ church yard with military honors; attended by the committee of safety—the members of the assembly—gentlemen of the army, and a number of the most respectable inhabitants of this city. The uniform character—exalted abilities and intrepidity of this illustrious officer, will render his name equally dear to America with the liberty for which she is now contending, to the latest posterity."

The battles of Trenton and Princeton, in which General Mercer fought and bled unto death, were the most brilliant and fortunate victories won in the war of the Revolution. The establishment of our independence was now no longer a matter of doubt. Confidence was restored to our disheartened army, and a chord of sympathy was stricken which vibrated throughout all the country. Europe looked with astonishment on the military skill displayed by a raw and dispirited soldiery, and in the indomitable fortitude of her banded chivalry, America felt that her independence was secured.

General Mercer's elevated character, lofty heroism and brutal murder, excited a deep and affectionate sympathy throughout all the colonies. On the 8th of April, 1777,* Congress unani-

* It is still a resolution of Congress. How often are justice, gratitude and honor forgotten in the low and vulgar conflicts of party!

mously resolved, that a monument should be erected to the memory of General Mercer at Fredericksburg, Virginia; at the same time a similar monument to the memory of Gen. Warren was decreed; and Gen. Washington, in an official letter to Congress, thus alludes to these resolutions. "The honors Congress have decreed to the memory of Generals Warren and Mercer afford me the highest pleasure. Their character and merit had a just claim to every mark of respect, and I heartily wish that every officer of the United States, emulating their virtues, may by their actions secure to themselves the same right to the grateful tributes of their country." The fixed popularity of Gen. Mercer, and the cherished affection which the nation bore for his memory, was happily exemplified in the chaste and beautiful compliment of Lafayette. When he was in the United States a few years ago, the conversation in a particular company, turning on the prominent men of the Revolution, one of the company observed to him, that he, Gen. Lafayette, was of course acquainted with Gen. Mercer, not recollecting that Lafayette did not arrive in the United States until after the battle of Princeton. "Oh! no," said the General, "you know that Mercer fell in January, 1777, and I reached the United States in the ensuing spring; but on *my arrival I found the army and whole country so full of his name, that an impression has been always left on my mind since, that I was personally acquainted with him.*"

In Wilkinson's *Memoirs*, several interesting particulars of the life and services of Gen. Mercer are related, and in alluding to his death, that writer remarks: "In Gen. Mercer we lost at Princeton a chief who for education, talents, disposition, integrity and patriotism, was second to no man but the commander-in-chief, and was qualified to fill the highest trusts of the country."

The same author remarks, that an evening or two before the battle of Princeton, Gen. Mercer being in the tent of Gen. St. Clair with several officers, the conversation turned on some promotions then just made in the army. Gen. Mercer remarked, "they were not engaged in a war of ambition, or that he should not have been there, and that every man should be content to serve in that station in which he could be most useful—that *for his part he had but one object in view, and that was the success of the cause, and that God could witness how cheerfully he would lay down his life to secure it.*" Little, adds the writer, did he or any of the company then think that a few fleeting hours would seal the compact.

In the historical paintings of the battle of Princeton by Peale and Trumbull, Gen. Mercer is a prominent and conspicuous figure. That by Peale hangs in the chapel of Nassau Hall at Princeton, and that by Col. Trumbull is in the exhibition

rooms at New York. The states of Pennsylvania and Kentucky, among their first acts of legislation, named portions of their territories Mercer, and lately Virginia followed these examples of gratitude and respect. The country in New Jersey, including Trenton, Princeton, Laurenceville, and the battle field of the 3rd January, has been very recently erected into a county by the legislature of that state, and bears the appropriate name of Mercer.

The remains of this gifted and accomplished soldier now sleep in Christ churchyard, Philadelphia. Impelled by filial love, his youngest son in the year 1817 sought his place of interment. The venerable Mr. Dolley, who had attended the funeral, was still the sexton and assisted in the pious search, and near the grave on the southern side of the brick enclosure were faintly inscribed the letters "G. M." A plain and unadorned marble slab now marks the grave, bearing the simple yet expressive epitaph—"In memory of General Hugh Mercer, who fell at Princeton, January 3, 1777."

March, 1838.

SCRAPS AND CULLINGS,

From the Note Book of a Gleaner.

BY A MARYLANDER.

BEAUTIES AND WONDERS OF NATURE.

Fountain of elegance, unseen thyself,
What limit owns thy beauty, when thy works
Seem to possess, to faculties like mine,
Perfection infinite! The merest speck
Of animated matter, to the eye
That studiously surveys the wise design,
Is a full volume of abundant art.

Wearied and dissatisfied with the vexatious pursuits of ordinary life, there are moments of sober reflection, when the mind of man, recoiling upon itself, seeks in the materials of the universe some evidence of his true estate and high moral destination. The Book of Nature is unfolded to his view, and in its living pages he reads every character that can delight the heart, and every lesson that may direct his understanding.

The Supreme Architect in the exercise of unmeasured power, seems, in the gorgeous display of his works, to have been prompted solely by his benevolence to those beings upon whom he has impressed his divine image. To the human mind, then, there can be no exercise of its wondrous faculties more grateful than a holy contemplation of the sublime machinery which wheels and moves around us.

All nature, upon which side soever it is surveyed, proclaims the superintendence of this Spirit of Benevolence. The lowly plants of the valley and the lofty cedars of the mountain proclaim him; the delighted insects hum his praise; in the fragrance and foliage of

the fields the birds warble to him in grateful accents; the lightning announces his power, and the ocean declares his immensity.

It is not because the beauties of Nature prove the existence of Supreme Intelligence, that the attention of thinking minds is now called to a survey of the harmonies by which we are encompassed; but it is, that the Author of Nature made manifest in his works, may receive from man, "busy about many things," some portion of that admiration and love, which is so lavishly profused upon the fleeting vanities of life.

It is by the calm contemplation of the material world, from man, the connecting link between higher intelligences and things perishable, the sharer of time and of eternity, down through all the gradations of animal and vegetable existence to inert matter in all its stupendous shapes, that we are enabled clearly to conceive, and properly to estimate the dignity of our nature, and the sublimity of our destiny. The mind familiar with such observances seems to catch something of the immensity it contemplates, until lifting its view from the scaffolding to the Architect, the heart is melted into love, while the understanding is lost in admiration!

It is thus, that overleaping the natural boundaries around us, we no longer confine our reflections to the fading beauties before us, but in the fulness of fervent contemplation extend our view to other beauties, which, while they seem to be transitory, are in reality permanent and everlasting. Such are motion and repose, darkness and light, the seasons, the revolutions of the heavenly bodies, and all those paraphernalia of nature, which give variety to the decorations of the universe. The ardent fire-worshipper of the East, who at early dawn turns to the pencilled messengers of the Orient which announce the coming of the God—the savage of our own continent, who breathes his lament upon the thickening shades of night for the departure of the Great Spirit at eventide, admire a fleeting beauty. But the christian philosopher, from the heights of science, in the scene that fades before him in the setting sun, traces in the distant heavens all the brilliant colors which are painted for another people and another clime, while he is overshadowed in the stillness of night. He feels that such beauties, though progressive, are absolute in duration, and that the lamp which has been hung out in the heavens can never be obscured, until the hand that created it shall, in the fulfilment of his inscrutable designs, throw time into eternity.

Let us pause for a moment on this elevation, and in the fervor of a chaste imagination, group some of the most beautiful imagery of nature. Would you unfetter the mind, and lifting the curtain of your horizon, form a clear conception of a prospect of the universe? Figure to yourself as existing at the same time all the hours of the day—the balmy breath of the morning, the blaze of noontide effulgence, the holy hour of evening—all the seasons of the year, a weeping day in April and a sunset in yellow autumn—a firmament studded with stars and a night mantled in clouds—meadows enamelled with flowers, forests stripped of their foliage, and fields burdened with golden harvests—the milky-way lustrous in the heavens, and the ocean asleep in its immensity. Merciful Father! how art thou made manifest in thy works!

How is it, that while you behold Hesperus sparkling

on the crest of the western wave, the orisons of another should mingle with the first rays of the morning?

By what magic is it, that this ancient luminary, the sun, which to your view retires to rest weary and glowing in the evening, should be to another the youthful orb that awakes bathed in dew, and arises from behind the gray curtains of the morning? Why is it, that at every moment of the day he is rising, burning in his zenith, and setting on the children of men? Who can look through the stillness of the night to peruse the magnificent volume of the heavens without feeling the nearness of the Deity? Who, that feels his presence and his goodness, will not bow down and adore him?

Thus we have endeavored to group somewhat of the chaste and beautiful imagery of Nature. We will now descend to one of the chords in the harmony which prevails around us.

Let our spirit go forth upon the waters—let us contemplate

THE OCEAN.

Thou glorious mirror, where the Almighty's form
Glasses itself in tempests; in all time,
Calm or convulsed, in breeze, or gale, or storm,
King the pole, or in the torrid clime,
Dark-heaving, boundless, endless, and sublime,—
The image of eternity—the throne
Of the Invisible; even from out thy slime
The monsters of the deep are made; each zone
Obeys thee; thou goest forth, dread, fathomless, alone!

Of all the wonders of creation, from the moment, that obedient to the celestial mandate, the comet submitted, and planet attracted planet across the fields of immensity, the ocean unreposed, untired, unconquerable, has filled the mind of man in all ages with a holy awe, which the other wonders of the universe had failed to inspire. The well ordered mind loves to look back to the origin of matter, when the infant ocean, in the morning of creation, commenced to roll that wild, profound, eternal bass in the anthem of early nature, and made such music as pleased the ear of Deity. It is the book of mystery. It is the temple of contemplation. The vintage, when the showering grapes "reel to the earth purple, and gushing in Bacchanal profusion," is not more rife with sweets, than the depths of the profound with wonders and beauties.

Holy of Holies! where shall we commence thy praise? Whether we calmly look abroad upon its expanse, when, asleep in its immensity, it reflects all nature from its polished surface; or as the soft echoes of its undulating billows is heard in low and hollow murmurs from the caves of its shelving beach, when every breeze is hushed, and its placid bosom is unruffled; or whether we gaze upon it when wrought up by fearful agitation into all the horrors of the tempest, when blackness scowls upon the face of its waters, and its foaming waves mingle with the clouds; it is impossible to conceive anything better calculated to excite in us lofty and sublime conceptions of that Spirit, who weighs in the hollow of his hand the waters of the deep. The level expanse of the ocean when reposing, communicates to the contemplative mind a similar tranquillity; and when its angry billows lift their devouring heads, we are filled with ideas the most sublime, meditations the most solemn. The very nature of the prospect, boundless and unbroken, presents a sensible argument for the

eternity of duration and infinity of space, more forcible than the subtlest reasoning of metaphysic.

The ocean, obedient in its alternate tides, to the celestial influences, and rolling its indomitable surges from clime to clime, with every billow whitened with the commerce of the dweller upon earth, is the most august object under the heavens. Man, in the plenitude of his intellect, in the utmost stretch of his imagination, feeling his inability to comprehend or to conceive the mysteries of the great deep, stands upon its margin, himself an atom in creation, forgetful of his puny mechanism, to bow down the powers of his mind before the grandeur and magnificence reflected in this everlasting spectacle. Who art thou, that taketh up the sea in thy hand, and in whose sight the ocean is a drop; who covereth the earth with the deep as with a garment, and meth it bounds which it cannot pass? Who will dive into the hungry depths of the ocean to reveal the beauties and the treasures which lie imbedded in its unfathomable recesses?

O boundless deep! we know
Thou hast strange wonders in thy gloom concealed,
Gems, flashing gems, from whose unearthly glow
Sunlight is sealed.

And an eternal spring
Showers her rich colors with unsparing hand,
Where coral trees their graceful branches fling
O'er golden sand!

But if the grandeur of this ocean scenery had been displayed for no other purpose but to awaken the hallowed feelings so eloquently uttered in the sublime sketch with which we conclude, these wonderful mysteries have been wisely ordained. "One evening (it was a profound calm), we were in the delicious seas which bathe the shores of Virginia; every sail was furled; when the sound of the bell broke upon the stillness of the evening to announce the hour for mingling our supplications to the throne of Grace. The officers stood upon the quarter; the chaplain somewhat in advance; the seamen were scattered at random over the poop; our faces were towards the prow, which was turned to the west. The globe of the sun, whose lustre even then we could scarcely endure, ready to plunge beneath the waves, was discovered between the rigging in the midst of boundless space. From the motion of the stern it appeared as if the radiant orb every moment changed its horizon. A few clouds wandered confusedly in the east, where the moon was slowly rising. The rest of the sky was serene. Towards the north a water-spout, forming a glorious triangle with the luminaries of day and night, glistening with all the colors of the prism, rose out of the sea, like a column of crystal supporting the vault of heaven. Religious tears involuntarily flowed from my eyes when my intrepid companions lifting their tarred hats, began in a hoarse voice to chant their simple song to that God who is the protector of the mariner. How affecting were the prayers of these men, who, from a frail plank in the midst of the ocean, contemplated a sun setting in the waves! How touching to the heart such invocations to the Father of the distressed! The consciousness of our insignificance, excited by the voice of infinity; our song resounding to a distance over the silent deep; the night approaching with its dangers; our vessel, itself a

wonder among so many wonders; a religious crew penetrated with admiration and awe; a priest august in supplication; the Almighty, diffused over the abyss, with one hand staying the sun at the portals of the west, with the other raising the moon in the eastern hemisphere, and lending throughout immensity an attentive ear to the voice of his creatures; this is a scene which defies the art of the painter and the eloquence of the writer, and which the whole heart of man is scarcely sufficient to embrace.

"We arose at midnight, and sat down upon deck, where we found only the officer of the watch and a few sailors in profound silence. No noise was heard save the dashing of the prow through the billows, while sparks of fire created the ripple of the broken waters. God of christians! it is on the waters of the abyss, and on the expanded sky that thou hast particularly graven the characters of thy omnipotence. Millions of stars sparkling in the azure dome of heaven; the moon in the midst of the firmament; a sea unbounded by any shore; infinity in the skies and on the waves! Never didst thou affect me more powerfully than in those nights, when, suspended between the stars and the ocean, I had immensity over my head, and immensity under my feet."

Adoring, own

The hand Almighty, who its channelled bed
Immeasurable sunk, and poured abroad,
Fenced with eternal mounds, the fluid sphere
To link in bonds of intercourse and love
Earth's universal family.

THE WEST FIFTY YEARS SINCE.

BY L. M.

CHAPTER I.

Col. B—— of South-Carolina, who had been a subaltern officer of merit during our revolutionary war, having an increasing family, resolved to emigrate in 1787, to Tennessee. He predicted justly, that the rich lands of that region would in the course of a short time be settled by an enterprising and industrious population, and that on such a theatre, he and his children might do better than in an older and a poorer country.

Col. B—— was a man of undoubted courage—of a powerful frame, and capable of enduring great fatigue. He was of a generous and unsuspecting nature—honest in all his transactions—and kind towards all his race. He was well educated in the practical matters of life. Almost all his valuable knowledge had been acquired in the camp, in his intercourse with his brother officers and soldiers, amongst whom there prevailed a chivalric spirit, begotten amidst the excitement and heroism that marked our revolutionary conflict. Mrs. B—— was a woman of meek temper, a professor of religion, devoted to her husband and her children, of industrious habits and sound judgment. Her oldest child, Emily, was just sixteen at the period of the proposed emigration, her next was a robust boy about fourteen,

her two youngest were girls, one four, and the other two years of age.

The daughter had been educated in Carolina, as well as circumstances would permit. She had a natural taste for music, and was gifted with a melodious voice. Her spirit was lofty, her affections strong, and even vehement. At the period of her departure from her native state, in the autumn of 1787, her health was excellent, her frame rather slender and delicate, her spirits high and cheerful.

Col. B—— commenced his journey in November, and reached a landing on the Holston river, in East Tennessee, early in December. He found that all the streams were swollen by recent rains, and the usual trace over the mountains utterly impracticable to one who was moving westwardly, with children, slaves, household furniture and farming utensils. In order to reach his destination near Nashville, Col. B—— determined to build a flat boat, to put his family and goods on board, and proceed down the Holston into the Tennessee river, thence into the Ohio, and up the Cumberland, to his intended home. There were dangers on this route. The boat might be stove: the shoals of the Tennessee were to be passed, as well as the boiling suck, which even at this day is the terror of all navigators of that stream. Above all, he might be attacked and overpowered by the Cherokees. Still, there were nearly equal dangers in any other mode of removal. Having taken his resolution, Col. B—— proceeded to the construction of his vessel. He was assisted by five young laboring white men, who were emigrating with him, and eight negro fellows. The boat was large, and divided into three apartments: one for his family, one for the young men, and one for the slaves. The building of so large a boat, which was to be planked up at the sides, both inside and outside, and in which there were to be portholes made, whence his well armed force might be able to fire upon the enemy, required time. The timbers were to be hewn out of the standing trees, and the plank was to be sawed by hand.

Still Col. B—— was not disheartened. His object was the land of promise, that lay before him to the west. During the whole of December, January, and part of February, the emigrants were busily employed. In the latter month there were appearances of approaching spring. The maples were tapped, poplar trays were dug out in which to catch the sugar water. The little negroes were usefully employed in this work; the negro women, under the direction of the mistress, were engaged in making sugar, a luxury of rare value in the midst of the wilderness.

About this time two gentlemen, followed by a servant who led a pack-horse, arrived at this temporary residence of Col. B—— and his family. Having alighted, they approached the door of the cabin, and the elderly one having entered, presented his hand, gave his name Major G—— of Virginia, and introduced his son Henry. The sight of these friendly and genteel strangers, filled the bosoms of the emigrants with delight. The elder was about fifty years of age, his hair somewhat stricken with gray. He was clad in apparel which indicated taste and wealth. His manners were kind and courteous, and evidently had been modelled after those of the men of highest rank in the "Old Dominion."

Young Henry G—— was about twenty-two, rather tall, athletic, with light hair, fair complexion, a remarkably keen, full blue eye, and the picture of good health. The mountain air of the Blue Ridge had given a deep red to his cheek. The manner of Henry G—— was well enough. All his movements assured the observer that the character of his mind was of the positive order, and that he might prove a dangerous adversary in a quarrel. He had been accustomed to the chase in his native state, and was attached to all sports requiring physical exertion. Towards all those with whom he was intimate, he was as open as day. The sentiments which he carried into his intercourse with his young friends, were chivalric and honorable. Towards his father, he manifested the deepest devotion. The two seemed to be on a footing of the closest confidence. The former gave continually evidence that he looked upon the graceful figure of his boy with unutterable delight.

In the course of conversation Major G—— stated that he was going to the west to examine some lands, in which he had become interested, and which demanded his personal care. He had left Virginia with the expectation of meeting at some point, near where Col. B—— and his family were, a considerable party going to Nashville, having similar views with himself; and who, being completely armed, as he, his son and servant were, might protect each other, in pursuing the trace over Spencer's Mountain, and down the vallies to the head waters of the Cumberland river, from the hostile attacks of the savages. Until the arrival of this party, Major G—— would remain at the landing. But it came not as soon as was expected. Day after day rolled away. Col. B——, Mrs. B—— and Major G—— filled up their leisure in talking over the stirring events of the late war in the south—sometimes a melancholy, and sometimes an exulting theme. Occasionally, they spoke of the country to which they were making their way—the fatness of the soil—the wonderful product which it yielded to reward the cultivator—the serenity of the climate, until these elderly people found their imaginations bodying forth the forms of things unknown, turning them to shape, and giving to airy nothings, names and local habitations.

But, how were the son and daughter employed, during this delay at the landing? Their acquaintance was begun in the very bosom of the wilderness. Not a human being was to be seen who did not reside within a fortress, and who did not cultivate his patch of corn, bearing his rifle in his left hand, and guiding his plough with his right—who did not prime his arms anew before he laid himself down to rest from the labors of the day. That such a girl as Emily B——, under such circumstances, should strike the fancy and rivet the attention of so young a man as Henry G——, was, of all events that could occur in the intercourse of persons so secluded, the most natural.

That a high spirited and lovely maiden should feel anxious to know the mind and heart of such a youth as Henry, was also most natural. That she should even desire to gain his kind wishes, if not his affections, was at least pardonable.

The hunt was resorted to as a matter both of necessity and amusement. Anticipating the exhilarating joys of the chase, on his western tour, Henry G—— had

procured his hunting shirt—highly fringed, and ornamented as was the fashion of the time—his powder-flask, shot-pouch, knife, flints, and all other necessary materials. When clad in these, when mounted on his Virginia charger—of course the best in the world, as a Virginian always thinks—when the party were all ready, when the horn was blown and the dogs set up their cry, Emily could not avoid looking upon this scene with secret pride, and with a far tenderer interest than mere approbation begets. On the return of the hunters, whatever game had been taken, was brought by young Henry, and thrown at Emily's feet. If a bear was started from his wallow, the fight of the dogs with bruin,—his gallant and long continued resistance—the number of balls which he received before he fell—the moans which he poured forth before he yielded up his breath, were detailed by Henry to the parents, and particularly to Emily herself, in the most animated strains. That the girl heard them with delight, her kindling eye and approving smile, abundantly attested.

Occasionally the whole party would walk along the bank of the river, but Henry and Emily either pressed on before or lingered behind. But at last the travellers from North-Carolina arrived. The speedy departure of Major G—— became certain. It was at once evident to the quick discerning maternal eye of Mrs. B——, that her daughter, always so gay and happy, had suddenly become sad. She could not mistake the cause, nor could she avoid sympathising with her child.

After a halt of two days, that the horses might be rested, and refresh themselves with the green cane that grew luxuriantly round the landing, the party determined to set out. The evening before, Henry made his way to Emily's cabin, and took his seat beside her. After a long pause, he said in a subdued tone, We are going in the morning! There was no reply. Raising his head, and looking into Emily's face, he perceived that her countenance had assumed a deadly paleness. But, in an instant, her color partially returned, and her heaving bosom found relief from her tears. Throwing his arms around her, her head sunk upon his bosom, and her shining brown hair fell in profusion over her face. The confession of a mutual passion was then made. For a long time both were dumb. At last, however, the silence was interrupted by a remark from Henry, full of the tenderest interest, that he feared greatly for her safety in the descent of the river; and she reciprocated this feeling, by suggesting that the party to which he would be attached, might be assailed by the Cherokees in the gorges of the mountains, or at some of the narrow passes, and all cut off. The prospect of these dangers, she said, had filled her bosom with unutterable anguish. But he calmed her fears in some degree, by alleging that they were strong in numbers—well armed—that they would use every precaution, and, that the Indians had not been known to assail any but very small detachments of emigrants, in the unfrequented parts of the country through which they were about to pass.

In the morning all arose before daylight. The horses were saddled, the circingles were buckled over the rolls of blankets which formed part of the baggage of each rider, and which were to be at once the bed and the covering of each man of the party. Breakfast was hastily prepared, and all were soon ready to mount.

Passing with hurried steps to Emily's cabin, Henry simply said that they would meet again at her father's intended home—then embraced her tenderly, and bade her adieu.

Within a week after this sad parting, Col. B——'s boat was launched, and the utmost diligence was employed to fit her for her destined voyage. The deer and bear that had been killed were dried and stored away. A small quantity of corn had been brought on pack-horses from a settlement about sixty miles off. After every necessary arrangement had been made, the voyage was commenced. The steering of the vessel was committed to the young white men—the oars were plied by the slaves. The downward current of the stream accelerated their pace. On each night the vessel was fastened to the shore, and means of defence regularly adopted.

Although Emily was occasionally sorrowful, yet her love of the works of nature was often gratified on her journey. Sometimes, at the narrow parts of the stream, the mountains seemed to imbosom them—then, at some bend of the river, there broke upon her view broad and rich bottoms, that seemed to be burdened by the immensely tall and heavy timber that covered and shaded them. The howl of the wolf and the scream of the panther, attracted as these animals were by the lights on the boat, were heard at the dark hour of midnight. But there were anticipations even in this hazardous and tedious voyage, which sustained the spirits of Emily B——. Hope never deserted her. The land which her father was seeking lay before her, and each day brought her nearer to it. When reached, she might there receive the embraces of a devoted lover. Amongst the negroes on board, the banjou was heard every night, its sounds filling the young and the old with joy.

At last the voyagers approached that part of the country bordering upon the Tennessee, which is high and open. Large flocks of wild geese flew by, wheeling and sailing through the air, and droves of deer were seen approaching the stream—halting now and then to look on the novel sight before them—then bounding off through the woods in mere wantonness and sport.

In the vicinity of Nicojack, on the Tennessee, there resided a considerable number of warriors, who had been active in the depending hostilities, and who had made many successful marauds into the Cumberland country. Unprincipled white men—French and Spaniards as well Americans—had penetrated through the wilderness from Pensacola and St. Augustine into the upper towns of the Cherokees, and had bartered arms, ammunition and blankets for bear and deer skins.

As the boat of Col. B—— was passing a projecting cliff of the river, a short distance above Nicojack, about five o'clock in the evening, a white man and eleven Indians, all warriors, suddenly made their appearance. This white man hailed the boat, and at the same instant raised a pole with a piece of white cloth tied to the end of it, as a token of peace. Col. B—— answered this signal, and causing the boat to be turned a little towards the land, the white man inquired how long it was since he had left the upper country? To which Col. B—— replied about forty days. Then, said the white man, you had hardly heard of the peace, before you left the Holston? To which the colonel said he had not. This man was tall, slender and sallow. He had adopted the

costume of the savages; nearly all his flesh was gone, and his skin looked as if it had been tanned. In his youth, his fore teeth had projected greatly; but some of them had decayed, and two only were now to be seen, which bore the appearance of tusks. His hair was long, and matted together with filth. His forehead was low, and the expression of his eye ferocious. His scrawny legs were bare—the skin upon them looked as if it had been parched. But this miscreant had committed two foul murders in his native state—had fled when pursued, and had become an outlaw. He spoke to the strangers with fluency, in a subdued and even kind tone. He stated that the commissioners from the congress had met the Cherokee chiefs, about four weeks before, at Hopewell, and had concluded a treaty. That all prisoners on both sides had been given up—that only two days previous, sixty women and children had set out from that part of the country, under an escort for Knoxville, to be restored to their friends. That there was to be no more war, and that all the Cherokees were getting ready to plant corn and hunt for deer and bear. No one of the Indians appeared to have arms of any kind.

It was proposed to Col. B—— that he should come ashore and tarry for the night, but he declined, alleging that he had been a long time on his way—that the moon was now full—the water at the right stage, and the weather mild—that he could now travel as well by night as by day. About this time the colonel bade the party adieu, when the white man observed that he and his companions were going a short distance down the river—that they would come on board and see them, to which proposal Col. B—— assented. Passing rapidly from the point of the cliff on which they stood, the whole party descended to a little cove behind, and quickly appeared in a large canoe. The Indians paddled with much earnestness, and the canoe approached the flat boat with great rapidity. They ascended and met Col. B—— with all his family on the deck. The white man extended his hand and saluted all who were clustered around Col. B——. He then introduced, in a formal manner, the principal chief.

The frame of this man was herculean—his age about fifty—his form was perfect. Being nearly naked, the deep and swelling veins of his long arms and legs were prominent to the view. His manner was proud and almost disdainful. On his immense head he wore a crimson turban, with various feathers in it, after the manner of his tribe. His face was painted red and black—his long lank hair was parted before, and thrown to either side of his high, broad and wrinkled forehead. His eye was small, deep sunk, coal black and brilliant. His natural ferocity seemed to have been increased by the frequent glutting of his vengeance in the white man's blood. His prowess in the field had secured him the lofty pre-eminence of principal chief of all his nation.

Col. B—— and his family shook hands in the most gracious manner with all the party. He said something to the Indians, which, on being interpreted by the white man, awakened a dry, sardonic laugh amongst them. Beside Col. B—— stood his oldest boy, holding him by the coat. After a few moments, when all were at a pause, a loud shout was raised. The principal chief in an instant drew forth from under his hunting

shirt a tomahawk, and at one blow "literally parted the head of Col. B——, one half falling on either shoulder."*

When the Indians reached the deck of the boat, Mrs. B——, as she afterwards said, perceived that the white man was acting the part of a traitor. This conviction satisfied her that her husband's hour had come. Before the cry was raised, she had become dumb. As the body of her father reached the deck, Emily B—— uttered a slight shriek and fell by his side. The five young white men were despatched in a moment. The white man seized the steering oar and rounded the boat too, that she might be secured to the shore. The two little girls uttered wild cries and threw themselves into the lap of their mother, who had gradually sunk down. The negroes in their terror had rushed to their apartment below, and were there all huddled together, when the white man ordered the hands to come up. Having done so, he directed them to strip off the clothes of the six who had fallen, that they might be given to the party. This command being executed, he directed that the dead bodies should be rolled into the river. The blood was heard trickling down into the water, from the deck, in small rills—the brains of the departed were scattered here and there—plunge followed plunge, until all were thrown overboard into their watery graves. The boat having reached the shore, the work of plunder was begun. The fire-arms, ammunition, chairs, clothes, cooking utensils, crockery ware, farming tools and wearing apparel, were taken out and placed upon the beach.

In rummaging through the boat, part of a barrel of whiskey was found, which filled the savages with joy. Towards nightfall, Mrs. B., her children and negroes, were ordered to leave the boat, which they did, and gathered themselves up in a group on the shore. Night soon set in: the air became chilly. The sufferers were faint and exhausted. Large fires were kindled, but the prisoners were not permitted to approach them.

Very soon portions of the whiskey were distributed amongst the Indians, and quickly after loud screams and laughter were heard.

As they became more and more intoxicated, the principal chief would rise from his haunches, brandish his tomahawk, and exhibit to the rest how the bloody work had been done upon Col. B. and his companions. To these exhibitions the rest would respond, by loud shouts, which were re-echoed back to the shore from the distant hills. The dogs which belonged to the captured party had crouched near the mistress and her children. They answered these shouts with long, deep, and mournful cries and howls, as if they even knew that the work of murder had been done upon their affectionate master. The fowls which were on board the boat, and which were ever of consequence to the new settlement, seemed to be restless whilst roosting on the low branches near which their mistress sat.

About a mile from the river there was a Cherokee town. It is in this way that the Indians are divided into small communities for social purposes. At nine o'clock the moon rose in all her fulness and beauty, and shed her radiant light upon this scene of desolation and horror. News of the recent capture had been taken to

this town, and the women and children soon made their appearance. They came near to the clustered captives and looked on them with intense and eager curiosity. About ten o'clock, high words were heard between some of the warriors at their fire. The dispute seemed to concern some matter in which they felt a deep interest. The terms in which each spoke to the other were angry and resolute.

At this instant, an Indian woman of small stature, apparently seventy years old, bent nearly double, approached the fire where the chiefs were with remarkable speed. She was heard to speak with great fierceness for one seemingly so debilitated. After a little she was seen leaving the Indians, with both hands full of tomahawks and scalping knives. Having disposed of these, she approached the two little girls, who were sitting at their mother's feet, and said in a softened tone two or three times, *piccininis*. She then seized the children and led them off, beckoning to Mrs. B. and Emily to follow, who obeyed her silent command, to a dark thicket near by, and directed them, in a whisper, to sit down, which they did. This being, who had no clothing but a large Indian blanket, bore the aspect of a hag. All her flesh seemed to be withered away. Her skin did not seem to be any part of her, but to have been thrown over her. There appeared to be a thousand wrinkles in her face. She had the invidious, sinister eye of the savage, and yet a close observer could perceive something of kindness, and much, of shrewdness in its expression. It was apparent to Mrs. B. that the chiefs were quarrelling about the possession of the prisoners, and that being drunk, they might at once pacify the difference in their destruction. During this drunken revel the warriors would rise and seize some of the chairs on the beach, sit down in them, throw their legs across, and show the rest how the white men were used to sit in them. These exhibitions would be followed by loud laughter.

The old Indian woman appeared to be in deep trouble: she was perpetually in motion. Two or three times she made her way to the captives by a circuitous route—looked at them—gave a grunt of approbation, and hurried off. She seemed to view the various articles collected on the sand with amazement. Several times she put on the bonnets of Mrs. B. and Emily, held them in her hand and viewed them, but returned them carefully to their places. To all those around her she spoke as one having authority. Towards midnight the warriors were all stretched out and profoundly asleep. Moving along softly, the old woman approached Mrs. B. and her children, and put forth both her dried and filthy hands that were filled with pieces of fresh deer meat that had been broiled on the coals, and were full of ashes, making signs to the captives to eat, and importunately pressing the two youngest children to do so in kind tones. After a few moments she disappeared, but returned quickly with a large gourd in her hand, containing some water mixed with pounded parched corn, of which Mrs. B. partook, and as she afterwards said, was the most delicious draught she ever swallowed.

At last the day dawned: the sun rose in all his brightness and glory. The vegetation was bursting forth over the whole country. The contrast between the condition of Mrs. B. and her family now, and on the previous day, was indescribable. It was manifest

* The identical words employed by Col. B——'s son in his narrative to the writer.

to her that the captives were to be separated, and that her two little girls were to be torn from her.

But Mrs. B.'s religious convictions were strong and abiding. She cherished a steady faith in the overruling care of a kind providence. The sudden and shocking murder of her husband, would have overpowered her reason, but he was irrecoverably lost; and now her intense anxiety for the safety of her offspring seemed to sustain her.

About seven o'clock, the chiefs who had been overcome by the debauch of the previous night arose, and proceeded to dispose of the spoils. Whilst they were thus engaged, the old Indian woman spoke frequently. Sometimes she was greatly excited and even vociferous; at others she was softened and imploring in her tones. She moved to and fro perpetually, and often looked and pointed towards the prisoners, who by this time had been withdrawn from the thicket.

After a delay of several hours, all the final arrangements were made. The old woman approached with all her speed—her countenance full of eagerness and joy, and seizing the two little girls, raised them from the ground, and attempted to drag them along. The least clung to the mother, and uttered loud cries. She shrunk with horror from the touch of this being, as though she were not human.

The old woman struck the child on the mouth to quiet her; and the mother in an agony persuaded the child to go, because she perceived that it was kindness that moved this singular creature, and that in her care her little girls would at least be safe. At last the woman raised the youngest child upon her back, and firmly grasping the other by the hand nearly dragged her along. Seeing that at last she had succeeded in her wishes, she laughed, and in doing so looked like an unearthly being.

When the children disappeared, Mrs. B. felt as though she had sunk into the depths of despair; but there were others whose destiny was still unknown.

Her manly boy was assigned to a robust and good-natured looking chief, who spoke in a gentle tone to him, and pointed to him to take the road and go forward.

But Emily sat alone in all the bitterness of grief. She was of a tender age, and about to be separated, perhaps forever, from her mother, her instructress, her adviser, friend and companion. She was to be domiciliated in the family of a savage. Her father had fallen prematurely. Her thoughts reverted to him who had parted from her when she was flushed with hope, and sustained by a devoted passion. Filled with terror, lest disobedience should be followed by a violent death—still clinging to life under all these sorrows, Emily B. marched feebly along before the haughty chieftain whom she was to serve, and in whose train there were many ponies loaded with large portions of the plunder found in the boat. This warrior was a young man—a stern looking fellow—his face painted, with feathers in his turban—his tomahawk at his side—his rifle in his hand—a beautiful beaded shot-pouch over his shoulder, with beaded moccasins of great beauty on his feet, and leggins of the same material.

Mrs. B. was attached to a chief whose squaw was along, having with her two of her sons.

The negroes were parted into small lots, and disposed of to those who had captured them.

THOUGHTS ON SUNDAY SCHOOLS, AND SUNDAY SCHOOL BOOKS.

I go for Sunday schools. Apart from religious edification, they have at least three distinct recommendations, even to the mere worldling, who looks to nothing beyond the temporal good of man. 1. Their lessons are learnt peculiarly well, and act with peculiar force upon the mind and character, from their coming but once a week. So long a space between the stated mental repasts, causes them to be thoroughly digested; and creates for them an appetite ravenous, yet most healthful. Accordingly, the most rapid advancement in knowledge that I have ever known (considering the quantity of instruction given), has been made by children whose only teaching was at Sunday schools. 2. They afford opportunities for thousands, who (to the shame of Virginia be it spoken) have no other means of knowledge, to acquire much that may be useful. Some of these thousands cannot be spared from home on work-days: some, whose parents cannot afford to pay for their schooling, are not sent to the poor-schools, because pride will not let them consent to be singled out as objects of charity. Sunday schools avoid both these difficulties. The children of the rich and poor meet together there, without distinction—just as they would in those common-schools, the want of which has been so long and so justly a reproach to us. 3. Children who go to the Sunday school are kept out of mischief; saved from habits of vice and idleness. I have no morbid horror at the 'desecration of the Sabbath'; but I do believe, that a child, who spends all of it that is not devoted to needful bodily exercise, in improving his mind, stands a far better chance to be useful, respectable, and happy, than if he had given the same hours to idleness or sport. Compare any number of regular Sunday scholars, with as many children of like condition, who have idled away their Sundays: and see which will furnish the larger number of good-for-nothing, or profligate people; if not criminals.

Thus, whether we look to the well-doing of individuals, or to the good of society, Sunday schools, if not greatly perverted, must receive signal praise.

But, some of them at least, have been greatly perverted: so greatly, as to make them agents of less than half the good, which they might otherwise have wrought.

To pass over their omission to teach writing, geography, or arithmetic—though these might to some extent be easily and most usefully taught—the greatest perversion consists in the sort of books, used. Instead of Sandford and Merton, Evenings at Home, Edgeworth's Early Lessons, or the stories contained in them and in her Parents' Assistant and Popular Tales; instead of Peter Parley's shrewd, instructive stories, or the not less instructive Conversations of Uncle Philip; and Popular Lessons, Sergeant's Temperance Tales, or even that excellent series, the New York Spelling Book and Readers;—a tribe of books has been introduced, many of which no one can with a safe conscience employ as vehicles of knowledge, unless he is of the sect to whom that particular Sunday school belongs. Not content with the New Testament—though, (beautiful as it often is in style, and perfect in morals) that is

a very unsuitable school-book for young children—the caterers for such a seminary provide works not only staggering to faith, but puzzling to intellects ripe in years and long exercised in study. An innocent of eight years old is made to get and say by rote, mysterious doctrines that Athanasius and Arius in the fourth century, a thousand Fathers in the Middle Ages, the Council of Nice, and the Synod of Dort, battled it over in vain; when, like the fallen Angels in Pandemonium, they

‘reason’d high
Of Providence, foreknowledge, will and fate,
Fix’d fate, free will, foreknowledge absolute;
And found no end, in wand’ring mazes lost.’

Locke on the Human Understanding, is not commonly deemed a very simple book: few persons would think of putting it into the hands of small school-children. But it is easily intelligible, compared with some of the catechisms for Sunday schools. A very sensible member of a leading denomination of Christians lately told me, that one day, after instructing his own class of Sunday scholars in a plain, common-sense way, he perchance listened awhile to the lesson of a neighboring class; and was astonished to hear the little creatures utter mysteries unintelligible to him, and, he could not but suppose, unprofitable to them. The lighter-reading furnished by way of accompaniment to those profound catechisms, is not much better. It consists of Essays, Biographies, and Tales (pious novels), tending mainly to exemplify and illustrate the mystic doctrines aforementioned; with but an incidental bearing upon common life. Even Miss Hannah More’s ‘Two Wealthy Farmers,’ Miss Jane Taylor’s ‘Display,’ and her still more excellent ‘Contributions of Q. Q.’ so full of genuine piety, are scarcely evangelical enough for our Sunday schools.

For my part, this cause has long shut me out from a regular share in those schools. I grew up to manhood, and began to grow gray, teaching in them through six or eight summers: but sectarian books were introduced, which I could not explain and enforce (as books always sought to be, to pupils) without a seeming hypocrisy. Occasional help has since been all that was in my power.

Is this thing, sects might profit by a sort of apologue in ‘Evenings at Home.’ A gentleman and his son were walking in a village one Sunday, as the church bells were ringing. The various societies of worshippers were going to their respective houses of worship. ‘Father,’ said the little boy, ‘why do not these people all agree to worship God in the same manner?’ ‘And why should they agree? They were not made to agree in this, I suppose,’ said his father. Just then, a poor man fell down in the street, in a fit. Numbers instantly hastened to aid him. A Presbyterian sat down and made his lap a pillow for the sick man’s head; a Baptist chafed his temples; a Roman Catholic lady held her smelling bottle to his nose; a Unitarian untied his neck-cloth, and unbuttoned his collar, to let him breathe more freely; a Methodist ran for a doctor; an Episcopalian soothed the poor man’s crying children; and a Quaker held his wide umbrella over him, to keep off the burning sun.—‘Arthur,’ said the gentleman, pointing to the scene,—‘this is what men were made to agree in.’

Now the early instruction of youth, like the offices of humanity, surely is what men ought to agree in; so far, at least, as to forbear inculcating doctrines which, if intelligible to the pupil, are useful only to prime him for bitter controversy, and cruel intolerance. In the immense fields of confessedly valuable knowledge, there is common ground enough to employ all childhood in traversing, without straying into the by-ways of sectarian mysticism. To explore the several kingdoms of visible Nature, even superficially; to learn somewhat of Man’s constitution and history; to master that sum of all moral duty, comprised in the injunction, ‘Do justice—love mercy—and walk humbly before Heaven;’ are studies to fill many years; studies which no rational being can postpone to such questions as ‘how many persons are in the Godhead?’—and, ‘is sprinkling or immersion the right mode of baptism?’ Those studies are the common ground of humanity; on which all sects should meet, and to them confine early education.

Cannot the wise and good of every Christian denomination (including Unitarians and Catholics) determine, with some exactness, the great principles of religious truth in which they all agree; and then expel from Sunday schools, all books that teach any other religious tenets? The principles thus adopted, with moral duties, and the knowledge of Nature,—* would present a range wide enough for the most active mind, during the longest life. Hundreds and thousands of volumes might be filled, within that range; schools might go on for hundreds of centuries, to teach what it contains; and leave it, after all, far from exhausted.—Why—why will not those wise and good come to that agreement? Why cannot they make that sacrifice of the spirit of proselytism, upon the altar of their country, and of humanity?

In whatever school that generous sacrifice may be made,—or in whatever one a rational influence may prevail,—Sandford and Merton, with the other books first mentioned, ought to be among the first adopted.

Added to them, should be a recent one of Miss Sedgwick’s; ‘A LOVE-TOKEN FOR CHILDREN.’†

The eight stories which compose this little book, are suited to the capacities and tastes of children; for whom they were written. They show that knowledge of common life and of the young heart, for which the author is remarkable; and they possess that quality, the unfailing test of a truthful and wholesome book—the quality of making the reader feel, that good principles within him have been fortified, and generous impulses aroused, by the perusal. But the highest praise is yet to be uttered. Although these stories bear the manifest impress of decided christian piety, they contain not the slightest indication of the author’s particular creed. The truly virtuous of every sect must acknowledge and admire her, as a co-worker for the great end of Religion—*human happiness*: yet not one of them could claim her exclusively, as a sister, in subordinate points of faith. This is well nigh the beau ideal of a book for Sunday schools; indeed, I cannot help saying, of a

* By the phrase ‘knowledge of Nature,’ I mean all kinds of moral and physical science, and all sorts of history.

† ‘A Love Token for Children. Designed for Sunday School Libraries. By the Author of “The Linwoods,” “Live and let Live,” “Poor Rich Man,” &c. &c. New York: Harper & Brothers.’—pp. 142. 12mo.

book for any school. It should exhibit not the belief of Calvin, or Socinus, or Fenelon; but the maxims of common sense, and the principles of Christianity: just as the speech of a real statesman breathes not the spirit of party, but the holy dictates of Patriotism and Justice. Such a book ranges within that common-ground, upon which all sects ought to meet. Like the spectacle of distress in the apologue, it calls them away from points wherein they differ, to things wherein, if true to their common Master, they must agree—to succor the afflicted, to comfort the wounded in spirit, to diffuse all around them the kindly charities of life. Such a book is *this* one.

The best stories in it are 'The Widow Ellis and her son Willie,' 'Our Robins,' and 'Mill-Hill:' and again of these three, 'Mill-Hill' is at once the longest and best. If the Editor of the Messenger can spare room, he will find it well filled by copying one of these stories—'Our Robins'—as a touching and instructive lesson to his young readers.*

They are all New England Stories. *Emma Maxwell*, the heroine of 'Mill-Hill,' is a being of that captivating, yet unexaggerated loveliness, which the author so well knows how to portray. I subjoin an account of her; given, just after a description of the village burying ground.

'Ask any one at Mill-Hill whose thought it was thus to beautify their burial-place, and you will be answered, "Emma Maxwell's. Emma is so thoughtful about the children, and she thinks, if there are flowers about the graves, it will take off their gloomy feelings, and they won't be so shy about going there. She says it's a teaching-place, for there is always a still small voice comes up from the grave; and besides, since we have tried it, the neighbors all say it's a comfort to do it." Should you proceed in your inquiries, and ask "who planted the trumpet-creeper that winds round and round that old dead tree by the schoolhouse, and who trained the sweetbriars round the windows," you will be answered, "the children did it, but Emma has seen to it." "And who cut out the earth like stairs to 'Prospect Rock' at the top of the hill?" "The boys, but Emma Maxwell put it into their heads." "And who keeps the Sunday school for those little Irish children from the shanties on the railroad?" "Emma Maxwell; who but she would take the trouble, when their folks did not care one straw whether they were taught or not?"

And so you might go on for an hour, and find that Emma Maxwell did good deeds that others, for want of thought (and perhaps faith) rather than time or heart, do not do.

There are persons in this world who would almost seem to be deprived of the natural relations of parents, brothers and sisters, husband and children, that they may do the little odd jobs for the human family left undone by the regular laborers. Emma Maxwell was one of these, God's missionaries to his children. Emma was an orphan. She lived at her uncle's, where, though she paid her board, she rendered many services that lightened the burden of life to every member of the family. Perhaps some of my young readers would like to know how Miss Emma Maxwell looked. She was tall, and not very slender, for she took good care of her health, and had the reward of her care in strength and cheerfulness, and the sign of it in the bright bloom of her cheek. She had a soft blue eye, and one of the sweetest mouths I ever saw. How could it be otherwise? for never any but kind words and soft tones came from it. And she had—do not be shocked, my gentle readers—red hair. Depend upon it, all young ladies, be they good and lovely, and even pretty (and pretty Emma undeniably was), do not have—except in books—"auburn hair," or "flaxen," or even "rich brown." Emma's hair was so plainly and neatly arranged, that no one noticed it except to say that "somehow red hair did not look badly on Emma Maxwell." The light that comes from within can make

everything without look agreeable in our eyes. Many wondered why Emma Maxwell, who, at the date of our story, was full four-and-twenty, was not married, and she "so attractive and so excellent." The mothers said, knowingly, "the right one" had not asked her; and the young girls, with all their horrors of an old maid, almost hoped that "the right one" never would ask her away from Mill-hill.

Emma had escaped that worst evil, sometimes the consequence of the early loss of friends, a diminution of her affections. Hers were "set on things above." Her heart went out to meet every human being gently and silently, like the falling of the dews of Heaven. There was no bustle, no talk. By her fruit she was known. She often resembled those flowers that unseen, give out sweet odors; her kindness was enjoyed, and its source never known.

A railroad was projected, to run by Mill-Hill. The Irish came (as where do they not?) to work upon it. The villagers were very much afraid of so lawless a horde; but Emma Maxwell, in the 'ladies' sewing society,' maintained, that if rightly treated, those people would be found honest and tractable. It proved so. She soon had an opportunity of showing kindness to a little orphan girl among them—*Anny Ryan*, whom she saw weeping inconsolably over the fresh grave of a sister, the last of her family. Emma managed to soothe her a little, and accompanied her to the shanty, where lived her only protectors, an Irish laborer and his wife, named *O'Neil*. The description of the dwelling is graphic.—And there are few Temperance orators who might not envy the eloquent power of Emma's appeal to Mike, against the jug of liquor. I beg the reader not to stop till he has read all the following extract:

'Emma had never before seen the inside of a shanty; and, though she was well acquainted with the poorest abodes of our native people, she was astonished to see so many human beings hale and thriving in such a habitation. There was no table, no chair save one broken one; boards fixed on blocks served to eat and sit on. On her first survey Emma concluded there was no bed, but a second view led her to believe that a heap of rubbish in one corner of the apartment had served as a bed, and that there poor Judy had died. In an opposite corner lay a bushel of potatoes. A junk of pork and half a newly-killed calf hung beside the door, while a bountiful mess was frying, and Dame O'Neil was stirring up a cake to bake before the fire. She first perceived the approach of Anny with her new friend. "Be quiet, Mike, and hold your tongues, men, will ye?" she said, to her husband and some half dozen men, who, with a jug of liquor beside them, were all talking in the same breath, "the lady is coming with Anny Ryan. Och, Rose, take the babby's hands out of the molasses. Biddy, move aside the pan of milk that bars the door, will ye? The Lord above bless ye, Miss," to Emma; "ye've had trouble enough with her?"

"Oh no," replied Emma, entering quietly, and accepting with a kind look of acknowledgment the seat offered her; "Anny is trying her best to feel and act right, and that's all we can any of us do, Mrs. O'Neil."

"That's true, indeed, in trouble and out of it."

"She tells me, Mrs. O'Neil, that you have been very kind to her and hers, and now she'll find it a comfort to do for you."

"Lord help the poor child, Miss, if she'll stop fretting it's all I ask of her. She's always ready to do little jobs for me; it's enough I have to do, my oldest being boys—make a bow to the lady, Pat—and no help like to me."

"But rather a hinderance, I should think, Mrs. O'Neil. Here's a school for boys near you, kept by a very good young man, where you can send those two little boys for twenty-five cents a week."

"Do you hear, Mike?" asked Katy O'Neil.

"And where's the twenty-five cents to come from?" answered Mike, "when we are all fed the week through, six of us, besides Anny Ryan, that shall have her full meal if the little reg'lars go starved."

"Oh, there is no starving in this land, my good friend, for the family of a stout working man with a busy wife at home. But

* We will copy it in our next No.—[Ed. Mess.]

the mind must be fed as well as the body, or it will not thrive and grow. These are bright-looking boys of yours. They will soon learn to read, write, and keep accounts, if you will give them a chance. Is there nothing for which you spend twenty-five cents a week that you can as well do without?"

"It's the liquor you mane, Miss," said Mike, touching the jug with his foot; "troth, it's not I that cares for it; but, when the other boys drink, I must do my part."

"Perhaps the other boys have no children, and they cannot have the pleasure you will have in giving up drink for the good of your children. I see you love those little fellows—I see it by the way they hang round you; and there, the baby, as if to make my words good, is stretching out his arms to you. Surely, surely, Mr. O'Neil, those that have children to play with when they come in from their work don't need a drink to cheer them."

"And that's true, Miss."

"And then, when Sunday comes, it's good to have a store of pleasant thoughts; and what can be pleasanter than thinking that, instead of drinking up the money you have worked hard for, you have been laying it up, as it were, in these little boys' heads and hearts, to make them richer for this world; and, it may be, Mr. O'Neil, for the world to come? And, besides, ought you not to do this to show your gratitude to Him who gave you your children?—his very best gifts."

"Thank you, Miss, thank you," replied O'Neil, stroking his boys' heads and looking down, much pleased with Emma's proposition, but not quite prepared to accede to it.

"Good-night to you all," said Emma, and "good-night to you, Anny. Don't put your apron to your eyes again, my child; I will be sure to come and see you before many days, and then, Mrs. O'Neil, you can give me your husband's answer. Perhaps," she added, looking at O'Neil's companions, "some of your friends, whose families are not yet here, may have children they would like to send to the school."

"I thank ye, Miss," said one. "And ye'll be as sure to find children where there is a shanty, as bees where there's a hive," said another. Anny followed to the door. "How many days will it be?" she asked.

"Very, very few, and do not forget our talk at Judy's grave."

"Forget! I'll forget everything else, and mind nothing but Judy, and all ye said about her;" and she kissed Emma's gown as she stepped from the door, and, murmuring prayers and blessings, sunk down on the ground, and neither moved foot nor eye till Emma turned the road that led up the hill and was quite out of sight. As soon as she was out of hearing, one of the men within said, "There's not many the like of that young woman." "Her heart's blood is as warm as if she were born at home in old Ireland," said another. "And did not she plade for my stranger boys as if they were her own people's children?" asked Mike O'Neil.

The story has too many incidents, and too much good matter of various kinds, to indulge in further quotation: and abridgment is hurtful or insipid. It is deeply interesting; and would of itself be richly worth what the book costs.

This, this is the sort of books for Sunday schools.

W.

POCAHONTAS,

THE INDIAN PRINCESS.

There once stood, and I trust there yet stands, within the limits of the town of Petersburg, on the north bank of the Appomattox, within a few feet of the margin of the river, a large dark gray stone of a conical form, about five feet in height, and somewhat more in diameter. On the side which looks to the east, three feet above the ground, there is an oval excavation about twelve inches across, and half as many in depth. The stone is solitary, and lifts itself conspicuously above the level of the earth. It is called the *Basin of Pocahontas*, and except in very dry weather is seldom without water. How often in the days of youthful imagination have I leaned against that aged rock, and as my fancy warmed with reminiscences of our colonial history, have I figured to myself the form of this beautiful princess, meditating the protection of the white man, from the wiles of her ferocious countrymen, and the vengeance of her father, advancing to her ablutions, and perhaps lifting up her orisons to the Great Spirit for the welfare of the white man, as standing by this stone, she looked towards the orient, radiant with the pencilled messengers of the morning.

I know not wherefore it is, but I could never contemplate any of the evidences of the former greatness or present debasement of that doomed race, who, when this continent was one vast wilderness of nature, uncultivated and unfrequented, trod amid its solitude rejoicing in their illimitable sway, that my mind did not instantly revert to the virtues and the sufferings of this amiable child of nature, the Princess Pocahontas. In festive commemoration of the first settlement of the colony, I have stood among the ruins of Jamestown, and shrinking from the voice of revelry, I have lingered among the broken fragments of red stone tablets upon the graves of the early colonists, and my heart has been oppressed with melancholy feelings, when looking upon the dark green vine festooned around the tottering ruins of the church, I have thought of the fate of this Indian girl, and of her perilous services to the white man. At Cobbs, in the county of Chesterfield, one of the most beautiful sites on the southern waters, and one of the earliest private settlements of the colony, how often has its former proprietor, my friend L. and myself, stood beneath the melancholy shade of the cedars, in the midst of the graves of her descendants. One by one we have seen them passing away, and assisted at the last mournful rites. From the cemetery we have passed to the ancient picture-gallery, to look upon the sombre features of Rolfe frowning from the pealed and tattered canvass, and to dwell upon the interesting countenance of Pocahontas, which is still believed to have been her veritable portrait, though denounced by one of her lineal descendants as a "tawny mulatto." The paintings were as large as life, and well executed, though in a state of utter decay. Copies have been taken by Sully, and have no doubt been multiplied as well in Europe as in this country. Often has the tasteful traveller turned from the great southern route, to view these original portraits of Rolfe and Pocahontas, and to tread amid the gravestones of her descendants in the neat and lonely burial-ground.

How often do the incidents of ordinary life transcend the wildest fictions of romance? Who gave to this dark daughter of the red man, nurtured in the wigwam of the savage, and familiar with blood, those gentle emotions, those generous feelings, that delicate sensibility, that maidenly decorum, and yet that princely and exalted heroism, which have ranked this Indian girl among the loftiest of her sex in any age or clime,—in "Paynim land or Christendie!" Even in her girlhood, at the early age of twelve, we find her daring the displeasure of her father; and when the head of Smith, the hereditary foe of her race, was upon the death-stone, and the club uplifted, she threw her infant arms around the devoted white man, and bade them strike at

both. The stern bosom of Powhatan was moved by the appeal, and his vengeance suspended. How often when the colony at Jamestown was famishing, did she supply them abundantly with provisions? Even after she had incurred the displeasure of her royal father, and had been banished from his presence, and after she had been betrayed by her friends, and was seized by Argall, her attachment to the white men continued, until she was finally married to Rolfe, and visited England. How painfully interesting was her interview with Captain Smith in London? She had been told that he was dead, when to her astonishment he called upon her, but such was the repulsive coldness of his manner, that she turned from him, and burying up her face in her hands, she burst into tears.

But the most perilous service which this daring girl rendered to the colonists was in the fourteenth year of her age, when Powhatan having invited Smith to his settlement, on a hospitable visit, designed to massacre that leader and his whole band. Pocahontas eluding the vigilance of her friends, traversed the forest in the darkness of the night, to reveal his intentions to Smith. It was in commemoration of that signal service, that the following unpretending lines were written many years ago, by one who deeply admired the heroism of this untutored child of the wilderness.

THE PRESERVATION OF THE EARLY COLONISTS FROM MASSACRE.

"Whether this intervention of Pocahontas be imputed to the softer sympathies of the heart, or to generous sorrow," &c.
Burke's History of Virginia.

Full dark was the night, and the wild wind was high,
Not a star to be seen on the cloud-covered sky,
And the eagle had gone to his rest;
Each beast had retired to covert or cave,
The colonists slept in their barks on the wave,
Or they slept on the barren earth's breast.

No sound could disquiet their slumbers so sweet,—
They dreamed not of danger, yet feared not to meet,
For the sons of the ocean were brave;
And Smith was among them, their captain was he,
And a braver ne'er whirled the sword of the free
In battle, on land, or on wave.

To Powhatan's presence these strangers had been,
Through forest and glen, and thro' each desert scene,
With fearful petition they went.
And Powhatan told them that peace should be there,
His words seemed sincere, and his promises fair,
But they knew not his savage intent.

Virginia remembers how hollow they were,
As fickle as sunbeam that wantons in air,—
But the colonists deemed them sincere.
For tho' Powhatan promised his friendship and aid,
A treacherous plot to destroy them he laid,
When no treacherous plot they could fear.

On that very night while the colonists sleep,
Nor deem it befitting their vigils to keep,
Each man was to meet with his fate.
The sovereign savage had led out his band,
His tomahawk furious each grasped in his hand,
"To the white men, death, carnage, and hate!"

"To the white men, death, carnage, and hate," as they yell,
The savage sounds echoed thro' forest and dell,
"To the white men, death, carnage, and hate!"
But heed not, brave colonists, death is not near,
While the royal princess is your friend do not fear,
Pocahontas will screen you from fate.

She had heard, when his council surrounded her sire,
As they met to consult by the wintery fire,
That Smith and his crew were to fall:
She had seen him, she knew him, and sometimes her heart
For his dangers would feel an unusual part,
And she cherished the colonists all.

Whilst her father was arming his murderous band,
And exclaiming "exterminate all from this land,
Who will dare to intrude on our right,—
Strike, murder, and scalp—light the fires around,
Bid the war-whoop of death give its terrible sound,
Not a white man shall live out this night;"

Unnoticed she left them, and hastened away,
She recked not the mountain, or thicket, or spray,
Nor darkness she heeded, nor storm.
All breathless she reached where the colonists were,
They dreamed not that Powhatan's daughter was there,
They dreamed not of savage alarm.

Their leader in haste then the heroine found,
The sky was his cover, his bed was the ground,
And beside him his armor was laid.
"Awake thee, brave chief," cried the Indian maid,
"Awake thee, my hero, or Powhatan's blade
Will number thy crew with the dead."

"He comes with his tribe to o'erwhelm your whole host,
His savages wind by the dark river coast
To surround you, and massacre all.
Then haste, to his bark let each soldier repair,
And put off from the land, for the foemen are near,—
Oh haste, or the colonists fall."

"Nor call me a traitor, because for thy sake
I have traversed the forest thro' thicket and brake
To tell thee my father's design.
To have seen thee expire beneath his fell stroke,
And thy followers all, my poor heart would have broke,
And the cold sleep of death had been mine."

"I have saved thee before from his terrible ire,
When the club was uplifted, and kindled the fire,
And thy death was decreed by his oath;
Thy head on the block as my arms did entwine,
Between it and the club I then interposed mine,
And I told them to strike at us both."

"Then believe me, my Chieftain, and hasten away;
I return, or suspicion will blacken my stay,
And the morning my embassy tell.
May thy God e'er protect thee, and give thee his aid,—
Oh, live mindful of me, tho' a poor Indian maid—
Pocahontas now bids thee farewell!"

EXTENSION TO FOREIGN AUTHORS OF

THE LAW OF COPY-RIGHT.

A vigorous discussion is going on in New York and Philadelphia, upon the question, whether the benefits of the United States' law, securing to authors the exclusive right to the sale of their works for limited times, should be extended to authors resident in England and other foreign countries?

We confess, it appears to us surprising, that any voice should be found in the negative of this question; besides the voices of those booksellers, who profit by vending foreign books, and of those readers, whose morbid appetites make them ravenous for the worst trash that can be reprinted from the refuse of European literature. The advantages which would result from the proposed extension, are obvious, and great.

At present, works from abroad (because not saddled with the author's copy-right) can be re-published here at half the prices they would require if they were of domestic origin, and were protected by entry and patent according to law. An immense deluge of foreign trash—aye, and poison, too—is one consequence: an incalculable addition to that evil, justly deemed one of the greatest in modern Literature; namely, the needless multiplication of books.

Another consequence is, the exclusion, partial indeed, yet extensive, of our own writers, from the book market; if they avail themselves of the law made in their favor. For they are so far undersold by the re-printers of foreign works, that the latter occupy triple the space in the public eye, to which their intrinsic merits entitle them. Thus not only are European corruptions poured in copious streams into our literature, manners, and character,—but our native authors, deprived of the encouragement so peculiarly requisite in this country to stimulate literary effort, produce little or nothing that 'aftertimes will not willingly let die.' The inducements to that practice of composition, which is indispensable to excellence, are withheld. False models are forced upon their imitation: false taste, through a thousand channels, is infused into the minds of both writers and readers: unnumbered opportunities are lost, of disseminating American principles and creating an American spirit: and an improvement shamefully slow, if not a positive deterioration, attends the exertions of American intellect.

A *fair competition* is all that our own authors need. The guarantee they now have, against encroachment upon the fruits of their mental labors by piracies at home, every one concedes to be just. It is equally just, to make that guarantee effectual, by protecting them from an even more hurtful foreign encroachment.

Indeed, the interests of readers and of writers are so variously and indissolubly blended in calling for the proposed extension, that no point can be urged in behalf of the one, that does not tell in behalf of the other.

Justice to foreign authors, is no despicable inducement to the measure. Many as their readers are on this side of the Atlantic, how great would be the increase of their reward for those emanations of genius which delight and improve the world! How reasonable, that as the fruits of their vigils and toils cross the sea and are enjoyed by distant millions, these too should contribute something to requite the dimmed eyes and hollow, pallid cheeks, without which, that enjoyment had never been!—In this, moreover, as in *all* justice, there would be good husbandry at last. The benefit would be made mutual by foreign governments: they would allow copy-rights in their countries, to our authors. And thus another interchange of good offices—another important link of kindness—would be added to those which are already promising to make the intercourse of nations benignant and fraternal, instead of hostile and destructive.

The last topic alone might serve as text for an expanded and unanswerable argument in favor of the contemplated law. We are content merely to glance at this, as at the other reasons that may be urged.

MERCHANTS' LIBRARIES.

The New York Merchants have had a Library established for their joint use, since 1821. Connected with it, are courses of Lectures delivered by able men employed for the purpose, on various interesting and useful subjects. The following facts respecting it, are gleaned from a late annual report made by the presiding officer.

The Library opened in February, 1821, with 700 vols. At the end of that year, there were 204 members.

In 1826, its prosperity began to be more rapid than ever before. In that year, 471 members were added to it. In 1830, it took possession of CLINTON HALL, a 'noble edifice,' then 'dedicated to the service of literature, science, and the arts.'

In 1831, 507 members were added, and 750 vols.

1832, 383	"	864
-----------	---	-----

1833, 382	"	1397
-----------	---	------

1834, 393	"	1099
-----------	---	------

In this last year, (1834) the whole number of volumes was 9938.

In the year 1837, 2,547 volumes were added. The whole number at present is 15,852. Of the volumes added last year, 381 were donations.

'Great care has been taken,' says the report, 'in the selection of the new books, to procure the most important and valuable works in the several departments of learning, especially in those of history, science, and the arts, which were most in demand. Should the library continue to receive accessions, in an equal ratio for five years to come, it will then be in advance of nearly all the public libraries in the Union, both in the number and the value of its contents; and at the present moment there are few libraries in the country, that contain an equal number of standard publications, of the most approved editions.'

The following statement is creditable to the taste of the merchants for reading; and to their discrimination in their choice of books:

'Upon a careful examination of the subject, it has been ascertained that the average number of volumes drawn daily from the library, is upwards of 450, or upwards of 135,000 volumes annually. Of this large number a great proportion is found to consist of works upon the solid branches of learning, as the physical sciences, political economy, commerce, and the arts. Such is the character of the spiritual aliment which is afforded to many hundreds of our young men, from the accumulated stores of useful learning which our valuable library contains; and whenever we reflect upon the discovery of Lord Bacon, embodied with sententious brevity in the remark, that "KNOWLEDGE IS POWER," it is difficult to calculate the amount of that moral strength which is thus imparted, and of which society, sooner or later, must reap the full benefit.'

There are now 3772 members: of whom, 3,444 pay \$2, each, annually; 50 pay \$5 each; and 278 are stockholders.

The receipts last year, from initiation fees, lectures, and other sources, were \$6,918.

The subjoined paragraphs of the report display the benefits of the Lectures:

'The results of the Lectures during the past sea-

son, in a pecuniary point of view, far exceeded the most sanguine anticipations of the board; the surplus remaining, after paying all expenses, was \$665 66, as appears by the Treasurer's report. The course of lectures now in progress will undoubtedly yield a further surplus to replenish the treasury of the association.

'It is unnecessary to dwell upon the unparalleled success that has attended this auxiliary branch, which has been engrafted upon the original plan of our institution. The best testimony on the subject is found in the immense crowds that throng the hall during the delivery of the lectures, until additional space is required for their accommodation. Nor can any reasonable doubt exist, as to the utility of this mode of instruction, by which important truths are enforced, and valuable information imparted, in the most effective, as well as the most agreeable manner. We have all listened with emotions of delight and admiration to the impassioned eloquence that has been poured forth on subjects of the highest interest. Literature acquires fresh charms, and the lessons of philosophy sink deeper into the minds, when set forth and illustrated by the animated tones of the lecturer; the attention is directed with a new impetus to the consideration of important topics, and the inquisitive student is stimulated and encouraged to engage with fresh ardor in the pursuit of knowledge.'

Such institutions as this, are needed in all our towns and villages. On a smaller scale, they are practicable in every village of twenty families.

LINES.

Leaves of an evergreen plant, if written upon with a metallic point, retain the impression. The following lines were addressed to a fair cousin of the writer's, on her requesting him to place his name upon a beautiful plant of this genus, which grew among her flowers, and bore the names of those whose friendship she most valued.

TO MY COUSIN.

Permit me, Coz, a dream to tell,
Was conjured for an hour
Around my pillow by the spell
Of some strange wizard power.

Ambition sat upon a throne
Of gold, and sparkling gem;
And brilliantly the halo shone
Around his diadem.

He cast on me a glance of light,
Then raised his shadowy hand,
And, lo! upon a towering height
I saw a column stand.

To earth I bowed my forehead then,
My every pulse beat high;
That marble bore the names of men,
Whose fame can never die!

I marked a pathway rough and steep,
Which to the column led,
And, though I had but strength to creep,
I turned that path to tread.

Just then a maiden caught my sight,
From all this pomp apart,
Whose eye so sweetly shone, its light
Seemed incense from the heart.

She sat within a verdant bower,
Bespangled with the dew,
And on the air full many a flower
Its balmy fragrance threw.

Methought she had been sent to bless
The thorny paths of earth,
And teach the flowers that loveliness,
Which with herself had birth.

On me, methought, her glance and smile
In blended radiance fell;
She pointed to a plant the while,
Which told her meaning well.

Upon its leaves of changeless green,
Pure Friendship's emblem true—
The names of those she loved were seen,
A chosen favored few.

With rapture thrilling in my breast,
I joined my humble name;
Ambition's thoughts were lulled to rest;
What cared I then for fame!

BLANKS.

NO. I.

My earliest recollections of newspaper reading are connected with the name of a mysterious person, who made a conspicuous figure in our little country paper, under the patriarchal title of *Job Printing*. I was at first attracted by the stately capitals in which the name appeared, week after week, before I had begun to take much notice of the "reading matter" printed in small type. As the printer of the *Village Herald* chose to put the name of Mr. Printing in a most conspicuous part of every number, and in the most glaring letter that his fount afforded, it is his fault, not my own, that I began to look upon this eminent public character with a degree of reverence akin to superstition. As my skill in reading grew, and I began to give attention to second-rate, as well as *capital* articles, I found my favorite *Job* enveloped with a ten-fold mystery. Instead of advertising, as his neighbors did, some commodity for sale, or other business news, his advertisement was occupied with a mysterious announcement in relation to himself, which filled me with astonishment and awe. "Job Printing done at this office, with neatness and despatch!" I was reserved and addicted to solitary thought, and as I found that there were some things which I must not ask about, at least with any hope of a direct reply, I set this down upon the list, and waited till the secret should unfold itself. How a man could be "done" with neatness and despatch, was inconceivable, and as the printer's office was the scene of the performance, I found various excuses for frequenting it, and loitering about it, in the hope that *Job* might be "done" some day while I was there. But, alas, I hoped in vain, and true to my Pytha-

gorean principle of silence, I returned to the solitary study of Job's stereotype advertisement. At length I was startled by a sudden and important change in this enigma of typography. As I cast my eye one day upon the paper, I perceived at once that Job's advertisement was lengthened. I could not be mistaken, for its previous dimensions were engraven on my memory too deeply to be razed. I soon discovered the occasion of the change. Beneath the usual laconic notice a new sentence had been introduced, composed of seven words: "Blanks for sale and executed to order." I was at once relieved and disappointed; for I found that this idol of my imagination was a *bona fide* trader after all, just like his neighbors, and my reverence for him sank with my conviction of this fact. But, at the same time, a new mystery engrossed my thoughts. The village where I lived was sustained by manufactures, and even at that tender age, I knew its staple products, but the blank manufacture was entirely unknown to me. I could dwell with painful pleasure on the successive steps by which I gradually formed a conception of this novel fabric, but I spare my readers the detail, and hasten to inform them that my chronic doubt and wonder was at length destroyed by my honored father's placing in my hand a sample of the manufacture, which he told me was a "law blank." The joy of the discovery was lost in admiration of the blank itself, especially when I had got possession of a number, and by diligent comparison, had formed a just conception of the genus Blank. The singular vagueness and impersonality of these strange compositions, their punctilious abstinence from all details of time or place, their scrupulous suppression of the names of individuals, and their studied ambiguity even in relation to the sex of the mysterious non-entity referred to, as evinced by the use of *h*— for *his* and *her*; together with the tantalizing humor of the author, in encouraging the reader to expect some most particular and technical announcement, and then leaving a chasm in the very spot which ought to give the information—all these peculiarities of style, while they perplexed me, charmed me too, and I became intoxicated with a fond ambition to employ my time and talents as a writer of blanks. Never shall I forget the day on which I mustered courage to communicate this purpose to my father. The loud laugh of derision which assailed my ear, when I expected his applause and admiration, went like a dagger to my heart; but even that pang was forgotten in the shock which was to follow. I shudder when I think of the cold-blooded irony and undisguised contempt with which my heartless parent heard and answered my appeal to the distinguished reputation of Job Printing as a proof that the blank business was both lucrative and honorable. Never let me feel again what I then felt, on being told that my imaginary man was a mechanical operation, his Jewish name an English noun, his surname a mere participle! Those who have experienced the sudden demolition of long cherished fancies, may, perhaps, appreciate my feelings at that moment. May they never feel the consequences which I felt. My intellectual being had been so bound up in the existence, personality, and future acquaintance of the great Job Printing, that his sudden disappearance from the catalogue of entities, impaired my understanding. Let this be my excuse for incoherence or

absurdity. Being thus unfitted for fresh mental effort, and my best days having been consumed in earnest preparation for my chosen walk of life, I was under the necessity of following, though with a feeble mind and broken heart, the course I had begun. My intervening days have, therefore, all been spent in bringing to perfection the art of composing blanks. I soon found that mere business-blanks had been already perfected by business men; and I determined therefore to devote myself to blanks of a superior order, and if possible to introduce this sort of composition into all the higher walks of public life. That I have not been influenced by mercenary motives, is apparent from the long and weary years of silence, during which I have been laying out my strength in solitude, instead of thrusting my unfinished projects on the notice of the public, or the patent office. Having now approached so near perfection in the manufacture, as to feel secure of the result, and being sensible of the approach of age, I am constrained to guard against unknown contingencies and human fraud, by laying a few samples of my art before the public. I request the use of a few columns, therefore, to exhibit my congressional, academical, convivial, and other blanks, without note or comment, or any thing to recommend, and them beyond their own intrinsic merit. In the meantime I subscribe myself by that name which I have for years assumed. Your friend,

JOB PRINTING.

THE COPY-BOOK.

NO. II.

THE BALD MOUNTAIN.

While sojourning in this secluded spot of earth, I joined an equestrian party in a visit to a remarkable mountain about thirty miles distant. The party consisted of eight; three of them "bonny, sweet, sossie lasses." The first day we rode twenty miles along the bank of the river mentioned before, which we forded, and that night lodged at a farm-house. Next day crossed mountain-spurs and ridges; our road a narrow turnpike winding around the declivities of the mountains, from which we occasionally caught glimpses of the vale beneath; and at night we took up our quarters in a log-house at the foot of the mountain which we had come to visit.

Next morning, taking a guide along, we ascended the mountain until our way became so steep that we found it necessary to dismount and lead our horses.

At length, after considerable fatigue, we came to the top of the near Bald; from this we had an extensive and delightful prospect; the air grew chilly, and all our cloaks were put in requisition. After a short pause, we went on to the far Bald, which we found a good deal higher than the near, and the air as cold as winter. From this point the prospect on every side was vast, various, magnificent.

The smoky haze of Indian summer, threw a soft and dreamy veil over the scene.

Around on every hand lay a wide sea of mountains, furrowed, ridged, peaked, with here and there a black

spot, the purple shadow of a cloud. In the distance we beheld broad plains, and the speck of a village and the meandering course of a stream; while in another direction we recognised the river along which we had rode in the deep ravine of two mountains, glittering like molten silver in the sun.

This mountain is named Bald, from its being destitute of trees on top, which is owing, I suppose, to its height and extreme cold. It abounds in deer and bears, and is much resorted to by hunters.

We descended, and passed the night again at the log-house aforesaid. Next morning we took an early start, and found the mountain air very cold, but my fair companion bore it in so soldier-like a style, I was ashamed to complain much.

As we wound along our spiral turnpike, the sun began to gleam from his chamber in the east; huge clouds of snowy mist were to be seen slowly rising from the chasms beneath. It was October; the foliage of the trees was arrayed in purple and gold and crimson. When the morning beams first stream through these painted leaves of autumn, it is a spectacle of beauty, compared with which the dim lustre of a cathedral window is a mere trifle, a Gothic toy.

A PLANTATION IN ALABAMA.

There is not much variety in a cotton plantation: the fields being very large, and only a succession of rows of the cotton plant, or of corn.

Besides the dwelling-house, there are negro-quarters, corn-cribs, stables, sheep-house, carriage-house, smoke-house, carpenter's shop, blacksmith's shop, gin-house, hen-house, turkey-house, bake-house, overseer's house, loom-house, and kitchen. At ten o'clock a horn is blown to call the negroes to their breakfast of bacon and corn-bread. The women, in the winter, are employed in spinning and weaving; each one having a daily task allotted; which she brings in at night. The dwelling-house is usually built of logs: after the lapse of some years, perhaps it is plastered within and weather-boarded without, and thus undergoes a metamorphosis.

On a spring morning you awake at the song of the mocking-bird: mists are suspended over the fields; the trees are in blossom and the flowers in bloom; the bee is humming in the air; the martens have returned to their boxes, and the sun scatters the rosy light of beauty over all the landscape. In the yard the gobbler is strutting with all the pomposity of an alderman, amidst the feathered tribes. About the kitchen is a squad of negro children, sunning themselves. About the house a spoilt boy may be heard crying for bread and butter, or seen persecuting young birds.

THE SOIL.

Agriculture in new countries is carried on in an exhausting and improvident manner. It is quite shocking to see the prodigal waste of timber consumed in clearing a plantation in the west. Entire primitive forests are girdled, and rot away, food for the woodpecker species, (which, by the way, is very numerous in this country,) or are at once felled with the axe and burned in heaps: thus many square miles of sturdy oaks and hickories,

the growth of centuries, are reduced in a brief hour to blue smoke and volatile gas.

The land once cleared, is exhausted by an uninterrupted succession of crops; until the proprietor, grown dissatisfied, sells out to some less opulent or less avaricious neighbor, and either retires upon a fortune, or removes to some new Elysium in the woods.

There is nothing new under the sun: the same wasteful process has been at work in all the southern states; in which, perhaps, none of the soil retains its original fertility, except the deep alluvial banks of the rivers, and even they begin to feel the effects of wear and tear. The consequence of all this is twofold; first, the poverty of the soil has driven a portion of the population to emigrate; second, a reaction has ensued in the system of agriculture; and the means are employed to renovate the constitution of a soil worn out by cultivation, until "the wilderness again blossoms like the rose."

LINES TO A LADY.

Oh give me a tress of that sunny lock,
Which waves o'er thy forehead fair,
Like the clustering vine on the polished rock
With its tendrils bright, that seems to mock
The soft breeze that kisses it there.

Or weave me a chain of its silken fold,
As light as the gossamer's wing,
Though soft and slight be its meshes of gold,
My faithful heart will it ever hold
Safe by the slenderest ring.

Then give me a tress of that golden hair,
For thy lover so faithful and true!
Thro' far distant lands in my bosom I'll bear
That little tress as a talisman rare,
To restore me to hope and to you.

She severed a tress of her beautiful hair,
For a lover so warm and so true,
And the gay ringlet glittered with one bright tear,
As he placed in his bosom a pledge so dear,
And she sighed on that bosom, Adieu!

REFLECTION

On the Decalful Appearances of Human Affairs.

Oh! thus 'tis ever, in this world of woe!
Life's stream runs smoothest—most unchecked
When its bright waters onward flow
Toward misfortune's cataract.

Thomas Goff, in the reign of James I. was highly praised as a tragic writer. In one of his tragedies, Amurath, the Turk coming on the stage, and seeing "an appearance of the heavens being on fire," breaks forth in the following strain:

"How now ye Heavens! grow ye so high and proud
That ye must needs put on these curled locks
And clothe yourselves in periwigs of fire?"

THE GAME OF CHESS.

By the Authors of "The Cottage in the Glen," "Sensibility," "Losing and Winning," "Fashionable and Unfashionable Wife," &c.

"I can scarcely believe my senses," said Mr. Chauncey, as he was one morning sitting with Mrs. Atkins; "I can scarcely believe my senses, when I see my old classmate, whom I left just out of college, and my little friend, Susan Leigh, whom I found sitting on her father's knee, when I called to take leave before my departure for Europe—now married—settled—established in life! It seems impossible! I have always thought of you as a child!"

Mrs. Atkins smiled. "You forget that we are all six years older than when you left us; and perhaps you forget, too, that I was the youngest child, and had the privilege of sitting on my father's knee much longer than daughters are wont to do. You and Charles are about the same age, and I am but five years my husband's junior. Do you feel too young to marry?"

"O, no,—I am now six-and-twenty—one year your husband's senior; and now that my wanderings are over, I should really like to marry soon, could I find a woman possessing those qualities I wish in a wife, who would unite her fate with mine."

"I conclude your taste has become fastidious, from your observation of beauty and accomplishments in Europe," said Mrs. Atkins.

"No—not exactly so—but from close observation of domestic life, I design to be guided by judgment, rather than fancy in my choice; and sincerely hope I shall never be so much fascinated by the charms of any one, as to be unable to form a correct opinion of her real character."

"You will not find it particularly easy to fall in love *designedly*," said Mrs. Atkins, laughing; "nor to save yourself from falling in love, by the efforts of reason and judgment. Of one thing, however, your remark has satisfied me—at present you are completely heart-whole."

"That is certainly true; and it is equally true that I am perfectly willing to fall in love with the first lady I meet, with whom there is a reasonable hope of living happily."

"You really contemplate the subject with the most enviable *coolness*," said Mrs. Atkins, again laughing. "I do not recollect to have heard any young gentleman talk of love and matrimony with such perfect calmness and self-possession. How charming it will be, should the lady of your choice exercise as much judgment, and have as little enthusiasm as yourself! Truly, nothing would be likely to disturb the even tenor of your way!"

"It is very possible to talk of fire without growing warm," said Mr. Chauncey, smiling. "But

seriously, I hope to love my wife, should I ever marry, with my whole soul. What misery to have one with such discordant qualities, as would alternately kindle and quench the flame of affection! The heart must soon wither under such a process! It is my full belief, that

'L'hymen et ses liens

Sont le plus grands ou des maux ou des biens,'

and I would therefore use circumspection in a matter of so much consequence. Let me rather pursue the journey of life alone, than to feel a doubt whether the society of my wife will increase or diminish my happiness! Should my heart ever be warmed to love," he added, while his eyes beamed in a manner that showed how deeply he could love—"Should my heart ever be warmed to love, may its fire be unceasingly fed by the same gentle hand that first kindled the flame—and may it burn brighter and clearer, until lost in that world, the only element of which is love! May my wife be a gentle spirit to accompany me in the path to heaven, and lure me back to it, if tempted to stray—and not a scourge to drive me thither as the only place of refuge from herself!"

"You have grown so solemn, Mr. Chauncey," said Mrs. Atkins, "and seem to look for a wife so free from human imperfections, so angelic, that I am almost afraid to tell you that I am expecting a visit from two of my young friends, with one or other of whom I had hoped you might be pleased."

"I do not expect freedom from human imperfections, Mrs. Atkins; but I do hope for freedom from gross defects. But who are these friends of whom you speak?"

"The eldest, who is not far from my own age, is my cousin, Augusta Leigh—and the other is Abby Eustace, my favorite school-friend, who is two years younger."

"And can you tell me nothing concerning them but their names and ages?" asked Mr. Chauncey.

"No—positively I will tell you nothing else, except that either of them is pretty enough for a man who does not make beauty his first requisite in a wife; and each has fortune enough for one who does not marry expressly for money. This is all I will tell you; but as they will be here in the course of a week, you will have opportunity of studying their respective characters for yourself."

After a few minutes' thoughtful silence, Mr. Chauncey said—

"No, Mrs. Atkins, I think I shall not be fastidious; I think I shall be able to overlook imperfections in my wife, as I hope she would be willing to do in me. Qualities and acquirements which many might deem indispensable, I could dispense with; but there is one quality that I consider of primary importance—and next to pure and firm principles, that is what I shall seek for in my choice."

"And what is that?" asked Mrs. Atkins.

"You will forgive me if I do not answer that question. I wish to observe and judge for myself, and shall be more likely to judge correctly, if it is not known for what I am looking."

"Well," said Mrs. Atkins, "you appear very moderate and reasonable in your demands—and yet, were I an unmarried lady, I should be more afraid of you than of any young gentleman I have seen. Really, you are so calm, and reasonable, and scrutinizing, as to be quite terrifying. Give me the creature of impulse—of passion—of enthusiasm, who will be too much carried away with his own feelings, to be able to investigate my character too nicely; whose warm imagination will clothe me in virtues and attractions of its own rosy hues. Surely," she added, after a momentary pause, "Surely had Charles been of your temperament, I should never have known the happiness of being his wife!"

One day, about a week after the preceding conversation had taken place, Mrs. Atkins was seated in her parlor with her two friends, who had arrived a day or two before, when Miss Leigh, raising her eyes from the work that was in her hand to an opposite window, inquired who the elegant looking young man was, conversing with a lady, on the other side of the street.

"That?" said Mrs. Atkins, advancing to the window—"that is Mr. Chauncey, one of Charles's old friends."

"Horace Chauncey, who recently returned from Europe?" asked Miss Leigh.

"The same," answered Mrs. Atkins. "He will give us a call, presently, I dare say, as he comes here very often."

Before Mr. Chauncey arrives, there is just time to sketch a hasty outline of the portraits of the two young ladies. Miss Leigh was tall, well made, and commanding in her person. Her face was brilliant, with black eyes, and dark hair, but rather pale than otherwise, except when tinted by some degree of excitement. Miss Eustace was rather below the medium stature of woman, beautifully formed, and the most cheerful, happy looking creature in the world. Her eyes, shaded by long silken lashes, were of an undefinable color, and were dark or light, as intellect and feeling were awakened, or lay quiet. Her face was blooming; yet the color was so constantly changing its shade, that it seemed but the attendant on a heart "alive to every touch of joy or woe."

Mrs. Atkins was right. In a few minutes Mr. Chauncey came in, and was made acquainted with the young ladies. When Miss Leigh's name was mentioned, she calmly raised her eyes, and answered his civilities with the self-possession that is common to well-bred young ladies, on being made known to a stranger; but when Miss Eustace's

turn came, her color was heightened to a burning glow, and a slight and rather tremulous courtesy, was the only answer she made to the few words of compliment he uttered.—"Has he forgotten!" thought she, as she resumed her seat—"Can he have forgotten?"

Mr. Chauncey lengthened his visit to nearly an hour, but it differed not materially from other visits of a similar kind. The conversation was of a general and desultory character, and carried on in a lively manner by Mrs. Atkins, Mr. Chauncey, and Miss Leigh—Miss Eustace never uttering a word, except when directly addressed. On taking leave, Mr. Chauncey promised to profit by the invitation of Mrs. Atkins, to visit them very frequently. He was literally *in search of a wife*; and it was his wish to become really acquainted with those young ladies he met, in whom there was nothing which from the first moment told him that an union with them was impossible. The two friends of Mrs. Atkins were certainly not of this number, and his study of their characters soon became deeply interesting: that of Miss Leigh, because she had a great deal of character; was free, entertaining, even fascinating in conversation, with a heart overflowing with kindly feelings, and a head filled with noble sentiments and independent thought; that of Miss Eustace, because he had to judge her by her countenance, as she was extremely retiring and taciturn when he was present. Her face, however, was no very dull study; for of her, if of any one, it might perhaps have been said—"her body thought;" and occasionally, when he met her eye, there was a flash across his memory of something he had long before seen, or felt, or dreamed—an undefinable sensation of pleasure, but too evanescent to be caught or retained.

"How do you like Susan's guests, Horace?" Mr. Atkins inquired one day, after Mr. Chauncey had seen them a number of times.

"How am I to form an opinion of Miss Eustace?" asked Mr. Chauncey. "She indeed looks very much alive, but never utters a word when she can avoid it."

"How!" said Mr. Atkins. "I have never discovered that she is not as conversable and entertaining as Augusta, and far more playful."

"Indeed!" said Mr. Chauncey. "But it has certainly not been so when I have met them. I think Miss Leigh peculiarly brilliant and pleasing in conversation. She appears to be a fine—a noble girl."

"They are both fine, noble girls," said Mr. Atkins. "It is not every day that we meet those who are equally so."

Mr. Atkins had not often been at home when his friend was at his house, but Mr. Chauncey's remark led him to notice Miss Eustace particularly whenever he witnessed their succeeding in-

interviews. One evening Mr. Chauncey was with them, and Mr. Atkins chanced to be seated a little apart from his wife, her cousin, and Mr. Chauncey, who were, as usual, in the full tide of conversation, when Miss Eustace, on rising to leave the room, passed near him. He caught her hand, and drawing her toward him, said, in a low tone—

"Where is your voice this evening, Abby?"

"My voice!" said Miss Eustace.

"O, I am glad you have not lost it—but why have you not spoken for these two hours?"

"And have I not?" asked Miss Eustace.

"Scarcely," answered Mr. Atkins.

"Then I suppose it was because I had nothing to say," said the smiling girl.

"But you are not usually so silent," remarked Mr. Atkins.

"Perhaps it would be better if I were. But truly, though you may doubt it, there are times when I had much rather listen than talk."

"Especially when my friend Horace is exerting his colloquial powers! hey?"

"Just as you please, sir," said Miss Eustace, again smiling, but with some little appearance of embarrassment, and withdrawing her hand, she left the room.

Mr. Chauncey did profit by the invitation of Mrs. Atkins, to visit her very frequently. Miss Eustace interested him. He loved, when not too much engrossed in conversation himself, to watch the bright, the cheerful, the intellectual, the ever varying expression of her countenance. Her eyes seemed fountains of light, and love, and happiness; and the dimples about her mouth and cheeks, the very abode of joy and content. There was something about her to soothe and exhilarate at the same time. But Miss Leigh soon awakened in him a deeper, a more engrossing interest. Her talents, which were neither concealed nor displayed, commanded his admiration; her compassionate feelings and elevated principles won his esteem; so that scarcely three weeks had elapsed from the commencement of his acquaintance with her, ere he was more sedulously aiming to learn how he might render himself acceptable to her, than to ascertain whether the *indispensable quality* for a good wife, was a component part of her character.

One fine morning, Mr. and Mrs. Atkins, Mr. Chauncey, and the young ladies, were to go out on horseback. The three former were ready and waiting in the parlor, when the two latter came from their chamber.

"You have very becoming riding-caps, young ladies," said Mr. Atkins, "but I think neither of you have put them on quite right. Come, Abby," he added, playfully, "let me adjust yours more to my mind."

"O, do," said Miss Eustace, holding up her

blooming face; "make me look as pretty as you possibly can."

"There!" said Mr. Atkins, after drawing the cap a little more on one side; "I will leave it to the company if that is not a great improvement. Now, Augusta, let me try my hand at yours."

"No, thank you, sir," said Miss Leigh, elevating her head, while her color was somewhat heightened—"I will wear my cap according to my own taste this morning, if you please."

"O, I beg a thousand pardons for my presumption," said Mr. Atkins—"Your taste is certainly much more correct than mine—I really beg your pardon."

Miss Leigh made no reply, but gave her hand to Mr. Chauncey, who was waiting to receive it, and the little party immediately started on their excursion. For awhile they all were rather silent, and seemed entirely engrossed in the management of their horses; but the weather was charming—their exercise exhilarating; and ere long each one was enjoying a fine flow of spirits. They rode several miles, and on their return home encountered a company of Irish people, men, women, and children. They looked way-worn and weary; and the faces of some of the children even wore an expression of anxiety and depression, as if they felt all the force of the friendlessness, the helplessness of strangers in a strange land. Mr. Atkins and his friends stopped to talk with them a few minutes, and bestow charity according to each one's ability or inclination, and then rode on.

"O, Mr. Chauncey," said Miss Leigh, in a low tone, after riding a little way in silence, "what pitiable objects those people were! As good by nature, and undoubtedly, some of them at least, much more amiable in disposition than myself—why is it that there is so vast a difference in our lots? How is it that I can ever be ungrateful or perverse, while thus distinguished by unnumbered and undeserved blessings!" Her tone was that of the deepest sympathy and humility, and her eyes were swimming in tears as she spoke.

Had Mr. Chauncey uttered the thought of his heart, he would have told her, that she was the most amiable, the most lovely, the most deserving among the whole family of man! And his eyes did utter it, so far as eyes are capable of utterance; though his tongue only spoke of the vast disparity that Infinite Wisdom sees best to make in the outward circumstances of his creatures in this world. When about taking leave at Mr. Atkins' door, Mr. Chauncey received a pressing invitation to return to take tea, and spend the evening—an invitation he promptly accepted.

At an early hour in the evening Mr. Chauncey was seated amid his circle of friends in Mrs. Atkins' parlor. Before tea was brought in, and while at the table, conversation flowed as usual;

and it was conversation:—the exercise of the mind—the collision of wit—the interchange of opinion—the expression of sentiment;—and not the idle and frivolous chit-chat, nor the oftentimes mischievous and envenomed gossip, that is sometimes so miscalled. After the tea-things were removed, and the ladies had settled themselves to their several employments, Mr. Chauncey, at the request of Mrs. Atkins, read aloud the best of Mrs. Opie's tales, namely, "White Lies." Mr. Chauncey's voice was rich and mellow, his intonations and emphases perfect; so that whatever he read produced the full effect that the author intended. His present little auditory paid him the compliment of the most profound silence, till he finished the tale, and closed the volume.

"That is a faultless story," said Mr. Atkins. "Do you not think so?" All, except Miss Eustace, expressed their approbation of it in warm terms. She remained silent.

"What says my little Abby to it?" said Mr. Atkins. "Do you dissent from the common opinion?"

"I think it highly interesting and instructive," Miss Eustace replied, "but not faultless."

"Pray point out the faults," said Mr. Atkins. "Let us have the benefit of your critique upon it."

Miss Eustace blushed, and begged to be excused. She was sorry she had expressed any feeling of disapprobation. But Mr. Atkins persisted that she should point out the defects she discovered, in which he was joined by the rest of the circle. Blushing still more deeply, Miss Eustace said—

"Clara could not have felt true friendship for Eleanor, or she would not have manifested such indelicate joy, when the latter was proved so base."

"Clara's own explanation, that she had a *dearer* friend, at whose escape she rejoiced, was a sufficient apology."

This opinion, though differently expressed, was uttered by every one at the same moment, Mr. Chauncey excepted.

"That, as I think, is another defect," said Miss Eustace. "Was there no indelicacy in her permitting that *dearer* friend to see that she loved him, and calculated on the offer of his hand, while he yet had made no declaration of attachment to her?"

"Her amiable sincerity would atone for that fault, if it could be called a fault," said Mr. Atkins.

"Hardly, I think," said Miss Eustace. "I always was sorry the passage was written, especially as it was written by a woman, and have ever been inclined to *jump* it when reading the tale. I like not that female delicacy should be sacrificed, even at the shrine of sincerity. But Mrs. Opie not unfrequently sins against the more refined and retiring delicacy of her sex."

"In what other instance do you think she has done it, Miss Eustace?" asked Mr. Chauncey.

"O, in many," Miss Eustace replied. "Any one who understands the true female character, and who will read her works carefully, will easily detect them."

"O, name them—name them, Abby," said Mr. Atkins.

"Yes, name some other," said Mrs. Atkins.

"There is one in 'Madaline' that now occurs to me," said Miss Eustace, "that struck me as grossly indelicate; and, indeed, not true to nature. Madaline says of herself, 'that she sang *louder* than usual one evening when she supposed that Mr. Falconer was listening behind the hedge, that he might hear her.'"

"Was that false to nature, as well as indelicate, Abby?" asked Mr. Atkins,

Coloring more highly than ever, while her silken lashes fell over her eyes, as if to conceal their deep expression, she replied—

"I should have supposed that the idea of the proximity of one so dear to her, under such circumstances, would have rendered it impossible for her to sing as *loud* as usual, if indeed she could sing at all."

Mr. Atkins, who was seated by her, whispered in her ear—"What happy fellow taught you so much of the effect of the tender passion, Abby?"

This question covered her whole face and neck with a glow of carmine; but in a low, and somewhat tremulous tone, she said—

"May not instinct teach a woman how she should probably be affected under such circumstances?"

"Possibly," said Mr. Atkins—"but for all that, I do suspect you most grievously."

All the little party continued to converse in the most animated manner, Miss Eustace excepted. She was making a feather screen for Mrs. Atkins, and she now applied herself to her work with the most persevering diligence, and in perfect silence.

"Do let us hear the sound of your voice again, Abby," said Mr. Atkins, in an under tone. "You have now maintained the most profound silence for more than an hour. Pray speak once again."

"I will," said Miss Eustace, "for I am just going to ask Augusta if my screen will do."

"I can tell you that it will," said Mr. Atkins, "it is very handsomely made."

But Miss Leigh differed from him in opinion. "It is not so pretty as it might be, Abby," said she. "The different colored feathers are not so arranged as to produce the best effect."

"Are they not?" said Miss Eustace. "I have been trying to make it as pretty as possible. But you are correct, Augusta," added she, after holding the screen in different points of view; "it is really a gaudy looking thing. I will give it to some child who needs a fan, and will be delighted

with its gay colors, and make another for my friend."

"O no, Abby," said Mrs. Atkins, "you shall not take that trouble. This is really a handsome screen."

"So I thought," said Miss Eustace, "until Augusta helped to open my eyes to its glaring defects. No, no—I will make another for you. Should you carry this, it might be thought that a Sachem had robbed some fair one of his tribe, and laid the spoils at your feet. I should take no pleasure in giving you anything so ill-looking—in such bad taste."

"Just as you please, dear," said Mrs. Atkins, "though I am sorry that you should give yourself so much trouble."

"I shall not esteem it a trouble," said Miss Eustace, as she resumed her seat, and at the same time her taciturnity.

Miss Leigh was peculiarly happy this evening. Mr. Chauncey did not, it is true, converse with her any more than usual, nor say anything to her that he might not have said to another; but there was something in his manner, in the tone of his voice, and in the expression of his eyes, when he addressed her, that betrayed his admiration, his growing preference. Mrs. Atkins observed it with much pleasure. She truly loved Miss Eustace, and would not have been *dissatisfied* had she become the object of Mr. Chauncey's choice; yet her cousin Augusta was the one she had in her own mind selected for his wife. But Mr. Atkins saw it with something like regret. Though he really thought that Miss Leigh was, as he had said to Mr. Chauncey, a fine, a noble minded girl, yet she was not his favorite of the two young ladies. He loved Mr. Chauncey with a warm attachment; and Miss Eustace, according to his opinion, was the very person to secure his happiness.

After Mr. Chauncey took leave, Mr. Atkins and Miss Eustace chanced to be left alone for a short time, when the former abruptly said—

"You really vex me, Abby."

"Vex you! how? I am very sorry," said Miss Eustace.

"Why, here is my friend Horace, who is decidedly the finest fellow I ever knew, whom you are permitting Augusta to carry off, without one effort to contest the prize!"

"Effort! Mr. Atkins?" said Miss Eustace. "Would you have me *make an effort* to attract his attention?"

"No—not exactly make an effort; but I would have you do yourself justice—would have you let him see a little what you are. Why cannot you talk as much when he is here, as you do at other times?"

"You are now laughing at me!" said Miss Eustace. "I have been quite ashamed of myself,

ever since I was drawn on to say so much about Mrs. Opie's works."

"The only time you have spoken this evening!" said Mr. Atkins. "Truly you have great cause to be ashamed of your loquacity! Why, Augusta said more words to him in half an hour to-night, than he has heard you utter since you have been here!"

"It may be so," said Miss Eustace; "but you may depend on it, Mr. Atkins, that I will never speak a word when I should otherwise be silent, nor say anything different from what I should otherwise say, to secure the attention, or meet the approbation of any gentleman in the world!"

"You are incorrigible!" said Mr. Atkins. "And another thing—either you dislike Horace, or are attached to some other man. I suspect the latter. I have watched you a little this evening, and noticed a shade of sadness—of melancholy, on your brow, that I never saw there before. I do not wish, my dear Abby, from idle curiosity, to pry into the secrets of your heart,—but tell me—is not my suspicion correct?"

"I do most truly assure you it is not," Miss Eustace had just time to reply, ere Miss Leigh re-entered the parlor, and the former immediately left the room.

"O, how thankful I am," thought she, as she shut herself in her own chamber—"how thankful I am that he framed his question as he did! otherwise what could I have done? Dislike Horace Chauncey! Love some other man! O, would the former were true! Would I had passed through the same Lethe in which he seems to have been plunged! But no matter—I will soon go home, and then strive to grow forgetful myself; for never will I try to refresh his memory!" Sad! said Mr. Atkins? I will not be sad—at least no one shall see me so—I will not be so if I can help it!" Humming a cheerful air, which, however, lost something of its sprightliness, though none of its melody, as she warbled it, she returned to the parlor.

As day succeeded day, the visits of Mr. Chauncey became more frequent, and the interest Miss Leigh inspired more obvious. The seat next her he always, if possible, secured; if that was occupied, the back of her chair frequently afforded him a support. He interested himself in all her pursuits—looked over the book she was reading—examined and admired her work,—and never seemed completely happy unless near her, and having some object of mutual interest.

Meantime, despite Miss Eustace's resolution, she was frequently sad; and notwithstanding her efforts at concealment, which led her to appear unnaturally gay, Mr. Atkins saw it. He was observing her closely, but silently; not even suggesting to Mrs. Atkins that any change was coming over her friend. But he noticed that the moment

after the frolic or the joke was passed, a seriousness rested upon her features, as unnatural to them as frivolity was to her manners. When Mr. Chauncey was present, she indeed appeared not much different from formerly, except that her cheek was less frequently dimpled with a smile, her eyes were more intently fixed on her work, and her silence, if possible, was more profound than ever. Sometimes, when a pang of peculiar bitterness shot through her heart, she would resolve on closing her visit immediately; but when she had hinted such an intention to Mrs. Atkins, that lady seemed so much hurt, and so strenuously opposed such a measure, that she abandoned the idea. Yet how could she stay three months longer,—which was the term originally fixed for her visit,—witnessing that which she witnessed—that which was constantly enhancing her disquietude? Often in the retirement of her chamber, she would take herself severely to task. “How foolish—how worse than foolish I have been, thus year after year to let one idea engross my heart, without ever looking forward, for a moment, to a result like this! Common sense, common prudence, common discretion would have taught me better! Yet I consulted neither; but permitted my foolish imagination to indulge itself at the expense of my peace. Childish infatuation! But I will thus indulge myself no longer. This attachment shall be rooted out! He and Augusta will make a noble couple. I see it—much as my heart rebels against it. They will love and be happy! What if she will not study his every wish, as I could not help doing, and lose her very being in his! he will love her; and the observation of her shining qualities, will leave him no time to regret the absence of trifling and minor attentions or virtues. I *must*, I *will* forget this dream of years, which else will involve me in misery, if not in guilt. Too much already has my heart been divided between heaven and earth! and richly do I deserve this suffering, for permitting a creature, however exalted in virtue—and O, how exalted he is! how far above all others that I have seen! yet how wicked I have been to permit him to engross so much of that love, which before His sacred altar, I promised should be first of all for my God! Father,” she cried, while she raised her tearful eyes to heaven, “draw my affections to thyself, though my heartstrings should be severed!”

Both Miss Leigh and Miss Eustace were much attached to Mrs. Atkins, and were frequently employed in making some fancy article—some elegant trifle, to leave behind them as tokens of their regard. Miss Eustace had finished a screen, which could not but satisfy the most delicate taste, and was now engaged in embroidering a white satin reticule for her friend; while Miss Leigh was making a pyramid of various kinds of shells,

as an ornament for the mantel-piece. This last was quite an arduous undertaking, as many of the shells were exceedingly small, and required great skill and taste so to arrange them, as at once to match them with precision, and display their beauty to the greatest advantage.

All the little circle at Mr. Atkins’ watched the progress of this pyramid with interest, and with admiration of its beauty, and the taste of the fair architect. Mr. Chauncey was almost a daily witness of its increasing height, and certainly not behind any one in the praise he bestowed on it. He would sit for an hour together, assorting the shells, and admiring the delicate fingers that fitted them in their places so neatly; above all, admiring the power that enabled the architect to carry on a work that seemed to require so much care and ingenuity, while her mind seemed quite free to engage in any subject of conversation, however foreign to her employment.

One morning as Miss Leigh was seated in the recess which was devoted to her use while erecting her pyramid, Miss Eustace came, as she frequently did, to overlook her for a few minutes. She looked on in silence for some time, and then said—

“It is the most beautiful thing, Augusta, that I ever saw. But is it quite perpendicular?”

“Perfectly so,” said Miss Leigh.

“Perhaps it is the position from which I now view it, that makes it seem to lean a little toward your right hand,” said Miss Eustace.

“It undoubtedly is,” said Miss Leigh; “for it is precisely perpendicular.”

“It is really the most beautiful thing I ever saw,” repeated Miss Eustace; and soon after took a seat on the other side of the room.

She had been but a short time settled to her work, when Mr. Chauncey made his appearance; and just passing the compliments of the morning, he drew a chair towards Miss Leigh’s table, and seated himself beside her.

“What are you doing, Miss Leigh?” said he, in a tone of surprise, as soon as he had had time to observe that instead of adding shells to the fabric, she was deliberately removing them: “Have you made any mistake?”

“Abby has been finding fault with my work,” she replied. Her words seemed to almost choke her, and her eyes sparkled with unusual fire, while a very bright spot burned on her cheek.

“Fault! what fault?” asked Mr. Chauncey.

In an instant Miss Eustace was beside the table, and catching the hand that was about to remove another shell, she cried—

“Dear Augusta, what do you mean! you must not remove another shell from this beautiful fabric!”

With a motion not perfectly gentle, Miss Leigh withdrew her hand from Miss Eustace’s grasp, and in silence proceeded to remove the shell.

"Do persuade her, Mr. Chauncey," said Miss Eustace, with eagerness, "Do persuade her to let alone this work of destruction. I only asked her if it was quite perpendicular; and no doubt it was my point of observation that made it appear otherwise. Dear Augusta," she added, throwing her arms around her friend's neck, "do desist from your present purpose. I wish I had kept my foolish tongue quiet. You know not how sorry I am that I made the remark!"

But Miss Leigh would not yield. Releasing herself from Miss Eustace's arms, she returned to her work of demolition, while she said—

"I shall take it to pieces, *Miss Eustace*. I like not that anything should go from beneath my hand that is not perfect!"

"That is a right principle," thought Mr. Chauncey, "and is an excuse for——" He stopped short, for he found himself in danger of having his judgment warped by the emotions of his heart. Fixing his eyes on the pyramid, he fell into a train of musing.

"It is quite perpendicular, is it not, Mr. Chauncey?" said Miss Eustace, supposing his mind engrossed by the object he seemed so intently viewing. "Is it not quite perpendicular?" she repeated.

"It is not," said Mr. Chauncey, roused by her reiterated question to examine the pyramid with a critical eye—"it is not; though I did not notice its declination till led to look for it. The defect, however, is so slight, that few persons probably would notice it."

"You will not take it to pieces, Augusta?" said Miss Eustace, in an entreating tone.

Miss Leigh removed her work to a greater distance from her, and turning it slowly round, examined it carefully.

"Yes, I must take it down, Abby—at least thus far," said she, placing her finger on the pyramid. "The defect is not so slight as Mr. Chauncey says. Every one will observe it. I should have done so myself as soon as I had completed it. I am very glad you noticed it so seasonably, notwithstanding my petulency—my ill-humor. Will you forgive me, Abby?" she added, as she looked up with an expression of regret on her features, while she held up her lips for a kiss.

"I have nothing to forgive," said Miss Eustace, as she placed her lips on those of her friend with the warm kiss of affection.

Mr. Chauncey drew a long breath, as if relieved from an oppressive burden.

Yet notwithstanding this speedy reconciliation, Mr. Chauncey's visit was not pleasant as usual. Miss Leigh seemed too intent on taking her work to pieces, to converse with her usual vivacity. Nor did her countenance wear exactly its most agreeable expression. In a few minutes after the mutual kiss had been given, a look of uneasiness—

of discontent, settled on her features,—and a certain something lurked about her eye and brow, which, to say the least, was not attractive. There was something, too, in the closing of her mouth, that rendered her far less beautiful than usual. All this might have arisen from the unpleasantness of the task of taking to pieces that which she had put together with so much care and pains. But be the cause what it might, Mr. Chauncey was paralyzed by the effect. He made one or two efforts at conversation, as he found silence very embarrassing. He tasted not that rich enjoyment which he sometimes had, while sitting in perfect silence beside the object of his admiration. But his efforts to converse were unavailing, as Miss Leigh answered only by monosyllables. He wished Miss Eustace would do something to break the spell; but she had resumed her seat and her work on the other side of the room, and was silent and unobtrusive as usual. Mrs. Atkins at length came in, and Mr. Chauncey hoped that relief was now at hand; but instead of this, the unpleasant explanation of Miss Leigh's retrograde work must be made.

"What a pity it is!" said Mrs. Atkins. "Why did not some one of us observe it sooner, to save you so much trouble, Augusta?"

To this Miss Leigh made no reply, but with her mouth more firmly closed than ever, continued for a few minutes longer to undo her work. Increasing dissatisfaction, however, was legibly written on her countenance, till at length, closing her hands over the pyramid, she said, "This is too irksome!" and at the same instant pressed her hands together, and reduced the fabric to a complete ruin.

"O, how could you do so?" cried Mrs. Atkins.

"I will make one for you, Susan, after I go home," said Miss Leigh. "I could not go on with this—all satisfaction in it was forever destroyed!"

If Miss Leigh ever appeared lovely and fascinating—if she ever appeared to be all that a woman should be, it was for the fortnight that succeeded the demolition of the pyramid; and Horace Chauncey at length surrendered himself to the force of her attractions. And yet his heart had not the perfect consent of his judgment; or rather, he feared that if his judgment were perfectly well-informed, its sentence would be against him. "And yet, what have I to fear?" thought he. "The strong attachment of her friends speaks volumes in her praise, even did she need such testimony in her favor. And do I not, myself, constantly witness the vigor of her intellect—the correctness of her opinions—the delicacy of her feelings—the tenderness of her sympathies? What can I ask more? Where else can I find as much?" He sighed deeply as he added—"Mrs. Atkins spoke truth—I have become fastidious. I am ex-

pecting that perfection on earth, which is to be found only in heaven. And am I so perfect myself as to have a right to expect perfection in a wife? Alas, how many defects will you have to overlook in me, Augusta, should you ever be mine! and mine you must be! I can—I will hesitate no longer! This very evening you shall know the wishes of my heart!" He immediately opened his writing-desk, filled a page with the avowal of his attachment, and closed by the offer of his hand.

On entering his friend's parlor in the evening, Mr. Chauncey found the young ladies engaged at chess; Mr. Atkins seated by them, watching the progress of the game, while Mrs. Atkins was occupied with a book in another part of the room. He was so often with them, that he came in and went out almost like one of the family, so that a bow and a "good evening" were all that was necessary before he mingled in the group, and became a participant in whatever was on hand. He now stationed himself behind Miss Leigh's chair, and fastened his eyes on the chess-board. For some time, however, he could not fix his mind on the game, so much were his thoughts engrossed by the important letter that seemed to burn in his pocket.

"Our fair friends are so equally matched," said Mr. Atkins, "that there is much interest in watching the contest."

"Have you frequently played since you have been here?" inquired Mr. Chauncey.

"Very seldom," Miss Leigh replied.

"I thought so," said Mr. Chauncey, "or I must before this have found you thus engaged."

"They played last evening," said Mr. Atkins, "and had a warmly contested battle."

"And who was conqueror?" asked Mr. Chauncey.

"O, Augusta," said Miss Eustace, looking up, "but much against my will, I assure you. I never tried harder for victory in my life."

"Then you bore your defeat admirably," said Mr. Atkins. "For my part, I thought you quite indifferent about it, you appeared so well satisfied after you had yielded the contest."

"O, yes,—after I had yielded," said Miss Eustace. "The time of trial, you know, is when one fears that they shall be obliged to yield. After all, there is about as much satisfaction in being beaten as in beating; for one can scarcely help sympathizing with an antagonist who has fought bravely but unsuccessfully."

"I am happy to learn that you so much enjoy being beaten," said Miss Leigh, smiling.

"You think I shall soon have that enjoyment again?" said Miss Eustace, "and I shall, indeed, unless I pay more attention to the game."

For a full hour from this time they made their moves in perfect silence—victory sometimes lean-

ing to the one side, sometimes to the other. The two gentlemen were as much interested as the fair antagonists; but they had taken different sides. Mr. Atkins' sympathies all being enlisted for Miss Eustace—Mr. Chauncey's, of course, for Miss Leigh. Both, however, were too gentlemanly too express their feelings by word or sign. But at length the game seemed drawing to a close, and again in Miss Leigh's favor, when a skilful move on Miss Eustace's part, turned the whole face of the battle. Miss Leigh, however, seemed not aware of it, so intent was she on the manœuvre she had been performing. But Mr. Chauncey's heart beat quick, as he saw all her danger; and when she placed her fingers on a piece, to have moved which would have decided her fate at once, his self-command forsook him, and uttering an emphatic "Ah!" he turned suddenly from the table. He could not endure to witness her defeat!

Miss Leigh suspended her movement, but she was too much excited to see clearly, and after a momentary pause, she made the fatal move. The next instant she saw her error—it was too much—and at the moment when Mr. Chauncey resumed his post, with a flaming cheek and flashing eyes, she swept her arm across the table, exclaiming—

"I will never play another game of chess while I live!"

Miss Eustace looked up with an expression of anxiety on her features; Mr. Atkins with one of undisguised displeasure; while the countenance of Mr. Chauncey spoke amazement and consternation. Miss Leigh instantly left the table, and walked toward the fire, followed by Miss Eustace.

"Who is the victor to-night, Abby?" inquired Mrs. Atkins, raising her eyes from her book.

"Neither," said Miss Eustace, in a very soft and low tone; "we did not finish the game."

"You know better, Miss Eustace!" said Miss Leigh; "you know you were yourself victorious, and I will never play another game of chess while I live!" Her voice, though but slightly raised, had the tone of passionate excitement; and her words were scarcely uttered, ere she burst into a paroxysm of tears. Miss Eustace again looked up with an expression of distress—stood suspended a moment as if in doubt what to do, and then silently left the room.

"Are you petrified?" said Mr. Atkins, as he turned round, and observed Mr. Chauncey, standing immovable beside the chess-table, his eyes riveted upon it.

The question of Mr. Atkins roused him, and drawing out his watch, he said, while his voice betrayed much emotion—

"It is later than I thought—I must bid you good night!"

"O, not yet, Horace," said Mr. Atkins. "That unlucky game of chess has engrossed the whole

evening. Come, sit down. Susan will throw aside her book—Augusta will get over her defeat—and we will have some rational conversation."

"You will excuse me this evening," said Mr. Chauncey, and uttering a hasty "good night," he left the room.

He was scarcely conscious of anything until he found himself in his own chamber at his boarding-house. Stirring the decaying embers that lay on the hearth to make them burn more brightly, he matched the lately written letter from his pocket, and laid it upon them. He watched it as it consumed, until the last particle was reduced to ashes, and then, drawing a long breath, he uttered an emphatic—"Thank heaven!"

An hour afterwards he rang the bell for a servant, gave some directions, and at five the next morning, while the stars were yet bright in the heavens, he took a seat in the mail-coach, that whirled him rapidly away from the scene of his danger.

"What has become of Mr. Chauncey?" inquired Mrs. Atkins, the second evening after the decisive game of chess had been played—"He is staying from us much longer than usual, I think."

Miss Leigh looked up with a face of anxious inquiry, as Mr. Atkins replied—

"Indeed I don't know what has become of him. I have not had a sight of him since Tuesday evening. Perhaps," he added, laughing, "perhaps he died of the fright you that night gave him, Augusta!"

Coloring the deepest crimson, while the tears forced themselves to her eyes, Miss Leigh replied—

"At least my hasty temper will frighten all your friends from your house, Mr. Atkins, should its effects not prove any more fatal. O, could my friends know how much my ungovernable passions cost me, they would pity as much as they blame me!"

"O, do not talk of it, dear Augusta," said Miss Eustace, taking her hand. "Forget it all, as we do—or remember it only to strive after more self-command for the future. You remember how much we admired the sentiment we read yesterday—

'Qui sakt se posséder, peut commander au monde.'"

"O, yes—but all my efforts at self-possession are useless," said Miss Leigh, almost sobbing—"I can never remember till it is too late; and then mortification and self-upbraiding are my just reward. I would give the world, Abby," she added, as she parted the hair from her friend's placid brow—"I would give the world, had I your equanimity of temper!"

"Well, let us talk no more of it," said Mr. Atkins. "To-morrow I will look after the truant, and learn the cause of his absence."

He had scarcely done speaking, when a servant brought in the letters and papers which had just arrived by the mail. Looking them over, Mr. Atkins caught up one, exclaiming—

"This is curious!—this must be Horace's handwriting, and the post-mark is Boston!"

"Pray open it," cried Mrs. Atkins—"What does he say?"

"Why, he says," answered Mr. Atkins, after rapidly running the letter over—"he says that he writes to bid us a 'good-bye,' that he could not come to utter in his own person."

"Good-bye!" cried Mrs. Atkins—"pray when did he leave town?"

"At five the next morning after he left us," said Mr. Atkins.

"And how long is he to be absent?" Mrs. Atkins inquired.

"Uncertain," answered her husband. "The length of his absence will depend on circumstances. Perhaps we shall not see him again these three months."

"This is very singular!" remarked Mrs. Atkins. "Does he say what called him away in such haste, to be gone for so long a period?"

"Not a word. The letter seems to have been written in great haste. I have never seen such a scroll come from beneath Horace's hand. He must have been in great haste."

Mr. Atkins then proceeded to open other letters, and nothing further was said of Mr. Chauncey, or his abrupt departure. Yet a glance at the faces of the trio of ladies would have proved that the subject was not dismissed from their thoughts. Mrs. Atkins, with half-closed eyes, sat looking at the fire, with an air of abstraction which showed that she was endeavoring to unravel the enigma. Miss Leigh's features wore an expression of blank disappointment; and after an unsuccessful attempt to conceal or control her feelings, she retired to her chamber. The heightened color in Miss Eustace's cheek was the only thing about her face that bespoke emotion; but an eye, fixed intently on the frill that fell over her bosom, would have seen with what force and rapidity her heart was beating.

"Gone!" said Miss Leigh, as she closed the door of her chamber; "Gone for three months! From me—forever! The die is cast!" She wept in the bitterness of disappointment and mortification. She had for many days been hourly expecting the offer of his hand—the hand she most strongly wished to possess. She had felt confident of his attachment—she had told her cousin of her expectations. She had read his affection, his admiration, in his eyes, in the tone of his voice. Had she been deceived! Had he tried to deceive her? O, no—Horace Chauncey was above deceit. He had loved her!—but like a fool—or rather, like a fury, she had forced him from her! It must have

been so—that game of chess had sealed her fate! Such was the train of thought that accompanied her tumultuous and compunctious feelings. Her peace, her happiness, her self-respect were gone; and the most bitter drop in her cup of sorrow, was the full consciousness that she had brought on her own misery—that she deserved her wretchedness!

From this period, all enjoyment of her visit to Mrs. Atkins was at an end. She dragged out a week or two, every solitary moment of which was spent in bitter self-upbraiding, and then took an abrupt departure for home. Miss Eustace would have accompanied her, but to this Mrs. Atkins would not listen for a moment. "No, no, Abby," said she; "it must not be! I cannot part with you both at once; and one day must not be taken from the time that your mother allotted for your visit, unless by providential appointment."

"Whom suppose you I saw alighting from the stage-coach just now?" said Mr. Atkins with much animation, as he came in to tea one evening, about a fortnight after Miss Leigh's departure.

"Horace Chauncey," said Mrs. Atkins.

"Horace Chauncey!" repeated Mr. Atkins—"How came you to think of him?"

"Because there is no one likely to arrive here, whom I should be so glad to see," Mrs. Atkins replied.

"Well, you are correct in your conjecture," said Mr. Atkins. "It was Horace, and he has promised to look in upon us for a few minutes in the course of the evening. But you need not look so much moved, Abby; for I dare say nothing will happen to drive him away to-night."

"There is nothing pleasant in the recollection of the last time I saw him," said Miss Eustace. She blushed as she was speaking at the disingenuousness which led her to permit Mr. Atkins to ascribe her emotion to a wrong cause. She felt as if

"L'art le plus innocent, tient de la perfidie."

But it was not art—it was nature. The love in a woman's heart likes not to be looked upon, at least not until it may with propriety be expressed. It is a little treasure which she feels to be all her own—a treasure she has a right to conceal from all eyes. Timidity, delicacy, natural female reserve, are the causes of this concealment, rather than want of ingenuousness. In the most perfect solitude she would blush to clothe in sound the words "I love," though she might constantly be conscious of the fact—constantly have her eye fixed on the image of the beloved object engraven on her heart. The woman who can, to a third person, speak freely of her love, loves not as woman is capable of loving!

As expected, Mr. Chauncey came in before the evening was far advanced, and though on his first appearance, his manner was not quite as calm and

collected as usual, his embarrassment soon wore away, and his visit, instead of being one of a few minutes, was lengthened to a couple of hours.

"You need no new invitation to favor us with frequent visits, Mr. Chauncey," said Mrs. Atkins, as he was taking leave; "those you formerly received were for life."

Notwithstanding the kindness and delicacy of this remark, Mr. Chauncey for awhile was less frequently to be seen at his friend's than formerly. He was not a pining lover; but he had received a shock from which he could not at once recover. His was not a heart that could long continue to love, after the beloved object had ceased to command his respect. To marry Miss Leigh, to look to her to make his home the abode of peace, serenity, and joy, was impossible; and after this full conviction of his judgment, to spend his time in sighing for her loss would be puerile. Yet apart from every selfish consideration, he did mourn, that a woman possessing such qualities as she possessed, and who might be all that the heart or the judgment could require, should be spoiled by the indulgence of one baneful passion.

Even at the time when he yielded himself most completely to Miss Leigh's attractions, the contrast between her temper and that of Miss Eustace would force itself upon him. At the moment of the destruction of the pyramid, the feather screen came fully before his memory; and the different expressions of the two young ladies' faces, when Mr. Atkins ventured to propose some improvement in the mode of wearing their riding-caps, were vividly painted to his imagination. He strove, however, to persuade himself, that it was unreasonable to expect in one person a combination of all the excellent and lovely qualities that are divided among the sex; and he endeavored to believe, that that candor which was so ready to acknowledge a fault, was even more desirable than uniform sweetness of temper. But the veil had been rudely torn from his eyes; his sophistry had all been overthrown—and after one struggle, he was himself again—restored to the full conviction, that one great defect will spoil a character.

It was not long, however, before Mr. Chauncey's visits at his friend's house were as frequent as ever, though the character of his enjoyment was changed. He was no longer engrossed by one exciting object, and there was a new quietness breathing about his friend's fire-side, that rendered their rich moral and intellectual pleasures truly delightful. Formerly his visits had had all the excitement of pleasure; on returning home he had needed repose; now they had the soothing effect of happiness, and if he went weary, he returned home refreshed.

During several of his earlier visits, Miss Eustace was as silent as she had formerly been; but gradually her friends were drawing her out by

addressing themselves to her, or asking her opinion; and Mr. Chauncey himself was becoming interested in eliciting her remarks. She did not awaken his admiration, like Miss Leigh; but he soon became sensible, that if what she said was less shining, it was generally better digested; and if she had less wit herself, she more heartily enjoyed the wit of others. If he did not leave her society dazzled by her brilliancy, he found that what she said called forth thought and reflection; and if her observations had less force and fire than her friend's, they would better bear examination. Her lustre was mild, not overpowering; and her influence upon the heart and mind, like the dews of a summer's evening descending on the flowers—noiseless, gentle, insensible—but invigorating and refreshing.

That dreamy recollection, too—that strange association of certain expressions of her countenance with some bygone pleasure, which he had experienced on their first acquaintance, but which had been lost sight of while he was engrossed by Miss Leigh, was returning with increased force upon him, and awakened a peculiar interest. It was something undefinable, untangible; but still something that gave a throb to the heart whenever it crossed him. Yet so quiet was Miss Eustace's influence; so different the feelings she awakened from those excited by Miss Leigh, that his heart was a captive while he yet suspected not his loss of freedom.

One evening on entering his friend's parlor, he found Miss Eustace alone, Mr. and Mrs. Atkins having gone out for an hour. She was standing at a window, partially screened from view by the heavy folds of the window-curtain. She took no notice of his entrance, supposing it one of the family who came in; but he immediately joined her, remarking—

"You seem lost in thought, Miss Eustace. Will you permit me to participate in your reflections?"

"I was looking forth on the beauties of the evening," said Miss Eustace.

It was a glorious night. The moon, clear as a pearl, was riding high in the heavens, and looking down on the earth, which seemed hushed to perfect peace—and every star that could make itself visible in the presence of the queen of night, was sparkling like a diamond.

"It is indeed a night to awaken admiration, and inspire poetry," said Mr. Chauncey. "Has not the muse visited you?"

"I believe not," said Miss Eustace. "The influence of such a night on my heart is like that of music; I think it is *feeling*, not *thought*, that it inspires. O, could one communicate feelings without the intervention of words—could they throw them on paper without the mechanical drudgery of expressing them, what a volume would there be

to read!" She raised her face towards him while speaking, beaming with the inspiration of the soul.

"Who is it! what is it! that you are perpetually bringing athwart my imagination—my memory?" said Mr. Chauncey, abruptly. "I seem to have had a pre-existence, in which you were known to me!"

Miss Eustace made no reply. The suddenness of the question made her heart beat tumultuously—painfully; and the intensity of her feeling produced a sensation of faintness; but she supported herself against the window-frame, and her agitation was unnoticed.

"I have it—that must be it!" exclaimed Mr. Chauncey, after a moment's abstraction—"Gen. Gardner!—Years ago, when quite a boy, I spent a week at his house. He had a lovely little daughter—*her* name, too, was Abby—I have neither seen nor heard from her since; but she strongly resembled you! The same lovely expression animated her features! Am I not right?"

Scarcely able to command voice enough to speak, Miss Eustace replied—"I believe Gen. Gardner never had a daughter."

"O, you must be mistaken!" said Mr. Chauncey. "It has all come as fresh to my memory as the events of yesterday. My father went a long journey, took me with him as far as the General's, and left me until his return. I was with his lovely little daughter, daily, for a week; and remember asking her before I came away, if she would not be my wife when she became a woman!"

"Most true!" thought Miss Eustace, trembling from head to foot, "and you followed the question by a kiss."

"You are acquainted with the General's family," continued Mr. Chauncey, "and yet you say he never had a daughter! But you must be mistaken! He certainly had one then, if he has one no longer!"

"I cannot be mistaken, sir," said Miss Eustace, in tones that were scarcely audible, "as I have passed much of my time there from infancy."

"Then it was yourself," cried Mr. Chauncey, "your own self that I saw there! Am I not right? Do you not remember it?"

"I do," Miss Eustace had just voice enough to utter.

"And did you remember me when we first met here?" inquired Mr. Chauncey, with eagerness.

"I did," said Miss Eustace.

"And why," he cried, "why did you never speak of our former acquaintance? Why could you not kindly recall my early enjoyment of your society?"

Miss Eustace could make no answer. She felt as if about to betray her heart's most hidden secret; as if Mr. Chauncey would read her whole soul, should she attempt to utter another syllable.

Her trembling limbs could no longer support her, and with an unsteady motion she crossed the room, and seated herself on the sofa.

The attachment of Miss Eustace to Mr. Chauncey was rather an *instinct* than a *passion*. She was but eight years old when she met him at Gen. Gardner's, and she had never seen him since, until they met at Mr. Atkins'; yet the little attentions he then paid her, which were the very first she had received from one of the other sex, and which had a peculiar delicacy for the attentions of a youth of sixteen, made an indelible impression on her feelings. The strange question he asked her was ever awake in her heart—the kiss he imprinted ever warm on her cheek! She would have felt it profanation to have had it displaced by one from any other lips. But though she had never since seen, she had very frequently heard of him; and the sound of his name, a name she herself never uttered, was ever music to her ear; and for the ten long years during which they had been separated, his image had filled her whole soul. For Abby Eustace to have loved another would have been impossible! Her love for Horace Chauncey was a part of her very being!

Mr. Chauncey did not instantly follow Miss Eustace to the sofa. He wished to look at his heart—to still its emotions ere he went further. But one look showed him that he loved her wholly, entirely, undividedly; the sight of her agitation encouraged his hope—and advancing to the back of the sofa, and leaning over it, he said, in the softest tone—

"Now that you *are* a woman, may I repeat the request of my boyhood?—Will you be my wife?"

Miss Eustace spoke not a word, but her eyes met those of her lover;—language on either side was unnecessary—both felt that they loved and were beloved—that they were one forever!

Something more than a year after this eventful moment, *Mr. and Mrs. Chauncey* were spending a social evening with their friends, in the same pleasant parlor in which their hearts had first been opened to each other. In the course of conversation, Mrs. Atkins made known the fact, that her cousin, Miss Leigh, was on the verge of matrimony.

"I pity her husband," said Mr. Chauncey.

"Pity him!" exclaimed Mr. Atkins; "for what? I dare say he considers himself one of the most fortunate fellows alive!"

"Undoubtedly he does," said Mr. Chauncey; "but it will be a miracle if he ever enjoys domestic happiness."

"Why?" demanded Mrs. Atkins. "Surely Augusta has many valuable and attractive qualities."

"I grant it," said Mr. Chauncey, "and acknowledge that I once felt their force. But should

a woman combine in her own character all the valuable qualities in the world, she could not secure happiness to her husband, were they allied to a temper like hers."

"Is not that going too far, Horace?" asked Mr. Atkins—"Is it not laying *too much stress* on temper?"

"I think not," answered Mr. Chauncey. "Early in life my mother often spoke to me of the importance of good temper. Her remarks, which made a deep impression, led me to careful observation—and I am convinced, that could we accurately learn the detailed history of any one, from the cradle of his infancy, to the grave in which he was laid at threescore years and ten, we should find that *temper*, his own, or that of others, had occasioned three-fourths of the unhappiness he had endured. Neither poverty nor toil, pain nor sickness, disappointment nor the loss of friends,—neither, nor all of these together, have caused so many hours of bitterness in this sorrowing world, as ill-temper. It is the *scorpion* among the passions—its stings the deepest, the most envenomed wounds that are inflicted on human happiness!"

"I rather think you are right, Horace," said Mr. Atkins, after sitting for a few minutes in silent abstraction—"I rather think you are right; and if so," he playfully added, "I really sympathize with you on account of Abby's unhappy temper!"

"Abby's unhappy temper!" repeated Mr. Chauncey, while his eyes beamed with unutterable complacency and love as they rested upon her. "Look at her, Charles. Picture to yourself that face inflamed and distorted by passion! Imagine your own wife so disfigured! Is not the picture horrible? Who ever imagined a woman as she should be, without investing her with meekness, gentleness, patience, forbearance, as the genuine characteristics of her sex? When destitute of these, she denies her nature—counteracts the very design of her creation!"

"But you will grant," said Mr. Atkins, "that some women are born with much stronger passions than others: will you make no allowance for these?"

"Not the least," said Mr. Chauncey. "I have no belief in ungovernable passions. I would as soon excuse a thief for his stealing, or a drunkard for his intemperance, as a sensible woman for indulging a bad temper, on the score of natural infirmity. At the point of danger, a double guard must be placed. Every woman owes this, not only to herself, but to her friends. She was made to lighten care; to soothe corroded feelings; to console the afflicted; to sympathize with the suffering; and, by her gentle influence, to allay the stormy and conflicting elements that agitate the more rugged nature of man! Instead of this, shall she permit her own angry passions to be the whirl-

wind that shall raise the storm? The woman who does this, should be disowned of her sex, like those who abandon themselves to any other vicious inclination. An ill-tempered man is a tyrant;—but an ill-tempered woman is a monster!”

TO MY SISTER.*

'Tis but a few short months since we have met,
And yet those months seem ages! How old Time
Delights to linger on his flight sublime,
When between hearts that love, its course is set!
Sure age must flag his tardy wings; and yet
No breath of murmur shall escape from me,
For at each stroke—howe'er prolonged—I get,
Though farther off, yet nearer still to thee.

They come before me now, my childhood's hours,
When life was young, and all its plants were flowers;
Its beds of joy, just opening into morn,
Their stems too tender to retain a thorn;
Its quiet sports, when days serenely spent,
To sleep, at night, a ready pinion lent;
When time flew on as laughing streamlets flow,
Their waters making music as they go;
And now, as then, of all, the brightest hue,
That these delights were ever shared by you.
I see thee now, as often, terrified,
When ventures rash displayed my boyish pride;
Forgive me, since such tremors o'er thee ran,
A boy's first vanity—to seem a man.
I hear thee still in modest accents plead,
So early couldst thou prove a friend in need,
“If mother pass this one transgression by,
Brother, indeed, will be a better boy;”
The answer too, that oft thy tears beguiled,
“If mother spares the rod, 'twill spoil the child.”
All this—and more—within the flying hour,
Has linked the present to the past with power,
And ever shall on memory's tablet play,
Freshly, as one eternal yesterday.

But, with our childhood, gone are childhood's bowers,
Thus vined with clustering joys, and strewed with
flowers.

The noon of life, succeeding to its morn,
Withers each rose, but sharpens every thorn.
A stranger's fire is kindled on the hearth,
Where, with the hours, kept pace our infant mirth.
He who our father was while life was his,
Has gone to Him who, now, our Father is;
A righteous man! if thus our hearts may read,
In the entail of blessings on his seed.
His honored relic lingers to alloy
Her children's grief, and double all their joy;
And they, in turn, to soothe her widow'd mind,
While he has gone before, are left behind:
So aptly Heaven, to each afflicted state,
A double blessing doth accommodate.

*A detached passage of this article, under a somewhat different form, is in private circulation among a few friends of the author. Should it meet their eye, it may, perhaps, be recognised.

And wilt thou marvel if, thus left alone,
I early learned to make thy heart my own?
With thee a robe of grief or joy to wear,
And with a brother's blend a father's care?
Thy every step my earnest eye has view'd,
From girlish glee to thoughtful womanhood;
Well pleased, as thus intently it survey'd,
To see thy Maker by his work displayed.
And now, as memory folds her placid wing,
The sweets all shower'd which it was charged to bring,
And to hope's vision yields thee as thou art,
I find thee changed in all, except in heart.

Though metaphysics might have spared thy brow,
Nor changed its mood from simple to complex,
If view'd directly, or by sense reflex,
Thou shalt be ever dear to me as now.
I scorn the feeling by which man would bow
Down woman's spirit, to plum-pies and tarts,
And by her skill in culinary arts,
Square every virtue that her heart doth know.
It must be that this self-exalted race,
These mighty masters of this terrene world,
Fear lest their Dagon from its pride be hurled,
And her meek statue lifted on its base.
Spirit of her, whose harp so lately rung
Its lofty symphonies through Albion's isle,
By honor'd breezes wafted here the while,
Where did thy mantle fall, mother of song!
Do not sweet sympathies, of right, belong
To the sweet solace of man's rayless hour,
The grace, too oft the victim, of his power,
Yet loving on through thousand ills a-wrong?
I am ashamed that man's elated sense
Of his weak might and vain omnipotence,
Should spurn the contact of a meeker mind,
Not less exalted, though far more refined.
It shames me that these self-styled kings of earth,
These demi-gods by boast, if not by birth,
Should need, to fortify their vaunted crown,
The fulminating virtues of a frown.

But 'tis not thus my heart would have thee shine,
Nor treasures Fame one wreath it wishes thine;
Her temple keys too oft the vulgar hoard,
And they who entrance seek have their reward.
No! while one virtue lingers to impart
Its glowing graces to the quicken'd heart;
While yet one sorrow lingers to be soothed,
Or care has thorny pillows to be smoothed;
While nobler toils present a nobler prize,
And hope through faith points upward to the skies,
Let holier zeal inspire a loftier aim,
The Book of Life—and not the scroll of Fame.

Much do I owe thy love; thou ne'er hast known
What spells have bound me 'neath thy gentle tone;
The soft subduings of thy tender eye,
When passion's tumult drown'd thy meek reply.
Born to be ever hardened by a frown,
'Twas love could melt my iron nature down,
And love's own quiver, to her silken string,
Would oft, unconscious, lend a double sting;
Passion might veil and pride belie the dart,
But could not still its motions in the heart.

These arts can draw the soul, and such as these,
Gently as wind-harps answer to the breeze.

Oh what were we, if when our waywardness
Had left no work for time, upon the brow
Of one, whose frailty was too oft to bless,
But who no more shall bless or grieve for, now;
If, when the watch-light of a mother's fears
Had warn'd unheeded and gone out in tears,
The quenching of that unrequited flame
Left love no fountain for the heart to claim;
If not one tendril linger'd to entwine
The wayward oak with some devoted vine,
Whose gentle foliage might, at least, conceal
The harsher features which it could not heal;
If o'er our steps, to pray for their return,
No sister's tenderness were left to yearn,
And, with the patriarch's earnestness, to wield
The only blade that forces heaven to yield?
Who but would hug the shadows of the tomb,
If life were such an emphasis of gloom?
Oh! who could deem himself outcast of heaven,
If such the plea that he might be forgiven?

And now, farewell; may all that God can give
To glad thy spirit, mingle with thy cup.
I wander sadly; not unblest'd of hope,
Yet not upheld;—my heart doth love to grieve;
There is a sadness which itself doth weave
Bright presage of the future, and whose dart
Brings oil, to soothe its passage through the heart,
At once a blessing and a wound to leave.
Thus, when the present seems a thankless waste,
I water with a tear the flowery past;
And every bud of promise childhood knew,
Resumes its foliage with a freshened hue;
Above their graves my favorite flowers lie spread,
Their only thorn—the thought that they are dead.
How strangely doth our stream of being flow!
Joy starts the tear at morn—at evening, woe;
On the same stem despair gives hope the lie;
One certainty is man's—that man must die;
A transient star—his cradle and his grave,
The two great transits which his glories have.
A few short days,—at most, a few brief years,
The grave will hide our joys, and heaven our tears;—
If, haply, when life's billows beat no more,
Our barks be haven'd on that cloudless shore.
But toils await us ere the course be run,
And conflicts must precede the victory won.
Thou know'st the hopes, thou knowest the armor given
To them who fight on earth for crowns in heaven:
Then be these hopes, and be this armor thine,
And as thy conflict, thy reward, divine.

Camden, S. C.

B. W. H.

HISTORICAL WRITERS.

M. Le Long, in his historical catalogue, has produced the names of more than twenty thousand writers of French history. Bundu mentions thirty thousand "Scriptores rerum Germanicarum."

MORE OLD POETRY.

THE PURPLE ISLAND.

How many bards gild the lapses of time!
A few of them have ever been the food
Of my delighted fancy. I will brood
Over their beauties, earthly or sublime!
John Keats.

"Something about Sonnets" led me into a pleasant search among the old poets, and the paper I now offer you is the result of that search. In sending you these articles, I claim the humble merit, only, of a diligent though I would hope for the award, also, of a tasteful compiler,—offering little or nothing of my own, but the simple thread that ties together the rare flowers, plucked elsewhere.

In these days, when magazine poetry is a drug, and a drug, too, of the cheapest and most purchasable kind, it operates as a relief to the reader to turn over the pages of those "many bards, gilding the lapses of time," and to cull from them forgotten extracts,—the germ, quite often, of many a full-famed modern poet: and I cannot but recommend it as a plan to be adopted in conducting a literary work, to devote a certain portion of every number to this special purpose.

Among the English poets of "the olden time," PHINEHAS FLETCHER has ever been a favorite with me, and his "Purple Island," of all his works, prized most highly. This poet was born in 1584, graduated at King's College, Cambridge, in 1604, entered the church, and held a living therein for twenty-nine years. He is often confounded, when spoken of at this day, with JOHN FLETCHER, the collaborator of FRANCIS BEAUMONT, in the composition of dramatic works, and the contemporary of our bard. To my judgment the genius of Phinehas seems immeasurably superior to that of John Fletcher. His brother, GILES FLETCHER, was also a poet of equal celebrity, though few of his works are preserved. Phinehas died about the year 1650, not far from the age of 66.

"THE PURPLE ISLAND" is an allegorical description of Man, who is therein personified. The first five Cantos contain an account of the structure of the human frame, with all its functions. Therein are described all the physical faculties of man, their several and collective uses, their fitness, order, and exquisite workmanship. This portion of the poem has been objected to by some critics, as entering with too much minuteness into a subject, which it is the more appropriate task of the anatomist, than of the poet, to describe. I do not admit this objection, however, as being of sufficient force to deter any lover of fine poetry from a perusal of these five Cantos.

The poet next proceeds to a fine personification of the Passions, and the Mental, or Intellectual qualities of Man. This is both the work and the worker of inspiration. The soul kindles and flames as the eye and mind peruse it. It is a test, this poem, of a capacity, in the reader, for the enjoyment of true poetry. The two last Cantos are superlatively grand. *Eclecta*, or the Intellect, as the leader of the Virtues, or better Passions, defends "The Island" against the attacks of the Vices. The latter are conquered by the interference of an angel, who comes to the aid of *Eclecta*, at

his earnest prayer. This prayer is, perhaps, the most beautiful portion of the poem.

The Purple Island was written while Fletcher was yet very young: but it gives its author an indisputable right to the very highest rank on the scale of British Poets. Milton was evidently indebted to him for many of his beauties,—as, in his turn, was he, perhaps, indebted to Spenser, in no inconsiderable degree. Be these things as they may, that all the praise I have awarded him is but a feeble tribute to his merits, the extracts I shall transcribe from The Purple Island will abundantly prove to the reader.

PORTICAL FLAHIARIES.

Tell me, ye Muses! what our father-ages
Have left succeeding times to play upon?
What now remains unthought on by those sages,
Where a new Muse may try her pinion?

If the author of this poem wrote thus, what shall the bards of modern days say, while penning their opening apostrophe to the Muses? But here is something more in the same vein.

FALSE TASTE IN POETRY.

But wretched me, to whom these iron days
(Hard days!) afford nor matter, nor reward!
Sings Maro? Men deride high Maro's lays,
Their hearts with lead, with steel their sense is barred.

* * * * *

But if fond Bavius vent his clouted song,
Or Mævius chant his thoughts in brothel charm,
The witless vulgar, in a num'rous throng,
Like summer-flies about their dunghill swarm.
They sneer,—they grin. "Like to his like will move."
Yet never let them greater mischief prove
Than this,—"who hates not one, may he the other
love!"

Here follows a gem.

HUMAN CHANGES.

But ah! what liveth long in happiness?
Grief, of an heavy nature, steady lies;
And cannot be removed, for weightiness;
But joy, of lighter presence, eas'ly flies,
And seldom comes, and soon away will go;
Some secret power here orders all things so,
That, for a sunshine day, follows an age of woe!

LOVE OF GOD TO MEN.

Oh, thou deep well of life! wide stream of love!
More wide, more deep, than deepest, widest seas!
Who, dying, death to endless death didst prove,
To work this wilful rebel-island's ease!
Thy love no time began, no time decays,—
But still increaseth with increasing days,—
Where, then, may we begin, where may we end, thy
praise?

Thus far the first Canto.—The following is a curious specimen of the skill with which the allegory is sustained.

THE VEINS.

Nor is there any part in all this land,
But is a little isle: for thousand brooks,

In azure channels, glide on silver sand:

Their serpent-windings, and deceiving crooks,
Circling about, and watering all the plain,
Empty themselves into the all-drinking main,
And, creeping, forward slide, but never turn again.

The above extract is the only one I shall make from Canto the second, which is full of curious anatomical description, carried out with equal truth and beauty. For similar reasons, I shall pass over Cantos the third, fourth, and fifth, at present, and commence my extracts, once more, with the following sparkling stanza from Canto sixth.

HEAVEN.

There, golden stars set in the crystal snow,
There, dainty joys laugh at whiteheaded caring,
There, day no night, delight no end shall know,
Sweets, without surfeit, fulness without sparing,
And by its spending, growing happiness:
There, God, himself, in glory's lavishness
Diffused to all, in all, is all full blessedness.

Here is an animated landscape. What a flower-garden!

SPRING-TIME.

The flowers, that, frightened with sharp winter's
dread,
Retire into their mother Tellus' womb,
Yet, in the spring, in troops new mustered,
Peep out again from their unfrozen tomb:
The early violet will fresh arise,
And, spreading his flowered purple to the skies,
Boldly the little elf the winter's spite defies!

The hedge, green satin pinked and cut, arrays;
The heliotrope, to cloth of gold aspires;
In hundred colored silks the tulip plays;
The imperial flower his neck with pearl attires;
The lily, high her silver gingham rears;
The pansy, her wrought velvet garment bears;
The red rose, scarlet, and the provence, damask wears.

Come we now to the seventh Canto. Here is a touching sketch.

PASSING AWAY.

Why shouldst thou, here, look for perpetual good?
At every loss 'gainst Heaven's face repining:—
Do but behold where glorious cities stood,
With gilded tops, and silver turrets shining!
There, now, the hart, fearless of greyhound, feeds,
And loving pelican in safety breeds.

And now for a series of pictures, painted by a master-hand. The first who sits to the mighty lunner is

HYPOCRISY.

His wanton heart he veils with dewy eyes,
So oft the world, so oft himself deceives,
His heart, his hands, his tongue full oft belies;
In 's path (as snail's,) silver, but slime he leaves.
He Babel's glory is, but Zion's taint;
Religion's blot; but Irreligion's paint:
A saint, abroad,—at home, a fiend,—and worst, a saint!

The next sitter is akin to him whom we have been observing. Mark the delicate discrimination the artist makes between them.

DISSEMBLANCE.

His painted face might hardly be detected :
Arms of offence he sold' or never wore ;

Lest thence his close designs might be suspected :
But clasping close his foe, as loth to part,
He steals his dagger, with false, smiling art,
 And sheaths the trait'rous steel in its own master's heart.

Two Jewish captains, close themselves enlacing
 In love's sweet twines, his target broad displayed,
 One, with 's left hand the other's beard embracing,
 But, in his right a shining sword he swayed,
 Which, unawares, through th' other's ribs he smites ;
 There lay the wretch without all burial-rites :
 His word, "HE DEEPEST WOUNDS, THAT IN HIS FAWN-
 ING BITES!"

The "word" is the motto of the shield each of these personified passions is supposed to bear.—What a portraiture is this of SEDITION !

A subtle craftsman framed him seemly arms,
 Forged in the shop of wrangling Sophistry,
 And wrought with curious arts, and mighty charms,
 Tempered with lies, and false Philosophy.
 Millions of heedless souls thus had he slain ;—
 His seven-fold targe a field of gules did stain ;
 In this two swords he bore,—his word, "DIVIDE, AND
 REIGN!"

The next is a full-length. This impersonation is perhaps as strong and apt as any in this brilliant gallery.

ENVY.

Envy came next : Envy, with squinted eyes :
Sick of a strange disease,—his neighbor's health !
 Blest lives he, then, when any, better, dies !
 Is never poor, but in another's wealth !
 On best men's griefs and harms he feeds his fill,
Else his own man doth eat, with spiteful will.
 Ill must the temper be, where diet is so ill !

Each eye through diverse optic slyly leers,
 Which, both his sight and object's self bely :
So, greatest virtue as a mote appears,
And molehill faults to mountains multiply.
 When needs he must, then faintly yet he praises,
 Somewhat the deed, much more the deed he raises,
 So, marring what he makes, and, praising, most dis-
 praises !

His missile weapon was a lying tongue,
Which he, far off, like swiftest lightning, flung !

Here is a sketch ; a family group. Mark the exquisite delineation of the difference between these kindred personations.

DETRACTION AND THIEVERY.

And at the rear of these, in secret guise,
 Crept Thievery and Detraction ; near akin :
 No twins more like : they seemed almost the same.
One stole the goods,—the other, the good name.
The latter lives in scorn,—the former dies in shame !

The thief's death is surely better than the detractor's life.

Turn we now to Canto eighth. Here is the fifteenth stanza. I grieve to pass over some admirable descriptions,—but my "article" is growing rapidly upon my hands.

AMBITION.

Ah, silly man ! who dream'st that honor stands
 In ruling others,—not thyself ! *Thy slaves*
Serve thee, and thou, thy slaves ! In iron bands
 Thy servile spirit press'd, with wildest passion
 raves.
 Wouldst thou live honored ? Clip Ambition's wing !
 To Reason's yoke thy furious passions bring !
Thrice noble is the man who of himself is king ?

What affluence of description characterises the following sketch of

FLATTERY.

His art is but to hide, not heal, a sore :
 To nourish pride : to strangle conscience :
 To drain the rich, his own dry vaults to store :
 To spoil the precious soul : to please vile sense :
 A carrion-crow he is,—a gaping grave,—
The rich coal's moth,—the Devil's fact'ring knave.

In Canto ninth, you may read what I will call

THE LESSON OF THE LARK.

The cheerful lark, mounting from early bed,
 With sweet salutes awakes the drowsy light ;
 The earth she left, and up to heaven is fled :
 There, chants her Maker's praises, *out of sight.**
 Earth seems a molehill, men but ants to be,
 Teaching proud men, that soar to high degree,
The further up they climb, the less they seem and see !

There is a whole library of human philosophy in that Alexandrine !

Here are three pictures that should adorn the cabinet of every Christian. Humility and Faith !

HUMILITY.

— with sweet and lowly grace
 All other higher than himself esteemed ;
 He in himself prized things as mean and base,
 Which yet in others great and glorious seemed.
 All ill, due debt ; good, undeserved, he thought ;
His heart, a lowroofed house, but sweetly wrought,
Where God himself would dwell.—

THE SAME.

So choicest drugs in meanest shrubs are found ;
So precious gold in deepest-centre dwells ;
So sweetest v'lets trail on lowly ground ;
So richest pearls lie closed in vilest shells :
So lowest dales we let at highest rates ;
So creeping strawberries yield daintiest cakes,
The Highest highly loves the low, the loftiest, hates !

FAITH.

By them went FIDO, marshal of the field ;
 Weak was his mother, when she gave him day,
 And he, at first, a sick, and weakly child,
 As e'er with tears welcomed the sunny ray :

* "Like to the lark at break of day arising
 From sullen earth, sings hymns at heaven's gate."
 Shakespeare.

Yet when more years afford more growth and might,
A champion stout he was, and most puissant knight,
As ever came in field, or shone in armor bright!

In Canto the tenth is this admirable description of
COWARDICE.

He is as cowardly
That longer fears to live, as he that fears to die!

The following is a most graphic touch. I give it
without its proper connection, as I find it in Canto ele-
venth: it is a study for Landseer.

THE GENTLE GREYHOUND AND THE CURS.

As when a gentle greyhound, set around
With little curs, which dare his way molest,
Snapping behind:—soon as the angry hound,
Turning his course, hath caught the busiest,
And, shaking in his fangs, hath well nigh slain;
The rest, scared with his crying, run amain,
And, standing all aloof, whine, howl, and bark, in vain.

Here is a beautiful simile, by which the poet would
describe

THE REVIVAL OF THE WOUNDED.

So have I often seen a purple flower,
Fainting through heat, hang down her drooping
head:
But soon refreshed with a welcome shower,
Begins again her lively beauties spread,
And with new pride her silken leaves display:
And while the sun doth now more gently play,
Lays out her swelling bosom to the light of day.

The twelfth Canto, and the last, contains many splen-
did stanzas which I would fain transcribe, but there are
limits to one contributor's monthly share in a Magazine,
as well as to the patience of its thousands of monthly
readers: and I must close with the two closing stanzas
of "The Purple Island."

HEAVEN'S DELIGHTS.

There, sweet delights which know not end nor mea-
sure.

No chance is there, nor eating times succeeding;—
No wasteful spending can impair their treasure;
Pleasure full-grown, yet ever freshly-breeding;
The soul still big of joy, and still conceiving:
Fulness of sweets exclude not more receiving,
Beyond slow tongue's reports, beyond quick thought's
perceiving!

There they are gone: there will they ever bide:

Swimming in waves of joy, and heavenly loves:

He, still a bridegroom, she, a gladsome bride:

Their hearts like spheres in love still constant moving:

No change, no grief, nor age can them beset,

Their bridal bed is in that heavenly hall,

Where all days are but one, and only One is All!

If this attempt to add to the interest of the Messen-
ger, by extracting some of the beauties of the elder
bards, shall be received with favor on the part of the
readers of these pages, it will give the writer much
pleasure to renew it in some future numbers.

J. F. O.

EXTRACTS FROM

GLEANINGS ON THE WAY.

BY J. Q. F. of N. C.

America—Coup d'œil of "my tour"—Philadelphia—its plan—
Public Buildings—Ladies—Flowers and Music—Intercourse
with strangers—University—Hospital—Ball at Mrs. C++—
Sleigh-riding.

America! happy, fortunate, prosperous America!
As the child loves its mother, so I love thee. Ere I was
let loose from the prison-walls of a university, I had
promised to tread your rich and productive soil; to see
your young and vigorous people; your cities, towns
and villages; to roam through your unknown forests;
to glide down your beautiful and majestic rivers; to
climb your lofty mountains and behold the surrounding
scenery. The grand, the curious and beautiful of fo-
reign climes may induce many of thy sons to leave their
blessed homes, ignorant of the beauties of their own
country, but they offer not the same attractions to me.
Give me to see the sublime and beautiful in nature—
the rocks and torrents, forests and mountains, hills,
vales and grassy plains that are found in my own lovely
land—give me to know and love my country, and I ask
no more.

I have visited in "my tour" the fertile fields of the
sunny South, and enjoyed in that land of ease and ele-
gance the kindness and hospitality of the people. I
have halted in Philadelphia—the city of beauty—where
more elegant figures and lovely faces are seen than any
where in the Union; eat my icecream at Parkinson's;
become acquainted with the intelligent and accomplish-
ed of that most delightful city, and charmed with their
society. I have travelled through the beautifully culti-
vated country of Eastern Pennsylvania, and lingered on
the banks of the romantic Susquehanna. I have brave-
ly ascended and descended, on inclined planes, the Alle-
ghany mountains, and refreshed myself at the "Summit
House." I have embarked at Pittsburg, floated down
"La Belle Rivière"—the Ohio, and stemmed the pow-
erful current of the Mississippi. I have wandered over
the extensive prairies of the West, and lodged in the
wigwam of the red man. In the light canoe of the In-
dian, I have moved, with a quick and equal sweep,
over the still and quiet waters, lit by Heaven's beauti-
ful lamp, and fancied myself in some *paradisiac* scene.
I have skimmed over the sail-covered lakes of the North,
felt my "littleness" at mighty Niagara, drank my glass
of water at fashionable Saratoga, and read the last lite-
rary work in Boston. I have glided down the grand,
romantic and classical Hudson, landed at New York—
the great commercial emporium of our country, prome-
naded Broadway, and forced my steps through the dense
masses of living beings which throng that elegant street.
I have listened to the last piece of music sung by a
charming lady in the "Monumental City," stood within
the Senate Chamber at Washington and heard the elo-
quence of the nation. I have surveyed from the Capi-
tol, in Richmond, the picturesque scenery of the sur-
rounding country, bathed my limbs in the Hot Springs
of Virginia, touched at "Old Point Comfort" and luxu-
riated on oysters, fish and a pure and healthy sea breeze.
I have passed through scenes interesting and charming;

gazed on spots sacred to American freemen; parted from friends dear in my memory.

PHILADELPHIA.—This neat and beautiful city is situated between the Delaware and Schuylkill rivers, about six miles above their junction. You are landed at Chesnut street wharf, and introduced, at once, into the most fashionable part of the city. The first things remarked, are the neatness and cleanliness of the streets; the stores, which are well finished and showy; the gentlemen, who are good-looking and well dressed, and the many handsome female faces met at every step. Contrasting their complexions with the Southern ladies, you will find them not so fine and delicate, but more showy in the distance. Their feet are large, which is almost a characteristic. The Southern lady may justly boast of the neatness and delicacy of her hands and feet.

The plan of the city is plain, simple and convenient. The principal streets are those which extend from the banks of the one to that of the other river—these are crossed by others at right angles, thereby dividing it in squares. Chesnut is the most fashionable. The houses are built of good brick, plain, comfortable and well furnished. The Girard Row, Portico Square and Colonnade are the most attractive fronts. The most serious objection is the monotonous appearance of the buildings, which is tiresome to the visiter, but this dull and *quaker-like* style is being laid aside for one more finished, beautiful and elegant. From spring till winter, the Philadelphian is making improvements about his lot—not satisfied with his house, he pulls it down and builds again, or tears away the brick and adds a marble front, or repaints the doors, windows, &c.

The number of trees which border the streets, gives an air of freshness and coolness to the city and adds much to its beauty and comfort. The public squares are large and in good order, and want only a few trifling additions to make them most delightful promenades, both during the day and night.

If water were kept leaping and playing through and above the green grass, which carpets the walks on either side, and if, during the night the brilliant gas lights were substituted for those of oil, then would Independent and Washington squares soon be rid of those who now visit them, and the respectable citizens and strangers could here promenade without the risk of being insulted at every step. Owing to this arrangement of streets and public squares, the air circulates freely and contributes to the health of the city.

The public buildings are of a fine order, but I visited only one with much interest—the Old State House, which stands unnoticed and unhonored, with its front posted with bills of “Theatre,” “Magic,” “Diorama,” “Constable’s Notice,” “Lost,” &c. To me, it served to recall many interesting and delightful associations, and I felt sorry that it is not more highly prized. It should be the boast of every Philadelphian, that in this plain and venerable pile once sat the immortal Signers of the Declaration of Independence—that on these steps was first declared that we were free and independent—that here the “Father” of a now flourishing and extensive country was first seen sitting in the Presidential chair, directing the destinies of a new and freeborn nation. But no such feelings as these glow in their bosoms, and they never point to it as the dearest proof of their freedom. How often will they speak of Fairmount

Water Works and Girard College, and ask if you have seen these places, but never wish to know if you have visited the Old State House—entered the room which Washington in by-gone years had entered—trod the steps which he once trod—had pointed out the seats of those immortal men whose names are as imperishable as time. I am better satisfied and shall be more pleased to say that I have seen the Old State House in Philadelphia—entered the room in which the illustrious patriots of the Revolution pledged their “lives, their fortunes and their sacred honor,” in defence of Liberty, than to be able to paint the beautiful and romantic scenery of the Schuylkill—Fairmount Water Works, with its pumps in operation, forcing the water high up in basins, and the manner of conveying it from thence by *hydrants*—the canal on the opposite side, with its boats of coal, the wealth of Pennsylvania;—to know that a Mr. Girard, who lived a poor and miserable life that he might die rich, bequeathed a handsome sum of money for the erection of a college and the education of youth.

The Churches, Banks, Hospitals, Penitentiary, Exchange, Deaf and Dumb Asylum, Academy of Fine Arts and Mint are the most interesting and conspicuous buildings. Having seen this, you now visit Fairmount, situated amid the romantic scenery of the Schuylkill. The basins are on a high hill and the water is raised by machinery propelled by the waters of the Schuylkill. You ascend to these basins by means of wooden steps and when at the top, you are repaid by a most charming view of the City, Penitentiary, Girard College, Pratt’s Gardens and the picturesque country around. These works now at a very trifling expense supply the citizens with pure and healthy water, and in cases of fire, afford sufficient water to extinguish the flames before they can make any advance.

I have said that the ladies of Philadelphia are handsome. This is not all. They are intelligent and accomplished. The number of select and well conducted schools give them great advantages, and their education is not finished at *fourteen*, in order that they may “come out,” as is too often the case in the South. Their manners are pleasant and agreeable, and their conversation interesting and instructive. They want the liveliness, the vivacity, the simplicity, the ease and expression of the Southern lady when engaged in conversation. They have the *substance*, but want the *soul*. Hence the conversation of the latter, although not so instructive, is more attractive and winning. All who have been so fortunate and happy as to converse with both, must acknowledge the superiority of the Southern in this particular. There is a *something* which fascinates, chains and insensibly wins. The Philadelphians dress in better taste than any people in this country. Their dresses are neater and their colors better chosen; hence their appearance is the more finished.

The ladies are very fond of music and flowers, both of which speak very favorably of their taste and refinement. In walking the streets, you will see beautiful collections of flowers at their windows, and you will find some of their private gardens most extensive. I have been often charmed with their music, and it is delightful to attend the musical soiree given by Mrs. Capt. R. and Mrs. B. alternately on Tuesday evenings. At these parties, you hear the best vocal and instrumental performers and meet the most select society. As

instrumental performers of a high order, we may mention Mrs. W., Misses N. and P.—and as vocalists, Mrs. Capt. R., Mrs. B. and Misses W. and G.

It has been said that the Philadelphians are cold and reserved in their intercourse with strangers, but it holds true only with those who have visited that city and left it without remaining sufficiently long to become known. Strangers who bring letters of introduction, or persons whose family, education and manners are such as to entitle them to move in their circles, will, when acquainted, have the most marked attentions paid them. There is no city in the Union in which the gentleman is better received. If he pass the ordeal, he is safe and happy in their society; if found unsuited and rejected, he will find it advisable not to attempt the purchase, as he will most certainly fail.

The Medical department of the University of Pennsylvania is an institution well known through our country, and stands deservedly high both at home and abroad. The antiquity of the school and the great names connected with it, have placed it at the head of medical schools on this side of the Atlantic. With it, are associated the names of Rush, Wistar, Barton, Dorsey, Physick, Dewees, Chapman, Jackson, Hare and Horner—names illustrious in the history of medicine and as benefactors of mankind. It has been gradually extending its course of instruction, and its resources are constantly accumulating. The chemical laboratory is inferior to none in the world, and the anatomical museum is the most perfect in this country. To it, is attached the Philadelphia Hospital or Alms-House, the most extensive and best arranged building of the kind.

The winter has been uncommonly gay. Mr. and Mrs. Wood and Mr. Brough have astonished and delighted the musical world in the operas of Masanello, Fra Diavolo and La Somnambula. They have fine voices, sing with great taste and power and give the greatest satisfaction. The parties and balls are very frequent. To-night, we attend the brilliant ball at Mrs. C***, Chestnut street, where we shall meet the aristocratic and fashionable.—At 10 o'clock, we made our obeisance to Mr. and Mrs. C***, and stepping aside so as to give room for those who were behind, we were soon lost in the crowd. The music from Johnson's justly celebrated band invited to the dance, and we were soon engaged in the graceful cotillion, the voluptuous waltz and elegant gallop. The dancing continued until twelve, at which time the ladies were conducted to the supper table, which was heavily loaded with all the luxuries of good eating. At one in the morning, the company began to disperse, and at two I found myself comfortably fixed in my lodgings, which I left at ten, fatigued and suffering from headache and fever.

I delight in sleigh-riding. It is glorious sport, when, with ladies on either side of us and with horses well trained and gentle, we dart away at the rate of twelve miles an hour to see some dear friend in the country. It is sweet to leave behind the pent-up city with its dull anthracite coal fires, and seek the country and seat ourselves beside the cheerful wood which blazes and crackles on the family hearth. And then too, comes the cold bread and sliced ham, cakes and wine, and other refreshments a thousand times better than the same things on our own tables. And now too is the time we love

to dwell upon the past, and make it seem as the present. All is life, all buoyancy, all pleasure, and we return to our homes better and happier beings than when we left them.

Elizabeth City.

THE SLEET STORM,

AT WASHINGTON.

By the author of 'Love at the Shrines,' &c.

As I lay in my bed this morning I heard a low noise upon my windows, and extending my arm from beneath its folding of blankets, I drew aside the curtain, to see which of winter's messengers was summoning me to arise. Like a wild urchin scattering shot from his father's pouch, the delicate flakes of sleet tapped against the panes, and made music upon the brittle and responding surface. I was fairly awake. There was no sunlight in the skies, but a dull, heavy atmosphere fell over the face of nature, and veiled the distant houses in a dusky cloud. Still the spattering against the windows continued, and I answered the summons by a spring from my bed, and was soon equipped.

How cheerfully our hearth burns on a sleety morning, when the servant is industrious. You descend from the regions of Lapland, where furred wrappers and ermined cloaks are necessary, into the region of delicious comfort.

The breakfast room is warm, and you meet your rosy child, with its rich cheeks crimsoned with health, who runs to you from her cricket by the fire, and presses her sweet warm cheek to yours. You take her in your arms, and both together gaze upon the whitened fields; and how the merry heart laughs, as she sees the old cow sliding down the hill, like a mahogany table—her four legs stiff as icicles. She chirps and laughs with delight, when a little boy catches the sliding old quadruped by the tail, and accompanies her on her slippery journey, until they arrive in safety at the bottom of the hill. The wiry, woolly dog has crept from his lair in an old basket, where he has slept all night, covered up in a green baize crumb-cloth which he has cabbaged, and he looks around him with a knowing eye as if he was considering his chance for an upset. He is a droll, sly and quaint chap, and though quite young, has his wits wonderfully developed.

The only place that he will stand a chance for a fall, will be the outside steps that descend to the kitchen. Bob, the ostler's, shoes, may have iced their angles, as he passed in from the stable.

No sun yet—and the clock is on the figure of nine. Is yonder white world of ice to stand all day long? The skies forbid.

How the urn smokes again, and the aroma of the coffee ascends in fragrant spires and pervades the room, as if the odor of some Deity descending from Olympus. The hot rolls melt the butter, as I hope the sunbeam, warm and vigorous, will ere long march over the stubborn ice, and conquer its huge surface with a smile.

The sleet hurries on apace from the near hanging clouds, and the very trees seem to shiver as the ice-bolt

splinters about them. How gloriously will he unfold them, and cloak their dusky bark with an armor as pure as the crystal of the spring. Two months hence, and the buds will cluster upon those boughs, and the wild birds hide themselves in the fragrant leaves—the gentle breath of May will whisper to them, and the soft sun will rejoice amid their verdant foliage; but will they then wear an aspect so lovely as that with which they are now bedecked? Like ten thousand chandeliers of diamond spars flashing every ray from the light, the limbs throw out their glassy tracery upon the sky, and the wind that whistles through them, clatters them together with a soft and singular sound.

The grass is prouder to-day than it has been for a long and weary time—it is stiff in its conceit; and should the old cow that slid down the hill just now, attempt to clip it, how it will pierce her nose with its sharp and beautiful spear. The grass is in its panoply of silver mail, and is ready to tilt against anything. Now it is more beautiful than the lily of the valley, and it lifts its head that the wind may tread over it and hear its mellow song.

The horses poke their bony heads out at the stable-door and snuff the cool air, and shake their trembling ears as the sleet darts between them. Armed with my cane, and wrapped in my coat, I step forth to dare the whistling messengers from the clouds. Whew! How they scatter themselves over my face and cut their horizontal way over the tips of my ears. I place my faithful cane carefully in the ice, else away I would dart and roll over, to the edification of every market-woman that might feel herself secure in woollen straps passed under the soles of her shoes.

Progressing along with all the apparent infirmity of age, though I am but in my younger youth, I reach at last the crowning point of my toil—to ascend that knoll on this side and descend it on the other, is like the passage of the Alps.

Warily my cane is placed, as if I trod upon the loftiest summit of Mont Blanc, and saw beneath me the deep glaciers wherein 'tis almost death to gaze; I stick the point of my square-toed boots into the ice and clamber up. The steep is won—but now for the descent. A wild boy on his skates dashes past me, and away he goes like a rail-car, down the steep; he has passed the fence corner, and the rogue has stopped on his iron heels, to watch the descent of Bonaparte. Lord how the wind whistles around me, and how smooth and clear looks the shining declivity—there is not the slightest shrub to break the monotonous frigidity of the view, nor the grateful furrow of a cartwheel, and down that inclined plane go I must. Shall I sit down and slide it out? The laughing eyes of the skater, peeping over the fence, forbids the idea. The work is commenced—the cane once more planted—the umbrella poised above my head; for the sleet storm is pouring upon us all in feathery glory, and I am off. It is in vain that I try the slide—the equilibrium of my boyhood is gone, and the just precision of my eye, from want of practice, fails me at this momentous crisis. A slip—mercy—and all is over. My heels have kicked defiance to the clouds, and my head has smitten with an audacious force its mighty mother. The umbrella inflated with its own conceits has fluttered away, and is beyond my reach. But I am down, and the occasion

is favorable. There is no bone broken, and away I go upon my back as gently as a sleigh spinning along with four in hand. I heard that wicked urchin's mirth as my heels slipped from under me, and as I glide majestically along, I hear his splintering approach—he shoots by me like an arrow, and a broad grin is upon his handsome face. He has my blessing, bright boy, and though I may stumble frequently in life, may thy course be as it was this morn, happy and secure. He brought me my umbrella, and has brushed the ice from my back.

As I wend up the avenue, hundreds of boys fly past me on their skates, for the pavements and roads are all covered with the ice. Here it is safer walking, for they have roughened the surface with their fluted irons, and I pace along as merry as the rest.

Like an alderman picking his way to a turtle dinner, see that solemn steed, how he minces his steps, and hear him how he snorts, as a flying skater, like a summer swallow-bird, flashes before his frost-webbed eyes, and his poor rider shakes his whip at the boy, who chuckles in his sleeve, and returns to the attack like a Bedouin Arab of the Desert.

The blacksmith's shop is crowded with company, and the beaded perspiration falls from his forehead and hisses on the glowing iron. The two white horses are to be frosted first, for they belong to Mr. ———, and he wants them to pay a visit of some importance to the President. The blacksmith, with a nonchalant air, snatches up the huge foot of an honest cartman's horse, who earns his bread by his daily toil, and hammers away right merrily upon him. The white servant of the great man has to pocket the insult, but his turn will come next. Thanks, honest smith! The poor wood-carrier will bless you this night, when he pours his earnings into his wife's hand, and sends his eldest boy out to buy milk for the evening coffee.

I stand by a man who is digging lustily away at something beneath the sleet: chop—chop—chop—the ice breaks off in cakes, and he draws forth the last evening's paper. He will chop logic over the sage editorial; for bent must he be on learning, that would thus stand in the shivering air, and pick two inches deep in ice for an evening's journal. The editor was highly complimented by the labor.

How the hours wear on—how slowly the hands point upon the face of my time-piece, and yet how swiftly do our thoughts mount upon the four winds, and seek the hearthstone scenes of our friends. Alas! that they are distant from us.

We hear the wind chuckling around the gable-ends of the houses, and almost screaming with delight, when it cuts a corpulent biped across the bridge of the nose with its icy sword.

The night draws on apace—slowly the curtain falls, and dim and indistinct sneak on the dying moments of the day—the grass has not bent an inch, and the tall trees shake their heads ominously, as much as to say, "We'll have a cold time of it out here to-night." Where are your elegant blankets that the gods have sent you?

Will the mice stir abroad to-night? The cat is rolled up in her night-clothes and purs away like an old erone spinning wool. The wiry-headed dog barks ever and anon in his sleep, for he is haunted by visions of sacked towns and dismantled larders.

Oh! how the wind bellows without—"discoursing most eloquent music." The shutters are fastened—the doors are not locked, for some sufferer may knock, and I would not deny him the comfort of my blazing fire. The curtains are not drawn down in such a night as this, for many a poor houseless wretch passing by and seeing all dark, would pass on, and he might find his bed in the deep hollow a few yards beyond my door.

The sleet day has ended in a cold and starry night. The fretted limbs are swaying about in the powerful blast, and as yet I have heard of no accidents. The boys could have met with none, for they were not forced to the deep waters for their skating frolic; and though they, doubtless, have had some delightful tumbles, they are none the worse for that. Fine fellows, how soon the skates are thrown aside, after their first appearance at the barber's.

And now it is growing late; the wand of Morpheus has been passed more than once across my eyes, as the nodding reader will have perceived, and once more I am permitted to snuff my bed-room candle, and don my nightcap.

Washington, Feb. 16, 1838.

THE SLEET.

Awake, awake, the sun is up, awake and sally forth,
We've had a rain of jewelry from out the frozen north;
The earth is robed in dazzling white, each tree is hung with
gems,
And diamonds in ten thousand shapes are hanging from their
stems.

Each bush and every humble shrub, with precious stones is
strung,
And all the purest, brightest things, by handfuls round are
hung;
The emerald! and the amethyst! the topazes! behold!
And here and there a ruby red, is sparkling in the cold.

The chrysolite and jasper see, and that bright Sardine stone
The holy Patmos prophet saw, upon the Heav'nly throne;
Here all the gold of Ophir shines, with all Golconda's store,
And who could ever number up the countless myriads more?

The holly in its darkest green, with crimson fruit looks gay,
Enchased in solid silver too, how rich is its display!
In green and gold the shaggy pine seems almost in a blaze
With all the sun's reflected light, yet soften'd to the gaze.

The cedar! ah thou favor'd tree! in scripture it is told
They laid thee in the house of God, and cover'd thee with gold!
But great as was King Solomon, he, nor the house he made,
Were dress'd in such magnificence as thou hast here display'd!

The beech tree stands in rich array of long and shining threads,
Its brittle boughs all bending low to earth their drooping heads,
And now and then some broken limb comes crashing from on
high,
And showering down a world of gems that sparkle as they fly.

The lofty oak—the hundred limb'd Briareus of the trees!
Spreads out his pond'rous icy arms, loud crackling in the breeze,
And as the roused up lion 'shakes the dewdrops from his mane,'
So does the woodland monarch shake his crystals o'er the plain.

But time would fail to tell of all that bright and starry host
The north-wind brings 'to witch the world' from out the realms
of frost:

The meanest thing—the most deform'd—the dry and sapless
bough,
The bramble rude, the rugged thorn, are pure and spotless now.

'Ye counsellors of earth!' come forth, 'ye princes who have
gold!'

Your diadems, ye kings! bring here,—the jewell'd crowns ye
hold;

Come woman in thine ornaments, in all their costly sheen,
And let them be the loveliest ones that ever graced a queen!

This grass that's trodden under foot, this weed with branching
arms,

Thus glittering in the morning sun, hath fifty-fold their charms;
Then cast your baubles vile away, and bend in solemn thought
To Him, who hath this gorgeous scene, from storm and tempest
wrought.

Yet this fair pageant soon must fade before the breath of noon;
And by the fiat from on high, your wealth shall fade as soon.
Oh lay not worthless riches up, which 'moth and rust' assail,
But those which at the Judgment day, through Christ, will then
avail.

What though the sun so soon must melt this frostwork and its
forms,

He speaks them into life again, who rides amid the storms;
So 'in the twinkling of an eye,' at his last trumpet dread,
Our bodies, fashioned gloriously, shall rise up from the dead.

The sun goes up his destined way—how few do heed my calls!
In tears the vision melts away, 'the baseless fabric' falls.
I too, could shed some tears, alas! that this sweet scene is
pass'd;

For scenes as sweet, it brings to mind, which fled away as fast.
NUGATOR.

* Job, chap. 3d.

ILLUSTRATIONS OF A SCIENCE.

By the author of 'Love at the Shrines,' &c.

THE ANIMAL MAGNETIZER.

How the following wild and eccentric story came into my possession, is a matter of no great import. It came by the right of inheritance, among a golgotha of garret furniture, such as trunks and boxes of all sizes and of every form. On opening one of them, I was struck by a singular looking roll of paper tied up very neatly with a faded piece of brocade, and it was not long ere I found that the writing was that of a very celebrated ancestor of my family, and I set to work to decypher the outré letters, for the benefit of your readers—simply remarking that I have excluded all portions of the record, that appertain to the scientific part of animal magnetism; apprising the general reader however of the fact, that in the early days of the art, the operations were accompanied with music—this remark is relevant to the understanding the story.

THE STORY.

It is night—the weary wind pants around my windows—the fire glows in the hearth, and every now and then, a small cloud of smoke puffs down the chimney, driven out by the blast. It is a sad night, and the world is hushed, and the deep silence is only broken by the baying of the mastiff chained with a double chain to the portal.

How mysterious and awful are these gigantic walls—

those dark recesses—and that old and rusted armor hanging upon iron nails, how it fills me with ideas of the glorious past.

I am now an old man—the silver is about my head, and I am not what I used to be, when I bounded along the liveliest of all the proud ones, that have sunk away forever.

But why should I pause upon the threshold of that which I promised you I would relate? Often and often have I put you off with promises, and now as I feel the cold shiver of old age, I think it high time to gratify your curiosity. In this brief record, you will find ample materials for wonder and admiration, and when I shall have been gathered to my fathers, read it to your children, as a singular event in the life of one of their ancestors.

It is a dreary task to go back to the days of our youth—almost sinful in age to chill the sunshine of such a memory, with his breath iced and feeble; but yet for your sake, my beloved, I will go back upon the dreary travel, and conjure up once more the emotions of my youth, and stir the smouldering cinders in my heart.

It was your mother of whom I shall speak. Her character was gentle, pure and credulous. She had no guile, and when I wooed her, she did not shun me, but met my advances as nature prompted, which was modesty and truth to her. She was to me life—soul—divinity. I sighed for the morning, that it might bring me to her presence—for the night, that I might worship her in all that glorious impregnation of mystery incident to my country.

When I won her it was in the spring, and I remember it so well, so wonderfully well. I see again the moon and stars shining down upon the short crisp grass, and silvering every blade with a rich and fretted scabbard. I see once more the leaves trembling in the gentle breeze, the dark old trees beneath which we used to sit and count the throbbings of our hearts, one against the other. She was guileless as she was beautiful; she loved and was beloved; there was a tacit understanding between our hearts—they had met in the yearning confidence of their strength, and whispered calmly and thoughtfully to each other—there was nothing unexplained. Truth was the sun; the several and many thoughts common between us, the stars to our little world. We moved together, but not apart from the rest—we loved the world, and had our friends—we danced and we sung and whirled along the giddy mazes of society, but we had our world—one single step and we were in it, and it was a paradise.

In those days a wild theory had been started by some of our many dreamers, and all Germany had been tortured by the cruel and hideous doctrine. Crowds followed its professors through the streets, and mystery and majesty and a dreadful awe hung upon their actions and their words.

The science was one that had never before been heard of—it broke suddenly over the heads of our learned men like a thunderbolt, and swept onward into every avenue of the public curiosity. I shared the common wonder, and in my ardent spirit, there was awakened a most painful desire to master its secrets.

In this state of mind, the city in which I lived was visited by one of these strange beings—these teachers of the dark and weird lore, and I hastened to his pre-

sence. I stood upon the threshold of his room—he rose at my appearance. I could not move—for his eyes, large, dark and brilliant, were riveted upon me. There was a fascination in them like a snake's—so surpassingly beautiful were they. His forehead was high, white, and without the trace of a wrinkle, and his dark ringlets fell back upon his shoulders, and added to the wildness of his countenance—and yet he was gentle in every look—a languor—a softness, almost an effeminacy, which soothed the abrupt and startling effect of a first view of him. He spoke to me, and his voice was melodious as the softest music—so low—so gentle. I became acquainted with him, and found him melancholy but not morose—but he looked as we fancy the poets look—those priests of nature. I saw him perform his magnetic wonders on multitudes, and he seemed to sway them as a god. They breathed low and softly when he spoke—their limbs quivered when his large eyes were fixed upon them, and when he moved about the room their hearts would pant like the bosom of love—by a motion of his hand he gave them life, by a glance he could palsy them into a livid and ghastly corpse. Where was the magic of this wonderful being? I watched him like an eagle, but there was ever the same subdued manner about him. He glided across the floor like a woman in a sick chamber; he looked at you, and your very soul bounded and leaped beneath the swimming glance of the philosopher. His habits were secluded and studious. He pored over large tomes and rich-clasped books, and at times his brow would darken as if a tempest of wrath was brooding over him, and again his color would revive, as if ideas like rose leaves, had expanded in his soft and enchanted soul. I became a regular attendant at his rooms, and witnessed some strange scenes in the course of his practice.

It was a weird and ghastly occupation, that of this early magnetizer. He so calm and melancholy—the patient so pale, haggard and ghostlike; and there I have seen him stand gazing on the pallid face until the tears would rush into his eyes, and his whole frame would tremble as with an ague fit.

From a deep interest in the philosopher, I became a warm student of the philosophy. It excited and filled me with visionary thoughts, but I had never allowed myself to be magnetized. An awful dread of putting on the semblance of death prevented me. I did not wish that man should see how I looked when I should be laid out on the final plank—for I knew they would tell Imogen, and her heart would be filled with horror. A shudder would benumb every fibre of my body at the idea of the experiment, and an indistinct shadow waved me back. But I tottered towards the trial; I longed with an eager desire which maddened me to restrain, and yet I dreaded the result. Was it the secret influence of that mysterious man, conveyed through those strange and gloomy eyes, that swayed me to and fro? I fancied that I frequently saw him gazing at me with an earnest look. At this singular period of my life, old impressions returned upon me with renewed force. One in particular, which from its horror, and from the effect it now exercised, I will relate. It stalked before me whenever I entered the magnetizer's—I heard its clanking bones—I smelt its odor of the grave.—When I was a boy some ten years old, an uncle who was a

medical man, lived in my father's house, and was addicted to the relation of marvellous stories, many which have been since published. He would talk of goblins and spectres until the blood of both old and young would tingle in their veins, and he completed his conquest over my imagination. I slept in a small bed at the foot of my uncle's, and long after the family had retired, he would continue to pour into my ears his dreadful adventures. On one night in winter, we had all been shivering with the cold and my uncle's stories; that I kissed my parents and without a light went to my uncle's room. There were a few chunks burning in the hearth, sufficient to light the frightened boy to bed. I was soon undressed and stood over my little bed, and as I made the attempt to hide beneath the bed-clothes, I struck against something hard—it rattled with a hollow sound, and starting back, the ruddy light of the fire streamed full upon the spectacle. I sprung upon the floor, rushed down the stairs, and bursting into the room, shrieked, "The Skeleton! the Skeleton!" My uncle had placed this object in my bed, had laid it out with all its bones and eyeless skull and stinking skin scarce dry, to frighten me! How strong then was the impression of that object upon my mind, when after seeing others in the pallid sleep, I leave to your imagination.

Morbidly aroused to penetrate the science, I continued to pore over every work that touched upon the subject. I thought frequently that I might unveil the awful art by tracing it to magic, and the character of its professor would have given color to the charge. He seldom or never spoke to the crowd, but there was a stern and haughty reserve, that forbade familiarity and inspired the spectators with something akin to fear. To me, however, he was generally kind, but no information would be imparted. Inscrutable—dark and obscure, he stood among the crowd and exercised his power as he pleased.

Meantime my love ran on smoothly and with greater depth and fervor, without those common obstructions, deemed requisite to give its monotonous glory a piquancy and zest. Of course you will imagine that much of our conversation turned on the engrossing subject of magnetism, and she listened fearfully to my comments upon its subtle mysteries.

One evening we determined to visit the magnetizer's together, though I did not remember at the time of forming the engagement, that I had made a professional appointment with a sick friend. I told her the urgency of this visit, and proposed that she should go on to the magnetizer's with her cousin Ernest, where I would meet her in an hour. We parted, and ere that hour had flown away, I had closed the eyes of an old and dear companion—he had died in torture.

Filled with the gloomy impressions from the melancholy scene through which I had just passed, and whose horrid details I will not shock you with repeating, I directed my steps to the room of the magnetizer. The torches were lit along the streets, and the mighty wing of night hung heavily above—a few stragglers passed me, and I hastened on. The cool air in part revived me. I saw the light shining through the tall windows of the exhibition room. It was his gala-night, on which he proposed to exercise to the full the powers that he possessed. The skeptics had dared

him to the combat—he was to strike into a trance the body and the soul, and I rushed onward with a feverish anxiety to witness the grand and crowning scene of the sorcerer.

Suddenly I heard the notes of a soft and voluptuous air. It was a mysterious voice that gave it vent. It seemed to arrest the power of respiration, and a faintness overcame me—it was as if the fragrance of Heaven had found a tongue to syllable its sweets. The melody, for it was more than music, came from a darkened part of the magnetizer's house.

I was arrested, and my heart went slowly and sickly down, and burning thoughts, and deep and languishing yearnings of love took possession of me. A dimness was overspreading my eyesight, and I could hear no other sound but that bewitching voice—that divinity of solitude, and I saw no other object but that dark and solemn house. A numbness seized upon my limbs, and I was fainting, when gradually the air grew fainter and fainter; it appeared to sob, and then all was still as the tomb. The trance was broken. The sickening, but delicious sensations with which I had been filled, departed, and I bared my forehead to the cold breath of the winds, and proceeded.

Would that I had never waked from that glorious enraptment!—would that I could have been arrested and fixed forever in the world of melody created by that voice!

I entered the Hall of Experiment, but every space was crowded. I climbed to the topmost bench of the amphitheatre to see where Imogen and her cousin were. Several dark looking men, on whose shoulders I placed my impatient feet, glared at me with threatening eyes. I gained at last a position where I could command a view of the entire assembly. I glanced eagerly around among the dense mass for my beloved, but nowhere could I find her. I gnashed my teeth, and the blood went swiftly through my body. At length, in a distant part of the room and near to the magnetizer, I saw them sitting together. Oh God! how beautiful she looked! Her auburn locks were parted on her ample brow, and fell in ringlets on her shoulders; a delicate rose was entwined in her hair, and her cheeks were glowing. Had she too been spelled by that superhuman melody? If she had heard that glorious and voluptuous music, what had been her feelings? A cold shudder smote me through the heart, when I saw her dark-eyed cousin gaze earnestly in her face, and then his eyes fell with an abstracted and vacant air, and he appeared absorbed in thought. Had he too been poisoned by the intoxicating melody? He was transcendently handsome, and he had a languid look, that is more dangerous to the female heart than all the flashing eyes and eloquent tongues in the world. I could not reach the pair, and terrible emotions crowded to my brain when I reflected upon the effect of that terrible but delicious symphony. I burned with an inward and almost frantic fire, and several times I was upon the eve of screaming aloud at him, when he cast those baneful and languid looks upon her face. I tore my hair in my silent, but tormenting rage, and there I was doomed to witness the exaggerated scene, without the power of making them know that I was watching them like a hungry serpent. I was absorbed in the one vision of the hated cousin and the beloved girl. I

saw him speak to her with his mouth close to her ear. What he said was urged vehemently. She smiled timidly. Oh that smile! it dispelled every gloom. She shook her head, but he opened his large—his lustrous and splendid eyes, and gazed reprovingly and beseechingly into hers, and in a moment an alarmed and dubious expression flitted over her face, and she averted her look. I could have plunged my dagger into his heart, but I trembled and stood still, while a murmur ran through the crowd, and suddenly the *Enigma* stood upon the platform. He was clothed in a full suit of black velvet, and his forehead shone like a star; his hair fell down in long wavy curls, and his face was pale and his eye dim as an ashen corpse—but even in death beautiful. Had he been communing with that melodious being, and was he just from the conference?

A pin might have fallen and been heard among that absorbed and entranced assembly, and for a moment my attention was diverted from Imogen and her cousin Ernest, and directed in concentrated curiosity towards the operator.

There seemed a sound from afar off, like the dying cadence of a harp, but none heard it distinctly, yet all were startled at its mystery, and then all was still as the grave.

I once more turned towards Ernest and Imogen, and she was deadly pale, while he was flushed and his actions were agitated and nervous. Then was renewed within me the hell that I had before felt.

The magnetizer turned his full eyes from the crowd towards the twain—they were sitting near to him, and a sudden change was visible on his face.

In front of him were the skeptics, or philosophers, who had taunted him to this final trial, and every solemnity had been put in requisition to sustain him in his hour of need. I tried to force my way through the crowd. I could have torn them to pieces, but they moved not, and so I was constrained to be a mere spectator of that scene, which taxed every fibre of my heart to bear.

Suddenly the magnetizer waved his hand upwards and gazed upon Imogen. She was not looking at him at that moment, but no sooner had he made the gesture, than with a quick start she turned towards him. I was struck mute with horror and amaze—my tongue clove to the roof of my mouth, and I could neither call aloud nor make a sign.

Horrible sight! In a second, like a stroke of lightning the truth flashed across my mind, and I saw that Ernest had staked his hope of success with Imogen upon the magnetic influence of the master.

The gestures were continued, when all at once the powers of speech and motion came back to me, and I shrieked aloud to the dreaded sorcerer to stop. He did not appear to notice my summons, but proceeded. Again I shrieked and swore that I would strike him dead if he did not desist. *Imogen did not hear me!* She sat like a statue hewn out of the solid rock, with her eyes like those of a corpse, and her mouth open. Her cheeks were deadly pale.

I was possessed at that moment with the strength of a giant. I rushed forward—I trampled under foot those whom I overthrew—I swept with my arms a passage through that solid mass, and stood by the side of the magician. Ernest sprang to me, and we stood face to

face. With a blow I struck him to the ground, and grappled the arch-fiend by the throat. When he turned from his pallid and piteous victim upon me, his eyes glared—his hands were clenched together like the talons of a bird of prey, and he uttered in a sepulchral tone my name. "Restore my Imogen," I cried, "or I strike you dead!" He smiled, and I waved my dagger over his head. His eye followed my gesture, and quick as thought, while the crowd were rushing like a dark and giant wave towards us, that godlike voice from the distance, broke upon my ear. My arm dropped—the dagger fell from my grasp—a clammy perspiration oozed from every pore. I reeled from the intensity of intoxicated sensations, and leant against the wall.

The music continued, and with it seemed to come a perfume that filled the whole room. Not a person moved, but all looked on in fearful amazement at the wonderful spectacle.

There sat my beloved, my adored Imogen, as I have described her, with the terrible sorcerer towering proudly and triumphantly over all. The music paused but for a second, and yet that second was a life to me—not a moment to lose, but I darted forward and regaining my dagger, I plunged it into the body of my foe. I seized Imogen by the hand and tried to wake her. To all appearance she was dead—not a word—not a sigh—not a movement even of a muscle. I called aloud to the bleeding Magnetizer to reillumine the victim of his art, but he replied not.

He alone could rescue her. He who had darkened her spirit could revive the soul, and give it back to life and love. I knelt by his side—I raised him in my arms—I pointed to Imogen, and begged him to wave his hand once more, and wake her from her ghastly sleep. He smiled bitterly, and shook his head with a ferocious smirk of exultation.

Driven to despair, I dashed him away from me, and cast myself upon my knees before the inanimate body of my betrothed; but I gazed upon the vacant eye, and called to the deafened ear.

While kneeling before her, I heard a scream, and then a confused murmur of alarm, and the next moment I saw the figure of a dark and majestic woman standing above the magnetizer. She stooped and raised his head upon her knee and whispered to his ear. He slowly raised his eyes to Imogen and waved his hand. The eyes of my beloved moved—her lips unclosed—she drew a long breath, and rising from her chair fell into my opened arms. The crowd, held back through fear and superstition, now raised a loud shout of joy, and when I looked round for the strange being who had wrought this sudden change, I saw nothing but a small black pool of blood. The enchanter and the enchantress had left the hall.

Here the manuscript is continued with scientific arguments upon the science of magnetism, which may hereafter be published. At present they are too wild and singular for this age. So prone is the youth of our country to indulge in daring speculation, that I will not feed their morbid appetite by a present disclosure.

Petrarch declares that in his youth he saw the works of Varro, and the second Decade of Livy.

NAPOLEON AT ST. HELENA.

Lines written on seeing a picture of Napoleon Bonaparte, standing alone, just after sunset, on one of the cliffs of St. Helena, gazing in a pensive mood on the wide waste of waters before him.

Napoleon! Child of Destiny! What train
Of agonizing thought employs thy brain,
As o'er the Atlantic wave, with down-cast eye,
And thoughtful brow, thou look'st despondingly?
Does hope of conquest still within thee live?
Or o'er thy fallen fortunes dost thou grieve?
Thy thoughts seem fixed, amid the twilight's gloom,
On other days, perchance, or on the doom,
That war's uncertain chance, and England's hate,
Or the unchangeable decrees of fate,
Has brought on thee. And dost thou seek some balm,
The fever of thy o'erwrought brain to calm?
Art thou at last convinced there is a God
Who rules earth's countless nations with his rod;
Protects the meek; exalts the lowly born;
And sinks the proud beneath the poor they scorn?
Or dost thou still on fickle chance rely?
On changeless fate, and blindfold destiny?
And dost thou vainly hope again to see
The star of fortune rise triumphantly
From out the sea, and claim for thee that throne,
Which thou, with empty boast, didst call thy own?
—The Star of Austerlitz, that led thee on
To fields, where thou thy blood-stained laurels won?
Great chieftain, say, shall it rise no more,
To call thee back from St. Helena's shore,
And blind the nations with its dazzling beams?
Vain hope! the envious clouds that round thee rise
Have quenched its beams, nor shall thy wishful eyes,
Ere see its light again flash on the sky,
The sign and token sure of victory.
Napoleon, say, can'st thou not penetrate
The misty cloud, that darkly shrouds thy fate?
Nor learn the moral of thy life; nor see
Of fame, of wealth, of power, the vanity?
Where has thy greatness fled? Where is thy crown?
Where are the kings that trembled at thy frown?
Has wisdom to thy soul no entrance found?
Has conscience with its sting no power to wound?
Dost thou remain, still haughty, stern and proud,
As when before thee Europe's Sovereigns bowed?
—When France with all its legions, ready stood,
Battling for thee to shed its richest blood?
Napoleon, say, hast thou not felt remorse,
When backward gazing on thy heedless course?
When on thy couch reclined at midnight hour,
And reason o'er thy mind asserts her power,
Do not the ghosts of men in battle slain—
Of millions slaughtered on the ensanguined plain,
Thy boundless love of power to gratify,
Fall oft before thee rise reproachfully,
And call for vengeance on that guilty head,
For which so oft the innocent have bled?
Proud man! thy thoughts were sad enough, I ween,
As from the barren cliffs of St. Helene,
Thou didst survey, heart-sick, the Atlantic wide,
Around thee rolling still its briny tide.
O'er those dark waves full well thou must have known,

Freighted with thee no ship would ere be blown,
By summer gales. O'er that wide sea, gaze on,
Gaze still with hopeless eye, Napoleon!
No more shall Austria hear thy cannon's roar;
No more o'er Alpine heights thy eagles soar;
No more shall Gallia's hosts thy voice obey;
Nor at thy feet her crown Hispania lay;
No more for thee shall youthful warriors bleed;
Or conquered hosts to thee for mercy plead.
Thy sun has set—that sun, whose morning beam
Made thee like more than mortal champion seem.
Slowly it sinks behind the darkened west;
The nations now from fear of thee may rest;
The cliff whereon thou stand'st shall be thy grave,
The sea-bird's cry—the murmur of the wave,
Thy requiem shall sing along the shore,
And Europe hear thy battle-cry no more.

A TREATISE ON THE ART OF NAMING PLACES.

INTRODUCTION.

An eminent writer having favored the readers of the *Literary Messenger* with some valuable hints upon the art of naming horses, I am encouraged by his example to submit a few suggestions on a kindred subject, but one of still more general interest—I mean the art of naming places. My design is, first, to show what is the prevailing practice in America; secondly, to point out its disadvantages; and thirdly, to propose a better method. In a country where new towns and townships, states and counties, are daily springing up, the practical importance of the subject I have chosen, needs no demonstration. To those ladies and gentlemen, in all parts of the union, but especially the new parts, who have votes or influence in naming villages or tracts of country, I respectfully inscribe my lucubrations—humbly soliciting a patient perusal before final judgment.

CHAPTER I.

American method of naming Places.

There are three predominant methods of attaching names to places in the new states of America. The first, and perhaps most common, is to adopt names already appropriated in the older states. An impulse was given to this practice by the events of the revolution, or at least by the desire to perpetuate their memory. Thus the Lexington of Massachusetts propagated its title in Virginia, while Massachusetts, in its turn, received a Princeton from New-Jersey, and Kentucky borrowed both. It may well be questioned, whether the scenes of revolutionary conflict would not have been more truly honored by being left in undisturbed possession of their distinctive names, instead of losing their identity amidst a throng of honorary namesakes. Is it any compliment to Lexington or Princeton, that

the barbarous appendages "N. J." and "Mass." are absolutely needed, to preserve an ordinary letter from miscarriage?

A still more operative cause of this bad practice is the *amor patriæ* of settlers from the east. Springfield, Litchfield, and all the other fields of Massachusetts and Connecticut, are thus made to flourish in immortal youth, and may indulge the hope, that as the tide of emigration rolls towards the Pacific, they shall see their names emblazoned on the map beyond the Rocky Mountains. The only drawback is, that the old yankee towns themselves have stolen names, and must yield the honor to their prototypes in England.

CHAP. II.

Another Method.

The second common mode of giving names, is to select them from the map of the old world. To one who has travelled through New-York, illustration is superfluous. Rome! Syracuse! Ithaca! Jericho! What can be more classical than "Rome, N. Y." These New-York-State Romans, if they ever have occasion to write or speak of the eternal city, are no doubt in the habit of employing the genuine American expression, "Rome, Italy." This is a mere conjecture; but we know full well that some American writers, when they mention the Tuileries or Garden of Plants, can find it in their hearts to say "Paris, France," for fear of confounding it with "Paris, Ky."! What a commentary this upon the merits of the system! This practice is coeval with the settling of New-England. Almost all the names given by the Puritans to places, were taken from the Bible, or brought over from Great Britain. They had a right to pursue this method. They came hither by compulsion, and were fairly entitled to assimilate their new home to the old one as completely as they could, the rather as they could not then anticipate with certainty the growth of their adopted country, and had therefore no reason to expect any actual inconvenience from this kindly remembrance of the names of the old world. There is no such apology for him who travels westward, of free choice, and with his eyes wide open to the practical effects of this imitative nomenclature. What right has he to rob his native town of her good name, by a sort of theft, which nought enriches him, but makes her poor indeed?

CHAP. III.

Another Method.

The third common method of naming places, is to name them after men. The page of history from which these are selected, depends upon the taste and prepossessions of the namers. The refined conception of immortalizing ancient writers, heroes and philosophers, by giving them a local habitation and a name upon our modern maps, has been confined in a great measure to the Empire State. Setting aside some partial imitations on a very small scale, New-York enjoys a glorious monopoly in this branch of the fine arts. The addition of "N. Y." is scarcely needed to prevent

mistakes, after such names as Ovid, Ulysses, or Camillus. May this proud distinction be perpetual! May no inferior member of the union ever trench upon the New-York patent for naming places by the aid of Ainsworth's Dictionary! A less sublime variety of this same method, is to choose the names of moderns, either foreign or indigenous, especially the latter, and particularly those of revolutionary heroes or distinguished politicians. No one could have quarrelled with this easy method of perpetuating worthy names, if it had been provided by agreement or by law, that no name should be given to a plurality of places. The *City of Washington* strikes foreigners as a noble title, having all the qualities of a good name, sonorous and significant, convenient and invested with sublime associations. But alas! we know better. To us, the name of Washington has lost its virtue—we cannot conjure with it. Instead of being consecrated as a national name, it has been debased by association with a thousand hamlets. How strange that emigrants and settlers should imagine they are doing honor to that memorable name, by adding another to the list of its misapplications! If this however, were the only instance of such inconvenient multiplication of a single name, we might be able to endure it, and to persuade ourselves that it evinced the strength of national attachment to the Father of his Country. But what shall we say of the hundreds upon hundreds of ignoble names, which are not only honored with a place upon the map, but with two, three, half a dozen or a dozen places? In this case, the public inconvenience, arising from a paucity of local names, is not, as in the other case, compensated by the value of the names themselves. We have not even this romantic consolation, when our letters miscarry, or come back to us with half-a-dozen superscriptions, half-a-dozen post-marks, and half-a-dozen postages.

CHAP. IV.

Disadvantage of these Methods.

In enumerating these three methods, incidental mention has been made of some particular objections to which each is liable. The objections to the whole system may be reduced to these two heads: 1. Inconvenience. 2. Disgrace. Its inconvenience needs no proof to any one accustomed to write letters. So strong is the feeling of habitual confusion and dubiety, produced by the endless reproduction of the same names, that before long no man will be satisfied, without ensuring the safe passage of his letters, by specifying counties and townships as well as states. It is exceedingly uncomfortable to be always doubting of the whereabouts of every place you read of. Compare your own sensations when you read or hear of Washington, Jefferson, Jackson, Columbia, Portsmouth, or any of the many *villes* and *burghs*, which are held as common stock by all the states. Compare the uncertainty, vexation and solicitude, the reference to gazetteers and maps or knowing friends, which all such names occasion—with the pleasant sense of certainty and clearness which accompany names that have been used but once—such as Savannah, Cincinnati, Natchez,

or Chicago. Compare our own condition in this respect, with that of Europe, where a duplicate name can scarcely be detected on the most minute of maps. Here is one great advantage on the side of the old countries; an advantage too, arising from their having had their origin in what we call "dark ages," as distinguished from our age of light. The old Goths and Gauls and Saxons neither knew nor cared about the names of other countries, and this happy ignorance compelled them to invent. Our settlers are just well enough instructed to be imitators, and ignorant enough to overlook the disadvantages of imitation. Some New-England emigrants may even be entitled to the credit of not knowing that the good old yankee names, which they are carting to the west, were not invented by the Pilgrims. If the force of prejudice and habit were once broken, an ordinary pedler from "down east," could manufacture new and striking names for places without stint or limit, every one of them better than an atlas full of *villes*, *burghs* and *tons*, [*Calhouns* and *Bentons*, *Jacksons* and *Marshalls*, *Clintons* and *Websters*, *Harrisons* and *Clays*.]

CHAP. V.

Another Disadvantage.

The other disadvantage of the system ought to operate with power on the sensitive self-love of this vain nation. We may vapor as we will about native talent, American genius, an independent literature, and what not! We may rave till we are tired, of our annuals, and fourth of July speeches, and lyceums—it is still as clear as day that we have not even such a measure of invention as would enable us to name our towns and counties, without stealing from the map of Europe; nor taste enough to steal what is worth stealing; no, nor sense enough to consult our own convenience. If we have invention, taste, and common sense, let us begin to show it in our maps and road-books. This national infirmity has not been overlooked by our benignant neighbors. It has caught the eye both of satirists and sages. Witness the hundred *Warsaws* of Sam Slick, as an example from the first class, and the following extract from a work of Sir John Herschell, as an instance of the other. "Those who attach two senses to one word, or superadd a new meaning to an old one, act as absurdly as colonists who distribute themselves over the world, naming every place they come to by the names of those they have left, till all distinctions of geographical nomenclature are confounded, and till we are unable to decide whether an occurrence stated to have happened at Windsor, took place in Europe, America, or Australia."

This apparent poverty is rendered more disgraceful by its leading us to borrow from the very countries, which we profess to rival or surpass in all the qualities of intellect. If we are so wholly independent of Old England, let us prove it, and at the same time promote our own convenience, by disusing English names.—But this, belonging rather to the next ensuing topic, from which it will be needless to detain the reader, by any enlargement on the evil just exposed, the reality of which must be apparent to the mind, and painful to the feelings of all patriotic yankees.

CHAP. VI.

A better Method proposed.

It is not the object of this little treatise to expose an evil, without proposing remedies. To those who are convinced by the foregoing chapters, that the usual practice is both inconvenient and disgraceful, a method of correcting it will now be most respectfully submitted. The statement of this method will include several distinct propositions, any one of which may be adopted if the others are disliked; while at the same time there is nothing to forbid a simultaneous execution of them all. My first proposition, then, is this: that where there is an Indian name, it be retained, in spite of all absurd and tasteless efforts to convert it into something with a *ville*, or *burgh* annexed. If this rational and easy course had been pursued, we should not be now pestered and disgraced by post-office equivokes and geographical double-entendres. Every body who has been in Europe knows that our Indian names of places are exceedingly admired; not merely for intrinsic beauty, which they sometimes want, but as original and dignified by their associations. Oh if our great commercial city could but wear again its fine old Indian title of nobility, instead of being nicknamed after a decayed, mouldering heap of houses in the north of England, preserved from oblivion, only by its splendid minster! After this place New-York is named, to all intents and purposes; although in historical strictness, it derived its title, not from the city, but the *duke* of York. The prefix *new*, is universally disgraceful; a provincial badge which ought to have been knocked off when we gained our independence. The rustic vulgarism, *York*, at which the smart cities laugh, is vastly better; but *Manhattan* would be infinitely, infinitely better. The Canadian York has now a name of its own; ought not our own York to possess one too? It is a matter of congratulation, that in naming our new states, so much good taste and judgment have been exercised. Kentucky, Tennessee, Alabama, Mississippi, Missouri, Illinois, Ohio, Michigan and Arkansas, are names of which we all have reason to be proud. To the end of the civilized world, every educated person understands them, and admires them. This advantage is owing to the obvious fact, that the naming of a state falls into better hands than the naming of most towns and counties; but it proves, that among those concerned, there is discretion and good taste enough, if they were only used to some good purpose. Let those that have authority in this thing, be persuaded not to make themselves ridiculous, by sacrificing noble aboriginal names for paltry imitations and vile compounds. One great example of this folly has been given—not belonging to our own times except by sufferance. To this may be joined a small one of more recent date—one out of a thousand. A beautiful neighborhood in Pennsylvania, was once called *Nesháminy*: it is now called *Hartsville*! There is no weight in an objection sometimes urged to Indian names, that they are frequently uncouth and dissonant. Not to mention that this often seems so only at the first, and that even then, the most uncouth will bear comparison with many of our own domestic manufacture; there is no reason why an Indian name should not be slightly trimmed and softened, by throwing out a consonant or throwing in a vowel, before it is

ultimately fixed by usage. Such a process has actually taken place in most of our current Indian names. The object is, not to preserve the pure form of the Indian word, but to have an original, distinctive name. With such modifications as are here proposed, a noble list of names might be produced, intrinsically fine, and wholly free from the inconvenience and disgrace of being duplicates. A curious illustration of the difference between the two sorts of nomenclature here referred to, is afforded by the title of the celebrated railroad between New-York and Philadelphia. "Camden and Amboy" is unequivocal enough, when written as a compound. But separate the elements, and speak of Camden—you will instantly be asked, which Camden do you mean? Camden, S. C.? Camden, N. C.? Camden, Geo.? Camden, Del.? Camden, N. J.? Camden, N. Y.? Camden, Maine? or Camden, England? But speak of Amboy, and you will hear no question of the sort, unless a Jerseyman should ask whether you meant Perth Amboy or South Amboy; but these are mere fractions of an integer, on opposite sides of the same river, and do not therefore fall within the scope of this discussion.

CHAP. VII.

Another Method proposed.

The method just proposed can be extensively adopted only in the newly settled regions of the country, and even there, it may be open to objection, in particular cases, which must be provided for. The second proposition, therefore, is, that names be given which are descriptive of some characteristic and distinctive feature of the places named, their site, or their environs. That this corrective may not engender the very evil it is meant to counteract, it is of great importance that the names, formed on this principle, should be drawn either from something wholly peculiar to the place in question, or something not likely to be chosen as the ground of a distinctive name in other places.—*Greenfield*, for example, as a distinctive name, is absolutely worthless. It must not, however, be inferred that, by this rule, no such name could be given, except to places which possess some extraordinary natural distinction, such as *Rockbridge* county in Virginia, so called from the famous natural bridge. A circumstance, not wonderful or striking in itself, may be sufficiently peculiar to suggest a local name. An overhanging cliff of reddish earth or stone, though not at all extraordinary, might be a good reason for calling the village near it *Redcliff*; nor is it at all likely, that, without direct piracy or plagiarism, more than one village would select such a name. In order to afford the widest scope for this suggestion, and reduce the chances of direct interference to the lowest point, it may be well to suggest the derivation of descriptive names, in certain cases, from other languages than English, though the latter should in general be preferred. *Tremont*, (from *tres montes*,) would have been a better name in some respects, than *Threehills* or *Threemountains*, and in all respects better than *Boston*, a name purloined from an old seaport in Lincolnshire; nor can it be imagined that *greenmountain* would have been more convenient

or agreeable than *Vermont* from the French *verd mont* or *verds monts*. It may not be extravagant to add, that, in the west, even Indian names might thus be made "to order;" some descriptive epithet being adopted, even though it had never figured as a proper name.

CHAP. VIII.

A third Method proposed.

As a third expedient, may be recommended the imposition of commemorative names—commemorative either of events or persons. The latter species of commemoration it is true, has been the source of much of the confusion now existing. But why has it had this effect? Because the names selected have been those of persons generally known, and likely therefore to receive this honor from many different quarters at the same time. The evil has arisen from a foolish tendency to overlook local and peculiar circumstances, and give the preference to commonplace generalities. If, instead of desecrating some great names, by depriving them of individuality, and unduly honoring some small names in the same way, it had been the practice to call places by the names of founders, early settlers, local benefactors, or eminent inhabitants of any class, even though they might not be members of congress or heads of departments, our maps and gazetteers would have been more respectable. The reader can easily illustrate this remark by applying it to the place of his own residence, and those adjacent to it. It may be added that, besides the superior convenience of this method, it would be a valuable means of doing honor to a multitude of most deserving men, and of saving from oblivion a whole catalogue of names, far more worthy of remembrance than a moiety of those now scattered, with a niggardly profusion, over our territorial surface. As the object of this work is to suggest, and not to amplify, the only other necessary hint, in this connexion, is, that when the names of men are good enough to be distinguished in the way proposed, they are too good to be spoiled and made ridiculous by any sort of barbarous appendage. Who that has a particle of taste can waver between Jacksonville and Jackson? Even Pittsburgh, allowing for the force of habit and association, is less worthy of the place than the naked, ugly monosyllable, *Pitt*, would have been. But, be this as it may, we have enough of *villes* and *burghs* already for a thousand years. The suffix *town*, is not so bad, except when it is frittered into *ton*; but the best and safest rule is to discard them all, and let the name, whether long or short, stand on its own bottom.

CHAP. IX.

A fourth Method proposed.

As a last resort, where the foregoing methods are for any reason inexpedient, names may be invented. I remember to have seen in print, an ingenious mode of managing this sort of manufacture, so as to secure the two important points of euphony and originality. The plan proposed was to form two sets of tickets, one inscribed with consonants and one with vowels, and

then to draw alternately from the two sets, until a name of the required length is constructed. This plan is highly worthy of attention. If the reader will but take the pains to make a brief experiment, in this way, he will be astonished at the infinite variety of new and comely names, which might be substituted thus for our existing nomenclature. It cannot be denied, however, that the names thus chosen, would generally have an air somewhat exotic. For the sake of those who may prefer a more indigenous and English form, another method of invention may be here suggested. This is nothing more than to combine single syllables of different English words, so as to form a compound not significant. A large proportion of the names of minor places on the map of England, would really seem to have been formed in this way, or if they all were once significant, the changes of the language have destroyed their meaning. In order to exemplify the virtues of this method, I open at random a book lying by me, and selecting syllables from different pages, form the following compounds—*Sweetledge, Dwellions, Calsament, Plan-dity, Oldmass*. I know not what the reader may think, but for my single self, I should prefer the worst of these to almost any of our fashionable names; and if such as these can be obtained by lottery, what admirable ones might be contrived by skill!

CHAP. X.

Conclusion.

The four methods which have been proposed, if applied with perseverance and discretion, will ensure a full supply of really distinctive names for all new places in all time to come. But alas, these measures of reform seem scarcely to be worthy of a trial, if the existing practices must also be continued, and for every decent new name, flood the country with a dozen of the old disgraceful sort. As a supplementary suggestion, therefore, it may be added, that the application of the same name to two places, should be rigidly proscribed, if not by law, by public sentiment. It is much to be desired, indeed, that the disuse of duplicate names should arise from an honorable sense of independence and becoming self-reliance, together with a due regard to good taste and the public convenience, than from penal statutes, which I should be loth to see adopted, except in extreme cases. May we not hope that, by the same authority, the use of *vill* and *burgh* will soon be utterly abolished? Nay, may we not go further and anticipate, not only an improvement in the making of new names, but a great retrospective reformation in the old? Is it extravagant to hope that, when the great discoveries developed in this work, have been reduced to practice, their effect upon the public taste will be so great as to disgust all cultivated minds with the abominable system under which most of the names now extant were imposed? May we not expect to see thousands of old Indian names supplanting their supplanters, and innumerable other changes equally delightful, imparting a new aspect to our national geography? This is too bright a prospect—let us drop the veil.

I have purposely abstained from any copious illustration of my different topics. For such illustration,

the materials are abundant, if the public should require a new edition of my treatise, more extended and complete. In the mean time I commend it to their favorable notice.

JOURNAL

OF A TRIP TO THE MOUNTAINS, CAVES AND SPRINGS OF VIRGINIA.

By a New-Englander.

TO CHARLES E. SHERMAN, Esq., of Mobile, Ala.

These fragments of a Diary, kept during a tour made in his society, are respectfully and affectionately inscribed, by his friend and fellow-traveller.

THE AUTHOR.

—Virginia! Yet I own
I love thee still, although no son of thine!
For I have climbed thy mountains, not alone,—
And made the wonders of thy vallies mine;
Finding, from morning's dawn till day's decline,
Some marvel yet unmarked,—some peak, whose throne
Was loftier,—girt with mist, and crowned with pine:
Some deep and rugged glen, with copse o'ergrown,—
The birth of some sweet valley, or the line
Traced by some silver stream that murmurs lone:
Or the dark cave, where hidden crystals shine,
Or the wild arch, across the blue sky thrown.

Wilde.

CHAPTER III.

The White Sulphur Springs of Greenbrier County.—The place described.

White Sulphur, July 23, 1835.

This grand central point of attraction, pre-eminent above all the other localities in the Spring region of Virginia, is a fairy spot lying at the foot of the Alleghanies in a delightful valley; embosomed in shade and surrounded by every charm that lavish nature could bestow upon the most favored retreat. The Spring bubbles up from the earth in the lowest part of this valley, and is covered by a tastefully constructed pavilion, being a dome, supported by twelve Ionic columns, and surmounted by a graceful statue of Hygeia, the patron-saint of healing, holding in her right hand a cup, as filled with water, and in her left a vegetable or herb. This statue was presented to the establishment, by Mr. Henderson, a wealthy planter of Louisiana, who, I believe, went from New England. The pavilion is surrounded by the grateful shade of old oaks, locusts and elms—and hither resort, as to a common focus, the converging radii of the crowd, intent on banishing disease or ennui, gaining health or admiration, displaying personal charms, or sacrificing to fashion. The invalid, pale, emaciated and wretched, may be seen there at almost every hour, waiting till the giddy dance of the gay and volatile, who came there merely to gratify "a truant disposition," shall leave the waters free for him to drink and be healed. The fervish flush, the hectic of consumption, the tottering gait of rheumatism, the wasted form of the dyspeptic, may all be observed in

contrast with the ruddy glow of manly health, the free, elastic step of youthful vigor, the gay smile of unpaired hearts, and the loud laugh of mirth that knows not even the check of another's sufferings. At about an hour before dinner, the fashionable lounge at the fountain commences. Then also commences the playing of the musicians in the ball-room, a fine band of performers, who amuse the visitants to the Springs an hour at noon, and divide with the waters, the attention of the promenaders.

The centre or public building of the establishment, containing the dining room, stage office, post office, bar, and other public offices, is of wood, and has a long piazza running its entire length, forming the common lounge or sitting place during the day and evening. This building commands a view of almost the whole place, and makes a large part of an extensive square, ascending amphitheatrically, and bordered by rows of brick and white painted wooden cabins, with piazzas in front, facing inwards towards the centre of the square, at the lower part of which is the fountain, and the walks and alleys and green plats of which are shaded by a profusion of fine old trees, around which are commodious seats for the ease and comfort of visiters. One thousand acres of land are said to be the property of Mr. Calwell, of which the Springs are the centre, and constant improvements are annually making to the establishment, some of which are now in progress. Among these, the erection of a large and elegant brick house, forming the centre body of a block, the wings of which are to consist of several commodious cabins, is the most prominent. This house is to be for the especial occupation of Mr. Henderson, (the munificent patron of the concern, already alluded to,) whenever he is at the Springs. The domicil of the Calwell family is a plain, substantial cottage of wood, embossed by foliage, and surrounded by verdure, situated in the rear of the public offices.

There is the greatest difficulty experienced by visitors in getting in here. Much favoritism is shown by Mr. Anderson, "the man of all work," who is somewhat arbitrary in the disposal of places. A family in a private establishment, with two or four horses and servants, of course has precedence—and an old acquaintance has the advantage of a new one. This is irksome to the inexperienced traveller, who comes a thousand miles, perhaps, at great sacrifice of time, and money, and convenience, for health. Yet it is constantly the case that he must submit his own claims (though the first on the ground,) to the wealthy fashionable, who comes after him with a greater retinue. Quarantine in some of the neighboring taverns within a few miles of the Springs, must first be performed, while at intervals the inexorable Mr. Anderson, the janitor of the Eden that all are striving to enter, must be besieged with entreaties, and propitiated by fair words. A great man is Mr. Anderson.

The breakfast hour is eight—that for dining, two—and that for the evening meal, seven. The intermission between the two first hours is passed in lounging, calling, promenading, and drinking the waters. The afternoon is spent in reading, sleeping, riding, or—*lounging*. After tea every evening the ball-room is lighted, and thither whoever chooses may resort to join in the mirthful meeting of the young and the gay, from every part of

our common country. The hour for dancing is limited to ten o'clock, and a band of music is provided by the season, for this purpose. They sometimes give concerts, which agreeably vary the amusements of the little community assembled here. And so passes a day at White Sulphur.

No analysis of this water has ever been given to the world. Dr. Rogers of this state has prepared an imperfect one, but it is still in the possession of but few individuals; of course, I am unable to be so particular as I could wish as to its chemical qualities, and must write of its effects, by way of explaining its character. The most skilful physicians advise its use in hepatic, or liver complaints—*dyspepsia*, or disordered digestion—and all those diseases arising from a disordered state of the stomach, or a derangement of the system by injudicious modes of living,—while they reject its use in all pulmonary disorders, or in any affection of the lungs. The rheumatic patient is advised to drink of these waters, preparatory to, or accompanying the use of the hot and warm spring baths,—and the gouty subject, if he be not too far in for it, is recommended to abstain from high living awhile, and try the White Sulphur Water.

July 25.

I have been taking a topographical view of this spot, and append a few statistical remarks, as the result of my observations.

Upon arrival, the traveller stops at the hotel, or public receiving house, where he is disencumbered of his baggage, and obtains permission from the all-powerful manager of the establishment to enter his name on the register as one of its inmates. Then he goes around and views the quarters from which his own are to be selected—for the choice is not left to the guest, but is the grand prerogative of the stern autocrat aforesaid. Proceeding due south from the landing place, you come to a line of beautiful cabins, finely shaded by the venerable trees of the primeval forest, and facing northwest in the direction of the Water Fountain, between which and itself is a verdant lawn, also covered with trees, and laid out in walks and alleys. Happy the favored tenant of one of these tasteful abodes: the only danger in his case is likely to be that of exciting a deal of envy in this little municipality. As you pass to this row of buildings, called *North Carolina Row*, you go by a neat little cabin at the foot of an old oak standing by itself most picturesquely: it is the property of a South Carolinian, and is always tenanted by him, when at the Springs. At other times, it is at the disposal of the proprietor of the estate. This is a common mode of arranging matters here,—several cabins being, in this way, private property. Having gone up *North Carolina Row*, we come to *Paradise*, which runs rectangularly from the upper corner, directly northwest. This is irregularly, but handsomely built, of brick, containing many beautiful cabins, some with and others without piazzas, but all much more finely shaded than the other quarters. On the northern end of this row are, in the course of building, an elegant brick house, with several smaller ones running out like wings from each side. This house has already been alluded to as in the process of building for the use of Mr. Henderson of New Orleans, whose elegant gift of a statue for the pavilion, has also been mentioned. Still further north extends

Alanus Row, a quiet, secluded, retired spot, embosomed in foliage, and out of the view of the spectator in any part of the great square. After some short interval, still extending to the north, are buildings appropriated to the worshippers of *Chance*, both as residences and temples for the performance of their secret rites. Then come the Sulphur Baths, the Stables, which are on a very extensive scale, and the Kennel for the hounds, about sixty of which, of all ages and breeds tenant this last of the quarters at White Sulphur. Returning southwesterly, we come to the *The Wolf Row*, where gay young men and convivial parties "most do congregate;" it is pleasantly situated aloof from the main square, on the opposite side of the road leading to the stables, and makes a picturesque appearance from the northeast. Keeping down on the same side of the way, we next come to the negro quarters, and after a long interval, to the private residence of Mr. Calwell, the proprietor of the Springs. Further yet towards the south, is a new row of buildings, called *Baltimore Row*, a fashionable and handsome, though sunny range of cabins, and facing the green lawn of the great square on the other side of the way. Still further south is a large carriage house for the use of the visitors to the Springs. I have not yet mentioned the *Ball-room*, standing midway between the *Hotel and North Carolina Row*,—a two story wooden building, with sleeping rooms above, and a long hall beneath, where the band plays daily and nightly at certain hours,—where religious services are sometimes performed on the Sabbath,—where the ladies and gentlemen are fond of lounging in chilly or in intensely hot days, and where there is a good piano, a constant source of attraction and pleasure to the musically inclined. Behind the hotel, runs a row of buildings, devoted to culinary purposes, connected with a dining hall;—and, extending northwesterly is *Fly Row*, so called, because of the superabundance of that annoying insect, and the constant desire that is ever being expressed by its tenants to *fly* from its annoyances. In this delectable region (otherwise very comfortable) am I lodged. Beneath the dining hall are the post office, the barber's shop, and a tailor's establishment,—and there is the topography of the White Sulphur, "veluti in speculum."

To manage and carry on this extensive concern, there is first, the proprietor, *James Calwell*, a short, stout, gentlemanly man, of cheerful manners, and a dash of the old school in the cut of his dress, his gait, and his white queue. He lives at his ease, and reaps the fruit of his good fortune in being the possessor of this lucrative spot, to the tune of several thousands of dollars per week, during the six spring and summer months. Next comes his prime minister, Mr. *Anderson*, to whose autocratical endowments I have alluded already. You might as well be out of favor with the king as with the keeper of the king's conscience, and the exerciser of all the king's prerogatives. He is the setter and keeper in motion of all the complicated springs and cranks that regulate the clock-work of this extensive concern, and he most ably performs his allotted part, displaying a great development of the organs of order, constructiveness, locality, verbal and individual memory, and in no small degree those of combativeness and secretiveness. Then come the nine sons of the proprietor,—each in his way. Some keep the accounts of the concern,—others

do the agreeable to the guests,—others, conduct the deer hunts, and fox chases,—and all live like the heirs apparent to the perennial White Sulphur Spring. There is a caterer for the table, whose sleekness of face, rotundity of person, and general air of comfortable well-being, do great honor to the cheer he provides. The servants are numerous,—some of them civil, some saucy, and all accessible to "the soft impeachment" of ready change, by way of spiriting them to an interested discharge of their duties. For all this accommodation, such as it is, you are charged eight dollars per week, or if you stay less than a week, one dollar and fifty cents *per diem*. And *apropos* of this: the other day, on presenting his money to pay his bill, a gentleman was surprised to learn that he was chargeable nine dollars for six days, although he could have remained the seventh, with the deduction of one dollar for the whole time! Who shall talk of Connecticut and her Yankee tricks after this? Yet it "is so nominated in the bond," and "there is no law" at White Sulphur "to alter the decree."

I had been told much to disparage the living, (I mean the *cuisine*,) at this place, and came prepared to find most miserable fare, most wretchedly served up, to the luckless visitant at this monopolizing watering-place. I thought this would not be strange, were it to turn out so;—for a man, who owns a property like this, in the heart of an unsettled country, away from all markets, and fearless of all competition, in catering for the thousands of people who flock yearly to such quarters and such fare as he can spread before them, cannot, methought, be expected to perform miracles, for the gratification of every sense, and the indulgence of every whim of his guests. But I find that rumor has belied our good host, most grossly, in this matter. Considering the prodigious number for whom he provides, his table may be said to be even uncommonly fine: far too good, it strikes me, for invalids, who flock hither to drink mineral waters for health. Venison is a common dish, and the best of mutton, (and very worst of beef,) is daily upon the board, while the pastry cook of the establishment would do honor to the Tremont or Astor.

The lodgings for "single gentlemen without families," are—just such as the casual visitant of a fashionable watering place is willing, (because he can't help himself,) to put up with. Two small beds, in an uncarpeted room, eight feet by ten, present rather a forbidding aspect as the neophyte enters his appointed domicile, after two days waiting for it,—nor is an over-nice examination of the texture of the bed-clothing, or the cleanliness of the bedding, likely to add to his perfect contentedness. But he gets used to it soon,—or grows desperately resigned to it,—and comforts himself with the assurance that he will enjoy the delights of what he is at present deprived of, the better on his return home, from being without them awhile: by suffering them patiently, he is in the fashion, is in the way of being healthy, and is seeing the world!

This property, the White Sulphur Springs, is said to be worth the round sum of six hundred thousand dollars. An act of incorporation, with a charter, has been obtained from the Legislature of Virginia, by a company, who had it in contemplation to purchase it at about that sum, and improve it on a liberal and extended scale.

But nothing was done about it beyond this preliminary step, and it is now held at a higher sum, or else absolutely retained, without the intention of selling, by its present proprietor. It will be a mine of wealth, properly managed, for his children, of whom he has several, and all of whom appear full well to appreciate the value of the property, by living upon it as if it were indeed to be a never failing spring of wealth to all generations. But fashion is a fickle *queen*, though the *queen* of the present high ascendant,—and were fashion to remove her shrine from this favored spot, I much fear that the worshippers of Hygeia would be hardly numerous or important enough to sustain its popularity. But of this there is no immediate prospect. The Springs in this neighborhood, though all valuable, are all without the peculiar properties that render the White Sulphur a necessary resort for the invalid,—and, as the best excuse that can be given by the world for residing half the year at a watering place, is that it is salubrious, there is not much chance that my good friend Calwell's property will depreciate very rapidly.

I could wish, however, that the plan of raising a corporate company to carry on this establishment, as it should be, could have been effectual. Nature has done every thing for the locality, and it is a source of regret that Art had not followed the hints of the elder born sister a little more nearly. There is not that uniformity, that regularity, and neatness of detail, in laying out the place with reference at once to the utility, symmetry, comfort, elegance and *coup d'œil*, which could have been desired. A fine hill on one side the fountain, is marred by being abandoned to the most common and disagreeable uses,—another on the east is covered with houses, whereas it should have been laid out in walks; and the most beautiful part of the grounds are shut out from the view and from the use of the visitants, by being thrown entirely in the rear of the main body of the buildings, consisting of tailors' shops, stores, barbers' establishments, and groceries. There are many unsightly white-washed cabins on the premises, also—coach-stands on the green lawns, and gaming houses near the most frequented parts of the square. All these things, the gradual growth of the place, coming as they have, one after the other, imperceptibly, as the property has increased in value, could be easily remedied now by an enterprising company—while, if left to the proprietors, they can hardly be anticipated to take place.

The woods in this vicinity abound in game—and one of the sons of Mr. Calwell has gained the name of *Nimrod*, and a reputation almost equal to that of Little-John of Sherwood forest, as a huntsman, by the skilful use he makes of a fine pack of hounds, and an unerring rifle, by the aid of which he and his associates are wont to supply the table with good venison. Would that these adjuncts of *Nimrod* were content with this legitimate use of their several powers! But alas! the hounds are baying the livelong night throughout, and murdering the innocent slumbers of those who are "cabined, cribbed, confined" near their quarters,—and the rifle in its turn is the common instrument of slaughter, with which our mutton is prepared for the board. But all pleasures have their drawbacks,—and the mutton is as palatable as the venison.

THE SUMACH TREE.

I love the rose when I am glad, it seems so gladsome too,—
With what a glow it meets the sun!—with what a scent the dew!
It blushes on the brow of youth as mingling in its mirth,
And decks the bride as though it bloom'd for her alone, on earth.

I love the columbine that grows upon the hill-top, wild,—
It makes me dream I'm young again—a free, a blessed child;
But youthful days, and bridal ones, just like the roses flee,
And chaste'n'd fancy turns from these toward the sumach tree.

The sumach?—Why?—Its leaves are fair and beautifully green,
And fringe the brilliant stem that runs—a carmine thread—between;

Its clustering fruit—a velvet cone, of royal crimson hue—
Peers upward midst the foliage fair, in glorious splendor too.

And yet—and yet—the fancy turns in pensive hour to thee,
And twin'd with sober, sacred thoughts art thou, proud sumach tree,

A deep-wrought spell of early days:—in melancholy state
Rank grew a lonely sumach tree beside that grave-yard gate;

Kindred and friends reposed beneath, and oft has childish prayer
Risen from my heart that I, in death, might slumber with them there.

That prayer, how vain! yet still I love in fancy oft to be
Ling'ring within that place of graves, beneath the sumach tree.
Maine. ELIZA.

THE UTILITY OF LIBERAL STUDIES.

We have before us a masterly discourse on this subject, delivered on a literary anniversary in Rhode Island, last autumn, by Professor Goddard.* We propose, by the extracts we are going to make, to save ourselves the trouble of inditing aught of our own, in praise of Liberal Studies. Nor need we;—as every reader, who may go through the extracts, will be satisfied that they can hardly be surpassed, in their way. The author's manner of unfolding his views, is striking and forcible. He takes the following impressive mode of showing the inordinate craving for wealth, that possesses the people of America. Many may stare at the assumption, that Germany is so far before our country in civilization, as is here supposed: and others will be equally startled at seeing New England ranked higher, for cultivated intellect, than Virginia and South Carolina. But both suppositions are true.

'Imagine an exile from intellectual Germany, nurtured amid a nation of scholars, and imbued with all the sympathies of a man of letters, to visit these shores, either for the purpose of bettering his fortunes, or of enjoying freedom of political opinion. With what emotions may we suppose him to survey the actual condition of American society; and what would be his cool, philosophical estimate of our predominant national characteristics? Should he chance, first of all, to be thrown amid the vortices of fashion, and politics, and trade, which, in our vast commercial metropolis, seem, to the eye of a stranger, to engulf all better things; how would his sensitive spirit be driven back upon itself! How would it yearn for the inartificial, and pure, and serene delights of Germany; for her ardent and almost universal veneration for Genius, and Taste, and Learning!'

* 'An Address to the Phi Beta Kappa Society of Rhode Island, delivered Sept. 7, 1836, by Wm. G. Goddard, Professor of Belles Lettres in Brown University.' pp. 38.

'Penetrating into the far West, would our philosopher find his exile cheered by the voice of a more responsive intelligence? By the majestic physical developments of this region of our country, he would, indeed, often be surprised into admiration; and he would look, with somewhat of poetical enthusiasm, upon lakes, and rivers, and forests, and mountains, which, though all unsung, are unrivalled, for sublimity, in the land from which he had wandered. But, think you, would not his enthusiasm be limited to these mute evidences of Almighty power? Among the adventurous and intrepid inhabitants of the West, would he find either sympathy or companionship? Would the hardy pioneer, who is pushing his way towards the very confines of civilization, care to know aught of the progress of exegesis, or of the achievements of antiquarians? Would the land speculator, intent upon some stupendous scheme of gain, lend a patient ear to our accomplished German, as he discussed some difficult problem in moral philosophy, or applied to a favorite author the principles of philosophical criticism?

'Directing his steps towards the South, he would find not unfrequently, among the children of the Sun, a grateful response to the sympathies by which he is moved; a more deeply reflective spirit; a more cultivated taste for the beautiful; powers of more delicate analysis, and more comprehensive generalization. But, even here, our traveller would perhaps complain that, in some circles, *the talk is of cotton*, and that this region of social urbanity and intellectual splendor no more than adumbrates his unforgotten home.

'He next sojourns in New England. Adopting the popular estimate of this favored portion of our country, he anticipates that, here at least, he shall escape the pangs of unparticipated sensibility. He perceives that our territory is studded with schools, and academies, and colleges; and he fondly imagines that, like kindred institutions in Germany, they exert a transforming influence upon the general mind and manners. But, even in New England, he is destined to feel the chill of disappointed hope. He beholds, everywhere, incontestible evidences of enterprise, and industry, and wealth; of rare practical sagacity, and uncompromising moral rectitude. Nay, more: he witnesses many decided proofs of reverence for science, for art, and for letters; and by the whole aspect of society around him, the conviction is impressed upon his mind that, nowhere else in our country is to be found a more enlightened subjection to law, or so general a prevalence of high social refinement. Why, then, it may be asked, does not our traveller feel himself *at home* in New England? It would not, perhaps, be easy so to answer this question as to exempt him from the reproach of fastidiousness. He misses the pervading intellectual spirit of Germany; the enthusiasm, and exhilaration, and simple elegance of her literary circles. It saddens him to recognise, as predominant in many a face, an expression of seated care, or frigid caution, or calculating sagacity. He is repelled by the topics which well nigh engross our ordinary conversation. He is surprised to discover, that our schools, academies, and colleges exert no undivided sway over the public mind. Now, it would be most unreasonable, to insist that the whole order of society in this young and free country—where all is full of enterprise, and change, and progress, should be reversed for the accommodation of a fastidious German scholar. It would be most unreasonable to ask, that the West should intermit her speculations in land, or her emigrations into the far off wilderness; that the South should be less intent upon the production of her great staples; or that the North should force herself away from her ships and her spindles. All this would be impracticable, and, if practicable, it would be full of evil. It may be well, however, to inquire, whether, in the midst of such strong provocations to excess, *the spirit of accumulation is not liable to become extravagant*; whether a more generous culture of a taste for liberal studies would not gratefully temper the elements of our present

social character, and introduce higher and nobler interests into the whole of our social life? Would it not save us from an inordinate admiration of the least enviable distinctions of wealth? *Would it not impart to our manners more of variety, of grace, of dignity, and repose; and to our morals, a more delicate discrimination and a loftier tone?*

How just the following remarks, upon the too prevalent *misdirection* of expenditure among our wealthy people!

'In the selection of those objects of embellishment which it is in the power alone of abundant wealth to command, I am not singular in contending that the decisions of a simpler and better taste ought to be regarded. Is it not a matter of just reproach, that of all the apartments in our mansion houses, *the library is generally the most obscure, and often the most ill furnished*; and that the *fashionable upholsterer is allowed to absorb so much of our surplus revenue*, that hardly any is left for the painter and the statuary? In all this, there is manifested a melancholy disproportion—an imperfect apprehension of some of the best uses to which wealth can be applied. In the spirit of an austere philosophy, it is not required that we should dispense with those costly ornaments which can boast no higher merit than their beauty; but it would be hailed as a most benignant reform, if, in the arrangements of our domestic economy, there could be traced a more distinct recognition of the capacities and destinies of man as an intellectual and moral being—as a being endowed with imagination and taste—with reason and with conscience. How few among us cultivate the fine arts! How few understand the principles on which they are founded—the sensitive part of our nature to which they are addressed! To this remark, the imperfect knowledge of music, which, in obedience to the authority of fashion, is acquired at the boarding school, forms no exception. It may still be affirmed, that we have among us no *class* who delight in music as one of their selectest pleasures; who gaze with untiring admiration upon the miraculous triumphs of painting; who are filled with tranquil enthusiasm by the passionless and unearthly beauty of sculpture. And is not this to be lamented? Do we not thus estrange ourselves from sources of deep and quiet happiness, to which we might often resort for solace, and refreshment, and repose? To these sources of happiness there is nothing in the nature of our political institutions, or of our domestic pursuits, which sternly forbids an approach. We have, it is true, no titled aristocracy; and property does not, as in the land of our forefathers, accumulate in large masses, and descend, undivided, through a long line of expectant proprietors. But there is scarcely a city, a town, or a village in this land, where some could not be found, blessed with every requisite but the disposition, to acquire a genuine relish for the fine arts.

* * * * *

'Again: To few better purposes can wealth and leisure be devoted, than to the acquisition of those languages of modern Europe which embody some of the profoundest researches of science, and some of the most exquisite forms of thought. And yet, except here and there a painstaking or an enthusiastic scholar, how few comparatively of our countrymen can unlock the treasures of any literature save their own. *To this cause may, in part, be attributed some of our most unworthy national prejudices, and that fondness for self-glorification which is reproachfully signalized by foreigners as one of our national characteristics.* Those, who are familiar with men and manners at home and abroad, soon rid themselves of these unenviable peculiarities; but most obstinately do they cling to those who have found no substitute for foreign travel in a liberal acquaintance with the literature of Continental Europe. When this literature, so rich and characteristic, shall, in this coun-

try, be more generally cultivated, it will be strange, indeed, if we do not form more intelligent estimates of other nations, and more modest estimates of our own; if, emancipating ourselves from the servitude of local and arbitrary opinions, we do not acquire a profounder sympathy with universal man, and a truer reverence for those commanding truths which are the common property of our race.'

The mischievous influence of *such* politics as are commonly talked by our country gentlemen and bar-room babblers, is deeply to be deplored. Instead of being a patient and sober inquiry after truth, with a single-hearted wish to judge justly what is right and what wrong; what is for the country's good, and what tends to its hurt;—'talking politics' is commonly nothing more than a senseless wrangle, between partisans whose only thought is to confound each other, even though it be by noise and sophistry: a mere trial of lungs and flippancy, without a care for truth or patriotism. And political aspirants!—how utter, often, is their profligacy! how reckless their abandonment of principle! how servile their obedience to party!—Does not Mr. Goddard offer a remedy—at least a mitigant—well worth trying, for this terrible endemic?

'The value of liberal studies, in counteracting the influence of politics upon the individual and social character of our countrymen, deserves next to be considered. You surely do not require to be told that politics is with us becoming a distinct, though not very reputable trade; that the strife for power is hardly less eager than the strife for gain; that a new code of political ethics has been established, for the accommodation of pliant consciences; and that, almost without an exception, the *public men of both parties, and of all parties, tired of waiting for popularity to run after them, are now eager to run after popularity.* Who now so intrepid as to dare to take his stand, upon grave and well defined principles? In these days of meek condescension to the will of the people, and of affected reverence for their good sense, how few care to lead public opinion aright! how many pusillanimously follow it, when they know it to be wrong! How few, alas! will forego the vulgar trappings of office for the sustaining consciousness, that by no sacrifice of principle or of dignity, did they ever seek to win them! I would fain believe that the days of the republic are not numbered; but I am not without sad forebodings of her fate, when aspirants for popular favor are such utter strangers to the grace of an erect and manly spirit as to be solicitous rather to appropriate to themselves, at any cost, some transient distinction, than to await, with unfaltering rectitude and unfeigned self-respect, the judgments of coming times; when the man of wealth, and talent, and social consideration, outstrips the radical, in zeal for pestilent doctrines and mischievous projects; in fine, when it is incorporated into the creed of the politician, that the people are always in the right; in other words, that public opinion is not only the standard of taste, but the keeper of conscience!

'To most active spirits, the contentions of party are far from being repulsive; and elevated station seldom fails to captivate the ambitious. Thus multitudes, forsaking the round of common occupation, are seen to dash amid the tumults of the people. Thus, too, many of our most gifted men, relinquishing the pursuits of literature, or the sure rewards and the permanent fame of professional eminence, peril their independence, perchance their honor, in a doubtful controversy for some fascinating political distinction.

'Nor is this all. The agitations of politics communicate to the public mind impulses so despotic that it becomes, on all questions, intolerant of dissent. Hence it often happens, that, in matters entirely unconnected

with the contentions of the day, men are proscribed, because they may be content to doubt where others choose to dogmatize; or, because they may dare to differ when the multitude have determined that all shall agree. If this species of tyranny be not sternly resisted, it will banish from the walks of public and of private life all independence of thought and action; all calm discussion of controverted questions; all intrepid defence of unpopular truths.

If the influence of politics, direct and indirect, be thus injurious, it surely demands counteraction. I am not so visionary as to believe that the wider diffusion of a taste for liberal studies would prove more than a partial corrective of evils, which, deeply rooted in the very nature of our government, may, to a certain extent, be deemed inevitable. I cannot doubt, however, that it would render politics a less absorbing game; that it would banish from political controversy much of its acrimony, and lead to more intelligent views of the true interests of the people. The spirit of literature is essentially conservative. It forms a graceful alliance with whatever is elevated in thought or in action; it abhors violence; it is not rampant for change. It protects the sacred inheritance of individual freedom; 'the free thought of the free soul.' It is congenial to the more retired graces of character; to elegance, to dignity, to repose. Surely, in times like these, when a mighty controversy is maintained with the varied forms of evil; when factious violence every where prevails; when radicalism threatens to tear up the base of all social order, we need to calm our troubled spirits, and to recruit our overtaken energies, amid "the still air of delightful studies."

In the subjoined paragraph, Mr. Goddard well probes, and prescribes for, another disease rife in this Union:

'In such studies may also be found an antagonist to the spirit of ultraism. This spirit, at the present day, seems to pervade all lands, where thought and feeling are free. Our own country has not escaped the epidemic phrenzy. We have ultras in fashion, who deem every one a barbarian who will not adopt their conventional standard of propriety and their elaborate style of enjoyment; who will not sacrifice health, and happiness and virtue upon the shrine of their senseless idolatries. We have ultras in politics, who either propagate wild notions, or infer, from sound principles, dangerous conclusions; who revel amid agitations, and who owe all their consequence to their skill in working mischief. We have ultras in philanthropy, who, in the impetuosity of their zeal, sacrifice to an abstraction the substantial welfare of their fellow men; who make rash applications of admitted truth, and who seem to forget that, in carrying out one principle, however sacred, we must never trample upon other principles which are no less obligatory upon the conscience. And, last of all, we have ultras in religion, who, forgetting the weightier matters of the law, lose themselves in the labyrinths of systematic divinity; and who, impatient of a chastised, evangelical fervor, resort to equivocal expedients to generate an effervescent zeal. The spirit of ultraism I cannot pause fully to characterize. It *dwarfs the intellect*, and it *exasperates the passions*. It is *ferocious in denunciation*; it is *enamored of vexed questions*; it is *recruited by gladiatorial strife*. I do not claim for liberal studies the power to operate, directly, as a corrective of this diseased state of the public mind. Some efficacy, however, may be anticipated from their reflex operation. By stimulating the intellect to an exercise of its various powers upon themes of commanding dignity and attractive elegance, they would allay the violence of the passions, and rebuke that unphilosophical spirit which limits itself to a partial reception of speculative truths, and to a partial view of men and manners. They would, moreover, establish among the intellectual faculties that harmony of adjustment and operation,

which is essential to their just procedure, both in matters of speculation and of conduct. They would, in fine, impart to all classes of people, not those feverish impulses which impair intellectual vigor and foster an eccentric zeal; but those healthful interests which are congenial to moderation, to simplicity and to truth.'

After some reflections on utilitarianism—reflections which we dissent from because we like utilitarianism; and which therefore we shall not copy—Mr. G. has the following just and beautiful passage:

'How pervading is the sense of the beautiful, and how full of beautiful forms is this earth on which we are appointed to dwell! Who can look upon nature in her serene aspects and wonderful transformations, and not own it a glorious privilege to comprehend other than philosophical relations, and to enjoy something beside the demonstrations of exact science? At this season of pathetic loveliness,* who can look upon the memorials of the dying year, without confessing the power of imagery to wake to an eloquent response the chords of human feeling?

'This peculiar tendency of American society, which I have cursorily considered, would be exempt from the danger of excess, if liberal studies were permitted to exert their full power of counteraction. Without rendering us impatient of dull realities, they sometimes lift us above them; they quicken within us the sensibilities of taste; they transport us into the region of hopes and fears; of the profound and the indefinite; they invite us to the contemplation of whatsoever is lovely in the sympathies of our common nature; splendid in the conquests of intellect, or heroic in the trials of virtue.'

Lawyers, physicians, clergymen,—ought to read and ponder well this paragraph:

'Professional men, sometimes ready to sink under the pressure of unvaried mental effort, find that occasional excursions into the field of elegant literature impart renewed vigor to their exhausted powers. They do not so much require complete exemption from toil, as *counter excitement*; and to men of refined tastes, this species of excitement is abundantly supplied by those treasures of wisdom and of wit, and those captivating forms of expression, which lie without the boundaries of exclusively professional study. Again, from the peculiar nature of their pursuits, and from the almost incessant attention which they demand, such men are liable to become somewhat narrow and perverse in their judgments. They cultivate few of the graceful sensibilities of their nature; they estrange themselves from the regions of taste; they regale their imaginations with no images of beauty. "There is perhaps nothing," says one of the most original thinkers of the age, "which more enlarges or enriches the mind, than to lay it genially open to impressions of pleasure from the exercise of every species of talent." In this disposition, with rare exceptions, professional men are wanting; and it is this disposition which liberal studies are specially fitted to create. What a reproach attaches to the lawyer who feels admiration for no science but his own?† What physician is thoroughly prepared for the practice of his profession, who has not learned

much which it is not the business of masters in medical science to teach? And, think you, should we hear such repeated complaints of the drowsiness and the aridity of the pulpit, if preachers, less ambitious of soaring to the Alpine heights of theology, spoke more frequently the language of cultivated tastes, sympathies and affections; if, full of the momentous verities of the gospel, they were capable of imitating, however inadequately, the varied song of David, the majestic eloquence of Paul, the seraphic fervor of Isaiah?'

And let merchants of all sorts, mechanics, and farmers, pay heedful attention to the following:

'But it is to those who are familiarly styled *men of business*, that liberal studies should be more particularly commended. Parents often withhold, from such of their sons as are intended for active life, an accomplished education, because they believe that success in active life is rather hindered than promoted by the liberal cultivation of the intellect. In accordance with this belief, it is often said that merchants, manufacturers, and mechanics acquire no additional skill for the conduct of their business, by an acquaintance with general literature. And what if they do not? Were they born to be merchants, and manufacturers, and mechanics, and nothing more? Are they not endowed, like other men, with the higher faculties of their being, and should not these faculties be exercised upon their proper objects? They are not, it is true, candidates for literary distinction; but in whatever sphere they may chance to move they are human beings, and why should they not be rational well informed, refined human beings? If their ordinary occupations be somewhat alien from the pursuits of literature, *this, of itself, is a cogent reason why a taste for such pursuits should be the more carefully fostered.* To the imperfect education of this large and valuable class in every community, may be ascribed the otherwise inexplicable mistakes of men who stand strong in the consciousness of rare practical sagacity. What disastrous errors would such men avoid, if they gave more repose to their passions; and if, by employing their minds upon a larger variety of objects, they sharpened their accuracy, and enlarged their comprehension!'

The concluding paragraph is pregnant with truth and power:

'Well might I be deemed an unfaithful advocate of liberal studies, if, in estimating their value, I yielded no tribute of applause to the solid provision which they make for independent individual happiness; for that happiness which is enjoyed, not so much amid the hum and shock of men, as amid the solitude of nature and of thought. Living in a land where "men act in multitudes, think in multitudes, and are free in multitudes," we are constantly tempted to forget the mysterious individuality of our being; to go out of ourselves for materials of enjoyment; to fritter away our sensibilities, and to debilitate our understandings, amid the false and hollow gaieties of the crowd. I contend for no severe estrangement from the joys of a chaste and elegant conviviality; for no exclusive intercourse with forms of inanimate beauty; for no fearful communion with the mysteries of the inner spirit. But I deprecate habits and tastes which are impatient of seclusion; which destroy all true and simple relish for nature; which scorn all quiet pleasures; which abhor alike the composure and the scrutiny of meditation. As means of reforming tastes and habits thus uncongenial to virtue and to happiness, I can hardly exaggerate the importance of liberal studies. I ascribe to them, however, no power to teach rooted sorrow the lesson of submission; to succor virtue amid mighty temptations; to dispel the awful sadness of the inevitable hour. These are the victories of christian faith; the grand, and peculiar, and imperishable evidences of its power.

* Autumn.—[Ed. Mess.]

† The precepts and the example of the celebrated James Otis deserve to be commended to the attention of every young man who aspires to distinction at the Bar. We are told, by his biographer, that, after leaving College, he devoted eighteen months to the pursuit of various branches of Literature, previously to entering on the study of Jurisprudence. In a letter to his father, he says, "I shall always lament that I did not take a year or two further for more general inquiries in the Arts and Sciences, before I sat down to the laborious study of the laws of my country." He inculcated on his pupils as a maxim, "that a lawyer ought never to be without a volume of natural or public law, or moral philosophy, on his table, or in his pocket."

But I challenge for science and for letters, the noble praise of reclaiming us from the dominion of the senses; of lightening the burden of care; of stimulating within us the undying principles of the moral life.'

ANTIQUE CAMEOS.

NO. I.

ANDROMEDA.

*Nisi quoddam levis aura capillos
Moverat; et trepido manarant lumina fletu
Marmoreum ratus esset opus.*

Ovid.

Entranced in woe, fair Cassiope's child,
The victim of a mother's wanton boast,
Beheld the rugged crags that reared their wild
And threatening heads above the stormy coast;
And as she gazed upon the sea before,
In mockery through her bosom stole a host
Of pleasant memories, while with angry roar
The death-denouncing waves broke on the rocky shore.

The ample treasure of her raven locks
In darksome beauty streaming on the wind,
Upon a pedestal of blackened rocks
Like Parian statue stood the maid, confined
By chains which marred the tender wrists they bound:
The thoughts of home came thronging on her mind,---
Her bosom heaved, her eyes in tears were drowned,
And grief burst from her lips in sorrow's plaintive sound.

She thought of early childhood's summer hours,
Of sportive glee beneath the myrtle shade,
Of garlands wreathed for youthful friends in bowers
Of myrrhine sweets, through which her feet had strayed---
Thought of her father's halls---the dance---the lay
Of minstrel, and the mellow lute of maid---
Then of her doom; and saw with dread dismay
The monster of the deep roll on, prepared to slay.

One piercing shriek of anguish wildly rose
Above the moaning ocean---fear repeat
The hapless cry of agony, and froze
The fount of life within her virgin breast;
While from each starting orb, the tear-drops, o'er
Her snowy bosom showering pearls, confessed
Her lorn despair, as rushing towards the shore
The ravenous monster seemed her beauty to explore.

She trembled like an aspen; and the blood
Was curdling in her veins, as mute she gazed
Upon his bulk, now stretched upon the flood,
Now rolled in spires, as o'er the waves he raised
His towering crest, high gleaming in the air;
And marked his eyes, which like two meteors blazed
Upon his burnished front, with their red glare
Portending darksome death, destruction and despair.

Still onward rolled the portent, till his breath
Came warm upon her, and his nostrils shed
The dewy brine; and armed with pointed death
Appeared the jagged teeth within his dread
And terrible jaws, expanded to devour;
When from the upper air flashed on her head
A sudden light, and, in that fearful hour,
An unseen arm was raised that broke the monster's power.

E'en as his giant body smote the sand,
Swift rushing from the foam-engirdled tide,
With nostrils spread but breathless on the sand
He lay immense,---with jaws expanded wide---
And sinews bent---but rigid as the pile
Of endless crags, that, reared on either side
With everlasting adamant did tile
The rocky ramparts of the sea-defying isle.

And as the maiden slowly raised her eyes,
A form of matchless beauty and of light,
With waving plumes of a thousand dyes,
And looks of love, burst on her raptured sight.
Again life's fear-chilled current freely gushed,
Her eyes that tears had dimmed again grew bright;
And like the rosy morning, sweetly blushed
The blanched and pallid cheek by love's deep hectic flushed.

HERPESUS.

Selection from Blackwood's Magazine for 1818.

ON THE POETRY OF

SCOTT, BYRON, AND WORDSWORTH.

The three great master-spirits of our day, in the poetical world, are Scott, Wordsworth, and Byron. But there never were minds more unlike to each other than theirs are, either in original conformation or in the course of life. It is great and enduring glory to this age, to have produced three poets,---of perfectly original genius,---unallied to each other,---drinking inspiration from fountains far apart,---who have built up superb structures of the imagination, of distinct orders of architecture,---and who may indeed be said to rule, each by a legitimate sovereignty, over separate and powerful provinces in the kingdom of Mind.

Though greatly inferior in many things to his illustrious brethren, Scott is perhaps, after all, the most unequivocally original. We do not know of any model after which the form of his principal poems has been moulded. They bear no resemblance, and, we must allow, are far inferior to the heroic poems of Greece; nor do they, though he has been called the Ariosto of the North, seem to us to resemble, in any way whatever, any of the great poems of modern Italy. He has given a most intensely real representation of the living spirit of the chivalrous age of his country. He has not shrouded the figures or the characters of his heroes in high poetical lustre, so as to dazzle us by resplendent fictitious beings, shining through the scenes and events of a half-imaginary world. They are as much real men in his poetry, as the "mighty earls" of old are in our histories and annals. The incidents, too, and events, are all wonderfully like those of real life; and when we add to this, that all the most interesting and impressive superstitions and fancies of the times are in his poetry incorporated and intertwined with the ordinary tissue of mere human existence, we feel ourselves hurried from this our civilized age, back into the troubled bosom of semibarbarous life, and made keen partakers in all its impassioned and poetical credulities. His poems are historical narrations, true in all things to the spirit of history, but everywhere overspread with those bright and breathing colors which only genius can bestow on reality; and when it is recollected, that the times in which his scenes are laid and his heroes act were distinguished by many of the most energetic virtues that can grace or dignify the character of a free people, and marked by the operation of great passions and important events, every one must feel that the poetry of Walter Scott is, in the noblest sense of the word, national; that it breathes upon us the bold and heroic spirit of perturbed but magnificent ages, and connects us, in the midst of philosophy, science, and refinement, with our turbulent but high-minded ancestors, of whom we have no cause to be ashamed, whether looked on in the fields of war or in the halls of peace. He is a true knight in all things,---free, courteous, and brave. War, as he describes it, is a noble game, a kingly pastime. He is the greatest of all war-poets. His poetry might make a very coward

fearless. In *Marmion*, the battle of Flodden agitates us with all the terror of a fatal overthrow. In the *Lord of the Isles*, we read of the field of Bannockburn with clenched hands and fiery spirits, as if the English were still our enemies, and we were victorious over their invading king. There is not much of all this in any modern poetry but his own; and therefore it is, that, independently of all his other manifold excellences, we glory in him as the great modern National Poet of Scotland,—in whom old times revive,—whose poetry prevents history from becoming that which, in times of excessive refinement, it is often too apt to become—a dead letter,—and keeps the animating and heroic spectacles of the past moving brightly across our every-day world, and flashing out from them a kindling power over the actions and characters of our own age.

Byron is in all respects the very opposite of Scott. He never dreams of wholly giving up his mind to the influence of the actions of men, or the events of history. He lets the world roll on, and eyes its wide-weltering and tumultuous waves—even the calamitous shipwrecks that strew its darkness—with a stern and sometimes even a pitiless misanthropy. He cannot sympathise with the ordinary joys or sorrows of humanity, even though intense and overpowering. They must live and work in intellect and by intellect, before they seem worthy of the sympathy of his impenetrable soul. His idea of man, in the abstract, is boundless and magnificent; but of men, as individuals, he thinks with derision and contempt. Hence he is in one stanza a sublime moralist, elevated and transported by the dignity of human nature; in the next a paltry satirist, sneering at its meanness. Hence he is unwilling to yield love or reverence to any thing that has yet life; for life seems to sink the little that is noble into the degradation of the much that is vile. The dead, and the dead only, are the objects of his reverence or his love; for death separates the dead from all connexion, all intimacy with the living; and the memories of the great or good alone live in the past, which is a world of ashes. Byron looks back to the tombs of those great men “that stand in assured rest;” and gazing, as it were, on the bones of a more gigantic race, his imagination then teems with corresponding births, and he holds converse with the mighty in language worthy to be heard by the spirits of the mighty. It is in this contrast between his august conceptions of man, and his contemptuous opinion of men, that much of the almost incomprehensible charm, and power, and enchantment of his poetry exists. We feel ourselves alternately sunk and elevated, as if the hand of an invisible being had command over us. At one time we are a little lower than the angels; in another, but little higher than the worms. We feel that our elevation and our disgrace are alike the lot of our nature; and hence the poetry of Byron, as we before remarked, is read as a dark, but still a divine revelation.

If Byron be altogether unlike Scott, Wordsworth is yet more unlike Byron. With all the great and essential faculties of the poet, he possesses the calm and self-commanding powers of the philosopher. He looks over human life with a steady and serene eye; he listens with a fine ear “to the still sad music of humanity.” His faith is unshaken in the prevalence of virtue over vice, and of happiness over misery; and in the existence of a heavenly law operating on earth, and, in spite of transitory defeats, always visibly triumphant in the grand field of human warfare. Hence he looks over the world of life, and man, with a sublime benignity; and hence, delighting in all the gracious dispensations of God, his great mind can wholly deliver itself up to the love of a flower budding in the field, or of a child asleep in its cradle; nor, in doing so, feels that poetry can be said to stoop or to descend, much less to be degraded, when she embodies, in words of music, the purest and most delightful fancies and affections of the human heart. This love of the nature to which he belongs, and which is in him the fruit of wisdom and

experience, gives to all his poetry, a very peculiar, a very endearing, and, at the same time, a very lofty character. His poetry is little colored by the artificial distinctions of society. In his delineations of passion or character, he is not so much guided by the varieties produced by customs, institutions, professions, or modes of life, as by those great elementary laws of our nature which are unchangeable and the same; and therefore the pathos and the truth of his most felicitous poetry are more profound than of any other, not unlike the most touching and beautiful passages in the sacred page. The same spirit of love, and benignity, and etherial purity, which breathes over all his pictures of the virtues and the happiness of man, pervades those too of external nature. Indeed, all the poets of the age,—and none can dispute that they must likewise be the best critics,—have given up to him the palm in that poetry which commences with the forms, and hues, and odors, and sounds, of the material world. He has brightened the earth we inhabit to our eyes; he has made it more musical to our ears; he has rendered it more creative to our imaginations.

LORD BYRON'S FAULTS.

[The merits of Lord Byron have been sufficiently trumpeted. No penner of choice verses in a lady's album, but has the oft-quoted beauties of *Childe Harold*, *The Giaour*, and *The Bride of Abydos*, at his fingers' ends. No literary dandy, who draws his morality and his prettinesses of speech from Bulwer, but lisps with equal fondness and familiarity though less knowledge, the euphonious name of ‘Byron.’ It is now time to hear the other side. That our readers may in part do so, we cull from our old Blackwood the following severe letter addressed to his Lordship, by a stern moralist, whose castigation is the more just and effectual, as he evidently holds the powers of the noble poet in the highest esteem.—*Ed. Mess.*]

TO THE AUTHOR OF BEPPO.

My Lord,—It has for many years been almost impossible that any thing should increase my contempt for the professional critics of this country; otherwise the manner in which these persons have conducted themselves towards your Lordship, would, most certainly, have produced that effect. The hyperboles of their sneaking adulation, in spite of the far-off disdain with which you seem to regard them, have probably reached, long ago, the vanity of the poet, and touched, with a chilling poison, some of the better feelings of the man. I have formed, however, a very mistaken opinion of your character, if, conscious as you still are of the full vigor of youthful genius, you can allow yourself to be permanently satisfied, either with the subjects or the sources of the commendation which has been poured upon you. If you feel not within yourself a strong and tormenting conviction, that as yet you have done little more than exhibit to the world, the melancholy spectacle of a great spirit, self-embittered, self-wasted, and self-degraded,—if, in your solitary moments, there shoot not sometimes across your giddy brain, the lightnings of a self-aborrent and un hypocritical remorse, the progress of the mental paralysis has been more deadly than I had been willing to believe;—but even then, a friend of charity and of virtue may expect a ready pardon for having hoped too much, and for having spoken to you in vain.

To few men, either in ancient or in modern times, has been afforded an opening destiny more fortunate than yours. Sprung from a long line of generous ca-

valiers, and inheriting from them a name to which no English ear could listen without respect,—and, adding to these, the advantages of a graceful person and a powerful genius,—where was that object of worthy ambition which could have appeared to be beyond the wishes or the hopes of Byron? You chose to build your fame upon poetry, and your choice was wise. The names of Marlborough, Nelson, Chatham, Pitt, Fox, and Burke,—what, after all, are these when compared with those of Spenser, Shakspeare, and Milton? To add another name to the great trio of English poets, and to share the eternal sovereignty which these majestic spirits exert over the souls of the most free, and the most virtuous of people, this was indeed a high and noble ambition, and the envy of kings might have been due to its gratification. Such were the proud aspirings that a few years ago possessed your mind, and your countrymen were eager to believe and to proclaim the probability of your success. Alas! my Lord, when you reflect upon what you have done, and upon what you are,—when you remember with what wanton hypocrisy you have tortured our feelings, and with what cool contemptuousness you have insulted our principles,—you cannot scruple to confess, that the people of England have been shamefully abused, and are, with justice, disappointed.

I admire the natural splendor of your genius as much as the most violent of your slavish eulogists. I do more—I reverence it; and I sigh with the humility of a worshipper, over the degradation of its divinity. The ideas which you must have of the true greatness of a poet, are, doubtless, very different from those of ordinary mortals. You have climbed far up among the crags and precipices of the sacred hill, and have caught some glimpses of their glory who repose amidst the eternal serenity of its majestic summit. It is not necessary to tell you by what an immeasurable space your loftiest flights have as yet fallen short of the unseen soarings of the illustrious dead. You know and feel your superiority to the herd of men; but the enviable elevation which enables you to look down upon them, convinces you at the same time of your inferiority to those, who sit together in unapproached greatness, the few peerless spirits, alone among men and among poets,—HOMER, DANTE, and the British THREE. Distances and distinctions which are lost to weaker and remoter optics are seen and penetrated by your more favored eye. Beholding, as you do, Alps on Alps rising beyond you, even the gratification of your self-love cannot prevent you from condemning their voice, who would extol you as having already reached the utmost limit of ascension. Nor will this contempt for their foolish judgment be lessened by the consciousness, which I believe you feel, that your progress might have been more worthy of their admiration, had you not clogged your march with needless fetters, and loitered perversely beneath difficulties, which, by a bold effort, you might for ever have overcome.

In spite, then, of the shouts of vulgar approbation, you feel, my Lord, a solitary and unrevealed conviction, that you have not as yet done any thing which can give you a permanent title to being associated with the demigods of poetry. This conviction, to a spirit so haughty as yours, must be bitterness and wormwood. To others it might afford no trivial consolation to know, that although, since poetry began, scarcely one age has passed which did not suppose itself to be in possession of a first-rate poet, the names of those whose claims to that character the world has ratified, may all be written with a single drop of ink. But you, unless you be a greater hypocrite than even I suppose you, have that within which would make you prefer total obscurity to any fame that falls short of the most splendid. By comparing the nature of your own with that of more glorious productions,—above all, by observing the contrast which your own character affords to that of greater poets,—you may perhaps discover somewhat, both of the cause of your failures, and of the probable

method of retrieving them. The compliment which I pay to your genius, in supposing, that, even under any diversity of circumstances, you might have become the rival of those master-spirits with whom you have as yet been so unworthy of comparison, is assuredly a great one. Of all that read my letter, none will understand its weight so well as you: none will so readily confess that it verges upon extravagance, or be so apt to accuse of unconscious flattery the admonisher that has bestowed it.

It is not my purpose (for from me to you such a disquisition would be absurd) to describe, or to attempt to describe, to your Lordship, wherein your productions and your spirit differ from those of the great poets that have preceded you. I am not of the opinion of certain modern sophists, who affect to try every thing in poetry by the rules of logic. I feel, and so does every man of common understanding, that if you were born with the elements of heroic growth within you, your stature has been stunted; and that, when brought into contact with those whom perhaps you might have emulated, you are but a pigmy among a band of giants. One great distinction, however, between you and them, as it relates not to your art alone, but to the interests and welfare of those to whom that art addresses itself, a plain man, who makes no pretensions to the character of a poet, but who loves and venerates the nature of which he is partaker, hopes he may notice in a few words, without giving just offence either to you or your admirers. Your predecessors, in one word, my Lord, have been the friends—you are the enemy of your species. You have transferred into the higher departments of poetry (or you have at least endeavored to transfer) that spirit of mockery, misanthropy, and contempt, which the great bards of elder times left to preside over the humbler walk of the satirist and the cynic. The calm respect which these men felt for themselves, inspired them with sympathetic reverence for their brethren. They perceived, indeed, the foibles and the frailties of humanity, and they depicted, at least as well as you have ever done, the madness of the senses and the waywardness of the passions; but they took care to vindicate the original dignity of their nature, and contrasted their representations of the vice and weakness, which they observed in some, with the more cheering spectacle of the strength and the virtue, whose stirrings they felt within themselves, and whose workings they contemplated in others. Conscious of the glorious union of intellectual grandeur and moral purity within, they pitied the errors of other men; but they were not shaken from their reverence for the general character of man. Instead of raving with demoniacal satisfaction about the worthlessness of our motives and the nothingness of our attainments, they strove, by showing us what we might be and what we had been, to make us what we should be. They drew the portraits of wrath, jealousy and hatred, only that we might appreciate more justly the kindly feelings which these fierce passions expel from the rightful possessions of our bosom. They took our nature as it is, but it was for the purpose of improving it: they sung of our miseries and our tumults in noble strains,

“Not wanting power to mitigate and swage
With solemn touches troubled thoughts, and chase
Anguish, and doubt, and fear and sorrow, and pain,
From mortal or immortal minds.”

With the names of SPENSER, SHAKSPEARE, MILTON, we associate the idea of our nature in its earthly perfection,—of love, pure, tender, and etherial,—of intellect, serene and contemplative,—of virtue, unbending and sublime. As the Venus, the Apollo, and the Theseus, are to our bodies, the memories of these men are to our minds, the symbols and the standards of beauty and of power. The contemplation of them refines and ennobles those who inherit their language. The land that has given birth to such ministers of patriotism and of virtue, fears not that the sacred flame should expire upon her altars. We are proud of England, because

she produced them, and we shrink from degradation, lest their silent manes should reproach us.

Had it been your destiny to live two centuries ago, and in the place of these illustrious spirits, to form the national poetry of England, how miserably different had been, with regard to you and to themselves, the feelings of your countrymen! In all your writings, how little is there whose object it is to make us reverence virtue, or love our country! You never teach us to despise earthly sufferings, in the hope of eternal happiness. With respect to all that is best and greatest in the nature and fate of man, you preserve not merely a sorrowful, but a sullen silence. Your poetry need not have been greatly different from what it is, although you had lived and died in the midst of a generation of heartless, vicious, and unbelieving demons. With you, heroism is lunacy, philosophy folly, virtue a cheat, and religion a bubble. Your man is a stern, cruel, jealous, revengeful, contemptuous, hopeless, solitary savage. Your woman is a blind, devoted, heedless, beautiful minister and victim of lust. The past is a vain record, and the present a fleeting theatre of misery and madness: the future one blank of horrid darkness, whereon your mind floats and fluctuates in a cheerless uncertainty, between annihilation and despair.

The interest which you have found means to excite for the dismal creations of your poetry, is proof abundant of the vigor of your genius, but should afford small consolation to your conscience-stricken mind. You are a skilful swordsman; but you have made use of poisoned weapons, and the deadliness of your wound gives no addition to your valor. You have done what greater and better men despised to do. You have brought yourself down to the level of that part of our erring and corrupted nature, which it was their pride and privilege to banish from the recollection and the sympathy of those to whom they spake. In the great struggle between the good and the evil principle, you have taken the wrong side, and you enjoy the worthless popularity of a daring rebel. But hope not that the calm judgment of posterity will ratify the hasty honors which you have extorted from the passions of your contemporaries. Believe me, men are not upon the whole quite so unprincipled,—nor women quite so foolish,—nor virtue so useless,—nor religion so absurd,—nor deception so lasting,—nor hypocrisy so triumphant,—as your Lordship has been pleased to fancy. A day of terrible retribution will arrive, and the punishment inflicted may not improbably consist of things the most unwelcome to a poet's view—the scorn of many, and the neglect of all. Even now, among the serious and reflective part of the men and the women of England, your poetry is read, indeed, and admired, but you yourself are never talked of except with mingled emotions of anger and pity. With what pain do the high spirits of your virtuous and heroic ancestors contemplate the degradation of their descendant. Alas! that the genius which might have ennobled any name, should have only assisted you to stamp a more lasting stain upon the pure, the generous, the patriotic, the English name of Byron.

Any other poet might complain with justice, should he see remarks of a personal nature mixed up with a criticism upon his writings. You, my Lord, can scarcely flatter yourself that you have any right to expect such forbearance. If the scrutiny of the world be disagreeable to you, either in its operation or in its effects, you need blame no one but yourself. We were well enough disposed to treat you with distant respect, but you have courted and demanded our gaze. You have bared your bosom when no man entreated you; it is your own fault if we have seen there not the scars of honorable wounds, but the festering blackness of a loathsome disease. You have been the vainest and the most egotistical of poets. You have made yourself your only theme; shall we not dare to dissect the hero, because, forsooth, he and his poet are the same? You have debased your nobility by strutting upon the stage; shall we still be expected to talk of you as of a private

and unobtrusive individual? You must share the fate of your brethren, and abide the judgment of the spectators. Having assumed for our amusement, these gaudy trappings, you must not hope to screen your blunders from our castigation, by a sudden and prudish retreat into a less glittering costume. You have made your election.—The simile which I have employed may appear inept to many; of these, I well know your Lordship is not one.

You made your debut in the utmost dignity and sadness of the Cothurnus. You were the most lugubrious of mortals; it was the main ambition of your vanity to attract to your matchless sorrows the overflowing sympathies of the world. We gave you credit for being sincere in your affliction. We looked upon you as the victim of more than human misery, and sympathized with the extravagance of your public and uncontrollable lamentations. It is true that no one knew whence your sorrow had sprung, but we were generous in our compassion, and asked few questions. In time, however, we have become less credulous and more inquisitive; the farce was so often renewed, that we became weary of its wonders; we have come to suspect at last, that whatever sorrows you may have, they are all of your own creating; and that, whence-soever they may be, they are at least neither of so uniform nor of so majestic a character as you would fain have had us to suppose.

There was indeed something not a little affecting in the spectacle of youth, nobility, and genius, doomed to a perpetual sighing over the treachery of earthly hopes, and the vanity of earthly enjoyments. Admitting, as we did to its full extent, the depth of your woes, it is no wonder that we were lenient critics of the works of such a peerless sufferer. We revered your mournful muse; we were willing to believe that, if such was her power in the midst of tears, a brighter fortune would have made it unrivalled and irresistible. The forlornness of your bosom gained you the forbearance of the most unrelenting judges. Every thing was pardoned to the chosen victim of destiny. We regarded you as the very masterpiece and symbol of affliction, and looked up to you the more that your glory had been withered—

“As when Heaven's fire
Had scathed the forest oak, or mountain pine,
With singed top his stately growth, though bare,
Stands on the blasted heath.”

Although, however, we at the time believed what you told us, and opened all the stores of our pity to your moving tale, we have not been able to abstain, in the sequel, from considering somewhat more calmly the items of its horror. The first thing which made us suspect that we had been played upon, was the vehemence of your outcries. If your account of yourself were a true one, your heart was broken. You decked yourself in the sable trappings of a Hamlet, and, like him, you were free to confess that “the earth seemed to you only a sterile promontory, and the goodly canopy of heaven a foul and pestilent congregation of vapors. You had no pleasure in man, no! nor, for all our smiling, in woman neither.” You stood like another Niobe, a cold and marble statue, frozen by despair amidst the ruin of your hopes. Had your sorrow been so deep, my Lord, its echoes had been lower. The dignified sufferer needs no circle of listeners to fan, by their responding breath, the expiring embers of misery. Poetry was born within you, and you must have made it the companion of your afflictions; but your lyre, like that of the bereaved hero of old, would have uttered lonely and unobtrusive notes, had your fingers, like his, been touched with the real tremblings of agony. A truly glorious spirit, sunk in sorrow such as you assumed, might have well deserved the silent veneration of its more lowly and more happy contemplators. But it would neither have courted their notice, nor enjoyed their sympathy. Alone, in its gigantic wretchedness, it would have scorned to lay its troubles open to the

gaze of common men. Your delicacy was less exquisite, or your grief was less sincere. You howled by day upon the house-top; you called upon all the world to admire your song of lamentation, and to join their voices in its doleful chorus.

Under pretence of making us partakers in a fictitious or exaggerated grief, you have striven to make us sympathise with all the sickly whims and phantasies of a self-dissatisfied and self-accusing spirit. That you were, as you have yourself told us, a dissipated, a sceptical, and therefore, for there was no other cause, a wretched man, was no reason why you should wish to make your readers devoid of religion, virtue, and happiness. You had no right to taint the pure atmosphere of the English mind with the infectious phrenzies of the fever of debauch. Your misery was the punishment of your folly and your wickedness; why did you come to rack the eyes of the wise, the good, and the tranquil, with the loathsome spectacle of your merited torments? Could genius, a thousand times more splendid than yours, entitle the poor, giddy, restless victim of remorse, to make his art the instrument of evil,—to abuse the gifts of his God, by rendering them the engines of corruption and ruin among his fellow men? For shame! my Lord, for shame upon your manhood! If you had acted as became the dignity, either of your person or of your genius, you would have hidden yourself from the public gaze, until you had expiated, in the solitude of some congenial dungeon, the sins that had embittered your conscience, and degraded your muse. You had offended the eternal laws of virtue, and yielded up your self-condemning soul to be the play-thing—the *scipio mirrore*—of doubt, and of derision. But although you felt within yourself the hell of conscience, why should you have assumed at once the malevolence of a demon? Alas! you have not even attained to the generosity of “the superior fiend.” While the abject instruments of his rebellious rage found comfort in the companionship of many, the Satan of Milton preserved a nobler sentiment in the midst of his calamity. He scorned the vulgar consolation, and would have wished to have been alone in his sufferings, as he had been unequalled in his fault.

“His form had not yet lost
All his original brightness, nor appeared
Less than archangel ruined.

His face
Deep scars of thunder had entrenched, and care
Sat on his faded cheek.

Cruel his eye, but cast
Signs of remorse and passion, to behold
The fellows of his crime, the followers rather,
(Far other once beheld in bliss), condemned
For ever now to have their lot in pain,
Millions of spirits for his fault amerced
Of Heaven, and from eternal splendours flung,
For his revolt.”

I have a singular pleasure, I know not how, in quoting to your Lordship the lines of Milton. You cannot listen to their high and melancholy music, without reflecting with repentant humiliation on your own perverted and dishonored genius. To his pure ear, the inspirations of the muse came placid and solemn, with awful and majestic cadences. She ruffled not, but smoothed and cherished the wings of his contemplation. She breathed the calm of a holier harmony into his unspotted bosom. Reason and imagination went hand in hand with virtue. He never forgot that his poetry was given him, only to be the ornament and instrument of a patriot and a saint. Beside your pillow the “nightly visitant” respires the contaminating air of its pollution. The foul exhalations of disorder and sensuality poison her virgin breath, and dim the celestial lustre of her eye. In despair of ennobling you, she becomes herself degraded, and lends her vigor to be the weapon of that violence, which, had its phrenzy been less incurable, her ministrations might have soothed and tempered. Milton is to you as his own cherub was to the apostate.

“That glory then, when thou no more wast good,
Departed from thee.”

His very name is to your unwilling ears “a grave rebuke;” and you feel, when you reflect upon the beauty of his purity, as the revolted demon did in “the place inviolable.”

“Abashed the devil stood,
And felt how awful goodness is, and saw
Virtue in her own shape more lovely; saw, and pined
His loss: but chiefly to find here observed
His lustre visibly impaired.”

I give you credit for a real anguish, when you turn from the contemplation of this happy spirit, to that of your own “faded splendor wan.”

Visible, however, as was your apostacy, and mean your vengeance, there was still something about you to create respect, even in those who comprehended the best your vices and your errors. If you were an immoral and an unchristian, you were at least a serious, poet. Your pictures of depravity were sketched with such a sombre magnificence, that the eye of vulgar observers could gain little from surveying their lineaments. The harp of the mighty was still in your hands; and when you dashed your fingers over its loosened strings, faded as was the harmony, and harsh the execution, the notes were still made for their listening who had loved the solemn music of the departed.

The last lingering talisman which secured to you the pity, and almost the pardon, even of those that abhorred your guilt,—with the giddiness of a lunatic, or the resolution of a suicide,—you have tossed away. You have lost the mournful and melancholy harp which lent a protecting charm even to the accents of pollution; and bought, in its stead, a gaudy viol, fit for the fingers of eunuchs, and the ears of courtezans. You have parted

“With what permissive glory, since that fall,
Was left.”

You have flung off the last remains of the “regal port;” you are no longer one of “the great seraphic lords,” that sat even in Pandemonium, “in their own dimensions like themselves.” You have grown weary of your fallen grandeur, and dwarfed your stature, that you might gain easier access, and work paltrier mischief. You may resume, if you will, your giant-height, but we shall not fail to recognise, in spite of all your elevation, the swollen features of the same pigmy imp whom we have once learned—a lasting lesson—not to abhor merely, and execrate, but to *despise*. You may wish, as heretofore, to haunt our imaginations in the shadowy semblance of Harold, Conrad, Lara, or Manfred: you may retain their vice, and their unbelief, and their restlessness; but you have parted irretrievably with the majesty of their despair. We see you in a shape less sentimental and mysterious. We look below the disguise which has once been lifted, and claim acquaintance, not with the sadness of the princely masque, but with the scoffing and sardonic merriment of the ill-dissembling reveller beneath it. In evil hour did you step from your vantage-ground, and teach us that Harold, Byron, and the Count of Beppo are the same.

I remain, my Lord, with much pity, and
not entirely without hope, your Lordship's
most obedient, most humble servant,

PRESBYTER ANGLICANUS.

CHARLATANERIE DES SAVANS.

In an old French work, called ‘La Charlatanerie des Savans,’ is the following note. “D’autres ont proposé et résolu en même temps des questions ridicules—par exemple celle-ci. Devroit-on faire souffrir une seconde fois le même genre de mort à un criminel qui après avoir eu la tête coupée, viendrait à résusciter?”

—“Others have proposed and at the same time answered ridiculous questions—for example the following. Can a criminal be made to suffer a second time the same kind of death, who after having been beheaded, should come to life again?”

FIVE DOLLARS PER ANNUM.

INFLUENCE OF MORALS.

CONTINUED.

By a native (but not now a resident) of Petersburg, Va.

"It is a little singular," says Chancellor Kent, that distinguished jurist, whose whole life and writings, like those of the Roman philosopher, are replete with intellectual and moral excellence, "it is a little singular, that some of the best ethical writers under the christian dispensation should complain of the moral lessons of Cicero, as being too austere in their texture, and too sublime in speculation for actual use. There is not, indeed, a passage in all Greek and Roman antiquity equal in moral dignity and grandeur to that in which Cicero lays it down as a fixed principle, that we ought to do nothing that is avaricious, nothing that is dishonest, nothing that is lascivious, even though we could escape the observation of gods and men." And in some other portion of the works of that sublime moralist, he lifts up his voice from amid the dusky twilight of paganism, and exclaims in a tone not unworthy of inspiration: "The soul, during her confinement in the prison of the body, is doomed to undergo a severe penance: for, her native seat is in heaven, and it is with reluctance that she is forced down from those celestial mansions into these lower regions, where all is foreign and repugnant to her divine nature. But the gods, I am persuaded, have thus widely disseminated immortal spirits, and clothed them with human bodies, that there might be a race of intelligent creatures, not only to have dominion over this our earth, but to contemplate the host of heaven, and imitate in their *moral conduct* the same beautiful order and uniformity, so conspicuous in those splendid orbs." It is upon precepts like this that man should frame his rule of action; it is from the sacred fountain of pure philosophy, that he should derive that sense of the dignity of his nature and of his sublime destiny, which will enable him to correspond with the end of his creation.

In a former number we have erected a standard of morals, which many will censure for its loftiness; and we have, in a spirit of bold inquiry, questioned the utility, in their immediate results and prospective tendency, of the two great revolutions in the religion and government of mankind in the sixteenth and eighteenth centuries.

From the former of these great movements, sprang at once into the full vigor of life universal freedom of opinion; and for all the horrors of the latter we are indebted to the deadly legacy of anti-christian doctrines and anti-social principles, which the last age has bequeathed to the present. We have heretofore observed, that since the establishment of universal freedom of opinion, and the discovery of the art of printing, men have been astounded at the facility with which public morals have been corrupted, and, as a necessary consequence, at

the rapidity with which revolutions have been effected. While the press exercises its tremendous agency for weal or woe, the social and political fabric can only be sustained when it reposes upon the broad basis of morality. Experience, with her ever burning lamp, shows us, that the paths of licentiousness lead to the grave of social and political establishments. And wherefore should we not, like the Ismenian priests of old, who sought for prophecies in the ashes of the altar they had raised to their divinity, seek amid the ruins of the past for light to guide us through the darkness of the future?

We adhere to the stern rule, that IT IS THE FIRST DUTY OF EVERY CHRISTIAN AND OF EVERY PATRIOT TO OPPOSE EVERYTHING, WHICH TENDS TO CORRUPT PUBLIC MORALS OR TO PROMOTE LICENTIOUSNESS OF OPINION. The great and fatal error of the present generation springs from the promptings of a presumptuous understanding; and we are prone to persuade ourselves that we live in a boasted age of reason. The invention of poets has been exhausted in describing the sufferings of the human family in the ages of brass and iron: but it was reserved for history to write in the tears of nations the instructive and appalling drama of the age of reason. Before the mind of man was darkened by his depravity, before he tasted of the "forbidden tree, whose mortal taste brought death into the world, and all our woe,"—all his mental faculties, the will and the understanding, the reason and the imagination, were harmoniously blended and united: but since his fall, a dark spirit has interposed its shadow between him and the sun of righteousness, and disorder and confusion have entered into his mind and soul, and troubled their several faculties. Thus, the light of the understanding not unfrequently illumines the path of duty, but the obstinate will refuses to pursue it; and the eager and chastened will sometimes eagerly gropes its way where the darkened understanding is unable to direct it. In their hostility to the social, political, and religious institutions of the human family, the French philosophists propagated a senseless theory of the progressive improvement of man emerging gradually from the savage state, which they styled a state of nature, and improving imperceptibly in his language and polity. For the direct and consistent revelation of the Deity, they substituted their wild and incoherent speculations. But a wiser philosophy, lighting her torch at the consecrated flame of revealed truth, has dissipated these shadowy theories, and taught us, that the savage state is a state of social degradation, and that what these dreamers have called the germs or roots of tongues are, in fact, the ruins of once perfect languages. But we will reserve the discussion of this interesting question for a future number.

In the primitive revelation the first man received the highest degree of intellectual illumination, which, although obscured by his fall, still shone with a subdued splendor throughout the ages of the primeval world. By a just retribution, as man abused his great intellectual powers, he was gradually deprived of those

high gifts with which he had been originally endowed, and as his will, that moral faculty of the mind, became perverse, this bright illumination was obscured, because in his corrupt state it would have been hurtful rather than beneficial. It was this superior degree of intelligence which gave to the antediluvian races such vast superiority over the succeeding generations of mankind; and it was the same cause that led to that gigantic moral and intellectual corruption, which we can only comprehend in its consequence—the destruction of all flesh upon earth. The will being the moral power in man, it follows from what we have said, that if the will be perverse and licentious, the crimes of men are measured in their enormity by the extent of their understanding. Thus we trace the cause of all the horrors of the revolutions of the last century, urged on by enlightened minds, regardless of the salutary restraint of morals and religion. At the time of the revival of letters in Europe, and the discovery of printing, this key of knowledge, which had been mercifully taken from the corrupt generations, who had so grossly abused its treasures, seemed about to be restored to man, renovated as his soul and intellect had been by a long christian education. And after the intelligence of man had been extended by the revival of letters, and before the purple carnage and material philosophism which quickly followed the reformation, it seemed reserved for these latter ages to witness the full meridian splendor of human intelligences. It appeared that the great scheme of creation was about to be fulfilled, and that the intellectual light which played around the cradle, would brighten the last age of humanity. Men, catching the glowing spirit of Milton, had persuaded themselves that they beheld puissant nations, rousing themselves like a strong man after sleep, shaking his invincible locks; that they saw them as an eagle muing her mighty youth, and kindling her undazzled eye at the full mid-day beam, purging and unscaling her long abused sight at the fountain itself of heavenly radiance: but the calm impartial voice of history will declare the unsettled condition of the human family, and already discerns the malignant typhon of revolution gathering strength amid the increasing licentiousness of the age, collecting his scattered members, recruiting his exhausted energies, and preparing anew to assault, to oppress, and to desolate the world!

Considering man then as the work of the great Creator, upon whom in his munificence he had impressed his sacred image and bestowed the divine emanation of intellect; looking upon this most wonderful of the works of the Supreme Architect, as endowed with free will, and subjected to restraints admirably adapted to his condition and essential to his happiness; we can only account for his obscured understanding and unparalleled debasement, by the abuse of the favors heaped upon him. For, the whole history of the human race teaches us, that the mental and social degradation of man, in all ages, has invariably followed the corrupt and licentious will, which has led him to abuse his transcendent privileges. God is justice, and governs the world by fixed laws, and the genius of punishment presides over their fulfilment, and invariably chastises every prevarication or departure. The barbarian, debased beneath the primitive condition of manhood, in whom the light of reason glimmers like a half extin-

guished torch in an unwholesome atmosphere, has already suffered in his generations for his deviation from the path of rectitude, and for the abuses of his moral faculty; and untaught by experience, who sells her lessons at the price of tears, the enlightened nations of the present age, in their frightful abuse of the powers entrusted to them for high and holy purposes, seem, in the perversity of a corrupt will, and in the excesses of a presumptuous understanding, rapidly to approach the verge of that sheer precipice, around and beneath which, in the decrees of a superintending Providence, all is darkness and degradation. If the will or moral faculty were properly chastened, to enlighten the understanding would be to improve the heart; but when man, surrendering himself up to the desires of a rebellious will, "sins against the canon laws of his foundation," and is at war with his nature, to expand his intellect is to heap the measure of his enormities.

It will be objected that an enlightened understanding may compel the will. Alas! such is not the history of man. Throw around him a blaze of light, and closing his eyes to the celestial radiance, how often do we find him descending the paths which lead to the dark and unfathomable abysses of crime? He drinks abundantly of all the wells and springs of knowledge, but, like the fabled waters of the Golden Fountain, they convert him into stone. If virtue be not founded in the moral instead of the intellectual faculty, how shall we account for the transcendent virtues of the son of Jesse, the untutored peasant king, whose pastoral staff was displaced for the royal sceptre; whose harp, in the language of a beautiful writer, whose harp was full-stringed, and every angel of joy and of sorrow swept over the chords as he passed, but the melody always breathed of heaven; who hath dressed out religion in such a rich and beautiful garment of divine poesy as becometh her majesty, in which being arrayed, she can stand up before the eyes even of her enemies in more royal state than any personification of love, or glory, or pleasure, to which highly gifted mortals have devoted their genius. Let us confess the amiable truth: his will was chastened and obedient, the moral faculty was upright, and the divine flame of intellect in this pure atmosphere burned with a brilliant and holy lustre. And if the enlightened understanding can compel the reluctant will, how was it, that the son of David, he, to whom God had given "a wise and an understanding heart, so that before him there was none that was like unto him, neither after him was there any to arise like unto him,"—abandoning himself to the appetites of a depraved will, and forgetful of his covenant with Jehovah, "turned away from the commandments and the statutes, which the Lord had set before him, and served other gods and worshipped them?" And if to enlighten the understanding be to improve the heart, how shall we account for the corruption of all flesh in the races of the antediluvian world, which so far surpassed the generations of our age in knowledge and understanding? Whence the necessity of that divine prayer taught us by the meek and merciful Redeemer, "deliver us from temptation?" or of that other humiliating confession in the ritual, "we have done the things we ought not to have done, and we have left undone those things we should have done?" Alas! it is too often the case, the waters of virtue, like the sacred fountain of Dodona, cease to flow in the

noontide blaze of intellect, but gush forth in sparkling and plenteous effusion in the stillness of the benighted mind.

It was ordained of old, even from the creation, that beneath the branches of the tree of knowledge should lurk the enemy of man. Not all the vigilance of the celestial wardens of the gates of Paradise could repel the great corrupter of the will. But since "no falsehood can endure touch of celestial temper, but returns of force to its own likeness," armed with the spear of truth, let us endeavor to disrobe vice of her seemliness, and compel her to indue her pristine and repulsive deformity.

Inaccessible to the prejudices of the age in which we live, we have boldly canvassed the utility of the religious reformation of the sixteenth century in its ultimate consequences. Originating with man, it could not claim a celestial origin, and participated in the fallibility and frailty of his nature. If we could trace the divine impress in its character, introduction, or consequences, we are not so unmindful of the fate of the Israelite who stretched forth his arm to uphold the ark of the covenant, as to attempt an exposition of its effects upon the destinies of the children of men. There is but one reformation of the religious institutions of the human family, which bears the broad seal of the Deity, and that seems to have been pre-ordained from the beginning for the redemption of a lost world. From the fall of man, every system of polity, every type and figure of religious observances among the chosen people, shadowed forth this mighty revolution. The christian era constitutes a fixed central point in the history of man, and while preceding generations, filled with hope, looked forward to the coming of the Sun of Righteousness to resuscitate a perishing world, subsequent ages have looked back to the advent of the Redeemer as the sacred fountain, from which all the springs of life were to flow forevermore. The wise men, who came forth from towards the rising of the sun, were not the only watchers for the star that stood over the stable of Bethlehem, while the shepherds adored the infant Saviour. The rising of that star had long been foretold in those sublime passages of prophetic inspiration, which were consecrated to the Israelite; and the Gentiles had learned that it was to be to them too a light of salvation, and a gathering together of the nations of the earth into one fold under one divine pastor. When the veil of the temple was rent asunder and the mysteries of the sanctuary were revealed; when the oracles of paganism were struck dumb on their altars; when the types and figures of the old religion were overshadowed by the presence of the Deity; the only religious reformation, which has been promised to man, or which is consistent with the divine scheme of redemption, was consummated. Hence all subsequent changes in the religious polity of nations, are the work of human hands, and like any other result of merely human agency, are legitimate subjects of investigation. Whether mankind has gained anything permanently beneficial, by the reformation of the sixteenth century, which at far less cost to humanity and religion must not necessarily have followed the revival of letters and consequent intellectual development; whether the substitution of the revilings and mutual massacres of rival sects was less prejudicial to the true inter-

ests of religion than the persecution and intolerance of one established institution; whether it would not have been better to have purified and remodelled the ancient temple, venerable for its age and coeval with christianity, than to have erected a thousand different altars; whether universal freedom of opinion and its dark satellite infidelity, the leading consequence and necessary result of this reformation; whether all these have not rather retarded than promoted the social and moral improvement of man,—is a fair field for the exercise of philosophical inquiry.

The first great reformation, or divine fulfilment of the designs of Providence in the religious government of man, was introduced in a time of profound peace, at a period when the shadow of the Roman eagles had been thrown upon the uttermost boundaries of the known world, and when the language of Greece, with all its graceful purity, had attained its highest excellence. Its spirit was peace and good will towards man, and its corner stone was unbounded brotherly love. It was heralded in by a man of many sorrows, but whose life was a faithful exhibit of the sublime doctrines he taught. Clothed with the power of the Father, he was meek and humble of heart, and he never suspended the laws of nature, obedient to his will, but to bless and to sanctify those whom he ransomed from perdition. Did the dead arise from a bed of corruption, and cast off his tabid cerements,—the soul too was purified, and it was only the promise of a more glorious resurrection! Did the leper cast his scales, and was made whole in the flesh,—the spirit too was chastened, and he was clad in the raiment of innocence! Did the blind see,—the hand that restored his vision cast a divine ray into his soul, and he was blessed forevermore! Did the good man seek for virtue or the wise man for the lessons of wisdom?—the Sermon on the Mount contained every lesson of morality, all the fruits of wisdom. But the reformation of the sixteenth century originated in angry and exacerbad feeling, and one of its first consequences was a multiplication of conflicting and hostile sects, which during a space of thirty years deluged in blood the fairest provinces of christendom. In England, Scotland, France, Germany, and Ireland, the red car of reform rolled in the blood of slaughtered recusants. Each sect boasted its martyrs, but humanity and religion shuddered at the multitude of deluded victims. The primitive purity of the established current of religion, as it had flowed from the fountain of truth, may have been troubled by the admixture of licentious indulgences and lax morality, yet it would have been no difficult task to trace it in the midst of its slime and pollution, to its pure and sacred source. When the proud city of Babylon was beleagured by the forces of combined nations, the turbid waters of the great river were diverted into new channels, and though Babylon the great fell, the numerous currents deflected from the ancient bed, instead of uniting and rolling on in one pure stream, stagnated into a pestilential marsh, until nothing but the booming of the bittern and the howling of the hyena marked the spot where once stood in purple pride the city of the plain! Reformations therefore in the religious observances of a people, the work of perishable mortals, and divested of supernatural agency, whether they originate in Arabia or Germany, in

the solitary cave of Mecca or in the monastic cells of Erfurt, whether they eventually introduce sensuality or infidelity,—are subjects which fall peculiarly within the province of the philosophy of morals.

Carefully eluding all points of controversy in which religionists or sectarians might feel interested, and confining our remarks strictly to the operation of events upon the morals of a people, it is scarcely necessary for us to admit, that in the beginning of the sixteenth century, a large portion of the clergy had swollen beyond the girth of the canon, that the temporal power of the Roman hierarchy had become unhappily blended with its spiritual dominion, and that all reflecting men of the age felt and admitted the necessity of reformation in the morals of the teachers of the laity.

It may have been, that in the moral stagnation of the age, the torrents of revolution were required for the lustration of the people. Like the waters of the great deep, it may have been necessary for the preservation of pure and wholesome religion, that the conflicting tempests of unlicensed opinions and sectarian feelings, should sweep over its bosom, and agitate the element to preserve its purity; so that when the strife should have been rebuked, and calmness restored, it might have reflected from its pure and unruffled surface the unbroken image of the Everlasting. But when the winds were abroad, there was none to stay their violence, and men, alarmed for the protracted continuance of the storm, looked in vain for the celestial image of purity and peace, to spring into life, like the beautiful Aphrodite, from amidst the foam of the tempestuous sea. But if a divine spirit had raised and governed this tempest, as in the days of the redemption of man, when the "storm of wind came down upon the lake, and they were filled with water, and in jeopardy, there would have been among them One, to whom they would have gone, and said, Master, save us or we perish; and he would have arisen, and rebuked the wind and the raging of the waters, and they would have ceased, and there would have been a calm." But alas! there was none so powerful, and the waves of that tempest yet burst against the trembling monuments which girt and defend the morals of christendom.

If we incline to judge impartially between the establishment of religion at the introduction of christianity and its projected reformation by means merely human in the sixteenth century, we must learn to discriminate accurately between what is essentially divine and unchangeably eternal in the revelation of love, and the elements of destruction, which man has opposed thereto, or mingled therewith. In the ages which preceded and followed the christian era, we trace with sentiments of grateful admiration, of amazement and awe, the special dispensations of Providence for its propagation and advancement, its security and protection, and the wonderful concurrence of events towards this single object of divine love; while, in the introductory and concurrent circumstances of the reformation of the sixteenth century, we are compelled to lament the early appearance of those germs of disorganization, which have since shaken to their foundations the social establishments of the human race. Next to the bitter revilings of hostile sects, which, after this latter event, sprang immediately into life, our attention is forcibly attracted

to the alarming progress of infidelity, the elder daughter of that universal freedom of opinion, which this revolution necessarily introduced. Unrestrained by authority, and fostered by the prevailing liberalism, which a sudden freedom from restraint invariably produces, the philosophers and illuminati broached their appalling doctrines, subversive alike of government, social order, morals, and religion. The reformers had overthrown the temporal power, and circumscribed the spiritual dominion of the papal hierarchy; but the infidel and the scoffer, quickened like the reptile in the warm sunlight of science, exulted in the triumph of naturalism over christianity. Voltaire, in the concentrated malice of his heart, declared himself the personal enemy of God; Rousseau, more dangerous, because less indiscreet, proclaimed the worship of nature. The one was an open blasphemer, the other a dreaming sophist. The former would have erected amid the ruins of the christian temple an altar to Moloch; the latter, in the illusions of a mind not totally depraved, would have deified mysterious nature. From the declared enemy of christianity there was little to fear, but its firmest muniments were shaken by the insidious scoffer. While the stones which were hurled by the Roman soldiery against the walls of Jerusalem were white, danger could be avoided; but when the color was changed by the command of Titus, there was no longer a warning voice to bid them "bow down, for the bolt cometh." Voltaire was an atheist, because his wishes had warped his judgment, and made him disbelieve christianity because it was opposed to his passions. "This was his condemnation: he loved darkness rather than light, because his deeds were evil." But Rousseau was one of the most dangerous sophists of his age; and in the significant language of La Harpe, "every thing in his writings, even truth itself, deceives." What evils have not these men entailed upon the human family, by the perversion of exalted intellect? Filled with the sacred flame, it only expanded within their bosoms and spread its warmth around to detach the frightful avalanche, and scatter desolation.

Not all the celestial harmonies of that nature, which in the wild delirium of infidelity, he would have deified, could elevate the soul of the sophist to its beneficent author; and though endowed with all the graces of a refined intellect, he remained like the "Sea of Glass" in the valley of Switzerland, fast locked in the icy fetters of disbelief, though summer smiled around, and all the flowers of loveliness blossomed on its borders.

The whole history of the generations of the children of men has been an unceasing struggle between the benevolence of the Creator, and the rebellious will of his creatures. In the blissful walks of Eden, he bestowed upon our first parents the highest degree of intelligence of which their nature was susceptible; and with the slightest possible restriction, imposed as an acknowledgment of their dependance, they offended him in the only way in which they could rebel. In the ages which preceded the deluge, men were gifted with powers of intellect, of which we can frame but an imperfect conception; and they rapidly attained to such abandoned profligacy, that "it repented the Lord that he had made man on the earth." And when to regenerate lost man the awful price of the redemption was paid,—when by a long course of christian education he

had been fitted for intellectual advancement,—when the revival of letters had rendered him impatient of the blessing, even in the morning of science, he snatched the first rays of the rising sun to kindle the flame of rebellion.

Man is a social being. A pure morality is essential to the preservation of social institutions—and morality reposes upon revealed religion. Whatever therefore tends to shake the religious principles or to corrupt the morals of a people, is destructive of the social establishments and happiness of man. It is by this standard that we estimate the virtues or the vices of those who undertake to entertain or to instruct mankind. There is something so essentially criminal, so wholly unnatural in the perversion of that intellect, which has been bestowed on us for the praise of God and benefit of our fellow creatures, to the corruption of the morals of a people, that we are at a loss to conceive the inducement to a crime so foul and destructive. We can only compare such miscreants to that most unfortunate of the family of man, the public executioner; an officer absolutely necessary for the preservation of social order. His head and heart are constructed like ours, and yet by some unaccountable propensity, he prefers, to all the agreeable, lucrative, and honorable professions which present themselves in such numbers to the strength and to the ingenuity of man, the miserable employment of inflicting pain and death upon his fellow mortals. He is either ignorant of public opinion, or has the effrontery to brave it. The public authorities have no sooner assigned him a dwelling, than the habitations of others are removed out of sight; and in the midst of such a solitude he lives with his family and children, from whose lips alone he catches the tones of the human voice. And after an execution, when his loathsome task is consummated, he stretches forth his hand, red with the sign of death, and justice, shrinking from his presence, throws him a few pieces of gold, which he bears off between two lines of spectators retiring with horror at his approach. *No moral eulogy is applicable to him, for all such regard the social relations which unite the human family—and this man has none.* And yet all power, all greatness, all subordination depend upon the executioner; he is at once the horror and the bond of society. Remove from the world this incomprehensible agent, and that instant order will yield to chaos, governments will be subverted, and society perish. God, who established sovereignty, likewise ordained punishment; these are the two poles between which he has poised our globe, for "Jehovah is the Lord of the two poles, and upon them he has ordered the world to roll." And if such be the degradation of a human being in the discharge of a necessary and important duty for the maintenance of order, if such be the estimation in which he is held, and no moral eulogy be applicable to him, what station shall we assign to those, who, perverting the endowments of the intellect from their legitimate use, labor to sap the foundations of morality, and to subvert the social fabric by corrupting the *VIRGINS OF WOMAN*, the fast and firmest bond of civilization and society?

At the very head of the band of remorseless disorganizers, who, in despicable imitation of Voltaire, have assailed the morals of those two germs of society, women and young men, stands Edward Lytton Bulwer;

and it is sufficient to banish his productions from every domestic hearth that no husband can read Falkland or Ernest Maltravers to his wife, no fond brother to his sister, no father to his daughter. There is no more frightful evidence of the decline of public morals in the present generation, than the lamentable facility with which this fascinating writer has perverted the taste of nations, and substituted for the pure morality and manly vigor of Walter Scott, the sickly *sentimentalism* and the licentious profligacy, which infect every page of his romances. And unless this style of writing be utterly repudiated, there is much cause to apprehend a rapid descent to that gross licentiousness of manners and morals, which have invariably preceded the most deplorable social and political convulsions; for these enemies of mankind, unless they be repulsed in their first advances upon the citadel of virtue, like the martial Romans, deny all mercy when the battering ram shall have once smitten the walls. We feel no disposition to distinguish between the merits of creeds, but it would perhaps have been well for the interests of society, if the religious sects, which protested against the ancient establishment, had not neglected in their zeal to reform abuses, to retain that admirable feature in its ecclesiastical polity, which elevates matrimony to the dignity of a sacrament, and while it merely permits that a wife be put away for the single cause of infidelity, yet holds the bond to be indissoluble, and literally adheres to the solemn injunction, "Whom God hath joined together let no man put asunder." It is the high prerogative of christianity to have elevated woman to her proper station; and in all the events connected with its establishment, she has occupied an important station. As if by a just retribution, as she had been the first to disobey, we find her throughout the ancient dispensation in a state of comparative debasement, in which she was doomed to remain until the coming of the Messiah, when she was to bruise the serpent's head beneath her heel. But since that era, while in pagan nations she still abides the primal curse, she has been elevated to a level with the sterner sex wherever the light of christianity has been diffused. We need not advert to the terrible rites of the people who inhabit the banks of the Ganges, or the aborigines of our own forests, for evidences of the debasement of woman; for all the systems of ancient legislation despised, degraded, and maltreated the female race. "Woman," says the law of Menou, "in infancy is protected by the father, by the husband in youth, and by the son in old age. Her proper state is always that of dependance. The unconquerable capriciousness of her temper, the inconstancy and versatility of her character, the absence of all personal affection, and the natural perversity which characterises her sex, have not failed, notwithstanding every precaution, to detach them in a short time from their husbands." Plato wished that the laws would never for a single moment lose sight of woman, for, said he, if legislation on this point be unwise, they no longer constitute the half of the human family; they do however form more than the half, and just so much as they exceed us in number, are they inferior to us in virtue. All are acquainted with the almost incredible slavery and endless tutelage, to which women were subjected in Athens. Upon the death of a father who left behind him an unmarried daughter, the next of kin of the same name

was entitled to educate her and make her his wife; and a husband could bequeath his wife upon his death, as a part of his property to any individual he might think proper to select. Who does not recollect the severity of the Roman laws towards females? We might well imagine, when we remark the policy of these ancient legislators with respect to the *second* or *inferior* sex, that they had taken their lessons in the school of Hypocrates, who considered them essentially and radically evil. "Woman," he declares, "is perverse by nature; her disposition ought to be continually repressed, otherwise it will burst forth like the branches of a tree in every direction. If the husband be absent, the parents are unable to restrain or control her; she must be entrusted to the care of a friend, whose zeal will not be blinded by affection." In a word, the legislation of all nations of the earth has degraded woman; and even at the present day she is a slave under the Koran, and little better than a brute among the savages. The Gospel alone, by developing their innate and essential excellence, has been able to elevate them to an equality with man. It alone has proclaimed the rights of woman; and after having bestowed those rights upon her, has implanted within her bosom a principle the most active and powerful, whether for good or evil, which was the only security for their protection. Destroy, or even weaken the influence of this divine law in a christian community, by extending to woman that freedom which can only be safely enjoyed where that influence is deeply felt; and you will immediately behold that noble and touching liberty, which she derives from the Gospel, degenerate into the most shameless licentiousness. They will become the most terrible instruments to extend that universal corruption, which in a short time must shake the pillars of the state. The result of such widespread corruption must be felt in any nation; and soon, very soon, as public morals are corrupted, the government itself, reposing on morality, must bow down burdened with precocious afflictions, and its leprous decrepitude will fill all beholders with dismay and horror. A Turk or a Persian, who should attend one of our festive dances, would consider us mad; for he could not reconcile to his ideas of female purity this mingling of the sexes, and this unmeasured license. The heart of woman is so much more awake to celestial influences, her disposition is so much more conformable to the spirit of revelation, that by a kind of retributive justice, christianity has thrown around the sex her lightest mantle of freedom, and knowing well how easy it is to inspire vice, she has denied to the sterner race the power to compel it. Let this maxim be deeply impressed upon the minds of legislators, that as woman owes her freedom and elevation to christianity, so it will be necessary, before abolishing the scriptures, either to confine her, as in the Ottoman empire, or to subject her to frightful laws, as among the Hindoos. Well did the projectors of the French revolution understand the intimate connexion between christianity and female excellence, and the influence of that sex upon the morals of a people; and it is one of the darkest features in that darkest page of the book of man, that they first degraded her to a level with the brute, and only offered her their disgusting homage when she had been stripped of every moral attribute. When Elizabeth of France was led

to the scaffold, how touchingly does her simple remark find a response in the human heart: "Believe me, my friends, when you put persons of my sex to death, God thinks of it more than once." In imitation of the divine founder of that religion which had elevated her sex to its proper dignity, her last moments seem to have been more occupied with the guilt of her persecutors than with her individual sufferings. This is no place for a eulogy upon woman, doomed, devoted, suffering woman. In the hour of hope her presence gilds the distant horizon, in the day of prosperity she enhances its comforts, and in the dark hour of adversity, when the manly trunk is shaken by the tempest, she clings around it and supports it with all her delicate tendrils; and when the bolt shall have fallen, and the riven and shattered stock is all that remains of robust virility, she gathers up her clustering foliage around it, in tender solicitude to shelter and conceal from the scoffing and mockery of an unfeeling world the ruin which drags her to the earth. It has been the proud destiny of this country to have produced two distinguished personages, who, in point of true dignity and moral weight of character, have surpassed all the sons of the children of men. And it is not the least of the high attributes of these men, that they entertained and expressed throughout all the vicissitudes of an eventful life, a proper regard for the excellence, and a lofty sense of the purity of woman; and the daughters of their descendants will have shamed their mothers, before they forget the exalted virtues of Marshall and Washington. Woman, without whom the two extremities of life would be without succor, and its intervening space without pleasure, is not only the pride and ornament of joyous life, but her affections, like the waters of the Lybian fountain, grow warmer as the shades of adversity darken around the paths of our pilgrimage. The great objection we have to the principles and morals of Bulwer, Byron, and all that licentious school, is, that they attempt to infuse their mortal venom wherever its pernicious influence is most destructive; for they seek not only to sully the mirror of virgin purity, but to loosen the sacred bands of wedlock, and ridicule the sanctity of conjugal rites. In this the spirit of their writings is directly opposed to the genius of christianity; and worse than the infidel, they not only strike at the faith, but they labor to subvert the existence of social man. Let no lukewarm christian, let no tardy moralist tell us of the rape of Helen, or of the derelict queen of Carthage, from whose hapless and illegitimate loves have sprung two of those poems which seem destined to immortality. They were penned before the introduction of christianity, and were designed for a people among whom woman was deplorably debased, and the mere instruments of a master's pleasure. The scholar still admires in the Iliad, the wisdom of Nestor, the craft of Ulysses, the valor of Achilles, the courage of Hector, the prowess of Ajax, the sorrows of Priam, and the regal state of Agamemnon; but in the effeminacy of Paris and the inconstancy of Helen, there was nothing to shock the morals of a pagan generation, and woman was already debased beyond the influence of writers. But under the christian dispensation, since the revival of letters, and the consequent refinement of morals and manners, woman has become the bond of society; and those who spread before her the seductive

illusions of vice under the seemly garb of virtue, deserve to be accursed of God and man. How few works are there of a light character in English literature which a virtuous woman may safely read? Yet, be it mentioned to the enduring honor of the author of *Waverley*, that in the whole series of his romances there is not perhaps a single passage, which, in the hour of dissolution, he could have wished obliterated.

But if there be those who desire to learn how genius inspired by virtue can speak of holy wedlock, let them turn to the epic of Milton, and behold the mysteries of nature unfolded with all the chaste sublimity of christian eloquence.

To what causes shall we attribute the depraved taste of the present generation, and the morbid appetite for intellectual and moral excitement? Whither has fled the Anglo-Saxon solidity of our character, and to what are we indebted for the frivolous levity of the age? The shadowy genius of German mysticism seems to have impregnated our literature; and the perverted, unnatural, unhallowed sentiments of Byron, the filthy puling of Moore, and the deliberate seduction of Bulwer, seem to have banished all taste for the ease and elegance of Addison, the dramatic sublimity of Shakspeare, the surpassing purity of Milton, and the touching eloquence of the Bible. And the old English writers with all their Saxon vigor, how are they neglected! How beautifully has Bishop Taylor, in his sermon upon marriage, shadowed forth the immense consequence to man of the unsullied purity of woman? In that discourse his chaste and eloquent sentiments find their way directly to the heart. Marriage, he says, is a school and exercise of virtue; and though marriage hath cares, yet the single life hath desires, which are more troublesome and more dangerous, and often end in sin, while the cares are but instances of duty and exercises of piety; and therefore if single life have more privacy of devotion, yet marriage hath more necessities, and is an exercise of more graces. Marriage is the proper scene of piety and patience, of the duty of parents, and the charity of relations; here kindness is spread abroad, and love is united and made firm as a centre. Marriage is the nursery of heaven. The virgin sends prayers to God, but she carries only one soul to him; but the state of marriage fills up the number of the elect, and hath in it the labor of love, and the delicacies of friendship, the blessing of society, and the union of hands and hearts. It hath in it less of beauty, but more safety than the single life; it has more care, but less danger; it is more merry and more sad, is fuller of sorrows and fuller of joys. It lies under more burdens, but is supported by all the strengths of love and charity, and those burdens are delightful. Marriage is the mother of the world, and preserves kingdoms, and fills cities, and churches, and heaven itself. Celibate, like the fly in the heart of an apple, dwells in a perpetual sweetness, but sits alone, and is confined and dies in singularity; but marriage, like the useful bee, builds a house, and gathers sweetness from every flower, and labors and unites into societies and republics, and sends out colonies, and feeds the world with delicacies, and obeys their king and keeps order, and exercises many virtues, and promotes the interest of mankind, and is that state of good things to which God hath designed the present constitution of the world. There is nothing can please

a man without love; and if a man be weary of the wise discourses of the apostles, and of the innocency of an even and private fortune, or hates peace or a fruitful year, he hath reaped thorns and thistles from the choicest flowers of paradise; for nothing can sweeten felicity itself but love. No man can tell, but he that loves his children, how many delicious accents make a man's heart dance in the pretty conversation of those dear pledges: their childishness, their stammering, their little angers, their innocence, their necessities, are so many little emanations of joy and comfort to him that delights in their persons and society. But he that loves not his wife and children feeds a lioness at home, and broods a nest of sorrows, and blessing itself cannot make him happy; so that all the commandments of God enjoining a man to love his wife, are nothing but so many necessities and capacities of joy. She that is loved is safe, and he that loves is joyful. The wife should partake secretly, and in her heart, of all her husband's joys and sorrows, and believe him comely and fair though the sun hath drawn a cypress over him. She that hath a wise husband must entice him to an eternal dearness, by the veil of modesty and the grave robes of chastity, the ornament of meekness, and the jewels of faith and charity: her brightness must be purity, and she must shine round about with sweetnesses and friendship, and she shall be pleasant while she lives, and desired when she dies. Such is a touching sketch of the bliss of wedded life, and of the dependance of the happiness of man upon the purity and excellence of woman; and it is into this garden of bliss, to corrupt and poison everything around, that the immoral writer would crawl, like another serpent, to tempt the virtue of the daughters of Eve.

But we must conclude. How much of the literary fame of Byron and Bulwer is to be attributed to adventitious circumstances; of Byron to his title and of Bulwer to his clique? Why should we on this side of the Atlantic, in the infancy of a literature struggling into life against the jealousy and overpowering opposition of European writers, join in the senseless cry of defamation against our own countrymen, which is raised by venal and selfish pamphleteers? Virtue alone can lead to substantial fame; and while the English writers are viciously and dangerously corrupt, American authors, animated by a pure ambition, will gather no renown at the price of virtue. And whatever station may be assigned them in the temple of fame by a perverse generation, will matter little to those, who, in addition to the warm approbation of every upright heart, will carry with them into the evening of life the consoling reflection, that those signal attainments which are theirs for high and holy purposes, have been successfully devoted to the advancement of morals and the best interests of man. He who, in a corrupt age, has disdained to turn aside even for a moment, from the rude pathway of virtue, to build up a fleeting reputation amid the ruins of morality and virtue, will be remembered and read long after those enemies of mankind, who now shed a baleful influence in society, shall have passed away, like those noxious lights, which can only exist in a state of impurity and putrescence.

In conformity with the principles which we have endeavored to establish in relation to the perversity of the moral faculty in man, we already perceive the bud-

ding fruits of licentiousness. The unsparing license with which public and private morals have been assailed, has introduced into society a corresponding spirit of innovation upon all established institutions, social and political. We have broken loose from our ancient moorings, and are rapidly leaving the ancient landmarks far behind us. Putting out from the shores, and guided by the polarity of reason, we are seeking restlessly and hopelessly for happier climes. The whole world, all the nations of the earth, are in a state of unwholesome agitation; we have become impatient of the salutary restraints of law and order; and if we may correctly judge of the explosion which impends by the tremulous agitation which we observe and feel around us, there is yet reserved for history lessons which she may not obliterate with her tears, because they are designed to appal and to instruct future generations. "The stateliness of houses," we quote and conclude with this beautiful passage from an eminent writer, "the goodness of trees, when we behold them, delighteth the eye; but that foundation which beareth up the one, that root which ministereth unto the other nourishment and life, is in the bosom of the earth concealed; and if there be occasion at any time to search into it, such labor is then more necessary than pleasant, both to them which undertake it, and for the lookers on. In like manner the use and benefit of good laws, all that live under them may enjoy with delight and comfort, albeit the grounds and first original causes whence they have sprung be unknown, as to the greatest part of men they are. Since the time that God did first proclaim the edicts of his law upon the world, heaven and earth have hearkened unto his voice, and their labor hath been to do his will. 'He made a law for the rain; he gave his decree unto the sea, that the waters should not pass his commandment.' Now, if nature should intermit her course, and leave altogether, though it were for awhile, the observation of her own laws; if those principal and mother elements of the world, whereof all things in this lower world are made, should lose the qualities which now they have; if the frame of that heavenly arch erected over our heads should loosen and dissolve itself; if celestial spheres should forget their wonted motions, and by irregular volubility turn themselves any way as it may happen; if the prince of the lights of heaven, which now, as a giant, doth run his unwearied course, should, as it were, through a languishing faintness, begin to stand, and to rest himself; if the moon should wander from her beaten way, the times and seasons of the year blend themselves by disordered and confused mixture, the winds breathe out their last gasp, the earth be defeated of heavenly influence, the fruits of the earth pine away, as children at the withered breasts of the mother when the fountain of life had been dried up; what would become of man himself, whom these things do now all serve? See we not plainly, that obedience of creatures unto the law of nature is the stay of the whole world?

"Of law there can be no less acknowledged, than that her rest is in the bosom of God; her voice the harmony of the world; all things in heaven and earth do her homage; the very least as feeling her care, and the greatest as not exempted from her power. Both angels and men, and creatures of what condition soever, though each in different sort and manner, yet all with uniform

consent, admiring her as the mother of their peace and joy." Who would disturb this organic harmony? None but the enemies of God and man!

MELANCHOLY HOURS.

Hinc illa lachryma?

DEDICATED TO MY DAUGHTERLESS MOTHER.

I would I were on some far strand,
Where wildly rolls the ocean wave,
Far distant from my native land,
And pure affection's early grave.

There, oft alone, unseen, I'd roam,
When high its troubled waters rose,
Far from the green haunts of my home,
Where all my buried hopes repose.

And could I find one kindred form,
Like me oppressed, to share my wo,
Some sea-boy from the ocean storm,
O, then life's transient years might go.

There would I live and die, forgot
By all that I have known before,
With murm'ring waves to mark the spot
On that secluded peaceful shore.

For now I feel each passing day
Seems longer than an age to me,
For life's pure dreams have fled away,
And love and hope have ceased to be.

Why should I wish to perish here,
And wither, where all else is bright,
Where not a smile, nor e'en a tear,
Illumes the darkness of my night?

When by that distant snowy foam,
Of every joy of life bereft,
No rending bitter pang would come
To mind me of the home I left.

Yes, there I'd roam with spirit free,
And look to childhood scenes no more;
For what is left to solace me
When all I've lov'd have gone before?

And now the last hope of my heart
Is fled where all is bright and fair,
And I would willingly depart
Could I, dear sister, meet thee there.

And tell me, Susan, whose far grave
I ne'er again shall stand beside,
Will thy pure spirit by that wave
Commune with me at eventide?

O! say it will—and I will haste
With heart of joy to that far sea;
For life is now a dreary waste,
And I would sleep in death with thee.

Tallahassee county, Alabama.

MR. BUCKINGHAM.*

We must confess, that, if our expectation, in purchasing this work, had been to receive entertainment and instruction from the perusal of Mr. Hildreth's notes, we should regret, full as much as its value would justify, the half-dollar given in the exchange. We have here little more than the dry bones of those beautiful forms which have so delighted Mr. Buckingham's hearers; and, indeed, even this skeleton is not complete and symmetrical. The editor informs us, that, in order to complete his work, and make up for want of care and attention, in reporting a part of the course, he "has taken the liberty to make use of such authorities as came in his way, to fill out the notes of the highly interesting lectures, which form the groundwork of the following pages." If we were not expressly told, in the preface, that Mr. Buckingham had sanctioned the publication, we could not have supposed it to have been issued with his concurrence; not only because it would seem to conflict with his own interest, but also on account of its extreme meagerness. And, even now, we doubt whether he did not merely affect to permit what he could not well prevent. What is to be thought of a reporter, who, having forgotten the point of a good joke, or the humor of an allusion or illustration, gravely tells the reader, that, here, Mr. Buckingham "very facetiously remarked upon" such or such a subject; giving the same satisfaction as do those anecdote-retailers, who, invariably forget the latter half, or, at least, the gist of their stories? And what of an attempt to heighten our interest in a dull chapter, by informing us that "the audience, which had listened with eager attention, retired in a state of the highest gratification?"

We have recently had occasion to devote a few pages to a brief notice of Mr. Wolff, the missionary, a somewhat distinguished traveller, who, like Mr. Buckingham, visited this country and chose the medium of public lectures, for disseminating that knowledge of foreign lands, which he had acquired in his wanderings. We now propose to lay before our readers a parallel notice of Mr. Buckingham; and, as before, shall begin with such biographical particulars as we have been able to collect, acknowledging ourselves indebted for nearly all the matter, and even much of the phraseology introduced, without mark of quotation, under this head, to the sketch appended to Mr. Hildreth's Notes, and to Mr. Buckingham's "Address to the People of the United States," prefixed to the same. The former is extracted from a British periodical—"The Preston Temperance Advocate," in which it appeared nearly a year ago.

Mr. Buckingham was born at Flushing, within the harbor of Falmouth, in the county of Cornwall, on the 25th of August, 1786. His circumstances were humble, as we presume from the fact of his being so early devoted to a sea-faring life: at nine years of age he went to sea in one of his majesty's packets, from Falmouth to Lisbon. During his third voyage, the ship's crew

were made prisoners of war; and he, with the rest, was taken into Corunna, and there detained several months. At length, however, they were all released, on condition of their marching to Lisbon—a distance of more than three hundred miles,—where they arrived after a tedious and painful journey of several weeks, having travelled barefoot a great part of the way. From Lisbon they sailed for England. Buckingham was now only in his eleventh year.

His subsequent life, until 1813, with the exception of a short interval, was passed in the sea-service; and after his twentieth year, in the capacity of a commander, he sailed to all the four quarters of the globe, visiting chiefly, however, the West Indies, and the countries bordering on the Mediterranean. Having acquired a competency, in this occupation, he contemplated retiring from the service, and, with this intention, repaired to Malta; but, being soon driven thence by the violence of the plague, proceeded to Smyrna, and afterwards, travelled very extensively over the East. From his own short account of the regions through which he journeyed, contained in the address, above mentioned, we shall extract a condensed sketch of his travels.

Along the shores of the Mediterranean, among the Grecian Isles, in Asia Minor, Egypt, Nubia, Palestine, Syria, Arabia, Mesopotamia, Chaldea, Assyria, Babylonia, Media, Persia, and India, he personally inspected nearly all the remarkable cities and monuments of ancient greatness, which these countries contain. In Egypt, the gigantic pyramids, colossal temples, stately obelisks, majestic statues, and gloomy catacombs and sepulchres, which stud the classic banks of the Nile, from Alexandria and Grand Cairo to the cataracts of Syene. In Arabia and Palestine, the mountains of Horeb and Sinai; the Desert of Israel's wanderings; the plains of Moab and Ammon, with Mount Pisgah, the valley of Jordan and the Dead Sea; the ruined cities of Tyre and Sidon; numerous towns and villages celebrated in profane and scripture history; the city of Jerusalem, with all its sacred localities—the Garden of Gethsemane, the rock of Calvary, and the Holy Sepulchre. In Syria, the sea-ports of Berytus, Byblus, Tripolis and Laodicea, with the great inland cities of Antioch on the verdant banks of the Orontes, Aleppo on the plains, and the enchanting Damascus; the Temple of the Sun at Baalbeck, the splendid ruins of Palmyra, the gorgeous monuments of ancient magnificence in the Roman settlements of Decapolis, and the still earlier dominions of those who reigned, before either Greek or Roman, in Bashan and Gilead, and the regions beyond Jordan. In Mesopotamia, including the ancient empires of Chaldea, Assyria, and Babylonia, the birth-place and abode of the patriarch Abraham—Ur of the Chaldees, the ruins of Ninevah and Babylon, Bagdad, the renowned capital of the Caliphs, and the remains of the Tower of Babel, on the plain of Shinaar.

Media and Persia came next in order. Here he visited the ruins of ancient Ecbatana, the tomb of Cyrus at Pasargada, the remains of the great Temple of Persepolis, all rich in objects to gratify antiquarian taste; with the populous cities of Kermanshah, Isfahan and Shiraz, and the lovely valleys of Persian landscape, replete with the beautiful and picturesque. In India, a more extended field, to which a longer time was devoted, far more was seen and experienced. It is enough to say,

* Notes on the Buckingham Lectures: embracing Sketches of the Geography, Antiquities and present condition of Egypt and Palestine: compiled from the Oral Discourses of the Hon. J. S. Buckingham. Together with a Sketch of his Life. By James Hildreth. New-York: Leavitt, Lord & Co. 1838. 19mo. pp. 268.

that, after having navigated and accurately surveyed the Red Sea, from Suez to Babelmandel, and the Persian Gulf, from the Euphrates to Muscat, he coasted along the peninsula of Hindostan, visiting all its principal ports, and ultimately reaching the British capital in the East—Calcutta, on the banks of the Ganges.

What a vast field for observation and research was thus traversed. How many objects exciting the imagination, kindling a glow of zeal in the devotee of antiquarian lore, and deepening the reverence with which the student of ancient story regards the scenes that fancy has assisted the wonder-telling page to depict. If there be any grade of superstition which deserves to be cherished, as, at least, innocent, and productive of refined pleasure, it is that which impresses the living with a profound veneration for the abodes once peopled, and the graves still tenanted by the mighty dead: that which awakens the mingled feeling of awe and admiration, with which we trace man's lofty genius and power, and, withal, his frailty, in the monuments that have so far outlasted their proudest builders.

During his stay in Egypt, Mr. Buckingham seems to have enjoyed much of the favor and confidence of the Pasha, Mohammed Ali, whom he was instrumental in inducing to extend the commercial relations of his people with Great Britain and India. He also had influence enough to introduce the cultivation of cotton and sugar on the banks of the Nile; and is said to have been the first to recommend the plan of sending Egyptian youth to England, to receive education in the various arts and sciences of refined civilization. More than one hundred have already been so instructed in Great Britain, and a number in France, at the expense of the Pasha. Another measure which he recommended—the re-opening of the ancient canal across the isthmus of Suez—was not adopted; but this proposal, joined to other causes, led to a communication by steamboat, from Egypt to India, through the Red Sea, since established. During one of his journeys between these two countries, which he made over land, he wore the costume of the Arabs; and this, aided by a flowing beard, and the perfect knowledge of Arabic that he had acquired in his travels through Egypt, greatly diminished the perils of the way.

Returning from this adventurous journey, he sailed on an expedition against the pirates of the Persian Gulf; and, after a successful struggle for their extirpation, reached India a second time. Here he was appointed to the command of a frigate, belonging to the Imaun of Muscat, an independent Arab prince, in which he made several voyages in the Persian Gulf, and along the Indian coast, until reaching Calcutta, he resigned his trust, being unwilling to countenance and protect a barbarous traffic carried on by the Arabs, between Madagascar and Muscat. At Calcutta, by the invitation, it is said, of the merchants of that city, to whom his conscientious relinquishment of such a lucrative command had recommended him, he established a journal, to advocate the rights of the inhabitants—both natives and foreign settlers—to British freedom and privileges. He continued to conduct this journal for five years, and according to his own representations, his establishment, at the end of that time, was worth 40,000 pounds, and yielded a nett yearly income of

8,000 pounds, when for some of his strictures upon the oppressions exercised by the Company, he was arbitrarily banished from the country, by the temporary governor general, without trial or the privilege of making a defence, and all his property and prospects destroyed at a single blow.

On returning to England, Mr. Buckingham applied for indemnity against this unjust sentence, to the British government. All seemed to feel that gross injustice had been done him; multitudes were, deservedly, indignant at his wrongs; well attended public meetings were held to express this popular feeling; and a parliamentary committee, composed of men of all parties in politics, unanimously pronounced the condemnation of the East India Company. But, from some cause or other—either the chartered privileges secured to that company, the influence which it could exert, or the difficulty of bringing such an offender to justice—no measure of redress was afforded, though Mr. Buckingham urged his claims with untiring assiduity. He did not, however, stop here; for, disappointed in his hopes of obtaining justice, for himself, he devoted his attention to the investigation and public exhibition of the evils of the East India monopoly, and labored for its extinction. Partly in furtherance of this object, and, partly, we suppose, as a means of support,—for he was now reduced to poverty—he established and sustained for six years a monthly publication, entitled the "Oriental Herald," which had an extensive circulation, and, no doubt, served to awaken the public mind to a due sense of the important end which he was striving to accomplish. Some, naturally enough, accused him of being actuated by motives, arising from private interest; and no one can doubt, that his opposition to the Company was strengthened by the bitter recollection of his own wrongs—he must have been more than human to have overcome all feeling of personal resentment; but, still, no doubt, a warm patriotism was the main spring of his exertions. On giving up his journal, he travelled extensively, over England, Scotland and Ireland, lecturing in all the important towns, to large audiences. We are not informed whether his lectures, during the four years thus spent, were devoted, exclusively, to the denunciation of the East India monopoly; or were, also, descriptive of his travels: we suppose the latter. At any rate, we know that he has, at some time or other, delivered in the mother country the same lectures that he is, now, delivering here. He is said to have addressed no less than five hundred thousand, or, according to his own statement, one million of persons, in the course of this crusade; and at the same time, to have sustained active discussions, on his favorite subject, in numerous public journals.

We next find Mr. Buckingham in the British House of Commons, where he represented the town of Sheffield. His constituents had been so impressed by his zeal and activity in the cause of equal rights, that, though personally unknown to them, excepting as a public lecturer, he was chosen a candidate, and returned to parliament, victorious over three opponents, natives of the town; and since that period, until his recent departure from England, has continued, as their representative, to enjoy a large measure of esteem and their firm support. His labors in the legislature were chiefly directed to great philanthropic objects:—In

advocating all such he seems to have taken a prominent place. He had, at length, the satisfaction of seeing the accomplishment of his chief desires—the East India Company deprived of its illiberal charter; and, in India, the suttee abolished, the freedom of the press established, the revenue derived from idolatry suppressed, the right of settlement admitted, trial by jury secured, and, in short, the whole law of the land remodelled, upon the groundwork of British liberty.

Another object for which Mr. Buckingham labored was, the abolition of impressment and flogging in the navy and army; and his speeches on the former subject led to the passing of an act to encourage the voluntary enlistment of seamen. He also succeeded in carrying through both houses, a bill for the relief of authors and publishers, who having, before, been obliged to deposit eleven copies of each new work, in certain specified libraries, by the provisions of this bill need deposit only five. As chairman of the committee on shipwrecks—a situation for which his maritime experience and sympathies peculiarly fitted him—he prepared an able and valuable report. But the philanthropist may honor him for a still more signal service in the cause of humanity. He was the first to introduce the subject of *Temperance* to the consideration of the House of Commons. In the session of 1834, he delivered a forcible speech on moving for a select committee, to inquire into the causes and effects of intemperance, and, despite the opposition of government, carried his measure by a large majority. After several weeks of labor, and the collection of an immense quantity of evidence, from all parts of the country, the report of this committee, drawn up by Mr. Buckingham, as chairman, was laid before the House, and was ordered to be printed and published. Besides being copied into the columns of almost every newspaper in the United Kingdom, it was reduced into a single sheet, of which more than two million copies were struck off, and circulated, in Great Britain, Ireland, and America.

We pass over several less notable, though very important, measures, advocated by Mr. Buckingham, during his continuance in the House of Commons. His biographer remarks, "that, besides his parliamentary duties, he hardly ever omitted a day, in which he was not found, both in the session and in the recess, engaged in some public labor for the public good, in attending meetings and delivering addresses in favor of education, temperance and peace, and the promotion of the health, morality and happiness of his fellow creatures!" Having for six years represented the town of Sheffield, at the close of the session of Parliament, in July, 1837, he paid a farewell visit to his constituents, and announced to them his intention of retiring from public life. His avowed object in taking this step was, that he might have time, while a few years of health and activity might remain, to provide a retreat for the winter of life, and acquire the means of making that retreat independent as well as honorable. For this purpose he has visited our country. Arriving at New York in October last, he published the "Address to the People of the United States," before mentioned, and commenced lecturing. His success in that city seems to have been ample: delighted crowds thronged his rooms, and the public journals, without exception, so far as we have seen, trumpeted forth his praise in reverberating blasts.

At present, (March 14th,) he is in Washington, repeating his lectures.

Before leaving England, he published an address to the British people, giving an outline of his intended voyages and travels. Of this we will give a short abstract, as a proper ending to the brief sketch of his past life, which we have attempted. After completing his tour through the United States, and the British possessions, he contemplates passing on to the West Indies, and Gulf of Mexico. Here he wishes to determine the practicability of cutting a ship canal across the isthmus of Darien; and having accomplished this object, will proceed by way of Panama, Acapulco, or Lima, to China; from thence by the Philippine Isles, to Australia and Van Dieman's Land; and after visiting the principal stations in the Eastern Archipelago, by Malacca and Singapore, to India. Throughout the latter portion of this route—from the shores of the Pacific to India—he intends to combine the occupations of the traveller, the navigator and the merchant, defraying the expenses of his investigations, by operations of trade and barter by the way. In returning to England, he will revisit most of the Eastern countries over which he has already travelled, and traverse several parts of Europe.

To explain the objects of these contemplated wanderings, he recurs to a plan which he brought before the British public in 1830, of a voyage round the globe, to be undertaken at the expense of government. This plan, he says, was approved by a large number of the most distinguished members of the royal family and nobility, and by the leading men of science in France and England; and was prevented from being put in execution only by the political excitement and changes growing out of the late French revolution. The expedition was to be employed in making accurate surveys of coasts and islands imperfectly known; in ascertaining the commercial wants and resources of new countries, as a guide to commercial enterprise; in making scientific observations; and introducing the arts and learning of civilization among barbarous and savage tribes. Its motto was to be, "*Discovery—Commerce—Civilization*;" and this latter term he now explains by the included words, "*Temperance—Education—Mercy—and Peace*." In elucidation of this motto he remarks,

"The most fertile sources of crime and misery, in every country and clime, appear to me to be intemperance, ignorance, national and sectional animosities, oppressions, piracies and war; and the abatement of these, and the substitution of their opposites, is the most effectual reform which can be accomplished on earth. During my future course, therefore, whether in America or our colonies—through the Pacific or in the Australian seas—in China, India, and the Arabian gulf—in the isles of the Mediterranean, or on the continent of Europe, I shall seek for and profit by every occasion I can command, to advocate the four great moral objects I have named:—by recommending and assisting in the promotion of temperance societies, and infant and adult schools;—by communicating the arts connected with printing, where these may be at present unknown, and establishing periodical journals for the diffusion of useful information, and the advocacy of philanthropic improvements;—by teaching the advantages of union and co-operation in the formation of commercial asso-

ciations and friendly institutions, tending to bring hostile nations into more frequent communication through the mutually beneficial channel of unfettered commerce, and to bring opposing sections of nations into more familiar intercourse through the reciprocally advantageous medium of social meetings; so that each may benefit by a mutual interchange of their respective products, and a free utterance of their respective thoughts;—by visiting captives and prisoners, as well as courts and camps—in order to effect, if possible, by remonstrance and persuasion, a relaxation of the too bloody and barbarous punishments which unhappily everywhere prevail, and to show by example as well as precept, how much more powerful is the law of love than that of fear, and how much more desirable the reformation than the torture of any human being, both for the sake of the individual victim, and of society at large, as well as for the glory of Him “who desireth not the death of a sinner, but rather that he should turn from his wickedness and live;”—and above all, by pressing on the heads of governments, as well as on every class of the community, the ruinous and destructive policy of war, so revolting to all the best feelings of our nature, so subversive of the best interests of society, so contrary to the precept and example of Him who commanded us to “do unto others that which we would they should do unto us;” and who taught us, when we pray, to ask that our trespasses might be forgiven “as we forgive those who trespass against us.”

We cannot help expressing our surprise, that into this splendid scheme for “the most effectual reform that can be accomplished on earth,” the idea of propagating the religion of Christ does not directly enter!

From time to time, during his travels, Mr. Buckingham intends to transmit to London, for publication, the manuscripts of his journals. He anticipates that these will be sufficient to form a suitably sized volume, every few months.

Thus far we have exhibited Mr. Buckingham, in the light which he himself, and the author of the Sketch, to which we have already acknowledged our obligation, have cast upon his history. We now propose to attempt an estimate of his true character and abilities, relying, chiefly, on other testimony; though, by this, we do not mean to insinuate any thing against the credit of his biographer in the Preston Advocate: at least what we have drawn from this source bears good evidence of being, in the main, correct. As a text, on which to found a few remarks, we copy the following from a late English work—Grant’s “Random Recollections of the House of Commons.”

“MR. BUCKINGHAM, the member for Sheffield, is a person whose name has been, for the last eight or ten years, most prominently before the British public. He is generally supposed to have something of the quack in him. I am not sure that the charge is altogether unfounded, though I am persuaded he has often been actuated by the most disinterested motives in cases in which the general impression has been quite the reverse. I believe he may—unconsciously I have no doubt—have exaggerated the extent of his pecuniary losses by the arbitrary proceedings of the Indian government; but it cannot be denied that he did, in addition to the abstract tyranny and injustice of those pro-

ceedings, suffer in purse, or, perhaps, more properly speaking, prospectively, to a very large amount. That he has kept his persecutions, by the Indian government, before the public, with a prominence and steadiness at which other persons similarly circumstanced would have shrunk back, is not to be denied; but great allowances are to be made for him, when it is recollected that he lost, not a part, but the whole of his fortune, by his deportation from the East Indies, and that ever since he has had to struggle with all the horrors of poverty, sometimes, indeed with something approaching to absolute want.

“Mr. Buckingham is a man of more than respectable literary attainments. His travels in Mesopotamia and other countries of the East, are among the best that have been published respecting those countries. His *Oriental Herald* also, a great part of which was written by himself, was a journal of considerable merit. The great fault of his style, is its extreme wordiness.

“As a member of parliament he has not earned much reputation. On first entering the house he made great efforts, by repeated speeches of considerable length, to acquire for himself a name as a legislator; but the attempt was quite a failure. There was a strong prejudice against him, owing, in a great measure, to the general impression that he was a political adventurer. When he rose to address the House, the circumstance became a signal, sometimes for forced coughs, yawnings, &c. and always for inattention and other marks of want of respect. The result has been that he now scarcely ever speaks at all. Nor was he by any means regular in his attendance in the house last session, though previously he was one of the most exemplary in this respect, out of the whole six hundred and fifty-eight.

“Mr. Buckingham is a fine speaker. His manner is remarkably easy and pleasant. There is not a more fluent speaker in the house. His voice is sweet and melodious; but there is a sameness in its tones. His action is graceful, but is deficient in energy. He can speak at any time and on any subject. In person he is tall and handsome. Notwithstanding all the hardships and fatigues he underwent in his extensive journeyings in tropical countries, he appears to be of a vigorous constitution and in excellent health. His complexion is fair, and his hair of a light gray. He has a fine forehead. His features are regular, but distinctly marked. His face is full, and has something very intellectual about it. In his appearance and manners, he is quite the gentleman. He is about fifty years of age.”

We know of nothing which looks like quackery in Mr. Buckingham, excepting the language in which he sets forth to the public his own services and merits, and flatters those from whom he solicits patronage. Certainly the eulogiums which he passes upon his patriotism and philanthropic labors; the strong terms in which he speaks of the effect produced by his discourses, and of the unlimited confidence reposed in him by his constituents; of the bright and irresistible flame which he kindled throughout the entire British nation, and the triumphant accomplishment of all his plans and views, would suit the character of some peddling vender of pills and potions, much better than they do that of a reputed scholar and gentleman. At

least, in reading his address to the people of the United States, we were frequently and forcibly reminded of vermifuges and panaceas, the wonders of which, set forth by their humane and disinterested compounders, rarely indeed, in the columns of respectable newspapers; but, in unbroken continuity, on the pages of numerous penny sheets, sometimes fall under our notice. We do not say, that he exaggerates his own merits in a single instance: we have no evidence opposed to his assertions; and, even if we had, should esteem ungracious the task of contradiction. We doubt Mr. Buckingham's good taste, not his veracity. His self-bestowed panegyrics savor too strongly of the hustings. And so, we do not object to the flattery, which he lavishes upon the people of the United States, excepting as it looks, under present circumstances, too much like the fawning of a parasite. We would have a candidate for popular favor, carry with him, in his approaches to the public, the refined delicacy of private intercourse, avoiding whatever may give rise to the imputation, that, counting his wages, he panders to the passions of the multitude—shunning the very appearance of evil. We do not doubt that Mr. Buckingham's success has been increased by his skill in trumpeting. Without barefaced protestations, glaring sign-boards, and puffing extraordinary, quacks could scarcely make a subsistence by their trade. Their gains arise from practices which honest and respectable men despise; and their prosperity can scarcely sanctify the cajolery and deceit which have paved the way to fortune.

All must agree in giving Mr. Buckingham credit for considerable literary attainments. We cannot speak of his lectures from personal knowledge, not having had the pleasure of hearing them—a pleasure which we anticipate with impatience. But that they are, in a high degree entertaining and instructive, and, in point of style, polished and elegant; that they evince not only his abundant opportunity, during his travels, of collecting interesting and valuable information, but, also, his intelligence as a traveller, and the accuracy of his observations in Eastern lands, is the universal testimony of his American auditors. Mr. Grant's estimate of his merits as a public speaker is, also, corroborated by the impression which he has, already, made in this country. We have heard his oratory characterised, by several of his New York hearers, in nearly the same terms quoted above, so far as applicable to the lecturing style.

The feelings and habits of the present age are, certainly, unfavorable to that medium of communicating knowledge, which Mr. Buckingham has chosen. Lectures delivered as a part of the regular system of instruction, in academic institutions, or under the auspices of literary societies, though their use, in some cases, may be doubted, are, in this country and in Europe, established on a footing, which gives them the highest respectability, and ensures the character of the lecturer from any suspicion of quackery, or any danger of sinking in the public esteem. But the profession of an itinerant lecturer, who deals out his information to promiscuous audiences, at twenty-five or fifty cents a head, for some reason or other, about which we shall not stop to inquire, is not in very good repute. As if conscious of this, Mr. Buckingham labors to show, that he has not engaged in a business which should hold a

low place in common estimation; and for this purpose, besides alluding to his own success in Great Britain, adduces the example of many renowned men, "from the days of Abraham, who, according to the testimony of Josephus, thus taught the Chaldean astronomy to the Egyptians," down to the times of Marco Polo, Columbus, Camoens, Raleigh and Bruce. But we do not think him very happy in this attempt. Most of the examples which he cites are inapplicable to his case. If he had wished to defend the lecturing system in general, he need not have gone so far out of the way for authorities: in numerous European and American colleges, he might have found a sufficient sanction for that system. But, evidently, he is endeavoring to defend the peculiarities of his plan. Now, few, if any, of the illustrious instances enumerated are characterised by these same peculiarities. And, moreover, he has not taken into account the difference between the wants and resources of the times to which he recurs, and those of the present age. What would be thought of a public teacher, who, at this day, should open his school in a garden or grove, and plead the example of the sages of antiquity? In spite of Mr. Buckingham's classical and scripture authorities, the business of itinerant lecturing must continue to be of, at least, doubtful respectability. But this does not prevent its character's being, in some instances, elevated by the repute of particular individuals. In fact, it may be considered as a business which can yield no honor to any man, but on which honor may sometimes be conferred, by the weight of an established reputation for worth and learning. If he had been satisfied with setting forth his own experience, trusting, chiefly, to his well known character, we, at least, should have esteemed his prologue more appropriate. But, while making these remarks, and they are not made in an unkind spirit, we are free to congratulate Mr. Buckingham on his eminent success—on the respectability and even distinction given to his profession, by the force of high mental endowments, and that public esteem, with which his labors and services have been rewarded.

The question naturally occurs, what is the probable measure of benefit resulting to the community from such lectures? It is very certain that those really devoted to study may learn much more economically, as regards the expense, both of time and money, from books, than from oral discourses. But the latter have this superior advantage—that they attract the attention of multitudes, who thus imbibe knowledge, without any great effort, and who would never seriously apply themselves to books. And the excitement which the charms of oratory produce—the sympathies awakened in a crowded lecture room, tend to impress truth more forcibly upon the memory, thus, in some measure, making up for the opposite advantages of frequently renewed impressions. There are, however, other benefits, and of a different kind, resulting from such discourses as Mr. Buckingham's: they exert an influence tending to improve the morals and refine the literary taste of the community. There is a craving appetite, in persons of every class of society, for amusement; and, in most persons, for some amusement which does not require great mental effort. Hence the theatre, and other resorts of a still more pernicious character, are so much frequented. But we venture to assert, that,

to the great mass of men, intellectual amusements, suited to the capacity of those to be entertained, and not requiring forced intellectual exertion, are more attractive than any other. Our pleasures are heightened, tenfold, by the feeling that they are merely innocent; but, how much more by the consciousness, that our minds are expanded and our hearts improved, while the buoyant spirits, and the glowing blood give us new physical life. The history of theatres themselves sustains our position. If, then, proper and permanent sources of literary recreation were opened, they would diffuse a moralizing and refining influence. And such an influence has been exerted by Mr. Buckingham's lectures, though to a very small extent, because operating for so short a time. No doubt, multitudes in New York, listened to his discourses with chained attention, who, but for them, would have passed the time in utter listlessness, or in dragging the foul waters of dissipation, for unsatisfying and debasing pleasures.

Mr. Buckingham has been well received in the United States; and, no doubt, his fortune is rapidly improving, despite the pressure of the times. But, while we rejoice to hear of his success, we cannot approve of all the means employed to testify respect for his character. As a sincere patriot and philanthropist—for such we esteem him—he claims our admiration and praise; but, here he stands so prominently before the public, as a distinguished lecturer, that there is danger, lest testimonials, given to his worth and services in the cause of humanity, should, in the popular acceptance, be laid to the account of his popular eloquence. And while we, therefore, object to some of the public demonstrations of respect for him, which have been made, our objection to the manner of these demonstrations is still greater; especially to that of one, the credit of which rests with the good people of Philadelphia.

Before Mr. Buckingham left New York, he received an invitation to a great *temperance festival*, to be given to him in the city of Brotherly Love. *On dit*, that a dinner was first contemplated; but, then, many wished to extend the honor to Mrs. Buckingham; and, besides, a number of ladies, whose husbands were foremost in the affair, desired to be presented to the accomplished lecturer. Accordingly, to suit all concerned, a grand temperance tea-party was resolved upon. Now, the difficulty arose—where could a room suitable for the occasion be procured? After some consultation, it was, luckily suggested, that the Arch-street theatre, then unemployed, might be hired; and this expedient was adopted by the grave deliberators, some of whom, as we understand, were clergymen and inferior church-officers. The twenty-second of February was honored by the festival. For some time previously, it was advertised in the newspapers, and tickets offered at a dollar each. Of course, multitudes furnished themselves for the occasion: some, perhaps, in anticipation of convivial pleasure; some who were anxious to see and hear Mr. Buckingham; some, who, though principled against theatres, were glad of an opportunity to see the inside of one, without sin; and most, because the price of admission was so moderate. The appointed evening came, and the way to the place of temperate feasting was thronged. In looking round, on this gaily dressed assemblage, filling the boxes, and crowding the covered area of the pit, one might, almost, have expected

to see the curtain rise, and some celebrated actress make her debut amid shouts of applause. Perchance the polluted imaginations of some might have directed their eyes to the "third heaven," where the "nymphs of the pavé" usually shine, expecting there to behold the usual attraction.

But such thoughts were soon dissipated by a solemn sound, rising over the general buzz of conversation and merriment—the voice of prayer. A blessing was invoked upon the assembly, and the object for which it was convened—perhaps, too, upon the house in which they were met. This part of the scene reminds us of the prediction of one devoted to the pleasures of the turf:—that, before many years a prayer would be offered from the judges' stand, at every horse-race, on behalf—either of the men or the horses, we know not which. But we would not speak lightly of things that we hold so sacred. Let us pass on to the further development of this curious spectacle.

Mr. Buckingham addressed the crowd in a speech more than two hours long. His audience, with riveted attention, drank in his words, and those who had formed a high idea of his eloquence were not disappointed. Several other speakers followed him, who, perhaps, might, with better taste, have reserved their remarks for another occasion. We have not been informed of the exact "order of exercises," but suppose that, at this juncture, the speeches being finished, refreshments were served up. It would appear that they were delicious and abundant; though, indeed, it is said, that a large proportion of the eatables prepared were devoured rather before their time, by some very officious persons—frequenters of the theatre, no doubt, their knowledge of its localities having apparently been so correct—who broke in from the back of the house. However, the loss was either immaterial, or very soon repaired. But the alarm occasioned thereby, making all feel how precarious was the tenure on which their rights depended, quickened the activity of the crowd, in emptying the loaded chargers. The popular appetite, too, had been sharpened by the piquant intellectual repast. We Americans are charged with swallowing our food in hungry haste. But those who eat with great rapidity, must be equally hurried in seizing on their victuals: the supply must equal the demand. Plates, on this memorable evening, it is said, were scarce; or else the impatience and anxiety of the multitude, wrought up, by the occurrence just mentioned, to a pitch of phrenzy, forbade even the decency of a moment's delay. A thousand hands delved, incontinent, into the curiously ornamented pyramids of ice-cream, and gallantly offered their tempting spoils to the admiring fair, who had already devoured them with their eyes. Perhaps, however, all did not eat, as fast as they emptied their dishes: we are sure that some were seen, pocketing every manner of good things, even to the ices.

At length the crowd dispersed, at a good hour, and in decent order. The next morning's papers contained glowing descriptions of the "*GRAND TEMPERANCE FESTIVAL*;" and the Arch-street dealers in grog boasted, that for many a day their receipts had not equalled those of the previous night!

To speak seriously, we have stated nothing in the above account, which we do not believe to be substan-

tially correct. Nor do we think that the doings of an American mob cast any stigma upon the character of the American people. Even our mob would suffer nothing in the comparison with the mob of any other nation; but that is no reason, why its triumphs should be hailed with applause. If Mr. Buckingham should "write a book," descriptive of scenes in the United States, we are sure that he will feel much difficulty, in attempting to picture this temperance festival; what with his gentlemanly feelings toward those who would have done him honor, and his vivid sense of the ridiculous.

DESULTORY THOUGHTS ON HUMAN CREDULITY AND VERSATILITY.

By a Southron.

It is curious to observe how the opinions and the follies which have been exploded in one generation are often revived in another, and embraced with as much confidence and ardor as if they never had been rejected or exposed. It is not quite fifty years, I think, since the imposture of Mesmer received the stamp of reprobation from the philosophers of France, assisted by the sagacity of Franklin. In this day of light and intelligence, it is again revived under new auspices and with more exorbitant pretensions, and meets with the countenance of men of science, and the most unbounded credulity of thousands who flock to witness its wonders. There seems indeed to be a cycle in human affairs, like the cycles which govern the movements of the heavenly bodies in their sublime and wonderful revolutions. Our habits and our manners, our follies and our propensities all have their day, and are laid aside for others which in their turn prevail for a season, after which the former return upon us and are received with renewed eagerness and favor. Thus they follow each other in a perpetual round, and verify, to a great extent at least, the wisdom of the adage, that there is "nothing new under the sun."

The truth of these remarks will be questioned by none; yet it is probable there are some who have not duly considered to what a variety of subjects they may be extended. All observe it in the fashions. The dresses of our fair ladies, which a few years ago were so narrow that they could scarcely step, and so thin that they shivered with cold, have at length got back to the ample dimensions of former days and the comfortable habiliments of their grandmothers. The large and inconvenient sleeve is giving way; and the bosom, once too temptingly displayed, has been kindly hidden from our view, and the less attractive back and shoulders are now exhibited in its stead. Short waists, flowing robes and the graceful drapery of the Grecian costume have yielded to long waists, short skirts and heavy plaits, while the old fashioned bishops are revived in the admired tournures of our lovely daughters. It is true we have not yet returned to high-heel shoes and cushions for the ladies, or to periwigs and powder for our sex. But the former may reasonably be expected, if the young Victoria, ambitious of queenlike majesty and impatient of her want of height, should add to her

heels, or resort to that other succedaneum for a scanty stature, the ladies' cushion. I have a sample before my eyes of that antique head-dress, in a colored print of the lovely Antoinette, which has been handed down from the last generation in the family of a patriot to whom Louis the sixteenth was always dear. Wigs too will come in with the first battered beau of the *haut ton* who seeks to cover his baldness or to hide his gray hairs; and old as I am, I expect to see the reestablishment of long queues with powder and pomatum, and all the disgusting consequences which attended them. But the return of old times is not confined to the fashion of our coats. Our habits and manners have changed not less than our dresses. And some chance may yet bring them back again in all their freshness. Take for instance, the vulgar habit of profane swearing. When I was a boy, every gentleman swore;—and what is worse, in every company. Even the ear of the fair sex became familiar with this gross violation of decorum. But as Bob Acres says, "Damns have had their day." What gentleman would now blurt forth his vulgar oaths before a lady, or wound the sacred ear of a divine by "taking the name of the Lord in vain?" and yet a war, with all its other mischievous consequences, may bring back into polished life this disgusting practice. "The soldier, bearded like the pard and full of strange oaths," is ever so great a favorite with the fair, that his follies will be forgiven and his bluntness forgotten, in the richness of his epaulets and the gallant trim of his regimentals. The same destructive besom may sweep away our temperance societies, and the can and the tankard of the camp may again introduce that censurable excess which prevailed at our banquets in by-gone days. I remember "when I was young and debonair," I was at an entertainment in this city, which was served in the second story of the house, whence there was no escaping by a window. The landlord most hospitably locked the door and put the key in his pocket, and the glass was circulated so briskly that there were left but few to bury the dead. These excesses are now indeed no more; but I fear they are but suspended for a season, in spite of all the efforts and all the influence of temperance societies. These arrogate to themselves that change in manners which is chiefly the result of the perpetually varying current of human affairs. In its eternal windings it trenches upon our customs in succession, wearing away first one and then another, and giving rise to new ones which flourish in their turn for a season, until they too are swept off by the same resistless tide. Conceding the beneficial influence of temperance societies, particularly among the laboring classes, we are unwilling to believe that they have been the sole occasion of the happy changes we have witnessed. What society is there against swearing? what combination against fox hunting? what against balls at public houses? what against barbecues? Yet all these are obviously in the wane, from the silent but effectual operation of public sentiment, and of the perpetual fluctuation of everything that is human. Our customs and opinions succeed each other as the congo and the minuet have been succeeded in the ball-room by the waltz and the gallopade. This is particularly manifest, as we shall see in the sequel, in matters of the deepest concern; in the sciences, in religion and in politics. But before we

touch upon them, let us advert for a moment to the subject of human credulity, which, though in a state of perpetual change, seems indelibly ingrained in the character of our race.

Philosophers have never agreed upon the characteristic by which man is to be distinguished from all other animals in the creation. Plato defined him to be a two-legged animal without feathers. But Diogenes turned this definition into deserved ridicule. Some say that man alone is a rational animal; but the dog and the beaver, and the ant and the bee, stand forth as the champions of the inferior races, and challenge for them also the attributes of reason. Once it was said that man was a cooking animal; but the ouran-outang denies our exclusive title to that appellation. For my own part, I incline to look upon him as a *credulous* animal, though I thereby hazard the exclusion of the skeptics from the pale of humanity—a consequence at which many of my readers would not be disposed to repine. The truth is,—however numerous the individual exceptions may be,—there is no trait of the human character more universal than this. In all time and in all countries, superstition and credulity have lorded it over the mind. To say nothing of ghosts and hobgoblins, of demonology and witchcraft, of the foul fiend that haunts the moor, or the flying Dutchman that makes the seaman's blood run cold, we may go back to classical days for our illustrations. What a lasting monument of human folly is to be seen in the heathen mythology, where superstition is busy in the apotheosis of the winds and of the floods, and where every affection of the soul is invested with an imaginary form, and placed by devoted polytheism in the temple of the gods? Look at their oracles, now uttering the maxims of the sage and delivering the predictions of a penetrating sagacity, and now practising the cheats of a juggler, or answering questions about the future, in riddles that serve but to perplex, or to lead to destruction the misguided inquirer. And yet they were crowded by the credulous; and the monarch and the slave were found together at the shrine. Turn away from the land of literature and the arts, from the land of Socrates and Solon, to the country of the demigods of Italy, the country of Brutus and of Tully. Over that wonderful land the same superstitions reigned, and the same ready credulity in the monstrous creations of heathen mythology. What then shall we expect when we pass into Asiatic climes, to the country of Zoroaster and Confucius, to the land of Brama or Mahomet? Over all of them credulity sits brooding, and the darkness of ignorance covers them as with a pall. Is it better with christianity; with the christian who justly derides the mythology of the heathen and the false prophets of the musselman and the hindoo? Ask the sects of each other. Ask of the protestant the history of credulity in popish countries. Straitway he recounts a long catalogue of her superstitions. He points at once to her priests,—here giving absolution;—there praying a soul out of purgatory;—here curing a disease by the influence of their prayers, and there administering extreme unction to the departing zealot. He points to the tombs of the fathers crowded with prostrate pilgrims, and brings you the toe of St. Peter, or a veritable fragment of the cross, or the liquifying blood of the holy St. Januarius. Who but blushes for humanity at such an exhibition of its follies? Credulity

herself would blush, if she were not too credulous to perceive her delusions.

Turn next to the protestant;—are his skirts clear? I am too much of a protestant to be an impartial judge in such a matter, but there are some of its churches that I can venture to approach. Take the church of the Baron Emanuel Swedenbourg, an enthusiastic and visionary man, whose heated fancy led him to believe that he had ascended to the fifth heaven, and there had seen all the glories of the godhead, and mingled with angels and archangels around the sapphire throne of the great Jehovah. Yet this religious madman had his devoted followers, who believed his visions, dwelt upon his rhapsodies, and doubted not his revelations. I once had the pleasure of meeting with one of his sect, a remarkably intelligent lady of the New Jerusalem church, with whom I entered into an interesting conversation about her great apostle. I asked her if his followers really believed he had ascended to the fifth heaven. "Assuredly, sir," said she. "And upon what grounds do they believe it?" said I. "Upon the same," said she, "on which you believe that St. Paul had done so before him. Both of them were pure and virtuous, and pious and inspired men, and neither would have asserted that which was untrue!" Thus it is that credulity affords a ready answer to every difficulty; so that we almost cease to wonder at the declaration of the ancient father, who, in the fulness of his faith exclaimed, "*Credo quia impossibile est.*"

When we turn to the ordinary occurrences of life, while superstition and credulity meet us at every step, they are yet perpetually changing, like a Proteus. In one age, we have a monarch touching a patient for the king's evil, or a noble lady soothing the pain of her champion's wound by anointing the spear with which it was inflicted. In another, we have one impostor performing wonders with Perkins's points, and another practising the ridiculous mummeries of animal magnetism. Charms* and conjuration are the every-day remedies of the vulgar, and quack medicines and infallible prescriptions fill the columns of our journals and the stomachs of the sick. We cannot lay a fence or kill a hog without looking at the age of the moon, whose influences, extending beyond the tides, are fancied to rule over the ravings of the lunatic† and the fluids of our frames. It is wonderful, too, to see this ready credulity exhibited by the most intelligent. Dr. Johnson believed in ghosts: Those who burnt witches for the love of God, were among the first men of their day and generation: and in these our times, we are

* There is an amusing reminiscence handed down by tradition, of an incident which occurred in the old court of chancery before the venerable chancellor Wythe. One morning on taking his seat, he complained with some warmth of the masses of trash which the counsel introduced into the records; and in proof of it, read the deposition of an aged lady in support of the credit of another witness. She said, "She had known him from a boy, and that when he was a youth he was one of the greatest liars she ever knew. That she felt sorry for him, and as a cure advised him to swallow the heart of a rattlesnake; that he did so, and ever since, he had been as truthful a man as any other in the settlement." I am not sure that this is the only instance of the prescription of a bolus or a charm for the cure of a moral infirmity.

† This opinion is, I imagine, as old as Hippocrates: Lord Bacon obviously espouses it, though he denied that the influence of the moon satisfactorily accounted for the tides.

not without examples of a ready belief of whatever is miraculous. Here we have the two first men of their day, disputing for the hundredth time whether cheat is a distinct plant, or springs from an injured grain of wheat. The old chief justice maintained the latter, and of that opinion most certainly was Lord Bacon.* There we have a venerable old man, whose gray locks straggle scantily over his scalp, sitting with his elbow rested on a table, with a glass tumbler before him. He holds between his finger and his thumb, a simple thread, to which is appended a small key, so held as to be within the mouth of the glass. What is he about? He is exhibiting his *key clock*!† He verily believes that from some secret cause, some influence emanating from his hand, or some wonderful correspondence between the glass and the key, this simple apparatus will strike the hour of the day with unerring accuracy. No argument can overthrow his convictions, and yet he is among the most venerable and respectable of men, and fills his elevated station with dignity and ability. I have heard he derived the hint from Lord Bacon's works. After a diligent search through the *Instauratio Magna*, the *Sylva Sylvarum*, and the *Novum Organum*, which form together that wonderful *omnium gatherum* of wisdom and of notions, I at length met with the passage which gave rise to this curious conceit. [see vol. 2, p. 64.] No man, indeed, was ever more full of such conceits than was the great stickler for the theory of the antagonizing principles of radical heat and radical moisture. But let us not jeer this greatest of philosophers, whose noble genius gleamed through the darkness of the age in which he lived. It shed its bright rays over every science, and laid the foundations of that analytical philosophy, which in our times has led to such wonderful results. Let us rather reproach ourselves for still clinging to the nonsense and the impudence of charlatanism, in spite of the wise lessons we have imbibed from his philosophy. Let us lift up our eyes in amazement at the countenance given by the intelligent among ourselves to the grossest of impostures. In this boasted era we have had Redheffer's perpetual motion as a fair set-off against the elixir of life and the philosopher's stone of former times. We have also the *Quarterly Review*, gravely publishing a narrative of the wonderful performances of an Egyptian magician, through whose incantations an untutored boy can call up the spectres of the dead, as the witch of Endor brought into the presence of the trembling Saul, the awe-inspiring image of the departed prophet. And we are gravely told by the accomplished editor how far above suspicion is the source from which this wonderful story is derived; as though he yielded credence himself, to the miracles of this magician of the land of necromancy. Again; at this moment, animal magnetism, though exploded fifty years ago, as an impudent imposture, is revived both in Europe and America, with renovated zeal, and received with obvious favor by many of the illuminati. Exhibition rooms are crowded with gaping spectators, who swallow every monstrous pre-

tension with unsuspecting credulity, and scientific men are to be found engaged in eager investigations into the mysteries of the art, with less zeal for the exposure of impostors, than for the establishment of so valuable a discovery on the surest foundations. Human foresight cannot anticipate, indeed, the mighty wonders it is yet to work, and the countless blessings it is to shower upon our race. It will accomplish with so much facility what now costs both labor and time; for it shames the telegraph in its operations, and leaves even steam itself at a countless distance in the rear. Cognate with the lightning, the magnetic influence can "put a girdle round the earth in forty minutes." Of what use, then, are the wonders of the telegraph or the yet greater wonders of our express mails, when a sleeping girl, under the manipulations of a magnetizer, can see what is going on in the extremities of the "empire," and give you the news of the very moment in the most distant corners of the earth? For we have no reason to doubt, that if this new Pythian priestess can, in the infancy of the art, discern in her visions what is going on in Philadelphia, while she is sleeping quietly in New-York, her visual ray will soon be so improved as to enable her to discern what is passing in the remotest kingdoms of the world. Such wonderful results lead to the suspicion that this most valuable discovery must have been well known to the ancients, and was the true secret of the oracle at Delphi and the vaticinations of the cave of Trophonius. Be this as it may, the magnetic lady bids fair to render altogether superfluous the espionage of courts, and the use of spies in the camp of an enemy. What movement of an army could be inscrutable to a secretary who had been duly magnetised, or to a general who had had the benefit of the passes of the operator; when a girl fast asleep, can see through a millstone at a glance, and discern without difficulty the interior of a dwelling a hundred miles removed? And then what an acquisition to science! that an ignorant female, who, when awake, hardly knows that there is such a thing as what Mrs. Ramsbottom calls the "abominable* region," and who cannot tell the liver from the spleen, should all at once be initiated in her sleep, into the mysteries of nosology and pathology and physiology, and all the secrets of the materia medica; and without seeing or touching a patient, should be able to judge of his disease, and prescribe the proper remedy for its cure! Verily this is a wonderful science, and entitles its professors to an eminent exaltation. It is true that it is somewhat partial in its influences, and uncertain in its operations. It requires FAITH and WEAK NERVES† to ensure the success of an experiment; and it is said that in the recent exhibitions in a certain city, even the intimation by a visiter, in an audible voice, of a design to apply a red-hot poker to the nose of the sleeping patient, had a very marvellous effect upon the profoundness of his slumbers. Whether this was occasioned by the disturbing influence that iron

* "Abdominal."

† "Men are to be admonished," says Lord Bacon, "that they do not give place and credit to those operations, because they succeed many times; for the cause of the success is oft to be truly ascribed unto the force of affection and imagination upon the body agent; and therefore these things work best on weak minds and spirits; as those of women, sick persons, superstitious and fearful persons, children and young creatures."

* He says, vol. 1, p. 489, speaking of the diseases of grain, "Another disease is the putting forth wild oats (obviously our cheat) into which corn oftentimes doth degenerate."

† This incident is taken from real life.

must naturally have over the magnetic current, or by the natural repulsion of the tip of the nose for the white heat of a poker, I must leave to others to determine. I can only say that I learn no attempt was made at a repetition of the scientific experiment in a town where there was so little faith and such iron nerves, accompanied by an obvious disposition to make the actual cautery the test of truth. The experimenter and his familiar, it is said, precipitately took leave, and departed to pursue their investigations on some more propitious theatre. Much regret was felt at this premature retreat, as an opportunity would have been afforded by a few day's delay, of greatly advancing the cause of benevolence, as well as of science, by subjecting to the magnetic influence some unfortunate children who have been blind from their birth, and on whom the blessing of sight could doubtless have been conferred, for the time being at least, by this great cathedra of the 19th century.

Let us pass from animal magnetism to medicine. Fifty years ago a dose of calomel was shunned as a poison, and tartar emetic was looked upon with an almost holy abhorrence. Since that time they have been dignified as the Samson and Goliath of the materia medica, and are exhibited without scruple, by the ignorant as well as the initiated. The former has been indulged in to an excess against which all are now ready to exclaim. I was once much amused at a practical joke upon its extravagant use. In passing through a village, I saw a flour barrel standing at an apothecary's door, with the word "*Calomel*" in very large capitals marked upon its side. In amaze, I drew up my sulky, and asked an explanation. It turned out to be a piece of humor of the young apothecary, in ridicule of the preposterous extent to which the doses of this medicine were carried among the customers of his master. A humorous gentleman of the same place declared that in a severe illness he had taken so many pills,—not all calomel, it is true,—that when he sneezed they flew all over the room. But this passion has passed away, and we are getting back to what our forefathers thought to be a wholesome horror of mercury, and a wise confidence in nature, as the only true doctor. The science of medicine is, perhaps, above all others most remarkable for its oscillations. The medicaments in vogue at various times, are quite amusing. Lord Bacon's works are full of those of his day, many of which he very confidently recommends. Among others, he advises "a trial of two kinds of *bracelets*, for comforting the heart and spirits, one to be made of the *trochisk* (or cake) of vipers, and the other of snakes; for, *since they do great good inwards, especially for pestilent agues, it is like they will be effectual outwards.*" He tells us too, that "the moss which groweth upon the skull of a dead man, unburied, will staunch blood potently;" a quality which it has in common with the "blood-stone," and "the stone taken out of the toad's head," which is "very efficient, as the toad loveth shade and coolness;" and what is very wonderful, he gives in detail an account of the "English ambassador's lady at Paris, helping him away with" (i. e. curing) "a hundred warts within five weeks, by rubbing them once with a bit of bacon skin, which she afterwards nailed up to a post in the sun." Nevertheless, he seems somewhat skeptical about the "constantly received and avouched"

opinion "that the anointing of the weapon that maketh the wound will heal the wound itself."*

Such a mass of absurdities cannot fail to excite our laughter in these days of light and scrutiny. Yet are we sure that the hobbies of modern practitioners will not be equally derided when we shall be in our graves? The liver and the nerves, the mucous membrane, and the spinal marrow, the heart and the brain, all of which have had the ascendant in their turns, may very possibly soon give way to some new theory, which the enthusiasts in pathological anatomy may elaborate from their minute investigations. Already have the visions of glory which filled the dreams of Lavater been dispelled by the greater glories of phrenology and the successful theories of Gall and Spurzheim. Those who can laugh at lord Bacon and his fanciful notions, will yet gravely descant upon the developments of the brain as indicated by the skull, and pronounce ex cathedra that the subject of examination is according to the principles of their art, a saint or a Scapin, a philosopher or a fool. Nay more: not only do we learn from the ingenious German the position of every passion and every talent in the map of the human brain, but we are now promised by the naturalist Geoffroy St. Hilaire, a series of memoirs on the functions and situation of the soul itself. He states that he has no hesitation in treating on this subject;—that he feels strong in his own powers, and means first of all to examine the nature of the *spiritus corporis* of St. Augustin!!† In truth there seems no measure or limit to the whimsies of the human mind, nor any reasonable hope that with all the advantage of the wisdom of other times we shall ever be any wiser than those who have gone before us.

It were well, indeed, if in more important concerns the versatility of the human character was not as conspicuous as in the lighter matters which we have been passing in review. But unhappily it is otherwise, *Graveurs mement.* The oscillations in religion and the

* I have in my possession a folio volume translated from the French, and purporting to have been written by the physician of the King of France, about 170 years ago. It is a treatise on pharmacy, materia medica and the practice of medicine, and exhibits of course the most approved state of the science at that day. Truly it is a curiosity. The recipes resemble Lord Bacon's. The fillings of a dead man's skull are the prescribed remedy for epilepsy and madness, and distilled vipers, the specific for the bite of every species of rabid or venomous animal; provided, always, the patient has not been bitten above the teeth, for in that case the poison is inevitably fatal. Hartshorn is also a great panacea with this grave doctor. He tells us it is extracted from the horn of the elk, the swiftest of all animals, whom the hunters can never take unless they find him sick; and even then they must be very adroit, for if the animal discovers them, he puts his hind foot to his left ear, which cures him in an instant, and he flies beyond the reach of his pursuers!! Such was the profound ignorance and ridiculous credulity of this grave medic, who was doubtless looked up to in his own times as a miracle of sagacity and wisdom. In what light his successors of the present day will be regarded by their successors a hundred years hence, time must develop. But if we may conjecture, from the diversities already prevailing among the Sangrados and Brunonians, the Broussaists and the Old School, the Thompsonians and Homoeopaths, we should prophesy, that the theories and practice of them all, will be remembered only as subjects for ridicule in some Literary Messenger of the day, while some new system will, in its turn, be the hobby of the profession, and prevail until it has immolated its heretomb, as others have done before it.

† Eclectic Journal of Medicine, vol. I. 305.

radical changes in political opinion, are as remarkable, though not quite so rapid, as the revolutions of fashion in the cut of a coat or the maxims of etiquette. Take religion: its state and condition how surprisingly different at different times!! Let us go back somewhat more than a century. In the 46th number of Addison's *Spectator* of the date of April 1717, we have the following letter illustrative of the state of things at that day.

"Sir, I am one of those unhappy men that are plagued with a gospel gossip, so common among the dissenters. Lectures in the morning, church meetings at noon and preparation sermons at night, take up so much of her time, it is very rare she knows what we have for dinner, unless when the preachers are to be at it. If at any time I have her company alone, she is a mere sermon pop-gun repeating and discharging texts, proofs and applications so perpetually, that the noise in my head will not let me sleep till towards morning. The misery of my case is great, and great numbers of such sufferers plead for your pity and speedy relief, otherwise we must expect in a little time to be lectured, preached and prayed into want, unless the happiness of being sooner talked to death prevent it.

Yours, &c.

R. G."

Who would not think that this letter was written in these our own times, which exhibit occasionally, at what are called "revivals," the same inveterate spirit of church going and "gospel gossips?" And yet how numerous have been the ebbs and flows of fanaticism and even of "pure religion and undefiled," since the day when Addison, the gifted champion of christianity, thought it necessary to chastise the excesses of its votaries by his ingenious and amusing satire. I remember well the decorous solemnities of the church more than fifty years ago and the respectful deference which was paid to all its ministers. I remember well the punctuality with which upon my knees at the lap of a sainted mother, my hands were lifted up, morning and evening, to the giver of all good, in my little prayers. Then came the tempest of the French revolution. It swept away religion as with a besom.* It struck down the ancient monarchy with all its appendages, and the ecclesiastical state, which clung to it like a parasitical plant, went with it. But as sometimes happens in the convulsions of a revolution, the destruction of abuses involved the eradication of much that was sacred and most worthy of veneration. Religion itself fell into disrepute, and the apostles of the

* It must not be forgotten, however, that the poison of infidelity was long circulating through Europe before its signal triumph in the French Revolution. To mention the names of Voltaire, D'Alembert, Condorcet and Jean Jacques Rousseau, and of Hume, Helvetius and other disciples of the same school, is scarcely necessary. But there is one not so generally known who far surpassed them all in the boldness of his blasphemies. I allude to the Baron D'Holbach, a German writer, of whom Voltaire thus speaks in a letter to D'Alembert: "I have just read 'Good Sense.' There is more than good sense in that work. It is terrible." And D'Alembert echoes back the remark: "I think as you do in regard to 'Good Sense,' which appears to me a much more terrible book than 'The System of Nature.'" What, reader, think you must be the character of that work, the hardihood and blasphemies of which were terrible even to Voltaire and D'Alembert? And yet, believe me, it is far worse than your imagination, even thus aided, can suggest. D'Holbach was born at Heideisheim in 1723 and died in 1789. He lived principally in Paris, and was a member of the academies of Petersburg, Berlin, &c.

new philosophy sedulously sought to obliterate every trace of its existence, by the abolition of institutions which had prevailed for twenty centuries. The sabbath was changed into the decade, and the surplus of five days, which were thus left in the year, were called in the republican calendar the *sans culottides*! The contagion of infidelity spread far beyond the limits of the new republic. It was smuggled into the American States, with the extravagancies of Jacobin principles, which received too ready an admission from the votaries of rational liberty among us. The effect was correspondent. The religious institutions of the land withered at the touch of that great pollution. Religion was not only neglected but mocked at and despised; and though the benign spirit of our institutions forbade persecution in its most odious forms, yet the bigotry of skepticism—not more tolerant than the bigotry of the fanatic, looked with contempt and contumely on the scanty few, who still were followers of the cross, and faithful to their divine master through good and evil repute. Again a change has come over the face of things. The reign of skepticism has been short, and religion has once more resumed her sway. The pendulum has made a complete vibration, and we are now, as in the days of Addison, in danger of falling into the opposite extreme of "gospel gossiping."

I tremble to think that these mutations in human affairs are destined sooner or later to sap our political institutions. The fluctuations of opinion on the subject of forms of government already begin to show themselves among us. Not only are there those who, weary of the Union, would willingly go back to the wretched system of independent states, or throw themselves upon the protection of a feeble confederacy, but there are others in whom fretfulness at the triumph of political adversaries inspires a doubt of the success of our experiment in representative democracy, and prompts a secret sigh for institutions like those of the father land. These you may occasionally hear gloomily suggesting that a people never can be happy under a government like this, and that our rights would be more secure and our prosperity less interrupted under the rule of Nicholas or Napoleon, or the gentle reign of the young Victoria. God forbid that our cycle should as to this matter be very speedily accomplished. But the versatility of public opinion leaves no room for much confidence in the permanence of our institutions. Of this versatility, daily evidence is afforded. Take a single instance. The sentiment has now become familiar that a slave population is the happiest in the world, and that the existence of slavery is neither a moral nor political evil. Compare this growing sentiment with the opinions of George Washington and Thomas Jefferson, or James Madison and George Wythe, and their disciples. Compare it with the sentiments boldly, though indiscreetly advanced, about five years ago in the General Assembly of Virginia; and we shall see at once how little confidence can be placed in the steadfastness of our principles. Whether wrong then or now, is immaterial to the matter in hand. The change itself establishes the position for which alone we contend. It sustains the charge of fickleness and versatility, and with fear of greater changes, perplexes and confounds us. The human mind, emancipated in this happy country from every fetter, riots in its liberty and runs into ex-

traces. The trammels of prejudice having been thrown aside, we look to the benign light of reason alone to direct our pursuit of truth. But unhappily the mists of passion and the *ignes fatui* of theoretic notions, entice us from the paths of true wisdom, and we wander backwards and forwards in the trackless regions of boundless speculation. The inevitable consequence is, that all principles are unsettled and all opinions unstable. There is nothing sure, nothing sacred, nothing immutable among us. We have no axioms (in politics, at least,) which may not be contested, no postulates which may not be denied. The great problem yet to be solved by the statesmen of the country, is to give steadfastness to opinions and stability to principle; to correct that perpetual tendency to change which gives some fitness to the comparison of a republic to a vessel that is tossed upon the unquiet waves of the never resting ocean. This problem can only be solved through the agency of education; not in the learning of the schools alone, or in the acquisition of a wretched smattering in ancient tongues, but in the great lessons of wisdom and virtue also. We must, in this respect at least, take our model from the ancient philosophers. Our youth must be taught *things* as well as *words*. The schools of ethics must devote themselves less to the metaphysics of the science, than to the great and practical principles of true wisdom. The pulpit, instead of being confined to the mysteries of theology and the discussion of intricate points of doctrine, must condescend to instruct their flocks in the great duties of life. They must mingle with the lessons of christianity, the inculcation of the beauty of virtue and the temporal as well as eternal advantages of a pure and sublime morality. *That*, after all, is the only foundation upon which political philosophy can firmly rest. The principles of right and wrong are ingrained in the nature of things. They are as eternal and immutable as the heavens from which they emanate. What rests upon them will be steadfast and enduring, instead of undergoing that perpetual vacillation which is fated to every institution built upon the principles of "adulterated metaphysics."

I shall conclude my "rambles" by a short quotation from Edmund Burke, though his political speculations are in very bad odor with us. In his splendid declamations in defence of antiquated error, there is nevertheless intermingled much profound wisdom, which our prejudices against him and his opinions ought not to lead us to disregard. Though he may cherish too far the growth of our prejudices, it behooves us to take care that in attempting to eradicate them, we do not root out also our most valuable principles. Let us not destroy the wheat in pulling up the tares. Let us be careful, while we disabuse the mind of pernicious prejudices, to fill their place with the sound and well reflected opinions of wise and virtuous men: let us "engage the mind in a steady course of wisdom and of virtue," and fill it with good principles "of ready application in the emergency," so that the man may not "be left hesitating in the moment of decision, skeptical, puzzled, and unresolved." "You see, sir," says Mr. Burke,* "that in this enlightened age I am bold enough to confess that we are generally men of untaught feelings; that instead of casting away

all our old prejudices, we cherish them to a very considerable degree, and, to take more shame to ourselves, we cherish them because they are prejudices; and the longer they have lasted and the more generally they have prevailed, the more we cherish them. We are afraid to put men to live and trade each on his own private stock of reason, because we suspect that the stock in each man is small, and that the individuals would do better to avail themselves of the general bank and capital of nations and ages. Many of our men of speculation, instead of exploding general prejudices, employ their sagacity to discover the latent wisdom which prevails in them. If they find what they seek, and they seldom fail, they think it more wise to continue the prejudice, with the reason involved, than to cast away the coat of prejudice and leave nothing but the naked reason; because prejudice with its reason has a motive to give action to that reason and an affection which will give it permanence. Prejudice is of ready application in emergency; it previously engages the mind in a steady course of wisdom and virtue, and does not leave the man hesitating in the moment of decision, skeptical, puzzled, and unresolved. Prejudice renders a man's virtue his habit and not a series of unconnected acts. Through just prejudice his duty becomes a part of his nature."—If I cannot concur in carrying these opinions to the extent to which Mr. Burke would carry them, there are yet some prejudices that I would anxiously cherish in the bosom of the rising generation; I speak of our prejudices in favor of our free institutions and of that union which under heaven is their surest guarantee.

GARVIL

ADAM O'BRIEN.

About the year 18—, I left the valley of the Shenandoah, on an excursion over the Alleghany range of mountains, which I had never traversed before that time. It was early in the month of May, and the broad and fertile lands of the garden of Virginia were putting on their rich verdure, and the forests had unfolded their leaves, and the whole air was redolent with the blossoms of our flowering locust. As I ascended the steep and rugged road from the mouth of Savage to the Backbone, vegetation gradually disappeared, and every bud was as closely locked up on the summit as in the middle of winter. The view, though unobstructed by foliage, was not, however, as extensive as my fancy had suggested, and far less imposing than many mountain prospects with which I was familiar. On the right, however, you see, in your ascent, the vast cleft in the great Alleghany, through which, the Crab-tree and Deep creek pour their waters, forming with the rills that tumble from the mountain sides, the Savage river, which I had just passed. In the distance this cleft or gap looks as regular as the chop of the woodman's axe. It is the most stupendous chasm I have ever seen, and is one of the greatest curiosities of our mountain country. It is not universally known that the most western waters of old Cohongaronta (for that was one of the Indian names of the Potomac) rise on the western side of the great Backbone; so that the lofty ridge of the

* Vol. III. 106, 107.

Alleghany does not in this spot divide the eastern and the western waters from each other. The dividing ridge is a small mountain which does not exceed five hundred feet in height, and forms by its semicircular shape a sort of cove, behind the great mountain, within which the waters gather that make the Savage river. They then pour themselves through the mighty gap which some convulsion has opened for them, the sides of which cannot be less than 2,000 feet in height. After dwelling for some time on this stupendous object, I descended into the glades, whose beautiful natural meadows, interspersed with small hillocks, covered with clumps of trees free from undergrowth, were in striking contrast to the rugged scenery of the frowning mountain. The soil is, however, cold, and the seasons as backward as on the highest pinnacle of the Alleghany. The consequence is, that population is very scanty, though the country is often covered with beautiful herds of cattle, which are driven from Hampshire, Hardy and other counties, in the spring, to range in those abundant pastures during the heats of summer. Pursuing my way through the continuous meadows to the little Yough, I found myself at sunset in comfortable quarters at old Armstrong's, with a good fire, which the cool evenings made agreeable; and strong coffee, good tea, exquisite venison and fine trout to regale me. Next morning I resumed my march with little hope of such another inn. In a dozen miles I left the glades, and ascended Briary or Cheat mountain, the view from which is not less magnificent than that from the Warm Spring rock. At its foot, on the western side, roll the waters of the Cheat, the largest branch of the Monongahela, bordered by some fertile low grounds, and forming where the road crosses the river a beautiful farm called the Dunkard's bottom. I paused on the bank of this noble stream, not with admiration only, but with doubt about crossing it. I heard at the inn that it was *fordable*, but as I was also told a man had been drowned there only half an hour before, and as I knew how reckless of danger backwoodsmen are, I was still hesitating. Just then a horseman appeared on the opposite bank. Though distant three hundred yards, I could discover that he was a stout, fat man, on a very small and weak horse, riding on a large bag, and his bridle reins, as I afterwards found, were made of a strong tow string. He plunged in and the water was in an instant up to the root of his horse's tail. He laid himself back pretty much at his ease, and left his little horse to feel his way among the huge stones that render that ford one of the worst in Virginia. He stemmed the torrent successfully, and at length reached the shore. "Good God, friend," said I, "how could you venture across this torrent on that little horse with your weight, and that large bag full of oats?" "Lord bless you, sir," said he, "I did not care nothing at all about it. You see, sir, I knows this here river as well as my own cabin. You must know I was the ferryman here many a day, and many a time I have swum it when it was higher nor it is now. So if I had got a ducking, I could ha' got out slick enough." As I had no fancy, however, for such a navigation, and had not been trained to the dauntless habits of our hardy highlanders, who fear nothing, and always "go ahead," whatever stands in the way, I quietly wended my way to the ferry, where I passed dry shod, and escaped a cold bath at the expense of a ninepence.

Passing Kingwood, the county-town of Preston, evening brought me to Gandy's, far famed as being the worst house on the road. But unfortunately there is no missing it. He who luxuriates one night at Armstrong's, was always destined inevitably to all sorts of discomfort at Gandy's. It is situated at the eastern base of Laurel Hill, which seems to say to the wearied traveller, with more success and less presumption, than Canute to the ocean—"Thus far shalt thou go and no further." Accordingly I resigned myself to my fate and entered the uncomfortable "Place to rest at for travellers." As I walked into the apartment and drew my chair near the fire, my eye was attracted by an aged man, who was eating his very frugal meal at a table, almost as long as the side of the house, to which it seemed attached as a fixture. His back was to me, and though the scanty gray locks which were scattered on his scalp bore evidence of his great age, yet his brawny shoulders and muscular frame seemed to contradict their testimony. He wore a hunting shirt dyed with arnotto according to the fashion of the country, and his dress otherwise corresponded with this indication of his condition in life. The old lady who was giving him his supper was herself nearly eighty years of age, and was engaged in conversation when I entered. The first sentence I heard was from her lips.

"And how old are you now, sir?" said she.

"Ninety-three, madam," said he.

The answer startled me.

"Ninety-three," said I, "and where do you live?"

"In Kanawha, sir."

"In Kanawha! why that is one hundred and fifty miles from here."

"Yes, sir."

"And how did you get here?"

"I walked."

"And how far do you walk in a day over these mountains?"

"About twenty-five miles, sir," said he.

I was much surprised, but here suspended my examination. The old lady recommenced hers.

"And how old is your youngest child, sir," said she.

"A year last April, madam," said he.

"And how old is your eldest?" said I.

"Sixty-four years old," said he.*

My curiosity was very much excited by this account of himself, from the lips of a patriarch bordering on a hundred years of age, and not less so by the plain and simple good manners of the venerable old man. So as soon as our scanty and uninviting meal was ended, I took the liberty of asking the name and somewhat of the history of this pilgrim through life's weary way, who at more than fourscore and ten years was still struggling in the humble walks of life; still pursuing with unextinguished zeal some phantom—some hope—some glowworm fire, and still looking to earth as to his home, instead of pointing for it, like Anaxagoras, to the skies. What hope—what object could have tempted him so far from home? Was it that he could say in the pathetic language which even Burns could envy,

"Na'e hame ha'e I, the minstrel said,
Sad party strife o'erturned my ha',
And lonely at the eve of life,
I wander thro' a wreath of snaw"?

* The above detail, as well as what follows, is literally true.

It was not this: he had a wife and a young child the object of his care. Was the burden beyond his strength? Then he had a son of more than sixty, on whom to lean in his latter day, when pressed by the hand of rude mischance, and compelled to throw himself and his helpless charge upon another for protection and support. What then was the motive of this wanderer through almost trackless mountains—on foot—alone—his staff his only stay, and even without a dog for company? Reader! he was on his way to the county of Monongalia to ferret out a LAND TITLE!

I am well aware that in any other country than this, my story would be disbelieved. My readers would set me down as a pretender in the almost threadbare art of romancing, and my only credit would be the zeal which I display in contributing my mite to your pages. But those who are familiar with American backwoodsmen, feel and understand at once, how powerful a motive with an old settler and locator of land-warrants, is the hope of securing a title to some scanty glen among the hills, or of discovering a spot of vacant land between the boundaries of other occupants. Upon inquiry, I found that my new acquaintance was no other than Adam O'Brien, of celebrated memory in the north-western part of Virginia, where his name or rather its initials are to be found marked on numerous trees as evidences of settlement. He was, I think, an Irishman by birth, though he was certainly in Virginia as long ago as the war of 1756, at the time of Braddock's defeat. At a later period he seems to have gone over the Alleghany, contrary to the King's proclamation, and was found in that region at the commencement of Indian hostilities before the battle of the Point in 1774. In this situation he became an Indian scout or ranger, and passed his days upon the frontier, amid all the hardships and privations of the forest, and in perpetual hazard of the tomahawk and the scalping knife.

After learning his name, and the service in which he had been engaged in the prime of life, I asked him what circumstances had led him at so early a day to pass into the wilderness and encounter all the perils and the sufferings of the frontier. "Why, Lord bless you, sir," said he, "I did not mind it a bit. It was just what I liked. You see I was a poor man, and I had got behind hand, and when that's the case you know there's no staying in the settlements for those varments, the sheriffs and the constables. They are worse than Indians any day, for you daren't kill 'em no how. Now you know the King's proclamation* warned every body to keep the other side the big ridge, so there was no people over on this side except what run away from justice; and when they got here they were as free as the biggest buck agoing. The red men lay still after

* I presume he alluded to the proclamation of 1763, which reserved "the lands and territories lying to the westward of the sources of the rivers which fall into the sea from the west and north-west," and "strictly forbid on pain of the King's displeasure all his loving subjects from making any purchases or settlements of any of the said lands without his special leave." It also expressly enjoined upon all officers to seize and apprehend all persons whatever, who, standing charged with treasons, misprisions of treasons, murders, or other felonies, or misdemeanors, shall fly from justice, and take refuge in the said territory, and send them under proper guard to the colony where the crime was committed, &c. in order to take their trial for the same." The trans-alleghany country thus appears to have been the city of refuge of those early times.

the peace in sixty-three, so we were as well off as could be in these here backwood settlements. We had tramped through the woods too often not to know where the good land was upon the water courses. Some squatted here and some there—near enough to hear a dog bark or the crack of a rifle, but not too near neither. There was a fine place at the Dunkard bottom, and there, there was a settlement, and there was a settlement where Clarksburg now is. This, mind, was just after the peace, when Fauquier was governor. Well, we all had our little cabins, that hadn't a nail in 'em, but the roof was of clapboards, kept on by a long sapline laid crosswise, and tied fast with hickory wither. You may see some of the like of 'em now in the nooks of the hills. And we had our little patch of corn and potatoes, and powder and ball enough to keep us in bear meat and venison. And now and then a pedler would come over among us, with a little rum and ammunition, and some pins and needles for our old women, and a heap o' little matters that would suit the like of us. We had no money—not even a cut half-bit; but every body had skins, and that was the very things the pedlers come for. And if so be, one had no skins, his neighbor would lend him some, and next time, maybe, he would have to borrow. And we all wur snug and comfortable, I tell you. But at last came the Revolution, and there was a land office opened for patenting the vacant lands; and then the land spekulators poured upon us; and as all settlement rights were saved, all our settlements were as good as gold, and we set about making new settlements. That was easy done. There was nothing to do but mark your name on a tree, and cut down a few saplines and plant a handful of corn, and you'd get a right to four hundred acres of land, though it afterwards cost a good deal of hard swearing, as you may guess. You may see A. O. B. now upon a heap of the trees in the woods through the country here. That stands for Adam O'Brien. That's my name; and I was employed to make settlements on the good lands, and many of 'em I did make sure enough, and after all I am now as poor as a bear in the month of March.

"Well, as I was a saying, we lived quite happy before the Revolution, for there was no courts and no law and no sheriffs in this here country, and we all agreed very well. But by-and-bye the country came to be settled; the people begun to come in, and then there was need for law; and then came the lawyers, and next came the preachers, and from that time we never had any peace any more. The lawyers persuaded us when we lent our skins to our neighbors that we ought to take a due bill for 'em, and then if they did'nt pay they never let us alone till we sued 'em; and then the preachers converted one-half, and they begun to quarrel with t'other half, because they would not take care of their own souls; and from that time we never had any peace for our soul or body. And as for the sheriffs, the varmint, they were worse than a wild cat or a painter; for they'd take the last coverlet from your wife's straw bed, or turn her out of doors in a storm. Oh Lord! oh Lord! its I that knows it! my old blood gets hot when I think of it. My second wife, no, it was my third wife, was lying in of her fourth child in the 'cold winter,' in the middle of January.

* Panther.

One of these here spekulators had brought suit agin me for my little settlement, and what with bad management and hard swearing and perjury, he gained it. And the sheriff come one snowy day in January, with a writ of possession to turn me out, and out we went, and my poor wife I took to an old cabin that had but half a roof on, and she never was out of it till she come out a corpse. I'll tell you, what mister, I thought I'd rather live among the savages all my days, and take my chance of a tomahawk, than live among justices of peace and lawyers and sheriffs, who with all their civility, a'nt got no natral feeling in 'em. They sarved me amost as bad as the copper devils sarved old Tom Hart there down upon the Ohio.*

"How was that?" said I, wilking to divert the mind of the poor old man from reminiscences that seemed to shake his aged frame with emotion.

"Oh!" said he, "it was a sad affair, but what every body looked for in them hard times. I heard old Hart tell about it myself, one time when the Osages was coming into Virginia on their way to the seat of government. They staid all night at Gallipolis, a little below the Point,† not far from where I live, and they were to have a war-dance, and the folks all wanted to go over from the Point to see it, and they wanted Hart to go. And he would'nt. And they asked him why not? And he said because he should want to kill one of them, and he said he was too old to commit murder, and the Indians were all at peace, and it would be a sin to kill one, but if he was to go he should want to kill one of the damned copperheads. And so he up and told what aggravated him so much agin 'em.

"You must know, just about the time of the battle of the Point the Ingians was even on, around the settlements. The settlers were sometimes forted,‡ but whenever the innimy retired they went on to their settlements agin to plant and work their corn, and then the savages would come upon 'em of a sudden, and burn and scalp and slaughter all they come across. The man of the house had to go to the field with his gun, and oftentimes when he was at the plough the woman kept watch with the rifle. Rich people, mister, who have now got all these here lands, don't think much of what a world of suffering they cost the poor settlers. Well! Tom Hart went out one morning to plough, leaving his wife and children at home, and taking his rifle to shoot a buck if he should see one, for he never mistrusted about the Ingians, as it was rather before the troubles broke out, and they had for sometime been quiet. As he was coming home from his work what should he see but his house all afire. He run on, not slow, I tell you, and when he got there, he burst through the fire and found his wife and one child tomahawked and scalped and t'other child gone. He rushed out—for the fire was too hot for him to stay, and took the trail and followed on. He heard a cry like a wild turkey, and he knew it was an Ingian. So he got behind a tree and answered him; and presently a tall Ingian come tramping through the bushes, thinking 'twas another Ingian that answered. So he shot him.

* The above recital is as nearly as I can recollect a substantially accurate statement of the old man's remarks.

† Point Pleasant.

‡ Gathered together in a fort with block houses for defence.

He then followed on the trail 'till about dark he came to where they were camped in the fork of two little cricks. And there was his little daughter in the thick of them. I forget how many they were, but not many; so he makes for home as fast as he can—gets back to the settlement and gets what neighbors he can to go with him. And so they went, and 'tween daylight and sunrise they come upon 'em, where they were with the little gal. They sneaked up and all were to fire together, and he begs them for God's sake not to hit his child. And so they let fly, and some tumbled down, and some jumped up and run off, and Hart and his men set up a whoop, and rushed on and saved the child and carried her safe back, and ever since that time he's been mortal innimy to all the race, and I raly think he would kill one if he was to see him, no matter where. And yet he got his spite out of 'em at the battle of the Point. How many he killed that day he never could say for sartain; but he could swear to two, for as the Ingians and white men were treed, whenever they could they took good sight, and twant hard to tell when they knocked one over."

A new subject was thus broached, and I asked him if he was at the battle of the Point; he answered in the affirmative, and told me a good many things about it which I had heard before. I was particularly struck with his account of old Cornstalk, the Indian chief, who commanded the red men. He was often during the day on a little hillock where he could command a view of the whole battle, and gave his orders in a voice like a speaking trumpet. The old man could not repress his admiration of the noble savage, though he was his *natural* enemy, and he inveighed in strong language against the manner in which he was slain.

We sat till late bedtime chatting about Indian affairs and early times. I remember a little anecdote which gives a vivid idea of the state of the frontier population, while the Indians were yet hovering around them. Clarksburg was a small village much exposed, and the children were kept within very narrow limits, lest a lurking savage should chance to fall upon them. The little urchins, however, then, as now, sometimes broke their bounds. One evening, when a squad of them had wandered too far, they discovered an Indian who was creeping up to surprise them. They all set off for home at full speed, and the Indian finding himself discovered, pursued them fiercely with his tomahawk. The larger children were ahead, but one little fellow, though he ran his best, fell into the rear, and the savage was gaining on him. At last the boy got so far that his pursuer stopped, poised his tomahawk and threw it at him, but missed; upon which, the dauntless child, looking back, exclaimed, "Ahah! you missed me though, you slink."

After several hours of interesting conversation with the old centenarian, we retired to rest. The next morning, though I rose with the sun, he was gone before I was up, and two days afterwards I met him again in Clarksburg, which he had reached after a circuit of more than sixty miles, travelling on foot at about thirty miles a day. How he succeeded in his land claim I never heard, nor do I know whether he yet lives. The days of his pilgrimage are probably ended, though his brawny frame, his firm and well developed muscles, and his fine "thews and sinews" might well have lasted him for half a century more.

JOANNA OF NAPLES.*

This is an exquisite *morceau*, and the printer has sent it from his hands in a style befitting the beauty of its literary execution. This is a charm which it ever stands an author in hand to seek. It is an *a priori* argument in favor of his book that it is thus beautifully printed,—its “rivulet of text meandering through a meadow of margin.”

The author of “Miriam” and the present work, is Miss Park, of Cambridge, Massachusetts, who originally intended to weave a tragedy from the rich material, which, like a lump of virgin gold rather than of ore, she has snatched from the quarry, and wrought into a most touching and intensely interesting history. But as she approached the task, her eyesight failed her, and she was obliged to present the work in a less pretending—but to our minds, a far more inviting form.

That which would have deterred an ordinary mind from attempting this task, seems to have suggested its execution the more forcibly to hers. She had been reading *Mrs. Jameson's Life of Joanna of Naples*, in the *Biography of Female Sovereigns*,—and was led by that perusal to examine all the records of that celebrated queen, to which she could gain access: and, to quote the beautiful language of her preface to this little production, “When deprived of her customary occupations, by partial blindness, one of her chief resources against the weariness of forced idleness was in exercises of the memory and invention. She sometimes entertained herself with weaving fictions, and planning little works destined never to come forth from the chambers of her brain; and amid the visionary processions which moved through her darkened apartment, many a time did the majestic figure of the Neapolitan queen sweep sadly by, the heroine of the unwritten romance. As a memorial of those hours, when the faculties mercifully bestowed on every human mind asserted their power to charm away physical evil, she has, the last summer, committed some of their fruits to paper, and the task has again beguiled a few weeks of ill health. Want of eyesight has prevented her indulging in researches that might have graced her pages with antiquarian lore; but she trusts she has avoided any serious anacronisms. Her narrative is not a work of pure fiction, as most of the leading characters and principal events are historical; and she has endeavored to take no unwarrantable liberties with facts, as recorded by writers, who believed Joanna innocent of the crimes charged upon her by her enemies.”

For this she is to be thanked by all who have pondered regretfully over those pages of history which record the imputed, but yet unproven crimes of the gifted and the beautiful: and the more is she entitled to the gratitude of such readers, that she makes out a good case, (to speak in legal language,) for the noble subject of her romance.

The strongest passages in the writings of any historian, who can be considered as impartial and independent upon this question, against the fame of this ill-fated queen, are the following, from Hallam's “Middle Ages,”—which are, at best, but doubtful witnesses

* *Joanna of Naples*. By the author of “*Miriam*.” Boston: Hilliard, Gray & Co. 1833.

against her, adding but little force to the prejudiced accounts the church of Rome has handed down to posterity, concerning the monarch who had the independence to espouse the cause of Clement against the usurper Urban. “Public rumors, in the absence of proof, (says Hallam,) imputed the guilt of this mysterious assassination, [of Andrea, her husband,] to Joanna. Whether historians are authorized to assume her participation in it so confidently as they have generally done, may perhaps be doubted: though I cannot venture, positively, to rescind their sentence.” “The name of Joan has suffered by the lax repetition of calumnies. Whatever share she may have had in her husband's death, and certainly under circumstances of extenuation, her subsequent life was not open to any flagrant reproach: the charge of dissolute manners, so frequently made, is not warranted by any specific proof, or cotemporary testimony.”

But the reader of this little romance will conceive a *beau idéal* of the character of Joanna of Naples, which will make him willing, (or we greatly mistake,) to believe nothing of that heroic woman, not proved,—which is inconsistent with the beautiful portraiture that the pencil of Miss Park has produced.

Another feature of this work will strike the reader. The author shall state this feature in her own happy manner. “In this Tale,” she says in her preface, “the author has remembered a wish often expressed in her hearing by judicious mothers; she has endeavored to discard the machinery usually employed in works of fiction; and to bring strong passions and affections into play, without the coöperation of that, on which the main interest of a romantic story commonly depends. She respectfully waits the decision of the public, as to the degree of interest excited for a heroine, whose fears and trials are not interwoven with a love-tale. Her little work is published in the hope, that, if it win the approbation of her young readers, they may be led by it to the fountains of history, ever pouring forth bright streams of pleasure and instruction. As the current comes gliding down from the urns of dim antiquity, it brings us awful truths, that deserve contemplation,—the insufficiency of human greatness, the dangers of a blinding prosperity,—the terrible retribution, which so often overtakes guilt, even on this side of the grave.”

We commend this book as one of the choicest productions of the day,—and express a hope, which we know all our readers will echo, when, upon our recommendation they shall have perused it,—that this will prove but the commencement of a long series of similar favors, for which her countrymen are yet to be laid under willing obligation to the fair and gifted authoress.

HEXAMETER VERSE.

Gabriel Harvey, who “had the ill luck to fall into the hands of that restless buffoon Tom Nash,” attempted to introduce the Hexameter into our versification. His *Encomium Lauri* thus ridiculously commences:

What might | I call | this tree ? A | lawrell ? | O bonny | lawrell !
Needes to thy | bowes will I | bow this | knee, and | vayne my
bonnetto.

BIOGRAPHICAL SKETCHES

OF LIVING AMERICAN POETS AND NOVELISTS.

NO. I.*

FRANCIS WILLIAM THOMAS, ESQ.

This gentleman, now a resident of Cincinnati, is a native of Baltimore. In 1829, we find him a member of the bar in that city, and distinguished for his forensic talents. In 1830-'31, he emigrated to Cincinnati, and shortly afterwards connected himself with a political paper, which bore intrinsic evidence of being controlled by a powerful pen. During his residence in Baltimore, Mr. Thomas, although very young, drew the attention of political parties to himself, by several popular addresses, on occasions of great political excitement. His oratorical powers were of a high order; his eloquence graceful and winning, and frequently varied by flashes of wit, and irresistible humor; and when pointed at a party opponent, often barbed with the keenest sarcasm.

His talent for swaying political assemblies was soon discovered, and appreciated by his new fellow-citizens. He had been a resident of Cincinnati but a few months, when, in every gathering of the people, his voice was heard, stirring them by its powerful eloquence.

His readiness at repartee, and the biting force of his sarcasm, may be shown by the following incident. Like a certain noble poet, Mr. Thomas has a defect in one of his limbs; but, unlike him, he has the wisdom to be wholly indifferent to this peculiarity. On one occasion, during which he was the orator of his party, some reflection, by an opponent in his speech, upon his lameness, started him from his chair. With a kindling eye, and a lip writhing with indignant contempt, he turned upon the gentleman, and in a voice calm and clear, but which rung like a clarion, said—"I thank God, that he gave me not two perfect feet, lest my footsteps should be mistaken for *that man's*!" The careless, but inimitable attitude of his pointed finger, the dark flashing eye, which sought out that of his opponent, and the scorn that dwelt on his curling lip, as he threw all the depth and bitterness of his sarcasm into the last two words, were irresistible and overpowering.

Although editor of a warm partisan paper, and launched on the tumultuous sea of politics, Mr. Thomas found time during the lulls of the tempest, to gaze on the colors of the rainbow; to admire the snowy crests of the waves, as they showered their crystals at his feet; and to amuse himself in watching the prismatic changes of the nautilus, as he trimmed his transparent sail. Amid the roar of the waves over which his bark was borne,

he could appreciate, and seize upon, the brighter, as well as encounter the darker objects in his path; and poetry, with her fascinations, allured him from the tumultuous sea, to glide among her flowery isles, and listen to the melody of Calliope and her sister train.

The "EMIGRANT, or Reflections while descending the Ohio River," a poem, published in 1838, first introduced Mr. Thomas to the public as an author, although he had previously written some fugitive pieces, one of which, entitled, "'Tis said that Absence Conquers Love," was set to music, and is now one of the most popular American lyrics, and may be found on every young lady's piano. Perhaps an incident like the following, is more grateful to a living author, than a Shakspearian opulence of posthumous fame. In 1835, Mr. Thomas arrived in Philadelphia, a total stranger. Without any object to awaken a train of reflections which could make him feel less alone, he walked out in the evening a few hours after his arrival, and hearing from one of the merchants' palaces on Chesnut street, a sound of music, he paused to listen. The words of his own song fell on his ear, warbled by one of the sweetest female voices he had ever heard. The emotions this gratifying incident awakened, were peculiarly pleasing. He felt from that moment that he was no longer a stranger.

"Hoc est,
Vivere bis, vltā priori frui."

The "Emigrant" is a poem in the heroic measure, and the metrical arrangement of its stanzas is similar to that of Gray's "Ode to Adversity." It contains 91 stanzas, and is 728 lines in length. It abounds with strong and beautiful imagery; original and stirring thoughts; is occasionally varied by thrilling transitions, and is not deficient in sound philosophy. In perusing this poem, the reader is struck with a certain energy and manly tone of thought pervading it; and discovers with pleasure, that the author has not sacrificed noble and sound sentiments and common sense, for the sake of a happy turn of verse, or to introduce a garland of fine and flowery words; nor has he substituted an unmeaning word, on account of its smoothness, for one more expressive and sonorous, as is the custom of many of our modern poets, who often seem to prefer smoothness of verse to soundness of thought.

The following extracts will show the character of the poet's mind, and better illustrate his powers than any description of them. The first quotation is from the opening stanza of the poem, and happily expresses the feelings of the Emigrant, on leaving his old, and seeking a new home.

"We both are pilgrims, wild and winding river!
Both wandering onward to the boundless west—
Chanceful and changeful is my destiny;

VOL. IV.—38

* These sketches are numbered, without any reference to literary pre-eminence.

I needs must follow where thy currents lave—
Perchance to find a home, or else, perchance a grave."

There is a sombre coloring visible throughout this poem, which takes its hue from the peculiar feelings of the writer, who at the period of its composition, labored under ill health. He touchingly alludes, in the eleventh stanza, to this infirmity, and finely and poetically expresses the feelings of an ambitious spirit thus clogged in its aspirations.

"Is health returnless? Never more may I
Throw by the staff on which, alas! I lean?
Is the woof woven of my destiny?
Shall I ne'er be again what I have been?
And must the bodily anguish be combined
With the intenseness of the anxious mind?—
The fever of the frame and of the soul,
With no medicinal draught to quell it—or control?"

The following apostrophe to Love, is rich with the quaint and beautiful imagery, which characterises the old masters of the English lyre:

"O, Love! what rhymers has not sung of thee?
And who, with heart so young as his who sings,
Knows not thou art self-burthened as the bee,
Who, loving many flowers, must needs have wings?
Yes, thou art winged, O, Love! like passing thought
That now is with us, and now seems as nought,
Until deep passion stamps thee in the brain,
Like bees in folded flowers, that ne'er unfold again."

We will add another quotation, which breathes the divine afflatus in every line, and marks the accurate observer of nature:

"And the wild river, laughing, laves its banks—
A babbler—like a happy-hearted girl,
Dancing along with free and frolic pranks;
The leaves o'erhanging tremble like the curl
That plays upon her forehead as she goes:
While, 'mid the branches free from human woes,
The wild bird carols to its happy mate,
Glad for the present hour, nor anxious for its fate."

A more eloquent definition of Eloquence has seldom been written than the following:

"And this is Eloquence. 'Tis the intense
Impassioned fervor of a mind deep fraught
With native energy, when soul and sense
Burst forth embodied in the burning thought;
When look, emotion, tone are all combined—
When the whole man is eloquent with mind:
A power that comes not at the call or quest,
But from the gifted soul and the deep-feeling breast."

The succeeding stanzas, suggested by the sight of Blannerhasset's island, on sailing past it, will close, save one in allusion to his profession, the extracts from this poem. The second stanza, it will readily be seen, alludes to Col. Burr:

"Isle of the beautiful! how much thou art,
Now in thy desolation, like the fate
Of those, who came in innocence of heart,
With thy green Eden to assimilate;
Then art her coronal to nature gave,
To deck thy brow, queen of the onward wave!
And woman came, the beautiful and good,
And made her happy home 'mid thy embracing flood.

Alas! another came; his blandishment,
The fascination of his smooth address,
That read so well the very heart's intent,
And could so well its every thought express,
Won thy fair spirits to its dark design,
And gave our country, too, her Cailline.
He lives---the Roman traitor dared to die!
Yet in their different fates behold the homily."

The following and last quotation we shall make from the "Emigrant" is a pleasant allusion to the author's profession. Its truth and accuracy will find defenders in all who have to do with the "glorious uncertainties of the law."

"Soon must I mingle in the wordy war,
Where knavery takes in vice, her sly degrees,
As slip away, 'not guilty,' from the bar,
Counsel or client, as their honors please.
To breathe in crowded court, a poisonous breath---
To plead for life---to justify a death---
To wrangle, jar, to twist, to twirl, to toil,---
This is the lawyer's life---a heart-consuming moil."

We will here close this notice of Mr. Thomas's poetical works, for these "sketches" are not intended either for elaborate reviews or criticisms, but, simply, brief notices of the writings and style of authors, illustrated when necessary, by occasional quotations. We would observe, however, that the "Emigrant" was, even in this day, when poetry is so little read and appreciated, favorably received, and won for the author the praise and popularity due to genius. A poem of a different cast from the "Emigrant," several cantos in length, and abounding in keen satire, humorous hits at the times, and enriched with several admirable portraits, originating in the eccentricities and absurdities which characterize the fashions and follies of the present structure of society, is now we learn, in preparation by the same author.

In November, 1835, Mr. Thomas threw down his gauntlet in the lists in which he had appeared with some success as a poet, and challenged public opinion as a novelist. At this period, tired with

"Wrangling, jarring, twisting, twirling, toiling,"

he had retired both from the editorial chair and the bar, and devoted himself to the more congenial pursuits of literary composition.

"CLINTON BRADSHAW, or the Adventures of a Lawyer," is the title of the work by which he made his first appearance in this new path of literature. In applying his talents to this fascinating species of composition, which has in a great measure taken the place of the epic-rythmical poem, Mr. Thomas was only directing his genius into a field where it could take a higher and wider range. The poet is necessarily the creator of the novelist; and although popular poets will not always make popular novelists, yet no man, however severely his mind may be cultivated, however accurate and extensive his knowledge, however polished and classical his style, can become a popular novelist without being also a poet. The

one without the other, is the statue of marble, which passes—the triumph of his skill—from the hand of the sculptor, charming the eye with the exquisite symmetry and life-like truth of its proportions, wanting the soul to give animation to the eye, pencil the veins with azure, and give to the boom the undulating swell of the heaving wave.

"Clinton Bradshaw," to make use of the words of another, "is the story of a young lawyer of limited means and popular talents, whose ambition urges him to elevate himself by all the honorable means in his power. His professional pursuits lead him among the coarsest criminals, while his political career brings him in contact with the venal and corrupt of all parties. But, true alike to himself and the community of which he is a member, the stern principles of a republican and the uncompromising spirit of a gentleman are operative under all circumstances."

The reception of this book by the public, although of a kind flattering to the author, was not such as to stamp it with that decided mark of approbation, which is the index of popularity; nor such as those which had measured the intellectual strength of the writer, and witnessed, on other occasions, the bold flights of his genius, had anticipated. The causes which operated against its entire success, lay in the introduction of one or two characters of both sexes, such as Fielding has successfully drawn, but which in the present modification of public taste, even from the pen of a Fielding or a Smollet, would have been received with distaste. The truth and coloring of these portraits were undeniable, and evinced the pen of a master; but they belong to a school now out of date, and are superseded by subjects, which, although of a more chastened and refined character, are also less marked by strength and durability. Another cause may be traced to a peculiarity which may apply with equal force to all American novels, written to portray American manners and customs in American cities. The characters being such everyday people as we meet with in the commonplace routine of life, can be invested, however powerful may be the wand of the magician who calls them up to act their part on fiction's stage, by none of that magic and romance, which is at the present day, and indeed since the days of Mrs. Ratcliffe, has been the *sine qua non* of a successful American novel. It is different with the novels of other countries. The transcendent genius of Scott, in delineating the manners of his countrymen, was aided by the romance of that land of story. There was a stirring tale speaking in every glen; a tradition hanging on every mountain's brow, and ruined castle-wall; and *brownies*, *bogles* and *elves*, wandering on heaths, living in wild caves, or presiding over fountains, were ever ready to start up at the bidding of the great enchanter.

Even tales of London life, have their charms for the American reader: for, with a colonial feeling, that still lives in the hearts of all true Americans, and that derives its existence from the worthiest and holiest principles of human nature—love of "*faderland*"—we still look with a romantic and filial interest towards the "mother country." All that strengthens these associations, and brings us, in imagination, nearer to a land we love to contemplate at a distance, is readily received and cherished. It is, perhaps, to this poetic feeling, rather than to the intrinsic worth of the works themselves, that pictures of London life and manners, which differ but very little, if at all, from those in the principal cities of the United States, find here such extensive circulation, and so large a number of readers; while an American work, of superior merit, cumbers the shelves of the booksellers. We have, moreover, such a consurable, but, by the way, very natural propensity, to read of princes, dukes and baronets, that the mere glimpse of these titles, as they catch the eye in running the fingers over the leaves, is sufficient to secure a purchaser and reader, while the pretty nose is turned up, or the manly lip ejects a "pshaw!" at meeting in the novel lying beside it, only plain misters, and colonels, may be, and peradventure a senator or two, and a president. One "my lord," is worth an army of these republican characters; and so, aside from our colonial prejudices for everything English, the American work is thrown down with something like contempt. It is owing to these causes, that American pictures of manners in American cities, are not popular here, when, at the same time, they may be so in England—for we often first know our authors through the kindness, or rather justice of the British press. Viewed under these circumstances, it is not surprising that a novel of this class—in which "Clinton Bradshaw" is to be ranked—should have met only with partial success, where the author's friends, basing their judgment upon a knowledge of his powers, anticipated the most sanguine result. That it did not at once, therefore, take the high stand as a novel, its intrinsic merit entitled it to, is to be referred to causes beyond the control of authors.

The foregoing remarks, it should be understood, do not apply to American novels as a *class*, but to that *species* of them called "fashionable novels," the characters of which are daily familiar to our eyes, and therefore altogether wanting in those mysterious parts, that go to make up a hero or heroine: Cooper, Simms, Kennedy, Bird, and others, to be hereafter named, have shown us that the American novel can be invested with a dignity, power, and romantic interest, rivalling British works of this class. Our strictures apply only to what may be termed "civic novels." Probably all American novels of this species, however

well written and brilliant with genius, will, in their native country, meet with an indifferent reception, and have only an ephemeral existence. Perhaps it may be laid down as an undeniable proposition, that no novel can *live*, unless it is based on some remarkable historical event, which, like leaven in the lump, leavens the whole, infusing into it a principle of perpetuity. Independent of the genius of the author, this is the great secret of the Waverly novels—the leaven of history pervades them all.

"Clinton Bradshaw," however, was only a trial of the author's powers, as a youthful knight tilts in the tournament to try the metal of his barb, and test the strength and fitness of his armor, before he encounters in the more deadly strife of the field. It has been said that one sin is inevitably the parent of a numerous progeny: an author's first book is equally prolific. "Clinton Bradshaw," after having passed into a second edition, was followed eleven months afterwards, (in November, 1836,) by a second novel, entitled, "EAST AND WEST." During the interval, however, he was engaged in the composition of a satirical poem, already alluded to, called "The Beechen Tree," and about the length of the "Bride of Abydos," and with a somewhat similar variety of versification. This will be published sometime in the present year, probably; but, whenever it does appear, it will eminently contribute to the poetic fame of its author.

"East and West" assimilates to the same species of fiction, with which "Clinton Bradshaw" has been classed, but does not decidedly belong to it. Like that work, it is constructed upon no historical basis or popular tradition, but professes to be a picture of American manners, deriving its interest solely from the virtues and vices of the characters, and the circumstances in which they are placed. It differs from "Clinton Bradshaw," however, not only in not confining its scenes to the streets and houses of a metropolis, and their trite, daily histories, thereby encroaching too closely upon the province of the penny press, and lessening the dignity and charm of epic composition, but it differs from it in the variety and originality of its characters; the frequent changes of its scenes; (especially in the second volume, to which these observations exclusively apply;) its stirring incidents, and glowing descriptions of western scenes, character and adventure. The character of Blazeaway, a "river character," so called, and a spirited and thrilling narrative of a steamboat race, mark the second volume as no ordinary production. The two volumes are of very unequal merit; the first coming under the class of "city novels," while the second is of a widely different and more popular character. The cause is neither altogether in the author, nor in the style; but in the subject and scenes. He leaves the

paved streets and fashionable folks, brick-houses and pier-glasses behind him, with the first volume. In the second, he fearlessly spreads his wing and plumes his crest, like the unchained eagle, who soars to his native mountains, and with a bolder pen, seizes upon the themes and scenes, which, beyond the Alleghanies, spring up unbidden on every side, rich and inexhaustible material for the romancer.

The West is the legitimate empire of the American western novelist; and when he shall be content to wield over it the sceptre of his genius, and unfold its wild traditions, his works will contain the true principle of life. "It is a land," says the celebrated Mr. Flint, in a recent letter to the writer, "where every thing in history, natural and civil, every thing in nature and art, pertaining to it, touching its settlement and progress, is, in itself, matter of romance, and wanting, to those who have not seen and observed, *vrai semblance* almost in the same ordinary standard of romance."

A pen that can discourse so eloquently of the West, as in the following stanzas, taken at random from the "Emigrant," should seek no different theme: his muse should linger,

"Where stole the paddle-plied and tottering bark
Along the rough shore's cragg'd and sedge side;
Where the fierce hunter, from the forest dark,
Pursued the wild deer o'er the mountains wild."

* * * * *

"Yet, who that ever trod upon the shore,
Since the rude red man left it to his tread,
Thinks not of him? * * *

That Indian mound
Will soon be levelled with the plough'd up ground;
Where stands that village church, tradition's hold,
The war-whoop once rung loud, o'er many a warrior
cold."

"Within thee, river! many a pale face sleeps,
And many a red man's ghost his vigil keeps;
And many a maid has watched thy dark banks over.
For thee, perchance, thy stream ran red with blood,
There pale and red men met upon thy shore,
Embracing foes, they sank within the flood,
Fierce twins in death, and joined forever more!
But, God is just! to him the red race fly,
Driv'n to the pathless west, thence upward to the sky."

"Here once Boone trod, the hardy pioneer,
The only white man in the wilderness;
That mountain there, that lifts its bald high head
Above the forest, was perchance his throne!"

"How fertile is this 'dark and bloody ground':
Here death has given many a horrid wound!
Here was the victim tortured to the stake,
While dark revenge stood by, his burning thirst to slake."

* * * * *

"Methinks I see it all within yon dell,
Where trembles through the leaves the clear moonlight;
Say, Druid oak! canst not the story tell?
Why met they thus? and wherefore did they fight?
And wept his maiden much? and who was he
Who thus so calmly bore his agony?
Sang he his death-song well? was he a chief?
And mourned his nation long, in notes of lengthened
grief?"

It will be discovered by those who compare Mr. Thomas's novels, especially "Clinton Bradshaw,"

with this fine poem, that he has not yet done justice to his talents, or chosen subjects most congenial with his tone of mind, or best suited to the development of his powers. The admirers of genius will therefore look with some anxiety towards the future direction of powers which have not been conducted into the channel to which they have already shown a natural tendency.

Although the writer has not seen a review, not even the briefest newspaper notice of "East and West," and cannot therefore determine the kind of reception it has received by the editorial corps and the reviewers, yet judging only from the work itself, and the opinions of many who have perused it, he is confident of its title to a fair share of popularity, which must, in some degree, however, be qualified, by the causes above stated, operating on fictions of the class to which this belongs. It is spirited and racy, enriched with fine thoughts, and abounds in admirable sketches of character. The style, though not elegant or studied, is bold, free and flowing, as if the author wrote with ease and rapidity.

In briefly sketching the character of Mr. Thomas's mind, the poet and the novelist are too inseparably united to admit of their peculiar features being separately considered. As an observer of nature, he delights in the contemplation of the sublime and terrible, rather than the picturesque; choosing to spread the wings of his imagination and sail above the beetling crags, rather than fly through fairy dells, or hover in the shadowy grove. But he is not an enthusiastic admirer of "grassy meadows, breezy slopes, inspiring hills and mountain crags;" and will turn his back on the fairest scene, to seat himself in some quiet corner, if he be travelling, perchance in a steamer on the Ohio or Mississippi, to hold conversation with some "character," whom accident may have thrown in his way. It may be remarked, here, that his conversational talents are of the highest order; his voice agreeable, and his address and manners popular and prepossessing.

Perhaps the most prominent trait of Mr. Thomas's mind, is his perception and instinctive appreciation of the picturesque, eccentric and absurd, and what is called *original* points in the appearance, habits, or characters of men. With an eye to the humorous, and a passion for observing what he has emphatically termed "characters," he is at all times observant, and constantly deriving in this way, not only amusement to himself, but for his readers. Probably there is not a character, particularly the ruder ones, (for it is the unhewn block, and not the polished column which forms subjects for his study,) in his novels, which is not drawn from living originals; who, at a public table, in the street or highway, have unconsciously sat for their portraits to this observing painter of men and manners. It is this naturalness, this

not so much copies of men, as the men themselves, that constitutes the peculiar charm of Mr. Thomas's prose writings. This talent of observation has led him to study the characters of distinguished men; and insensibly created a taste for biography, which he has displayed in an eminent degree, in a popular biographical sketch of Wirt, published shortly after the death of this distinguished man.

We will now conclude this article, which has insensibly grown to an unexpected length, with a brief sketch of Mr. Thomas's personal appearance, inasmuch as it is not the fashion now-a-days for authors to show themselves to their readers, like their olden time predecessors, *en frontispice*. He is about twenty-eight years of age, five feet nine inches in height, compactly built, and slightly inclined to be fleshy. His complexion is a healthy brown; his hair black and wavy, and is worn long and negligently about his temples. His forehead is straight and high, with the intellectual organs strongly developed. His eyebrows are square and full, and beneath them plays a pair of deep-set eyes of the keenest black, with a lively if not a laughing expression, in which mixed humor and penetration predominate. His nose is straight and faultless; his lips accurately chiseled, and remarkably flexile, and capable of expressing humor or sarcasm in a striking degree. The ruling expression of his face, which is that of a handsome, dark complexioned man, is good humor and intelligence, and is marked with decided intellect. His address is courteous and gentlemanly; his politeness, proceeding rather from the heart, than the observance of mere external forms. On account of the slight peculiarity before alluded to, which renders artificial aid indispensable, he walks with a stout cane, with one arm behind his back, and his face bent, as if in deep thought, on the pavement, at which times, his face wears that solicitous look often observable in men, who, like him, have from infancy been the martyr of severe physical suffering. As an author, Mr. Thomas has only to be taught by further experience the natural tendency of his fine powers, to rank high among native American authors.

CURIOUS ELEMENTARY BOOK.

There exists a very curious little book in German, published at Leipzig in 1743, entitled "A new book of the A B C in 100 languages, or fundamental instruction for acquiring in the most tender youth not only German, Latin, French and Italian, but likewise the oriental and other languages." It contains, in fact, the alphabet and first elements of 100 different languages, ancient and modern. It was reprinted in 1748 and greatly augmented. The second edition contains the Lord's prayer in 200 languages. It is by John Frederick Frita.

LINES

Presented with a New Album.

Go! pretty book!
And when upon thy snowy page,
My fair shall look,
Tell her, whose love I would engage,
That to my partial eye she seems to be,
More pure and spotless far than even thee.

Tell her when treasures rare,
Fair volume, on thy page shall meet,
That then I will compare
To her own mind thy tassellated sheet,
Where taste and heavenly poesy combine
To make mosaic of this page of thine.

Or tell her that I send
An empty casket to her care,
And bid my friend
Store it unstintingly with jewels rare,
Culled by young fancy from the heaps that lie
In the full treasures of fair poesy.

And when o'er thee
Her gems are strewed, oh then I'll hope
Once more to see
Thee, beautiful kaleidoscope!
And on thy glittering wreaths and changeful hues,
Pore with delight, and tedious hours amuse.

Or shall I liken thee
To the smooth surface of a lake,
In which we love to see
The stars of heaven reflected back,
When night unrolls to the enchanted eye,
The 'spangled curtain of the dark blue sky?

Oh! there the radiant spheres
In heaven's inverted concave glow,
And every ray appears
Reflected from a deep abyss below,
While o'er our heads their orbs through ether roll,
And with poetic rapture fill the soul.

Above the rest resplendent,
The bard of Avon's waneless star,
Shines lord of the ascendant,
And shoots his blazing glories far,
While next, immortal Milton's sapphire rays,
Pour on the eye a bright empyrean blaze.

But, ah! the attempt were vain,
To number all the starry host,
That in her splendid train,
Bright eyed poesy can boast,
These glimmering faintly, while with powerful ray
Those shoot abroad as general as the day.

Disdain not yet the beam
That genius scatters from his glittering car,
Although it may not gleam
From Byron's sun or Moore's bright morning star,
But gathering all their rich and varied dyes,
Shine like a rainbow in the vernal skies.

JOURNAL

OF A TRIP TO THE MOUNTAINS, CAVES AND SPRINGS
OF VIRGINIA.

By a New-Englander.

To CHARLES E. SHERMAN, Esq., of Mobile, Ala.

These fragments of a Diary, kept during a tour made in his
society, are respectfully and affectionately inscribed, by his
friend and fellow-traveller. THE AUTHOR.

— Virginia! Yet I own
I love thee still, although no son of thine!
For I have climbed thy mountains, not alone,—
And made the wonders of thy vallies mine;
Finding, from morning's dawn till day's decline.
Some marvel yet unmarked,—some peak, whose throne
Was loftier,—girt with mist, and crowned with pine:
Some deep and rugged glen, with copae o'ergrown,—
The birth of some sweet valley, or the line
Traced by some silver stream that murmurs lone:
Or the dark cave, where hidden crystals shine,
Or the wild arch, across the blue sky thrown.

CHAPTER IV.

Sunday at White Sulphur. Reflections. An Excursion to
Lewisburg. A Deer Hunt. More Visitors. The Climate. Fine
Nights. Serenades. A Night Ramble. The Array of Stars.

White Sulphur Springs, July 27, 1835.

Yesterday was Sunday:—

But the sounds of the church-going bell,
These vallies and rocks never hear,
Ne'er sigh at the sound of a knell,
Nor smile when Sabbaths appear.

There are occasionally religious services in the ball-
room, when a clergyman, willing to perform there, is to
be found among the guests, but yesterday, the appear-
ance of the blacks in their best attire and in their high-
est spirits, was the only indication of the return of that
sacred day. Perhaps there were less promenading, less
music, and less gaiety than during the rest of the week,
but still to a New-Englander, it seemed very little like
Sunday.

But nature's Sabbath dawns wherever the heart is
attuned to that sacred sympathy which sees in the quiet
seclusion of the woodland retreat, a fit altar for the
sacrifices of a grateful heart, worshipping beneath the
blue dome of Heaven, as in a temple built by Deity, as
the place which he has made glorious for his presence,
and where to the pure in spirit he is ever accessible,
though arrayed in all the splendor of his divinity. It
never can be that

"Sunday dawns no Sabbath-day for him,"

who, removed far from the delights of home, cannot
worship in temples made with hands, though the spirit
of worship and the sentiment of gratitude, and the emo-
tion of a humble and dependant heart, on a review of
its own demerits and its abounding causes of thankful-

ness, may yet be ever active within him. Such a one finds a temple, an altar, a choral symphony, wherever the cope of Heaven arches over the retreats of nature, wherever the shade of the forest, the rippling of the streamlet, and the music of birds, invite to meditation, to reflection, to adoration of the gifts, and wonderful order of Providence, and to the welling-up of those emotions, which, while they are irrespective of time and place, are as grateful in the sight of Him who looks upon the heart, as though they sprung from the stuccoed domes, the vaulted roofs, and Gothic arches of the proudest fanes erected by the hands of man. And where does nature keep Sabbath, if not here, in these pathless woods,—on the slope of these magnificent mountains,—beneath these mild skies, and amid these sylvan shades, tuneful with the voices of a thousand birds, and soothing the spirit of the worshipper with the gentle flow of many brooks, musically gliding over the pebbles that lie below, glistening in the straggling sunbeam that finds its way through the overarching foliage?

At no great distance from this spot the sermon of the old blind preacher, described so touchingly by the late William Wirt of Virginia, in his celebrated "British Spy," was delivered. All will recollect that pathetic story: the woodland scene among the mountains,—the passionate eloquence of the preacher,—the raising of his sightless eyes to Heaven,—the description of the Saviour's sufferings,—the comparison between the death of Socrates and that of Christ,—and that glowing peroration, "Socrates died like a philosopher,—but Jesus Christ like a God!" That sermon was uttered in such a temple, and surrounded by such associations as I have imperfectly described. That temple was among these very mountains, and between their ridges reside the descendants of that old blind patriarch: and such were the recollections that have sanctified the day that has just passed, otherwise unmarked by any surrounding religious associations.

July 28.

An excursion to Lewisburg. This is a pleasant little village, distant from the White Sulphur about ten miles, and a pretty ride, often enjoyed by the residents here. With good horses and in a convenient phaeton, (a Baltimore friend's,) the journey was accomplished in little more than an hour and a half, through a lovely tract of country, the whole length of which was traversed by the fine turnpike of which I have already said something in commendation. We passed, and were passed and met by several vehicles, in which pleasure-parties to and from the Springs, below as well as above, from the Sweet as well as the White Sulphur, were dashing along the well graded road, all in high glee. Arrived at Lewisburg, I went over to the Court House, where the court of appeals was in session. This is the highest tribunal in the state, and the chief justice, or president, is *Henry St. George Tucker*, to whom I have already particularly alluded. There were one or two important cases expected to come on,—and the distinguished Richmond barrister, *Chapman Johnson*, was there. But the cases were postponed or settled, and I had not an opportunity of hearing, as I had hoped to do, the argument of the learned counsel. It was a disappointment, but these are the lot of man, and I went back to the hotel, enjoyed a dinner that would have surprised nine-tenths of the country inn-keepers of New England, by

its sumptuousness, and trotted back to the Springs, on the whole quite pleased with my little excursion.

July 29.

A deer hunt. This morning "the hounds were unkennelled, all ripe for the chase," and came dashing through the square, baying in full chorus, with half a dozen young gentlemen, headed by Nimrod, who ever and anon blew a note on his horn to keep in the hounds, all arrayed in proper trim for hunting the deer in the neighboring mountains. It was a novel and a gallant sight. The morning was clear and brilliant, and every thing promised a merry excursion, and plenty of sport. The huntsmen were mounted on fine horses, each carried a gun or rifle, and off they went for the mountain, in a southerly direction. Arrived at the haunts of the game, the leader of the chase stationed a man at several open passes or intervals among the mountains, who was to watch the coming forth of the deer as he should break cover, and bound for shelter across them to the opposite thicket. The hounds were all this time on the scent, and soon the game was afoot. The crack of rifles was heard, and the deep baying of the hounds was unintermitting. But, contrary to the usual good fortune of Nimrod and his "merry men all," there was no game struck, or if struck, it was but slightly, and not skilfully enough to secure the prey.

"So letting the stricken deer go weep,
The hart ungalled play,"

the huntsmen returned, with no other satisfaction for their morning's excursion, than a good ride, good exercise, and the customary "treat" from the individual who was so unfortunate as to make an unsuccessful shot. Such is a stag hunt in the Alleghanies, and differing only from the most of them, in the important particular, that the specimen furnished you was not crowned with the usual success.

The Springs are still filling. Scores of applicants are turned away daily, and are quartered about in the neighborhood, ready at any moment to slip in, whenever the scales of Mr. Anderson's even-handed justice shall incline favorably. Among the last new arrivals are large parties from South Carolina. Virginia, too, is on the *qui vive*. The neighboring Springs are pouring in upon us their visitants, and the surrounding country is full of *quarantiners*, waiting for admission. Not a place in which to lay one's head can be had, *inter parietes*, and as to Dickson's, the Sweet Springs, "the White House on the Hill," the Brick Tavern, and all the other suburbs of this place, numerous as they are, they are overflowing with anxious expectants, (four beds in a room, and three in a bed,) who every morning turn their longing, lingering look towards the paradise they may not enter. Some, more hardy than the rest, come boldly in, deposit their baggage on the piazza, borrow a friend's room in which to dress, spend the day and evening, and then sleep, or not sleep, heaven only knows where, until the dawn of the day which is to admit them to a cabin in "Alabama Row," or "The Wolf." I have frequently seen recumbent forms upon the benches under the trees in the square, covered with thick great-coats or cloaks, at midnight, apparently enjoying sound repose in the still moonlight, undisturbed save by a casual footstep or the occasional baying of

the awakened hounds. What will not people do to keep their place in the train of fashion and pleasure?

But few go away, compared with the number of arrivals. The pleasures of the place, the opportunity of social intercourse of a grade much higher and more agreeable than is usually enjoyed at watering places, the convenience of making pleasant excursions for miles around the Springs, as a common centre, attract and retain many more guests than the pleasure or the necessity of drinking the waters. *Paradise and North Carolina Rows*, present every evening a most attractive spectacle, the white piazzas filled with crowds of happy visitors, and vocal with hundreds of joyous voices. The seats beneath the trees at twilight are also well filled, and the dancers are beginning, as I write, to gather in the hall. The translucent clouds resting on the peaks of the mountains, have caught and reflected the last rays of the sun that has long since disappeared behind them, and are now softening from their yellow lustre into a thin curling mass of vapor, through which the stars are beginning to twinkle, and beneath which the new moon is bashfully sinking behind the hills. The new moon! If there be not in the modest beaming of that pale crescent the promise of midnight serenade, and of beauty's dream broken by the gentle breathings of flute and flageolet, perchance of manly voice, to the touch of the gay guitar,—there is no virtue extant in the legendary lore of astrology.

The evening air among these hills is damp and misty, and yet no one ever takes cold here. There seems to be a salubriousness even in the vapors which rise amid the mountains, and descend in showers or dews upon us in this happy valley. The truth is, these vapors, from the nature of the soil and the atmosphere, are not miasmatic nor impure. They rise from the pure bosom of our "gentle mother," and bear with them nothing that is not healthful, mild and salubrious; and it has actually come to be a popular belief in this region, that the night airs and night dews of the White Sulphur, are highly beneficial to invalids.

July 30.

I did not miscalculate on the gallantry and taste of the lovers at Spa. There were serenades last night, even as I predicted. Towards midnight I was awakened by a strain of sweet music, breaking in upon the stillness of night, and charming the air with melody. It proceeded from the band at present performing here, and was executed with taste and feeling. Soon a voice came stealing, in unison with the strain, upon my ear. It was breathed from the lips of some youth beneath a lady's window in *Paradise Row*, and it was with singular appropriateness of selection, that the serenader, in a mirthful and arch style of execution, commenced with "We're all a'noddin',"—following this introduction with "Oft in the Stilly Night," and closing his performance with "Farewell, but whenever you welcome the hour." Soon all was hushed, the tinkling of the guitar, the breathing of the flute, the warbling of the clarionet, the swell of the mellow horn, and the accents of the serenader, all died away upon the ear, and the fair objects of this graceful compliment were left to dream of the sounds to which they had been listening, just as the evening star was also pillowing itself upon the clear mountain top.

"Soft stillness and the night
Become the touches of sweet harmony.
The floor of Heaven
Is thick inlaid with patines of bright gold.
There's not the smallest orb
But in his motion like an angel stings,
Still quiring to the young-eyed cherubim."

I was curious to see how this lovely place looked beneath the still and quiet cope of heaven, lighted only by the stars, at deep midnight; and finding it impossible to recover the sleep that had been broken by the serenaders, I walked forth into the open air, and commenced my midnight ramble. Before me stood the pavilion, imbosomed in foliage,—its white columns showing like marble in the clear starlight. The white cluster of stars that extends in a milky path across the heavens, was shedding down a soft and peculiar radiance upon the statue that presides over the fountain,—while a solitary lamp hung within, to light the casual visitant to the pure element that bubbles up beneath. I stooped to quaff the elixir; for I have learned, as all will learn who come and try, to love it as never did a devotee of Bacchus love the juice of the ruddy grape. I pursued my way refreshed,—and followed the spring from its outlet to its course among the woods that hang over it, reflecting their heavy limbs in its translucent waters. It is a beautiful little stream, and pursues its steady, onward, undeviating, and perennial path, until it swells the current of the great Ohio in the west.

As I passed along this little river's bank, beneath the overarching woods, I suddenly roused the hounds, that lie in their kennel at my left. They had been tired with the day's chase, and were more quiet than usual. Indeed, I had not thought of my proximity to them, as I went on my silent way. But no sooner did they hear my footsteps near their domain, but as if by a unanimous concert of purpose, they rushed open-mouthed to the fence of their enclosure, and raised a baying, that reminded me of Virgil's description of the barking of Cerberus, on the descent of Æneas to Avernus. As my steps receded, they became quiet, or nearly so, an occasional short, sharp howl, alone testifying the unwillingness with which dogs as well as men submit to have their slumbers broken. I felt no compunction on that score, however, offsetting thereto many similar disturbances suffered on my own part, attributable to the agency of these very gentry. So, leaving them to reflect on the virtue and propriety of retributive justice as they best might, I pursued my walk.

The array of stars is a noble sight, even to the uninitiated in astronomy. The stars,—the same stars that on the plains of Shinar God bade his chosen patriarch Abraham to count as the number of his seed,—the reward of his faithfulness. The same stars beneath which Jacob lay, and dreamed that they formed the pavement upon which angels walked;—the stars, the bright, the beautiful, the musical stars, that sang at nature's birth, and that sing ever in their spheres. The unloosed bands of the Pleiades, twinkling in their seven harmonious orbits,—the belted Orion,—the Serpent twining its lustrous folds between the Bears,—the lovely Lyra, on which you can almost fancy the symphonies of the heavenly choir are singing,—the Dogs, beautiful and more bright than those which poets fabled as accompanying Diana in her chase,—Aldebaran, prince of

Hyades,—Gemini, those gentle twins,—Capella, that seems a train of starry effulgence as she bounds across the firmament, like the Capella of the hills she shines upon. Thus did I wander and gaze, until my weary footsteps tended homewards, and I returned to my pillow, just as the last glimmer in the latest cottager's window was expiring.

CHAP. V.

Death at the Springs. Funerals. The Stranger-Dead. Leave-takings. Poetry to the Pope. Time at the Springs.

White Sulphur Springs, July 31, 1835.

Death is everywhere,—and the healing waters of this blessed Spring are not always efficacious. But two deaths have occurred here this season, and one was that of Dr. Stevenson of Boston; whose amiability and excellence of character, whose gentleness and suavity of manners, whose professional and literary skill and genius, and whose general value as a citizen, are well known to Bostonians. He died here, in this lovely spot, whither he had come to avail himself of the use of the waters, being in a very low state of health—away from all save a few friends who surrounded his pillow during his last days, and made up by their assiduous attentions and delicate offices of kindness for the absence of those comforts which can only be enjoyed, at such a time, among one's kindred. He was much respected and lamented here, no less than at home.

The other was that of a New York lady, who had left that city in delicate health, to travel to the western country, where she had relatives. This journey was recommended to her by her physicians, as likely to restore her to health, and with her husband, she reached this point in her tour, where, having business of pressing importance to attend to, he left her, not worse than she had been on her journey thus far, and returned to New York. He had, however, been there but a few days, when he heard, first of the extreme illness of his wife, and on his way to meet her here, of her death. He took the stage-coach in which I came from Staunton, and we came on together. Heart-broken he arrived at the Springs to perform the last sad offices to the remains of the partner of his life,—but too late. They had been faithfully discharged by strangers: and he had only the sad consolation to learn that all which could be done had been performed by the residents and visitants of the Springs, in the neighborhood where he had left her,—and to visit her grave in the little burying ground connected with the place.

Such little incidents, at places so thronged with people from all parts of the country, strangers to each other, and having no other sympathies with each others' feelings than that which is the dictate of a common nature, are always touching and impressive. It was a moving sight to behold that pall borne to the grave in a land so far from the home of the departed, by the hands of strangers,—to see the remains of loveliness and worth followed to the tomb by those who had not known in life the form that had faded and was now mouldering to ashes, but who felt bound by the strong chain of

human sympathy, to do these last sad offices to one who had not died "among her kindred." There was a check awhile to all the gaiety and mirth of this gay and mirthful place, and the semblance, if not the reality of decent sorrow and quiet sadness, gave a striking illustration of the natural effect upon the mind of such lessons of the mutability of human affairs, as the funeral train pursued its slow and solemn way through the walks now deserted by the gay crowd, whose demeanor indicated that such an impression was produced as the scene seemed to demand. It was a moving illustration of the truth, that "in the midst of life we are in death."

* * * * *

The parting of friends, whose friendships have been formed but within a few weeks, and who, on bidding farewell to each other, have no other ties to sunder than those that have had so short a time to twine around their hearts, would hardly seem, when abstractly considered, as likely to cause much mutual regret or to produce a pang to feelings so slightly interested by association, habit, or sympathy. Yet there is, now and then, at places like this, (where we meet for the indulgence of the best feeling of our nature, whence all interests that can clash with each other are, in the nature of things, completely shut out and unthought of, and where every one strives to enjoy the opportunity that may never again occur, to become interested in those he meets, and to make himself acceptable to them,) a parting that approaches in poignancy the separations of older friends, and the sundering of ties more strongly knit. It is honorable to our nature that this is so. At a place like this, there is a gathering of those whose habits and education are such as to render them likely to be mutually pleased with each other, and to unite them together by such common bonds as are furnished by the scene, the nature of the occasions that call them hither, and the similarity of pursuits and identity of purposes that mark their life while here. The little community becomes more and more consolidated in feeling, and its component parts become more and more necessary to each other's enjoyment—and thus, when there occurs a rupture in the chain of sympathies so produced by the removal of a single link, it is sympathetically felt throughout all the rest, and the loss is felt in proportion to the importance of the link to the continuity and strength of the chain.

August 3.

Here is a copy of verses which have been "a nine days' wonder" at this place, and the curiosity as to the authorship of which has hardly yet subsided. They are addressed to a gentleman well known and highly appreciated in the annals of White Sulphur, the grand master of ceremonies for years on festive occasions, and by prescription the *Patron* of the establishment. I may be breaking faith to send it to the press, but I hope it will be excusable, as an attempt to preserve, in a durable form, one of the prettiest "bubbles of the Brunnens," which the season has produced.

TO WILLIAM POPE, ESQ.

Oh the White Sulphur Spring! the White Sulphur Spring!
How pure, how limpid, how cool are its waters!
Every year, thither borne upon hope's buoyant wing,
Hie the brave and the fair and the rich from all quarters.

VOL. IV.—39

Some go to seek pleasure and some to woo health,
And others, like "Cecilia in search of a wife,"
Whose virtues and charms, though unaided by wealth,
Shall solace their cares and enrapture their life.

But others there are, the base sordid elves !
Who sigh not for these—their object is money !
Ye favored of fortune, take care of yourselves !
Ah ! list not their love-tales, though melting as honey.

Oh the White Sulphur Spring ! the White Sulphur Spring
Can cure every evil that ever was known—
Gout, fever, dyspepsia, and each horrid thing
That e'er worried the flesh or tormented the bone.

How verdant its lawns in the depth of the mountains ;—
How snug are its cabins, all ranged in a row—
What spruce beaux and belles daily quaff at its fountains,
So gay and so stylish, they make quite a show.

When the bell sounds to dinner, what throngs sally forth,
Of bachelors, maidens, of husbands and wives !
There Tories and Whigs, from the South and the North,
Talking and walking as if for their lives.

At table what scrambling, and bustle and clamor !
Here gentlemen calling, and there servants running !
Vulcan's stout myrmidons, wielding the hammer,
Could not have occasioned a clatter more stunning.

But enough of *terrestrials* ; now haste we to *Paradise*,
Where dwell the bright houries, whose soft silken chains
Have entwined many hearts, and led them to sacrifice
Friendship's sage feelings to love's silly pains !

There you'll find sweet Miss C. and Miss B. and Miss W.,
And some other belles who in R——d reside ;—
But beware of their charms, they have power to trouble you,
And cause what is much like an *ache in the side* !

From Baltimore, Boston, Philadelphia, New York,
From Louisville, Lynchburg, and Edenton City,
There are fair ones and rare ones—just look in that walk !
'Tis filled with the graceful, the beauties, the witty !

There are songstresses also among the blithe train,
Whose soft notes enchant as they fall on the ear—
And Havana can boast of a nymph whose sweet strain
It delights every lover of music to hear.

At night you must wend to Terpelchore hall ;
You'll see there assembled a brilliant collection,
Who form every evening a sociable ball,
Where cotillions and waltzes are danced to perfection.

There are judges and gen'als, whose names I could mention,
And lawyers and doctors, all worthy of fame ;
But to lengthen this ballad is not my intention,
Such time would it take every one to proclaim.

Yet ere I conclude, lo ! a paradox hear !
Though protestants all, yet obey we a POPE,
Whose mandates give pleasure, whene'er they appear—
That long he may reign most devoutly we hope !

* * * * *

Time wears on here amidst new arrivals, new departures, new faces and new incidents. The strong man of yesterday has his chill or fever to-day, and the languid eye of a few hours bygone, is relighted now with its pristine lustre. All the world has dyspepsia, or is diseased in the liver, or racked with rheumatism, or eaten up with ennui, or bewildered with those *gentlemen in blue*, who often drive a man out of himself to get rid of them : and so "all the world" come to the Springs. Shoals of valetudinarians, of convalescents, of robust impersonations of ruddy health, and of that numerous class of Spa-visitants who drink the water "from mere

wantonness,"—(to say nothing of adventurers, matrimonially, mammonially, and mirthfully,—of old men to spend fortunes, and young men to get them,—of old women to marry daughters, and young women to marry husbands,)—daily arrive at our doors, anxious for admission to these crowded cabins, and are more often turned off than taken in. Meantime enough of novelty is discovered in the morning to last during the day,—a new equipage, a new dress, a new gait, a new expression, a new manner or a new oddity, serving as a topic of conversation to fill up the intervals of lounging or sleeping, of reading, writing, eating, drinking, and bathing,—until night-fall, when the ball-room is lighted, the music strikes up, and the dancers gather in the hall. There, all is animation until the clock strikes eleven,—the merry meeting is dissolved, sleep seals the drowsy eyes of the tired devotee of pleasure, while those of the suffering sick are yet unclosed, and strangers to the sweet restorer the live long night. As the day, so the darkness wears away apace,—another sun dawns over the mountains, and our little world awakens again to go through its gay routine, till weariness, the desire to change, or the end of the season, puts a period to the scene.

THE WEST FIFTY YEARS SINCE.

By L. M. of Washington City.

CHAPTER II.

The object of Major G. and his party was to reach the foot of Spencer's mountain before nightfall, that they might commence its ascent at the first dawn of the morning. They had before them a toilsome, laborious, and dangerous undertaking. The trace was winding, and not more than three feet wide. Above, the rocks were piled together in such immense masses, and to such an amazing height, that it was fearful to look up. At various projecting points of them, the hawks and eagles were seen teaching their young to try their strength in short and fluttering flights, then returning to the shelter of their maternal wings. Below, the ravines were so deep that if the traveller dared to look down into these bottomless abysses, his head became dizzy, and he lost all self-command. After the march was commenced not a word was spoken. Each rider having his gun in his hand, and his baggage on his shoulder, drove his steed slowly before him, conscious that he might be shot down at every turn of the trace. At short distances the caravan was halted that the horses might take breath. At last the whole of the company reached the highest point of the mountain without interruption. Casting their eyes down the precipice up which they had clambered, they felt an involuntary shuddering. But the prospect was now magnificent. The sun was shining in all his glory ; the sky was cloudless. Behind them afar off, they saw the Holston winding its way to the south-west. Before them, on their left, was the broad Tennessee, whose placid waters were moving slowly on to mingle with those of the father of rivers. The fogs which had settled on the

swamps and marshes were rising and dissipating under the influence of the increasing heat. Occasionally, the smoke of some far distant Indian fire was mingling itself with the surrounding atmosphere. No sound of the woodman's axe interrupted the silence that pervaded this illimitable wilderness. The tops of the trees had budded; the snakes had shed their skins, and were crawling slowly from their dens; the bears were emerging lazily from their winter wallows; the wild geese were uttering their glad cries. To the right and to the north of the travellers there was an interminable stretch of bald, bleak and barren mountains. But the scene that lay before them and at their feet was ravishing. They beheld at last the mighty West, the future abode of countless millions. Descending the mountain, the party halted about dusk; struck their flints; applied the sparks to some dry leaves; kindled up fires; secured their horses so that they might feed on the case, and be readily found in the morning; broiled their meat; passed the good-natured joke around, and rolled up in their blankets, with their heads resting upon their saddle seats, they soon fell away into sleep.

On the thirteenth day after leaving the landing, the travellers reached the Nashville station. When they emerged from the contiguous wood, and were seen by the settlers, loud, long, and reiterated shouts rung through the air. The men rushed out to meet and congratulate them on their coming. The women and children gathered around them. Even the horses which they rode seemed to be conscious that they had reached once more the abodes of civilized man. The arrival of the strangers was like sudden and unexpected succor sent to a besieged and starving city. The hunting dogs pawed about their feet as if they were old friends.

In consequence of this accession to their numbers, the settlers took immediate steps to procure additional means of subsistence. A strong detachment was detailed for the chase. The seine was hauled, and large quantities of fresh fish taken. The opening spring admonished the young men to start their ploughs. They were encouraged to do so by the reflection that the recent addition to their strength gave new assurance that they would be able to keep their footing in the country.

Within five miles of Nashville there were three stations, at each of which there resided about eighty persons, most of them adults. Runners were sent to inform them that a large number of emigrants had arrived, and that it was proposed to celebrate the event by a dance at the Nashville station the next evening. This invitation produced a strong and delightful sensation amongst the invited. They anticipated, truly, that the strangers had brought letters and messages from their relatives and friends, of whom they had not heard for a long time, as well as small tokens of continued affection. All attended this celebration who were able to do so. Of young girls there were some fifteen or twenty, and a like number of married women with their children. In going even these short distances, the visitors moved in military order. The females kept the trace. In front and rear, as well as on each side of them, the young men were stationed, who were well armed, and moved with the utmost circumspection. The whole of the guests arrived in safety. About dark the musicians tuned their violins, and the

merry dance was begun. All seemed to forget that they were surrounded by a vigilant, insidious and remorseless foe—so strong is the social principle in our bosoms! so regardless are we of the coming calamities of the future, in the enjoyments of the present!

About midnight the partners in a reel took the floor and moved off. One of the ladies in it was descended from a distinguished family in North Carolina. Her person was small and delicate; her complexion brown; her eye of a dark hazel—large and languid. The expression of her countenance was exceedingly mild; her manner gentle and fascinating. Those who approached her, however rude and rough, were softened by the kind and gracious way in which she addressed them. That one so beautiful and of a nature so tender, should have adventured into so wild a country, excited wonder in those who were unacquainted with her story. But this high-born and high-bred woman had become devoted to an enterprising and chivalric young man, who loved her so passionately that he could not permit the winds of heaven to visit her too roughly, and who had recently received the appointment of surveyor-general of the new territory; a post requiring talents and education—one of great profit and imminent peril. After his marriage Major R. proceeded to prepare for a journey to the west. As the period of his departure approached, his young bride declared her unwillingness to be separated from him. He remonstrated with her kindly, but she persisted in her resolution to accompany him. After her arrival at the station she had given birth to a female infant.

Suddenly, some person said, "What cry is that?" The music was hushed. It was, indeed, a cry of deep distress and alarm. The tramp of horses descending the hill that overlooked the fortress was heard—the riders approaching at full speed, and redoubling their efforts to be heard. Terror was depicted in every countenance. The women grew pale, and the children gathered around their fathers and mothers.

The commander of the station exclaimed, "Indians!" As quick as thought, every man sprang to his rifle, tomahawk and knife. This commander was a veteran in war, of iron nerves, hard features, thick set and broad shouldered, slow in his movements, of solid judgment and immovable courage. Great confidence was reposed in his military skill. When in his cups he would tell over how he had fought through the recent revolutionary contest; that he was standing close by Campbell, when he received from the surviving officer at King's mountain the sword of the gallant Ferguson; that on the next morning he had assisted in hanging a gang of Tories, which was, as he believed, the best act of his life.

The commander, Major W., said to his company with perfect coolness, "Those who are coming are the surveyor-general and his party; watch, and when they reach the gate open it, let them in, then close it instantly and bar it." In a moment they were in at a full strain and breathless. The company crowded around them. When they were able to speak, they stated that the party of the surveyor-general, which had gone out four days before, to make some surveys, being on its return, was suddenly set upon by more than four hundred Indians; that the surveyor and two of his chain-carriers were killed, and that they four had narrowly
